(13:50) apology or both the story sidetracked them but it went around them they are the arbiters of what is truth in a poem which is hilarious as I mean 95% of the sightings begin with their misidentifications honest mistakes it's the other fighters that are important but the craziest story isn't about in the world that our arbitrated by certain self people they decide which stories are credible which ones are not in a world that isn't basically made up begin with and they hate my fellow journalists and they hillary me on the radio
(14:29) engagement they run out bail department mark jokes they would geography an important a make up songs and poems newspaper columnist with that freaking time one of my expense there was pre editorial cartoons and the state's largest newspaper me with a butterfly that patient flying saucer ins was tough when the marshmallow alien hitmen encumbered me and then there was a column about I had done a series about alien abduction said it was the headline was kidnapped by aliens and they dumped me a grant Paula in the
(15:04) church of cosmic rock and there was another one where they had the the TV writer said that people running all the time to see my TV stories about UFOs not because they care to run aliens but because they want to be there when I went to old goose loogie on air that continues I think any story I do where I am come up against somebody on any issue they remind folks but it occurred to me that people making those jokes bug easier to joke about it well through the work will look at the bombs background to sit out there in the desert night
(15:43) after night deceived by clauses that dodge the security guards that digging the dusty old records in our content it's hard work it's a lot easier to make fun of I was a trance by the documents that you found - you know opposed the official lives of the institutions where either what the school thought that was pretty compelling evidence whether they could make an illness during the time that bob was in important when in Congress did was awful Senator Reid when it's also healthy congressman Bilbray
(16:17) had requested records and the FBI actually responded which they they always told me they had nothing that's all the other agencies that as well and they were lying but yeah I don't understood you don't have an even though they say there are no records they said you as a member of Congress don't have any no Wow Jeremy Kevin wanted to see one that's just you know it's so - when you hear something that's outside of your scope reality separate yourself a bit immediately and make a judgement say
(16:53) it's true it's not true it's a matter of but you know believe it's not crazy there's believe based on information you have there's crap about what so I think like this the hope is that untangle some of the best by other people over all these years and it's up to you it's up to deal with it bob is just telling the story you need everybody else here supporting so telling your story historian to be asked oh this is a way to reach this is one way to reach people and I think it succeeded in that way hopefully with a
(17:45) little bit money get the focus materials there's like different have knowledge of the tariff by the way I think you get that want to say that you know I guess my city just watch a film about the night before just rushing to each other yes for them teeth I decide for yourself yeah speaking of the deleted scenes that was able to see some of them thank you a nation should you break it shot me home oh you didn't show me now it's got a little start Jamal but I think they also saw a nice split with you for five
(18:41) straight minutes well you both apparently Elsie BJ I would just like to know what it's been like you've been married 17 years almost all exclaim what's it been like living with this legend and at the same time [Music] [Music] no I when did he break out the UFO story so we did and it was quite embarrassing
(19:59) I know you so you knew the UFO story before you bet important like I gotta know when you told first day second day in a virgin so was I why are you two in Maschine Mikro down there anymore maybe step two shell
(21:43) yeah I hate that the technology is so advanced I don't really even know how to do a reasonable analogy I guess it would be like giving an iPhone to a chimpanzee but we can't duplicate anything I mean they're all components of the crab there's no wiring there's no connections between them you can take half of them out and it still operates it's if it really is amazing the way to think works it's borderline and now take iPhone back to Victoria don't have to do of course that looks
(22:25) like magic to when they can't even make a plastic case around but that's exactly where we can kind of observe document how some of the things work and how they've changed we do certain things but as of when I was in the project in the late

80s and early 90s we have I don't know what happened 32 cents but I don't know if they would have to be some monumental discovery of forward at all April of 88 was when I started it had to do with began to question my clearance
(23:45) then they stopped following me out there after that I started having a TV show up at my house just park outside you saw used to drive around and we were following everywhere and every time they stopped the car would be searched it got to a point where now I became afraid they give you all this information so to be concerned here so I took my closest friend I allowed them the seasons going on this is what I was doing and things kind of progressed from there anyone people I
(24:49) knew said look we should probably talk to this guy your dreads still ring did they die when we interviewed here I sure [Music]
(26:13) [Music] Oh inclusion only oxidant so by when I did know I did interview the other people who were out with about all those tests video video the other people who made each of the three dozen beginners you don't get well very important but one thing Oh
(28:20) right well you're going with you right here you're planning on making sure first of all you're making conclusion I when I was working with the private I had no oh I had absolutely going from the program with it I didn't tell my closest friends I didn't tell my wife even where I was going at so I was playing along in fact when I was given the information and that was really intuitive the early days there feel kind of privileged to say you know so I was with the program it was only its timing on it began early and
(29:23) you know whether that's the only time [Music] [Music] George was one of the most sensitive get
(31:44) involved so all that is talking about it's because and that's the conversation that they just repeated the next day okay who's got just a couple more here guys another million [Music] [Applause] [Music] [Music] [Music]
(32:59) I pretty well maxed out no I it's clear that the project was with highly classified Alec was painful sir actually surprising bytes what factions of the government is really flour my paychecks of the Department of Naval Intelligence and it's what they're doing analyzing flying saucers or anything is it is it done that way just because that's where they were funds doesn't draw from so I think that's such a convoluted offense change from where I come from I just I say we are gonna help our
(33:52) December 2007 you were told that our government is currently worth like so now we're living in a world where we don't need a system is highly addictive these unknowns probably no government your honor that maybe he's looking at Bob straight differently and the guy who wrote most of that information was actually George that we should ask George about that question of black budget well just did a nutshell you know you have over 70 men Washington things like a sieve secrets cannot be captured secrets aren't they may be secrets
(34:53) market and this revelation from the New York Times December 2017 is an example one there was a program going on for all those new for at least 1012 years right under our nose going into billions of dollars to study to our phones and in didn't go public until the government hooked up with a guy named Tom Oklahoma or whatever it's in a nickname or word and then met with the New York time to talk them into doing this story and I think determined to get ready new to do another story because it's time to presentations other
(35:27) journalism organizations also cover the issue in the last 14 15 months of it stories that CNN stories news on Fox why posed other may be a news organization the media environment has changed and I think it helps to give a sort of a freshman president to look at the bubbles are each our program is compartmentalize everything works what they call a buddy system you really with 100 specialism and what you work with is very native certainly we didn't work on crack there was a system of the crack there are people that in every aspect of
(36:34) it as far as the metallurgy itself initially I wasn't even allowed to touch the craft the first thing I showed it was me I walked by with the garden of my hand on it which I was recommended for immediately but it felt cold like metal into the Hollywood saying but when there was a a metal or ceramic I couldn't tell you we can actually don't win formation Oh one time I was allowed to look inside and the only reason it was to see if the placement position that I was working you don't have any importance but there
(37:11) were no fasteners that were known well there were no right angles anywhere it's definitely an algebra was given as if the crab mousse carved out of wax and allowed to melt a little bit everything had a radius of curvature and you know at

the time I could imagine how many thing like that could be fabricated but these days 3d printers I guess something along those lines cranking with whatever material that was metal and ceramic assemble it layer by layer but I know so little about the Mellon metallurgy of the craft itself
(37:54) young woman it was a little under 50 now I don't know for sure we determine this afterwards but I did about fifty two point is the best guess just to be clear you never get the right I never get the right so got that job I don't know I didn't get to see it live close up rain how are we doing on time I know we only met a little bit shorter okay let's let's hear you Jim so the question is whether box account
(39:00) as I think all my teachers get longer and I'd say though skinwalkers it's its own bag of tricks it's a it's a digital another parable it's every kind of weird paranormal supernatural pathology you can imagine all the one place and including flying saucers it doesn't make any sense no one who's studied including US government I think don't think they're know I've been going there for 27 years and I said you don't you interfaces cute oh it's just a really clear place of
(39:37) property Bigelow a billionaire from Las Vegas great organization for about 20 years and they study it and counted Ottoman to really strange phenomena phenomena go back at least 250 years as long as humans have lived at that part of the of the West this day the US government funded the study a big alone entity company than I mentioned a moment ago here secret study of your Bose mother for years one of its uses in what branches of living lab a government scientist out there they income it's a really weird stuff scared the hell out
(40:27) of them but they still have no idea what did I promise these dozen wouldn't give too long because there was no man and pretty what is the most the apps experience you want this just audience right here tonight like what is it no just really simple well its technology technology that was off world
(41:33) technology and they were actively analyzing it I really want to make know who's coming out tonight I know it was awkward sometimes and it's uncomfortable sometimes that this is a fascinating subject I love your boobies it raises automatic questions in my mind you can make your own decisions but thank you all for participating in it and putting it together especially let me show it here in the freedom doesn't so thank you [Applause] you

Rare Unheard Bob Lazar and George Knapp Interview High Quality - YouTube

Transcript:
(00:00) uh I thought maybe we start with a couple of questions sort of that let you get to know Bob a little bit um so they they played one of the great Super Bowls of all time last month which of the teams did you like yes really we're gonna do sports questions I don't even know him play that's right NFL uh tomorrow tomorrow's the Oscar broadcast who would you think is the best picture now I have no idea because you don't watch a lot of them right yeah of Breaking Bad or Sopranos which of those series did you like best
(00:32) yeah yeah you're just not on my channel because you live what I'm trying to convey is you live in Bob world right right what do you do tell them what you do now I live in the scientific bubble that's just about it I mean you know it's uh my my work is my life whether I was working or having fun it's pretty much the same thing so it's uh I don't know I pretty much do the same thing where you live and what you do your business I unfortunately live in Michigan yeah I would really like to be back here
(01:07) but um yeah the businesses United nuclear scientific we sell uh and build much of a scientific Equipment and supply it to schools universities the government you know everybody we also do contract work we do r d work design construct prototype gadgets weird things for different companies if they have a problem or something they're trying to solve they'll come to me and just say make this work and you know so we do but the bulk of it is really just selling scientific equipment and supplies and you know trying to bring
(01:43) that back back when I was a kid you know used to be able to go into a a hobby store and buy chemicals and have a chemistry set now if you see any glassware in somebody's house you just think they're cooking up meth or something like that so you know we try to change the tide and bring back Hands-On stuff and uh you know the

current generation that's one of the stories told about you right that you had a meth lab among them oh yeah that's true yeah I forgot about that do you have any government uh contracts
(02:12) we do government contracts oh you see where that could go people he's working for the government they're paying him off he he did his job spread this information now he's he's working for the government you're not well from the government now I don't work for the government but you know if there's contracts I bid on it you know every faction of the government doesn't know what the other one's doing it's it's a complete mess I want to give him an idea that you know
(02:41) the question is raised you're not scientist what kind of scientist are you and I I haven't been to your house in Michigan but the last time I visited you it was in New Mexico and there was something built in the house the building right behind your home it was as I recall a 30-foot particle accelerator yeah you built it yeah yeah what did you do with that what do you what do you do with your home particle accelerator that's 35.
(03:08) well at the time um we were working on an efficient way of storing hydrogen for you know Automotive use so it can be used as a fuel and um some of the most efficient um hydrides materials that absorb hydrogen like a water like a water like a sponge absorbs water um we're restricted because they're used in thermonuclear hydrogen bombs and so you couldn't purchase these materials but there was kind of a loophole in the law where you could make them so I had to make the vertical accelerator to make the material to use and run tests on so
(03:42) that's what that was all about you moved to Michigan in part because you thought that you were going to have some help from state government with the the system right the hydrogen system yeah kind of I mean a lot of things changed I mean we moved to partly because you know family reasons out there and just to get a change from the southwest which I regret and uh um you know yeah there was a a lot of at the time there were a lot of unemployed Auto Workers and we thought you know we can hire those but um you know a lot of
(04:13) things happen the recession happened and also at the same not at the same time but around 2008 or something the uh uh Chinese who at the time were making a lot of the rare earth uh elements um because they did it cheaply and the U.S mines had shut down years beforehand uh decided boy now that you know we pretty much control the market on it we're going to go ahead and crank up the price you know 10 or 100 times what it was and it it really made what we were doing impossible to do profitably so you know you you your business is science
(04:48) related to cell site equipment you build things like Oracle accelerator and jet car engines and things of that sort uh but I I think if you've heard me talking earlier you'd have to agree with a lot of people that you don't fit the mole as a typical scientist I mean you're not a member of any science organizations are you no I don't know do you write papers you submit papers I mean not not typically not in not in the normal sense I mean you know the when I first went to Los Alamos what was really annoying to
(05:14) me was that the boy that the typical pompous self-righteous scientist you know and they would come into town and uh you know interact with the ordinary people and you know use terminology that was over their head just to get them to say well what do you mean by that and they just would puff up and you know it boosts their ego and that it really annoyed me so you know when I worked there I relabeled some you know important equipment whirly gig or something along those lines and it you know it really pissed them off and uh
(05:48) you know it was really just uh what to make a long story short and I was the new guy coming from the west and to the you know hardcore scientific field and it uh you know really I was able to run circles around these guys because they they followed a set path into a set amount of things there their support teams were were very limited and weren't engaged in them because they had no idea what was going on they never took the time to you know bring these guys in but um I don't know I just looked at a looked at things from a different point
(06:21) of view and I simplified things so explaining technical matters on a simple level and I do that a lot and people say well boy you don't talk like a scientist yeah I'm trying to make everyone understand you know but um and and it works you know if you if you talk on a a simple basic level everyone is going to understand what you're talking about it's easy to talk over everybody's head but all that does is make you look like an idiot you know when I first met Bob I remember going to his house and there
(06:51) was a a skull and crossbones flat flying over his his house at the time he

had this giant jet car parked in the in this in the driveway he had these videos that he shared with me that we used in mother's reports were it's a lot of machine guns he had a lot of really interest the kinds of interest that you don't associate with Scientists I mean you heard my comparison to Edward Snowden I hope I didn't make you uncomfortable but I mean he's sort of the same vein there was a guy who had no academic credentials he didn't make it
(07:21) through high school he took online hacking classes he worked as a security guard the next time they hear from him he's working he becomes a computer expert for CIA and NSA and Sorrell fits the mole he doesn't fit the mold in the same sense that you don't no but if it's the new mold you know he doesn't fit the other wall just as what we're we're used to seeing but I don't need a degree no no no they're looking for telling I think they learned a long time ago that they were missing a lot of creative
(07:48) people and people that would think outside the box and if you really want to move forward that's where it is especially with computers oh yeah no no doubt yeah and that's right let's get to Flying Saucer uh you got hired through EG to work for the U.S Navy yes a member of Davidson first day out there little first day out where stay out at the at the facility first the first day was going to you know Area 51 proper and signing all the agreements and doing all that stuff signed agreements what what kind of
(08:21) greatness did you say it was really paperwork of going over you know exactly what I was going to be doing and it was a lot of security stuff I mean they were questioning you know my family where we had moved it was you know boring nothing they'd been around talking to everybody you knew yeah yeah clearly and because I already had previous security clearance um you know I made it a little earlier as opposed to somebody starting from scratch which typically takes like 13 months from what I understand to do a
(08:49) top secret or civilian cue clear did you have the clearance that you needed to work there when you started working there or that no no no no I just had a convenient starting point where you know they didn't have to go back the other day I was born and you know verify that they go okay well he had clearance here and then we can go from there so you get on the plane in Las Vegas Jen playing yeah right why up there that which on the bus but the blacked out windows oh yeah when we're going S4 right yes so that you don't take you
(09:17) landed room like I did 51 and then signs of theaters yeah if you want to make it a short version yeah right um you had told me the story that they started showing me these briefing books that Cyril laid out the general story was that it had grown or was that that was it as for that was no that material would never get north of uh that's what group Lakers say I never heard any of the stuff Stony Point sausage then there's no Flags other stuff at 51.
(09:45) no that's uh look 51 is uh it's a there's lots of people working there it'd be hard there's when I worked at S4 again I have no idea how it is today but you know back in my day at S4 there were 22 people that had clearance and knowledge of the E.T material ET crafts that was it we were given the list we knew the names on the list that was it I still know that the names on that list today and those are that some of the things that I never say anything to you about because yeah why is one well exactly
(10:16) there has to be some stuff I keep to myself because you know how many times people said yeah hey I worked out there with Bob and so on and so forth really who are are you what'd you do and whatever and it's only the stuff I said I'm waiting for the guy that says hey yeah I worked out with you and here's some of the other people on the list or we did this or is it so it's if I don't keep that stuff there's nothing I have to verify if some other guy comes up to me you see it all the time though don't
(10:41) you I may imagine you get emails all the time or or you read stories or you hear claims on if you watched television you'd hear it that is uh about people who claim they've been out there and obviously they're making it up well I mean the most recent was this uh Bushman I think it was like yeah like the CIA guy or something like that was it Anonymous guy who had a he's who was dying or he died yeah and a lot of people ask me hey he was a barely very supportive of me and uh but I never heard of them and
(11:16) what am I going to say I I've never heard of the guy and never seen him back to day one you're you're at groom you take a bus to S4 to Papoose yeah it was an old Bluebird school bus but navy blue how did you know it was called S4 did you read that on something no is this what they said that's what they called it yeah did you

ever see it written down on anything and and it's an S and a four or S Dash four or s f o u r or no it's a numerical forced sm4 okay and so you get to S4 and you see what
(11:49) describe what you saw well the first time I went we went around it's kind of hard to describe there's a little mountain or rise whatever that that ends and the first time I have to admit I didn't notice it that we just drove around and I thought it was just a flat part of the Mountain at the very end is an entrance a flat wall with doors and that's where we parked we went in and that's the first time I went into the facility at all um that's where I was taken to the medical facility um that's where I was given the
(12:24) briefings initially and it was it wasn't until the second time that I was taken down there that we stopped in the middle because the side that I thought was flat was actually Hangar doors that were didn't really cleverly blend it into the side of them to look like desert yeah yeah great job well you're inside can you see all the hangar doors you can only see all all nine of them or whatever it is that from Elton what do you mean if you were inside looking at in one hanger can you see all the way down see all of them see more whereas
(12:58) they're separated yeah there's there's inside each hanger Bay there's you know if there's the big door that goes to Outside Inside on the sides I guess I could use the Whiteboard there's um oh what the hell again all right this is gonna be a tough one Okay so can't see it [__] you can't see that all right if this is that making any sense so there's uh the doors here where this is you know Papoose Lake the main door's here roll up however inside there are regular doors
(13:55) and on one occasion these doors were all open and when I came into the came in through here on the first uh well I think it was the first time they showed me well there's the craft in there these doors were yeah these doors were all open and you could see that there were different craft in each yeah so those are the doors I'm talking about let's talk about the whirly games or whatever you want to call them so the talk about the first time you saw one of them was it this the first time I saw one of
(14:27) them was the uh a second time I came in the end the last uh bay door was open that was the sport model that was sitting in there uh we pulled up we stopped instead of going around in the front normal entrance we went in through you know the big bay door you before who had seen these posters you described that were all the walls yeah yeah they're here posters describe but yeah they went through the trouble of actually making a picture of the sport model that was lifting obviously off of Papoose Lake because you can see the the
(15:03) background there and it just said they're here and it was it was like a commercial poster I mean they looked like they were lithographed I mean they must have been printed on site they wouldn't have done that out there but yeah somebody's idea of a joke yeah it was good to see that that level of uh I don't know lightheart in this out there first day you get a look at the sport model what are you thinking to yourself oh my God what are you thinking no it was the Flying Saucer did not alien Flying Saucer did not enter my mind it
(15:31) was exactly the opposite that uh well this explains all the UFO sightings that you know we have some field propulsion technology it has to be in this you know shape or form you know Flying Saucer type and this is what people have been seeing for a long time thinking that they're alien craft and it made perfect sense to me it's like great I'm I'd really like to be part of this project Advanced propulsion this is dynamite so I was excited to be part of it in fact when we went by it um and I think I'd even mention to you
(16:00) it had a little American Flag stuck on it and I dragged my hand across it and you know it felt like get cold so I just assumed it was metal it got yelled at immediately you know don't keep your hands at your side walk forward all right until I get to yourself um I am part of the coolest inside yeah industry because we've got plans ozos that we made and we're playing a joke on everybody or like no I wasn't really playing a joke it was that you know this is cool technology and why at any time we feel like we can probably just take
(16:29) over the world America you know and that was that attitude so at what point do you realize we didn't make it how did you learn that is that the briefing books well yeah the briefing books this just did not make any sense we started into you know that uh that that actually you know predated seeing that and I I really don't know the the briefing books covered a little bit about a lot of topics and it it dealt with uh you know analysis of it was all about engineering material analysis of metal you know Power Systems

(17:04) and the way things were uh even the way things were laid out within the craft and um again it really had me confused the going is it it was so far beyond what I was expecting is this is this some kind of test or is this actual material so it just you know I thumb through everything and went okay and just went on it from there but it really didn't hit me until I went in I was introduced to my uh working partner was Barry castillio or whatever I pronounce his last name and um the way they worked there was uh
(17:42) everything was very compartmentalized so everybody had a buddy to work with and that is the only person you can talk and Converse with and bounce ideas off of you can't talk to anybody else in any other group you can't you know even if we go sit and there's a bunch of other people around you can only talk to the guy you know your buddy they call them so anyway so he was when I'm buddy and um and when I the first day we went in there he was excited to show me everything and it's it seemed like he had been alone for too
(18:14) long that might have worked he was uh you know you know it's you know really excited that I was there and um I was kind of picking up on his enthusiasm going well let's he says boy you were gonna just die when you see this you know and um you know one of the first things he did was you know fire up one of the the reactors that had been taken out of the crowd that story Kelly uh the reactor is a it's a small device it's probably you know just roughly a foot square with a half a hemisphere on it
(18:47) um um anyway so there's do really nothing there the the top comes off and there's like a little tower on it um it does draw it a lot can you keep them well this is my Eraser here did you see the drawing in the back no oh these guys can't that's not fair I have to watch it on the screen was anything about the this in the briefing books about how this worked you did read about this there's very little about this essentially you know for size comparison half a basketball on a plate that was
(19:51) probably not a whole lot of moving Parts no nothing I mean it's just incredibly simple there was there was nothing there that could that could do anything for and it was too small to hold any large power source right so what'd they show you anyway the the top came off and uh he put the top on and then he said go ahead and and grab the sphere and as my hands approached it I couldn't touch it which was uh fantastic and if you ever played with magnets I'm sure everybody has you take two like pulls of a magnet and you can
(20:22) kind of feel that bounce it was exactly exactly like that but it was my hands they weren't magnetic and he says you're feeling a artificially produced gravitational field and that really floored me and you know that I began to run through in my mind how can this be a joke or fake or there's just there's no way and um it that that's the first time that it was kind of a domino effect than what I had read in the briefings and going these guys aren't kitten this is unbelievable let's go back to briefings
(21:00) for a second and then we'll come back and you can tell us a little bit more how this operated in the briefing books you see the craft described and then you get into some more exotic stuff I think really you had to wonder are they messing with your head Elite yeah there was it was a one and only um griefing whatever you want to call it uh or an overview of it was split the the entire program that was split into individual projects and um you know each had an overview of each project and each group got an overview of all the other
(21:36) projects in case there was some connection to what they were doing but it was clear they didn't want everybody to know everything and although the military loves doing that it it really really screws up trying to move forward and and too compartmentalized it's insane but they really enjoy that but um anyway the uh only thing that dealt with any kind of you know biological yeah it's essentially what you'd call them there was just uh a view of of a creature and like closest estimation I can give you is a gray
(22:16) because it had a head with a large eyes but the what they were focusing on was a tea cut in the chest and it was one large organ and the comments were about how um it functioned as a a liver a lungs a heart as if all organs had grown together or evolved together where it was just uh what I don't know an all-purpose internal organ yeah I guess I don't really have a analogy for it but um that was it and they were and the uh accompanying photographs were that was the um that organ removed it was sectioned it
(22:56) was showing the different chambers or indications of it there were the weights of the different pieces that they removed so I again I don't know where the

thing came from you know where that this was just a briefing of something else but it was uh you know that is there's nothing in the briefing but versus this comes from X Planet they're and you're wondering yourself are they messing with us right are they messing with me are they fasting right I mean I well it really didn't it it really didn't hit me at the
(23:21) time uh it seems they wanted me up to speed really fast to where there was skipping too many places to make me feel comfortable um you know at the time I didn't realize that everybody got these and you know the people that dealt with the biological connotations of everything we're getting middle energy reports and again it was just in case there was some connection you know you could kind of raise your hand and say wait you know this thing might relate to us in some way did very or anybody else tell you
(23:53) why they wanted to get you up to speed so fast where there's some urgency there or were they just tired of not making progress or what was that was never really clear I know there was some accident prior to me being hired and um you replace somebody who I replace somebody somebody was was killed and it was playing with the reactor and you know they said well we're going to be working on the reactor but well you know um but so yeah there was obviously a lot of caution being taken but I from what Barry said and what Dennis said who is
(24:24) my immediate Supervisor was that you know they were trying to make Leaps and Bounds way too fast and you know uh I was certainly not planning on doing anything like that especially hearing the news when you say think of yourself I shouldn't be here why they got me yeah yeah yeah please there's a billion people they could have hired you know that I thought would have been um you know a better choice for that but um they were they really wanted somebody it seems like they were stuck and they wanted somebody coming from left field
(24:57) with just new ideas just get us out of the rut and just move something forward man what did they get the right guy the mirror idea I don't know uh if that's the way let's go back to talk about the reactor so he showed you with this experiment in your hands you could feel it's a force field and how they faked that if they were faking it is amazing no I don't think you then you saw some other stuff the golf ball yeah demonstration tell me that story tell us well that wasn't really supposed to be a demonstration
(25:23) but uh yeah well in some way it was and you know once I said that's that's unreal this is a gravitational field and you can see that you know it's extremely strong by it and it tapers off and you know it's following the inverse Square law which is you know the uh the gravity radiation uh the the inverse Square law is essentially you know uh the uh amount of energy dissipates really quickly as distance increases so um you know it that was immediately noticeable to me and he said well check this out and you know
(26:05) he had a golf ball winning you know winged it at the thing and it bounced off the field coming nowhere close to the the reactor and you know we have those ceilings suspended ceiling tiles in there and it knocked it out of place and you know he flipped out and said you know you know Dennis is going to be back in here to jump up on there we're trying to arrange stuff and you know fix the thing and he's knocking the the reactor around and going oh man it's my first day you know don't screw everything up so
(26:37) and I'm taking the dust off the thing and boy the second we finished you know Dennis walks inside and is how things going she's great you know but stop she may have cooked and so it was uh something we'll say it's day one you've read this interesting briefings you don't know quite what's going on you do see this technology it's damned amazing what is your job what do they say you're supposed to do by the the bottom job is not to figure out how this thing works or you know let us know what this meant
(27:07) is just can we make another one of these so just let us know if you can can we duplicate it totally duplicate it like it it doesn't have to be exact but find out how this thing works if we need to make something that's bigger or do it just but we want more of these things and just do it right now so that was it and the answer is can we I mean can we no no no no no no where this is not not even in the same ballpark is it because of materials or we just don't know yeah it's it's a ball look this is like dropping off an
(27:43) iPhone in the Wagon Train days and say we're gonna need more of these we are now and yeah did you uh did you ask anybody hey where do we get these uh where did these come from no I you know I really didn't say there was so much other stuff that was flooding my brain that was just amazing and uh you know I was so excited to be

there I didn't care where the thing came from it's you know it was beginning to trickle into my mind boy this is maybe what you know flying saws have crashed and styled Africa or something and we
(28:20) got it and we're taking it apart this is great you eventually saw all of them or you saw glimpses well when I looked through the doors I could see as far as you could tell they looked they didn't look like they'd been in a crash right well there's one one there's one and I mentioned this two along to you a long time ago and I I never added this one thing which I'll add now there was one like I said that had been shot with a projectile um and I know for a fact it came out of the water that's all I know
(28:52) you know what to refactor because that's what you were told yeah that it came out it was a big projectile like a Howitzer shell or something right it was about it's hard to judge from distances you know like from here to the exit sign how big is that but I'm guessing it was what a maybe a nine inch diameter hole the sport model no dents no screen no it looked like a camera out of the showroom and it looked like the Billy Meyer beam [__] yeah from the pictures I've seen of the Billy Meyer one which you know
(29:19) it looked fake to me but no there it is I'm sure the Billy Meyer people are happy about that but I mean you you know there's a lot of people don't take that case seriously and um it's either the most amazing coincidence and coincidence on the face of the Earth or something really did happen to that guy Billy Meyer so the sport model you called it you had names roll up yeah one half give me some other names well there's one that looked like the top hat and one was obviously a Jello mold and I you know but it was they were
(29:50) just silly names because we were talking about them and you know they're talking about bird six and I'm like what's that is that the jello looking thing you know so I gave him my names and they stuck with them like they did in Los Alamos um so the sport model you've got to know that one pretty well though you got this yeah it's the only one I I just say I hands on I touched I walked in you know that I can say for all the other ones could have been holographic projections to fool me but um this is the only one I
(30:16) know is really before we talk about the test uh one other thing about the reactor and I want you to use this example to sort of explain how it worked you had told me a story about a candle and and again a flame that was basically Frozen tell me that story and why it gives us an indication of how this thing operated what power it had well when we had you know after the golf ball incident there was the benches we had set up the reactor was not the only thing in the craft the reactive sits in the center on the level underneath there are
(30:53) well I should say the reactor surrounded by the reactor there are three gravity amplifiers as they were called directly under those there are emitters which are um told probably like 55 gallon drums there are three of them they hang directly under the emitters and apparently the way the device Works excuse me is um the reactor supplies the base gravitational wave and power to the amplifiers which channel it down to the emitters which Propel the craft so in addition to the reactor that was out of The Craft one of the emitters was also on the
(31:33) bench now I don't know which craft this came out of it was not out of the sport model but they had the uh reactor operating and the emitter and Barry had taken a candle and put it about well I'd say about two feet from the end of the emitter and lit the candle and it fired up the reactor and he said go check out the Kindle and the flame was there but it wasn't moving it was like a picture of it it was just Frozen and now that makes you think of a lot of things oh boy if it's we know gravity in
(32:14) time or interrelated and you know okay one is essentially the other and fine if gravity if it stopped or slowed time down there how are photons still being emitted so we can see the light it should just go black um you know there are a lot of things made absolutely no sense whatsoever with the science were familiar with but um this is these were just things he was showing me as a demonstration that uh you know uh you know the properties and what it's doing that are just so far beyond what we even know what's going on
(32:48) and this had nothing to do with the work I mean we're uh if we're just supposed to make another one of these things somehow so yeah so help us understand what this technology means how advanced it is you know it becomes obvious at some point it's somewhere else we didn't make it because we're taking it apart to figure out how it works look a machine that makes gravity is the most important thing that mankind could probably create look we have electromagnets that make magnetic fields

you know we can make
(33:21) electric fields we you know with the Van de Graaff generators and you know God knows what else but you know to make a gravitational field is like the the the last piece of a missing pie because when you can art right now the only thing that makes gravity as far as we know is mass you just need a bunch of stuff and it's a property of mass that it just magically pulls in things you know we observe gravity we see what it does but we really don't know what it what it is we can throw some equations together and say well it works like this
(33:54) but we really don't know what's behind it but if you can make a machine that on demand makes gravity you know all the stuff we write science fiction about stops becoming science fiction that afternoon then force fields become a reality you can shift time I mean everything becomes possible it's uh it's it's the most important thing and here is an operating machine sitting in front of us that makes gravity and due to we really want to be able to make one of those things I mean you could make
(34:28) impenetrable Fields you can do to have propulsion that is mind-boggling as the crafts operate it would be the Ultimate Weapon well that not just the Ultimate Weapon but it would really be the ultimate thing it would it would catapult mankind forward and what really sucks is the military is in control of this I should have done crap [Applause] I I neglected to mention this during my presentation but Bob and I have talked about before getting Ben Rich who uh Jim Goodall knows and and interviewed several times Ben Ridge was the head of
(35:08) the Skunk Works which uh was the they operated things at Groom Lake and uh and had been there they developed the U2 and SR-71 and stealth if anybody would know about advanced technology it's him and Kelly Johnson so um a lot of people have speculated whether Ben rich and those guys had Incorporated alien technology into some of the advanced airframes that we've got and I even had a chance to ask him on the day that the stealth was unveiled out there at Nellis whether any alien stuff was in there he said no but other
(35:38) people have talked to him Jan harzan who's here from mufon heard a speech that Ben Rich gave at UCLA and which he basically said we now have the technology to take E.T home we had the calculations slightly wrong but we can do anything you can imagine we can travel to the stars but he said the technology is locked up in Black but black budgets and black programs and will never see the light of day what do you think about that well as we're like the same thing yeah that sounds exactly like what I'm saying you
(36:08) know I hope that's not the case but I mean how do you pry it out of there it's it's it really there should be a lot more people working on this that's a lot more well that that's sort of what why you became disenchanted with it but we'll come back to that let's talk about the sword Model A little bit you got to see it Fly you got to see a test yeah once well one's close up um Barry and I were in the lab we were working um Dennis came in and he said there's a test flight going on Bob
(36:40) why don't you come out here Barry you can tag along too um and that's when we came in you know side door into the hangar um the craft was already out onto the dry lake bed in front of where the lake bed proper but it was out in front of the uh door um and probably about two minutes after I got there the craft just began to silently lift off the ground and there was a guy between where I was standing and the door that had a small desk and there was uh some sort of transmitter on it and he was just on a microphone talking apparently
(37:23) to somebody in the craft and at the time that again immediately set up a red flag in my mind going that's not supposed to work either there is a craft being powered and surrounded by an intense gravitational field how are the radio waves getting into this thing this it just didn't make sense but again very few things did there and I didn't have much of an opportunity to connect all the dots but um it lifted off the ground silently there was an obvious a high voltage Corona discharge it was beginning to get a little late
(37:58) but you could see the purple blue glow but as soon as it lifted off you know 6 10 feet that dissipated and it just moved around sat back down where it was but it wasn't it doesn't sound like much but it was incredibly impressive there wasn't there wasn't a sound other than a little hiss when it first took off but you know it's a big device it moved around and uh and sat down and I mean I was just I was beaming it was so cool you didn't get this it didn't fly off to Venus or anything and people no no no no no no
(38:30) this this is their this is their prize catch here I mean they no one is going out there and taking it out of the atmosphere and risking it I mean it was a big deal um you know like a be good um I'm sure I don't know if they knew how to get

it into that mode but um you know like the test flight data that I saw they even uh were very careful on what days to take it above the mountain range where traffic was at low at its lowest in the surrounding area itself they were very concerned about who could see what and
(39:03) you know how much they risked the thing moving around but it was uh I was quite a prized possession of their so you saw the reactor up close and you saw the craft inside not only the test but you got in it yeah later on later on it was uh again you know we have to look at at everything we're trying to figure out how this device works from nothing so uh and it's technology you know we can barely grasp so uh you know obviously the placement orientation of the components and sub-components might be critical to the operation of it
(39:38) so um I was let in uh one time there were several other technicians in there doing their own thing I don't know what they were working on but we wanted to see where the reactor was how it you know how it was positioned um you know where the amplifiers were and this is when you know I described to you there was a access to a lower level to where the emitters were which was a small hexagon shaped area that had a what I thought was a really creative collapsible uh doorway and um I guess the only analogy is if you take uh
(40:19) oh you know what six pack of beer that comes in bottles and you take out the little divider there it's if you stand it up by itself it's really strong it'll hold a lot of weight but you can easily collapse it flat by the side this is essentially a metal version of that and it was a hexagon shape with a little hole and you can walk on it but you can just put your finger in the hole and pop it and the whole thing snaps over to where you have a you know hole you can kind of stick your head upside down and
(40:49) which is what I did I just leaned in there and they wanted me to see how the you know specifically how the arms that held the emitters connected to the bottoms of the amplifiers and those in themselves were fantastic technology describe the interior what it looks like it's very very Bland if I uh again was to give you an analogy I would say it was if you put all these components in there pretended everything was made out of wax heated up for a bit and let it cool off there was never a sharp angle anywhere
(41:22) anytime something sat somewhere perpendicular to it it had a radius of curvature to it um everything had a smooth curve everywhere it was all one color um was it all one piece it it looks like it was one giant injecting molded thing but there was not there was not a seam there was not a rivet there was not a Fastener it was just all there any buttons and he got me here no place to put in the key no and there's no wiring you mentioned about I'll use the term Furniture because you gotta look we've both got a lot of
(41:59) belief yeah too far that's very yeah well that was because I was you this was I think the first interview on TV and I was well I was writing for a couple of reasons first of all that I wasn't supposed to be saying anything and the fact that it was on TV and I didn't know what kind of big mistake this was and um so you asked me what was inside or describing I was trying to work think of the word seeds and I couldn't in a million years get that out of my mind and all I could say is there's Furniture in there and I know it sounded
(42:32) ridiculous and everybody said well that guy can't be a scientist he doesn't even know what the word seed is you know it's just stress does that to you it was the size of it though it was small yeah it was Yeah well yeah that's that's that's quite a critical point everything was very small it looked like uh well maybe that's where the it popped into my mind because I was thinking of uh you know the children's you know furniture set or tea sets you get for little kids that have you know the
(43:00) little molded chairs and little tiny but that's exactly what it looked like it looked like a little furniture set for for kids so um and obviously it was uncomfortable though to walk around it when you first come in the side you have to hunch over the only place you can stand that comfortably is you know right by the reactor in the side so whatever built or used the thing was obviously smaller than than my stature I'll come back to the term the kids so somebody did the test somebody was in it they must have figured out a little
(43:30) bit of how it operates yeah obviously and in the sport model the ones that I went in they removed one of the uh amplifiers which was really shocking to me um none it now the reactor and emitter all those were in that one so these Musta that must have come from another craft which made me at least partially to believe that these all may have the same Power Systems in them which you know really makes you

think that's so the one you had of the lab that you were working with yeah well components had to come from same where
(44:09) other was in the in the sports Market yeah but wasn't the smart models so at uh you know you can extrapolate and say hey hold up yeah it's kind of like a Chevy they all have the same kind of engine and they're different uh but I don't know it's all conjecture let's talk about the fuel so big um it's an interesting part of the story and a bone of contention for a lot of folks element 115.
(44:34) how did you know it was 115 describe its properties to describe its properly wait what does it do what what why well so miraculous well I it let me put it this way the uh we weren't given the task to say you know analyze the fuel find out what it is and you know they just again the thing was and there was a lot of push to it was uh what is that and do we have any and um you know that's that's it and these guys really do talk and think like that it's just you know what did you guys do today we just looked at this the other day but
(45:10) um you know I mean we you know if you remove the top of the reactor there's a little Tower in there with a cap and there is a triangular piece of fuel on there what we call the fuel because if you put that in everything starts to work we analyzed what was there now somehow again we didn't have access to all the information but somehow Los Alamos had something to do with either keeping or storing the fuel now it's uh we did all kinds of tests on it not just us we had it sent all that equipment isn't there we don't have
(45:50) you know all kinds of interesting spectrographs but um we had it tested and we just wanted to see where this was on the Periodic Chart what kind of Peaks we get off of it and you know maybe it's just if you know a unique fuel maybe it's just some you know a blend of a nuclear material but when it became obvious that this isn't even on our usable Periodic Chart you know that's that's essentially where we stopped you know and said if we weren't going to analyze the material and see if we could make it we just
(46:20) wanted to know if it was something that we could possibly use and it wasn't you told me that we couldn't make it why why couldn't we make well and just like any heavy element or super heavy element more specifically um you know the only naturally occurring heavy elements uh uranium I mean as soon as you get anything heavier than that you know a larger number of protons you have to make artificially and that's that's a difficult job because you either like to make plutonium which are country loves you
(46:51) know you have to take um you know other materials put them in a reactor let it run for a couple years and then you can in the case of plutonium you can chemically separate out you know the small quantity of that now even heavier elements you have there's more difficulty obtaining um you know extremely heavy ones like 110 you I mean you have to make that on an atom by Adam basis an accelerator where you're you know slamming accelerating single atoms are beams of other atoms you know near the speed of light
(47:25) smacking them together and it doesn't make a usable quantity I mean you may get the interaction you want and it flies off and hits a detector you know in a fraction of the speed of light you go but that was 115 and you know that's when they say well you know we synthesize winds but that's what it is it's not like a cup pops out and we've we've got some you know it's uh it's just uh you know a particle comes flying out when he goes well at at these angles at this Magnetic Moment at that speed it
(47:53) will be 115 and if you get a peek at that you know boom it comes off it's a little display on a thing and right we we made 115 but you know it actually make usable quantities forget it would take you know the entire resource the resources of my country forever you know to get a gram or so how much was up there well they say there was 500 pounds of the material now was that recovered in a craft was that separate they certainly didn't synthesize it but you know where it came from I I have no idea but it but again
(48:30) Los Alamos had something to do with it because they they renamed it la1000 I know there are shipments back and forth there but I I think it had to be from what I understand it had to the if you assume a cylinder of this material it has to be machined into a cone and that cone sliced uh well it has to be stacked first like a bunch of quarters stacked on top of one another then machined into a cone and then sliced to be usable in the reactor now all of that had to do with the metallurgical guys and we weren't even
(49:04) allowed to know why but I knew that was necessary for whatever it's worth reactor doesn't work without 115. did you ever do an experiment to try some other

kind of fuel no no I mean I mean quite honestly we really didn't know what was going on there I mean we had a basic idea of at least we thought again we just had a report to what was going on so it's not like you can never say you know we really don't know we've been working on this two weeks you better come up with something so it's uh you know like we
(49:34) think it's a we think it's an accelerator and you know we we've identified that that's you know 114 115 once again it looks like it's 115 it's an element and you have to explain this stuff to guys that absolutely have minimal scientific background and just try that when you're dealing with stuff that's not even you know from the earth so how does it work I mean yeah how does it work um what you learn you get a piece of it a triangle it's in and and how does it look it really you just put the I I wish
(50:09) I had that model that uh is it really okay um you you just put the the fuel in there you there's a there's a little cap that sits on top and then as soon as you put it yet nothing happened but as soon as you put the lid on it turns on there's no on switch Yeah it's just it's like it attains resonance or something it just is on which makes you wonder how does it work in the craft because no one's taken the lid off because in the craft it sits on the ground and there's a conduit that sits over it and goes to
(50:42) the top of the craft so but it's not clear how anything works in the craft and it generates gravity oh yeah yeah it generates its own graph artificial gravitational field and that lifts the craft off the ground we've had conversations uh in private about how this accounts for some UFO cases I mean it it in effect achieves invisibility in a sense you could be saying oh yeah absolutely yeah because light it will bend it around there and and if sorry I didn't leave that I left out that pretty important observation when the craft was
(51:22) up I mean you could walk underneath and look straight up and you can't see the craft until you step to the side and it becomes visible again it's quite it's quite amazing you know so it it bit well it bends it bends live just like uh you know you could see on a hot roadway in the summertime how how heat would affect that coming off of uh you know but here you're you you're in a much more controlled situation and the way the shape of the gravitational field the artificial field around the craft if you
(51:56) look at that and then we're able to stand at different Vantage points you can just look around it now this isn't something new we know this from you know looking at far away Stars uh that they call it gravitational lensing where a star might be over here but because we're looking around another star it bends light and you know but here again here is an artificial Source a machine that does this and that's everything but yeah like I said all the science fiction Things become reality there's your
(52:28) invisibility cloak there's your you know impenetrable force field here's your field propulsion system and you know here's you're even beginning to temper with you know potential time travel it occurs to you hey this could work not only in space but underwater maybe that's why the Navy's interested running the program I mean that it's odd isn't it that it's a U.
(52:49) S Navy around the program out there you know that never occurred to me huh no I don't I swear to this I never even thought about that thing operating underwater I wonder how it's fine though wouldn't it I guess I I don't know I don't I mean yeah I didn't understand why I wouldn't but um it'd be interesting to see what the water does you had said I remember that it and I could barely get my pointy little head around it when we were first talking about this but that uh if somebody had one of these and were out in space and
(53:20) wanted to come to Earth in essence they're not propelling themselves toward Earth it works differently right there yeah yeah in fact the two modes that the craft operated on are um get they label Delta and Omicron configuration Delta meaning using all three uh amplifiers and Omicron obviously meaning just one and the way the craft would work is uh get rid of my reactor here now I'm going to draw really bad Flying Saucer all right so normally the um you would have the three amplifiers hanging or if the three emitters hanging down in
(54:17) Omicron mode a single one with slings swing sideways and you would have the other two sitting like that now what happens is the two that are facing straight down essentially act like a pedestal where they just keep the craft steady the one swung out to the side creates a gravitational Distortion off the edge and this in in urban crime configuration these things really fly unstable they're they do not look like uh in any sort of high-tech uh in technology it uh to give you an example if

you put a bowling ball
(55:10) in the middle of your bed and two feet away you take your fist and you push it down the bowling ball rolls towards it that's exactly how the craft operates it focuses the the single emitter and creates a gravity Distortion essentially a divot and space time and the craft rolls forward you know in the Distortion so that's basically how the thing moves around so and this is opposed to our conventional propulsion whether you're using uh you know a jet a rocket the propeller we always take something and accelerate it
(55:45) out the back using the action reaction principle and you know push forward and these guys are doing it exactly opposite they're creating a distortion in front and they're tucking towards it when Element 115 of course when you're talking about this stuff it did not exist we're so years away from it but you said you had told me in that first interview look uh we believed that there was an island of stability somewhere 115 116 somewhere in there uh and you know maybe someday we'll be able to make it
(56:13) it didn't exist then but they've made it since tiny little piece as you said with that news Adam's out people say some people said aha Bob was right others people say aha Bob was wrong because this isn't 115 at all it doesn't behave anything like what you said there's not 500 pounds of it that's for sure so and there's not 500 pounds I mean like they had up there we couldn't make 500 pounds of it no no obviously not and well I mean you're talking about physical quantities and also you know
(56:40) atom quantities from fabricating it but uh yeah I mean it is the the island of stability isn't something that we came up with I mean that's been theorized since probably the 50s said it you know it just looks like in the uh you know physical makeup where it's just a geometric stacking I guess of protons and neutrons it's certain combinations they're stable and other combinations they're not well it you know it looks like further up in the Periodic Chart what if we haven't ever had anything with 115
(57:13) protons or something in that range looks like that might become stable and you know that was actually in Our Minds when we're trying to identify I said boy this thing is off the charts you know is it are we looking at the island of stability and um I'm beginning to get lost here well I was in circle are we going with this the 114 that was synthesized oh yeah so the 115 again you know I think they what did they whack together uh calcium and uh I don't know business or something like that but they did a they did a unique
(57:44) collision and accelerators and they made yeah a few atoms of it and they went this is you know 115 and it decayed now obviously this is a stable material but um a different isotope yeah it's like I said there's uh you know we have hydrogen that's uh you know one on the Periodic Chart just like 115 is 115 it has one proton 115 is 115 proton well there's hydrogen which is protium which we're all familiar with hydrogen gas it's flammable it's stable it doesn't you know Decay but there's
(58:15) you know two other isotopes of hydrogen there's still hydrogen still element one and you know one we call deuterium there's two protons it's uh it's also stable um but it's different it's heavier and there's another one called tritium which is radioactive and it decays about Half-Life about 12 and a half years um again they're different isotopes they have different numbers of neutrons they have the same amount of protons so it's the same thing no doubt 115 has the God knows how many Isotopes
(58:50) um we know at least one is stable there's probably you know several that are unstable and you know again they if they keep playing around with it and I don't see why they wouldn't I'm sure they're going to find a stable isotope and oh idea of um anti-gravity propulsion we've heard it from scientist that guy does lizardas know what he's talking about that's impossible it violates this and violates that and you've heard that you've dealt with it I mean yeah Tom was one of the guys that say it's violates
(59:20) this you would have said that before yeah yeah you would have said things about UFO people this can't be I mean you were pretty dismissive right which is the way I shouldn't be you know and I I give a lot of people you know crap about that too because you know look if you're gonna if you're gonna work in a scientific field you're going to be a scientist and you know in any capacity the most important thing is to keep an open mind because uh you know look back in time they said you know 30 miles an
(59:49) hour is the fastest a human body can possibly take and that was written as a scientific fact I mean that's what I disbelieved then and they all agreed on it and you know how many other things are we you know they said this is the way it is you

you cannot do that you know you have to keep an open mind look flying saucers I used to laugh at John Lear and have a good time of it I still do but that's a different story but um you know but um I have to give him credit you know he was talking about you know they have flying
(1:00:18) saucers up at the area 51 really John you know I just be an adult now but um you know there's a lot and as far as the technology yeah it violates a lot of what we know which concerns me because some of the things we know are laws and the reason we call them laws and not theories is because they've been verified time and time again you know with experimental proof and you know that's supposed to be cast and stalled so you don't want to see anything that violates the law to see any aliens up there I know several of
(1:00:57) the people who submitted questions wanted to ask about aliens I mean the only if you did see you know this came from yeah that now the diagram you want to call that seeing an alien the only other time and I know it's because this one incident I told that one time I was being let in and dragged my hand across the Craft um we went in that door there's a corridor to the right and you immediately turned to go to the labs well as you turn to the right there is a door and it has a small you know a window on it that has the
(1:01:29) little wires running through it I peeked in there as we turned the corner and that's when I saw I I've told you this before there were two guys there and a little tiny thing that they were looking down at you know and and I just walked by told to keep my eyes forward and you know I I think I told Gene that and a couple other people and I said well you probably saw well not the gene said that but you know what you probably saw an alien or whatever I don't think that was the case I I think even to this day I think they they had a
(1:01:59) little dollar or something because they were trying to find out you know whatever size creature would fit in the craft and you know they were you recognize the term the kids did you ever hear the term the kids yeah and that's referring to the creatures that ran the craft so they called them the kids wherever these yeah craft came from but you never got an answer how we got them or no that was just incidental talking that you know and so had nothing to do with me you know you've heard all the stuff over the years they of those who don't
(1:02:30) believe your story they believe you're either making it up or it's disinformation that you're working for them out there that's spreading the story so you're making it up no no you couldn't make it up now really no I'm sorry that's way too much for me to handle um no really I don't and I don't look a lot of people are into you know UFO stuff and I just kind of exploded on to the scene and said hey I don't follow UFOs I don't follow reports I don't know who's researching
(1:03:06) what I don't know the names of people involved and um but on the other hand you know I know people make their living doing this sort of thing and um you know if I just pop in one day and say hey this happened to me I did this and this and this but you know I'm I'm out I'm not part of this um I can understand how that can interfere with their you know income stream or their belief system or whatever and they need to attack me but look I'm sorry this what I said happened absolutely happened period that's it
(1:03:36) [Applause] you know I've been speaking about you for a long time a couple times a year ago I'll explain the story from my perspective and and defend you because it deserves to be defended and I believe the story as as it's been told but you know you go out there and you hear all kinds of of crazy theories about uh what you're doing and who you work for and everything and um there are those who have a lot of trouble with um I can understand that look if the tables were reversed I honestly who could not say I would believe my story
(1:04:17) look there's not enough I can provide enough information and so in some cases won't to you know to back up my story and um you know if the tables are reversed I I have to take that other side and go look unless you can you know provide more proof um it's I just can't say that you know I'm behind it and I I have to agree with that so why do things go south for you it seems like the a scientist's dream to work on a program like this why in the world would you walk away from that or tell anybody else about it do you were
(1:04:52) you picked because they figured you would tell somebody about it no I mean that that doesn't make any sense well um I mean well what happened was I mean it was kind of more of a personal nature between my wife and I at that time now it's not like I had a nine to five job and they said you know come out at these hours it was it was really a sketchy setup that they would call me um the place at EG and G by the airport what what was that I was on Sunset Road over yeah I I think it was

called something I can't remember anyway they
(1:05:29) would call me and say you know it's now 8 45 by 9 15 we expect you to be you know at the building and and board the craft and you know the airplane yeah so um and it would be at a moment's notice like that well and it's like I was so really thrilled to be part of this project um I was keeping with the whole program like I couldn't talk to my wife you know I said look I'm working at at the test site there it's on I said it's on secret nuclear stuff you know and that's it um but again I get calls in the middle
(1:06:08) of the night she can't hear who they are and I said I gotta go it's work you have to go to work at eight o'clock at night and you may not be back you know until the middle of the night of the morning I said yeah that's just the way it goes and that happens you know time and time again and you know if the phone picks up and you know my wife picks it up they hang up you know and um you know so then they call back I pick up the phone yeah it's Bob here and uh yeah okay two hours I'll be there well after a while that
(1:06:37) seems like something else in fact maybe not after a while but pretty quick and um you know I mean it's something I could laugh at now but it it was not funny then and um you know I um I kept with the program never said anything to her and um you know she thought I was having an affair and yeah you know as time went on going back and forth um was she she really didn't have a job or anything to do so I started since I was making money from here now I got her flying lessons down at McCarran airport and to give her something you know to do
(1:07:19) and uh anyway she started having an affair with the flight instructor so um you know I had no knowledge of this but you know part of the requirements of the project and the security requirements really were to have my phone monitored now I'm going back and forth to work and now they are listening to this affair progress on the phone that I know nothing about and you know one of the things one of the main things is that you'll be you know mentally and physically stable and they're really concerned about that
(1:08:02) so it reached a point one day where they didn't call and they were kind of in a quandary at that point going they you know what are we going to do with Lazar we got to see if either this you know Affair Fizzles out or they break up or whatever so you know that I just stopped coming and I stopped getting the calls I called Dennis I don't get return calls and you know days are going by and you know now Tracy's going back and forth and flying and doing stuff she's busy all the time because you know she's got a boyfriend
(1:08:37) and you know I'd be getting to get now beginning to get really concerned I mean these guys are so over the top of security and you know we want to know everybody that knows this material we want to know where they are 24 hours a day so on and so forth they're not even calling me what's going on and so I started getting concerned and I reached a point where I don't know where the breaking point was but I I think it I'm pretty sure it was Gene Hoff the first you know guy that you know I talked to and um
(1:09:08) and said you know kind of spilled my guts hey look this is what I've been doing out there and you know told Tracy too and um hey let's go see him yeah well I I had I also had when I know we're skipping over lots of stuff but I had um there were you know charts of the test flight days and which days that they were going to go over the mountain and do that what they call high performance tests so those days statistically on that Highway they went by the lowest number of Travelers was on a Wednesday night so Wednesday night I
(1:09:41) think eight o'clock was like the test night so I thought I knew how long they were going to be in there and all that stuff just from memory so I told these guys I said this is going to be an unbelievable story but this is what I've been doing you know I can go out there and show you guys but I'm starting to get concerned that they don't like me anymore for some reason and that I'm just gonna like disappear um so I just want somebody else to see what I had done and gay he's just gone one day and at least you guys have a
(1:10:11) story and so we go out there take everybody and uh well you know the story we go out it's yeah eight o'clock did everything happens like I said and um you know lands and then uh you know now it finally hits Tracy oh my God he wasn't having an affair and so you know if she breaks off the Affairs you know and it it is just a giant mess it's embarrassing yeah I messed them up but I mean it is the human side of the story that that yeah but the other Human Side as I alluded to it and my talk is that
(1:10:45) there's stuff that happened to you in that period after after they caught

you the third time they went out they got caught and so they want to talk to you and they're very upset Dennis in particular the guy fell yeah so they want to talk to you and and then a whole series of really bad things started happening share with us a little bit about what that period was like because it's hard to it's hard to convey it and that it was really all on but it was real yeah I was um the uh well I guess it
(1:11:14) started when we got caught you know when we got caught that time um I can't quite remember which time that happened but you know we had we had gone out again with the test flight data two times and been there on Wednesday nights and Gene huff and we had an ever increasing amount of people that we began to trust to go out there and uh which is getting really ridiculous I think we even brought a motor home out there we're parked out on the road because nothing uh now you know once you start getting away with
(1:11:51) something you get a little cocky and thinking of why they can't see us so we're out there and you know Gene and I kind of joke around sometimes and say stupid stuff you know pretending that someone's out there listening so we're sitting out there on the dirt road the test flight time is coming up we're sitting leading on the front of the car and you know I it's a junior says something to the effect is well I hope they out there they don't realize that we've got those other 150 you know team
(1:12:24) members out back with you know automatic weapons and everything and they're getting ready to storm the base and I said they can't possibly know about all those guys you know and so right after we said that not now it's Pitch Black it's you can't see your hand in front of your face not 50 feet in front of us who saw a little green thing fall on the ground and roll to us and they're about saying there what and as it turned out there were a whole bunch of guys standing there in the dark watching us
(1:12:52) through night vision scopes and after I said that a guy dropped one and it rolled over to us they turn on you know turn on the lights okay everybody come with us and you know that uh and I had told the story about the break-in the car I mean they I remember going to your house after a break-in and you had the uzi out and you're ready to shoot somebody and then the break-in at the car at the gym that stuff really happened it was really going on oh yeah that was with Mario the guy um you know it was a truck driver now he um
(1:13:25) was going to uh and we were just working out at a local gym near us and I was at uh this was at the probably the highest paranoia stage and I had a you know and Uzi in the the front and you know Mario and I got to the place and I said okay it's loaded here we're safe to go outside and we opened the car doors we close them and we may even make a joke about it we locked the doors we try and open them okay okay the car is secure we go in there and you know joking you think we'll be safe for half an hour and
(1:14:00) yeah I think we can do it and we you know we come walking out there's all the doors the trunks open the Boozies laying out there my wallet you know and we just looked at each other this is impossible you know but uh yeah that that happened Mario tells that story probably every day you got some point you decided to talk to me you know we did that interview in silhouette I can't quite remember why what that well and how that happened there was just too much going on but I know at some point that was really again uh Lear was making a a big
(1:14:32) deal he started naming off the people that he knew that suddenly disappeared and he said you know unless you talk to this guy George Knapp you know and if you go out on the air they all you know they'll be afraid to talk to you I said John they're not afraid to to do anything you know it's but uh I called you anyway or he did and then it kind of hits the fan they're really mad at him and and then that's when a lot of really bad stuff started happening and then we we decided to record an interview just
(1:14:58) for safe keeping in case something happened to him so it was a couple of hours on tape and I under the condition that I wouldn't use that until Bob said okay it was eight months eight months until we got the okay and I worked done him every day to talk him into allowing me to use it and tell the story I assuming he was still alive and on the day that we were ready to broadcast it it was part six of a nine part report uh Bob suddenly changes his mind and grabs the video talk as you were going to say who I was yeah we're getting ready to
(1:15:28) identify him I'm worth 10 minutes from going on the air he's we're wrestling over the tape he did [__] as a UFO profiteer and Messiah coming forward and making up stories he was a very reluctant witness I can tell you um you regret

it I mean we heard a little bit of it at times you certainly regret it because it's it's you know a lot for my life I mean it's changed yeah it has it um not it's not good this is hot no I mean that's what's kind of entertaining to me people you know they go oh you made up
(1:16:00) some story I bet you're making all kinds of money on there where does where I want my can cut but uh no it right you know to be honest I did have I did have the opportunity I mean new line studios in Colombia you know when they heard all this I mean the president of Columbia Pictures came down and you know you well you're in there right yeah and um yeah you say we're doing this and you know and they started giving me screenplays and like no you know um you know like today it was as a James Bond movie they had me running over the
(1:16:32) tops of cars it's like look hey do you tell the story how it happened or just or leave me out and just make up a UFO story but you you can't it has to be exactly what happened and so it was just constantly everything being turned down it's like you know what we're not doing it I mentioned before about me going out and doing presentations about you and one of the things I always said is that look Bob doesn't show up at UFO events he's not cashing in on it there's nothing wrong with those who do if you can make some
(1:17:01) money at it more power to you because it fuels the research but um you've you've never done that before that's not the case anymore why did you decide to come here right well I really didn't you know I um you are here yeah I know I'm here but um now I know a lot of people mentioned you know a 20 luck there's this big UI and I've never been to a UFO convention I mean I thought they were like Star Trek inventions people walking around with antennas and stuff but um you know I didn't want to be have
(1:17:33) any part of that and um you know what uh to the people that arrange this in you and no this is the class thing just come down there's 25 years once in your life just say something and I you know well everything I've said has already been said either on the internet and why would anyone even care to just hear it again so I finally just said okay fine just to stop you from hassling [Applause] well the the way [Applause] but it it really didn't end there and that was just a moment of weakness and then about you know about uh and one of
(1:18:21) the reasons why is because it was like two or three months away so I just yeah for February I'm fine whatever you want to do and then and then um anyway a few weeks went by and it kind of hit me that one day that date's gonna come around and I you know so I I was more than that maybe it was uh you know three or four weeks or something like that so anyway I I called them back here and I said no you know I'm really thinking about not doing that and now I'm I'm sorry and you know I told my wife and George and you
(1:18:53) know and I really didn't realize there were this many people that were interested and you know they said you can't back out you know we've been advertising there's going to be a lot of people here and you know that's when I said you've got 15 or 50 speakers or something it's just one list that's going to be here but um seriously you don't recognize so you don't understand that people are so interested in seeing you and hearing from you it doesn't register why not no
(1:19:19) but I I appreciate that I do but um I mean that you know they made that clear aside from the fact that they'd sue me if I didn't so you know I said in a nice way yeah nice way and besides I will go so I am here well the fact that you said that you would do it because I keep pestering you I take that as no no so I did you know I I did give him my word I did and it's not like I'm you know it's too bad I well and then I told you it'd be great it'd be cool well no problem um you know when you look at you heard
(1:19:51) my the presentation about how far the story has traveled how many Industries and and businesses it is launched the Extraterrestrial Highway that's from you um that Las Vegas 51's baseball team yeah they feel boy people jumped capitalizing on it really really quickly it's amazing I mean Area 51 mentioned in movies and some Tom Hanks movie or you know Independence Day or something it's it's overwhelming yeah I guess it's uh it's hard for me to grasp you know it's almost um it's I don't know how to describe it so
(1:20:27) this the experience here so far has been pretty good for you might you do it again or might you open up a little bit or oh but there's nothing else that's the whole story you got a list of names then I think you haven't given me yet no I mean look I believe me I could really make it easy to verify a bunch of things and I do not want to do that at all it I really would prefer people don't buy the story because it makes look my day-to-day life is has nothing to do with UFOs and being

the UFO guy is a big problem it's hard to
(1:21:04) get contracts and beat you know taken seriously and I you know I don't want the last thing I want is you know a movie coming out or something like that it would be a catastrophe well it'll be a great movie if they made it right well I don't know you know it was amazing though a year or so a couple years ago the there's the story about this Russian spy that was killed by use of polonium and oh yeah they called me right national network people want to do a story let's see where can we get polonium and they find
(1:21:33) online well here's a guy who sells it it's Bob lasagna yeah yeah yeah they're at the house the first day but um do you get stopped I mean you know got people stop you on the road I know you get emails and phone calls well emails you know people asking you know questions that um you know they really aren't up on you know the topic at all it said you know has anyone tried to you know duplicate one of these the crafts well you know that was the whole aim of the project there and but um you know they're just hearing that there's a guy
(1:22:06) that might have worked on flying saucers and you know this is his email address but by the way I'm not on Facebook there's these guys that pretend to be me and I keep getting these emails hey thanks for friending me on Facebook what are you talking about it so I hope well it's I think this is our time we're up I've been asking questions from the submitted by folks including in this and uh you know I think that people are just excited to hear it directly from you tell the story and again I I certainly
(1:22:37) understand why people would have a hard time believing it but I do it's true yeah it really is it really is but really at down yeah exactly that way like everything [Applause] I want to thank you uh thank you all for coming hope you enjoyed the conversation with Bob and uh maybe I can pester him into doing this again sometime thank you very much

Bob Lazar Q&A with Jeremy Corbel & George Knapp - YouTube

Transcript:
(00:02) [Music] imagine a place between shadow substance a place where the world is just thin not many pass through here they just tend to get burnt up infected you say knowledge it's corrosive like a an acid the mind can unwrap so you're going to want to keep your wits about you you got to show grit and patience [Music] they say the secret of the finder sometimes that's true you better hope that's true welcome to the world extraordinary [Music] beliefs mcminnville yes yes i haven't outlived my welcome here thank
(01:07) you again for having me guys what an incredible really exciting weekend just as a fan and i'm very excited bob lazar is here we did it man we flipped the script thanks to bob for deciding to tell you his story again we will have a live q a there are specific things we'll go over you haven't heard before we're going to get very specific today but write really thoughtful questions you know not manifestos questions right yes questions and then we'll do our best to to answer them enjoy the film we'll be
(01:48) right up here on stage after and thank you guys this story is extraordinary especially if it's true and it all started in the desert just north of las vegas a local scientist who worked at groom lake said to be where top secret weapon systems have been tested over the years he has asked that his identity be shielded exactly what's going on up there what's going on up there could be the most important event in history [Music] physical contact and proof from another another system another planet and other
(02:21) intelligence what would happen to you if the government learned that you were giving us this information [Music] he just wanted to stay alive maybe this has been kept from us for a good reason sir how do we know you are who you say you are my name's bob lazar i'm known for working at a classified base and reverse engineered alien spacecraft i have no motivation to lie the science and the technology can change us we've always looked to the skies for answers instead of looking into ourselves thank you bob for letting me make the
(03:23) movie this story spans as you know 30 years so thanks for watching the movie

let's jump directly into it it's been said by george many times that bob lazar is a reluctant ufo messiah i want to hear when you were going to be put on the news and you were nervous about your well-being how george knapp had the tape and you said okay let's do it and the second he's putting in that tape there was a wrestling match you did not want your name and face out there so each of you i want to hear your side on
(03:55) stage before we start the agreement was that we could film all of this back in the 80s and that at any time if i change my mind george guaranteed me we'll just pull it that's it there's no problem so we did film all of it and things started to get tense and i began to get worried as time went on and it finally came to the day where it was going to be aired on the five o'clock news if i recall and you know kind of near the last minute but not the last minute you know i decided you know what let's not do it i'm not
(04:36) going to go public with this and uh george just said no we're doing it and uh so i tried to grab the tape from george and i think that that's about all i remember i don't know where it went after that well i wouldn't call it a wrestling match it was more of a tussle and i won um yeah uh but just context of that is that uh 30 years ago this week this wednesday marked 30 years since the dentist interviewed the anonymous interview and it's the synchronicity of it with the anniversary for this uh
(05:13) festival and the 30th anniversary of that event that changed our lives and the life of area 51 itself is amazing it's almost like it's scripted but uh we did that interview with with bob as dennis i had not met him it was a last-minute thing you know it was somebody had canceled i'd been hearing about bob from john lear for a long time somebody had canceled for our five o'clock news and we um said called lear hey can your flying saucer guy that area 51 guy can he do an interview i had no idea what was
(05:43) going on in bob's life at the time that he'd ran into some trouble with his employers and was afraid for his life and was surprised when they said yes we put the five o'clock interview on this story comes spelling out all of our jaws were dropping the general manager comes running in is that real the news director calls me in is that for real the phone's ringing off the hook all hell's breaking loose we don't know if it was real but we decided to find out and so the next weekend we go to lear's house to meet
(06:14) lazar my news director and i bob we're going to put him through his paces we're going to ask him a bunch of questions about his background figure out if we believe his story and we left that meeting on holy crap this sounds like it's true and if it is it's the biggest story we're ever going to cover it was also the riskiest story we were ever going to cover because our reputations were on the line individually as journalists we could be ridiculed it could damage the reputation of the station so we're
(06:41) going to take our time and check this out i had to talk bob it took me another month to talk bob into getting a safety interview going on camera not to be aired just to have it in case something happened to him because there was a lot of strange stuff going on at the time threats that were being made to him we were all being followed around our phones were tapped it was a very tense time and it's hard to convey to people 30 years later how real it was but it was real we lived through it what was going on so we had that first interview that was
(07:10) our safety interview and i promised i wouldn't air it that was just in case bob got bumped off or something and also as a measure protection to let people know that we've already got the interview you don't need to kill them anymore we're still going to tell the story and then we did another interview in november for this series and i remember bob stoutel and i were walking out of the meeting with with bob and saying gosh we could do a multi-part series this could be like five parts or something we end up doing
(07:36) two weeks each of the stories were you know a typical news story even in those days is a minute and a half two minutes these stories were 12 13 14 minutes long and it was the biggest highest rated thing that's ever been on television in las vegas so more context we ended up doing a two-week series part six is where we're going to reveal the identity of bob so we're five parts into it setting it up history of area 51 and ufology and all that stuff we've already teased it over the weekend monday's the day we're going to release
(08:08) the identity of this mysterious dentist character and the whole world was trying to figure out who he was and that was the day that bob's in the station and uh trying to grab the tape i've changed my mind i said no sorry we're too we're too

late into it i mean literally we were editing right up the last minute and i am taking the tape down to the edit bay and i'm going to run out to this studio and we started tussling for the tape and wrestled a little bit and i no it's too late we're too late into it and
(08:36) ran down the hallway stuck the tape in the machine and then i went out on set and history was made there's a lot i want to cover today based on your question so let's rapid fire go through them bob do you feel that this movie accurately tells your story yeah it really does i mean i had a chance to kind of go through it and jeremy assured me unlike george that it at any point you know uh if there's something that why said wasn't accurate i just said it had to be factually accurate um it didn't matter if i'd liked
(09:21) something or not uh just as long as it was was true but yeah yeah there was it certainly told the story up to that part i mean there's a whole lot it didn't say uh but that's way too much to fit into an hour and a half and you know there's like two hours of bonus materials and i'm still releasing footage to clarify certain points but just to be very clear bob gave me absolute access to his life was able to interview his mom you know his friends that all went through this a lot of people that didn't go on camera
(09:52) couldn't go on camera on behalf of bob because of whatever reasons they had so a lot of the information i gave you everything i could in the movie the only restriction because as i'm looking this you know i'm looking to be honest you got to look for holes i'm looking at bob i'm looking at a story and he gave me complete access his archives of tapes go ahead and take him document cell phone who do you want to call he was helpful in every way he could for me to help clarify his story the only thing he said
(10:23) was do not twist it more it's got to be accurate that's it and so hopefully we achieved that and you got a taste of that and there's a lot more coming through the bonus materials okay this is interesting one because we have commander fravor in the audience who i'm really excited to speak with soon i'm grateful that you're here commander bob do you have any thoughts on the recently revealed ufo uh videos and program detailed by the new york times so meaning the tech and gimbal the tic-tac-toe seeing those craft you have
(10:58) any thoughts about your experiences and and now the acknowledgement of a reverse engineering program the attempt to reverse engineer propulsion system as far as how they're looking at it but more importantly the gimbal and the tic tac the movements of those do you have any thoughts on that yeah very much so i mean they they move they behave i mean they act exactly like a gravity-propelled craft would it's to me it's a very vindicating thing and speaking to commander fravor and you know looking at the tape and you can see
(11:30) the way uh you know crap move as he uh mentioned the way it moves like a ping-pong ball in a cup and bouncing around something that doesn't have inertia i mean propulsion like this is not possible with our technology and probably won't be for a very long time but uh yeah these crafts seem to operate exactly like the craft that i worked on so it was uh i find that really fascinating i'm i'm anxious to talk to him some more about exactly what he saw yeah people are making that connection now because look in 1989
(12:02) george knapp broke the story with bob government program attempting to reverse engineer ufos remember we had been told in 1969 that all ended that is proven to be a lie by the pentagon now by their own admission and thanks george for proving those videos were real through the right process so now through the lens of 30 years not only the reports of how these things move in the videos of how they move but we're living in an era where we now know the study of ufos has been and is currently live and strong so we have to account for that when we
(12:36) look at what bob has told you again bob is just telling you his story take it or leave it it's better for him if you leave it because his life and his wife is great and he doesn't need more interruption but he thought it was important enough to untwist the knots over the years that have been twisted so that's what you get hopefully in the movie okay okay this is interesting what some some of these little obscure questions that bob didn't cover in the film what is the history of the alien human interactions according to the
(13:10) briefing documents that you were able to read when you were there what is the history of the kind of human alien thing like what did they tell you about the they didn't tell me anything i have to make a very big distinction between the information and technology i had hands on and could verify and you know analyze and briefings that i read that had to do with other facets of the project which i can't

i can't say if they were real i don't know why they would be other information i read in the briefings was
(13:47) accurate so but there was some information from other groups everything was split into so many different groups that some dealt with metallurgy some dealt with you know the origin of the craft and information was so compartmentalized we couldn't talk to the other groups which is a really ridiculous way to have science move forward you have to have communication so they're uh the way the military handles stuff it just doesn't work with research but they were so concerned about you know somebody getting more
(14:22) information than they need uh they kept everything separate but in any case they alluded to the fact that there was there was some alien human interaction at some point but um that they had been involved with us for a long time that's the allegation yeah it went back it went back very far the crabs had been here for like ten thousand years or something like that right you had mentioned before kind of new new information that uh you they were they gave you the impression that the craft that you worked on and the other ones
(14:58) were from some sort of archaeological that's the impression i had it was for more of an archaeological archaeological dig it wasn't like the aliens land and said here is one of our craft it uh you know i think it's just something i don't know how we came across it um but we did but they were they were very old i want to get into these specifics that for 30 years people have asked and bob has explained to me but he just haven't explained to you so let's get into these little details you mentioned in the
(15:25) documentary that you have dismantled devices from another civilization what fasteners methods are used to hold it together screws clips whatever can you tell us yeah this is something that fascinates me i mean back in back in the 80s there was no 3d printing so it was it was a complete mystery how this stuff was put together the craft itself there is not one single right angle anywhere in any part of it every single thing has a radius of curvature to it and i think in the 80s i said when talking with george it's as if somebody
(16:04) made a big model out of wax and then heated it just a little bit so it all melted and then let it cool and that's the way everything looked it had everything in a smooth interconnecting look to it there were no fasteners anywhere there were no seams anywhere and uh you know nowadays you think well they had some gigantic 3d printer i guess you know using alien technology they could make it that way but i didn't even think of that back then it was just a mystery how it was but i mean was what was even more so of a
(16:36) mystery is that there's no wiring anywhere you know the sub-components from you know a reactor that tremend generates tremendous amounts of power and the other sub-components the amplifiers and the emitters there's nothing connecting them and when you remove them and move them away they still work it's it's unreal i mean it is absolute borderline magic so it's it's nothing that we're gonna you know duplicate and we're going to add this to an f-16 or something it's it's going to be a long time before we
(17:09) know what the hell is going on so george has said to me from the very beginning look if people don't want to believe bob they're going to find a thousand ways to discredit him because that's they don't want to believe you so go ahead however you're if you deny the evidence that we have then you're missing the picture and some of the greatest skeptics online you know tend to fixate on these little things and one question that's been like looming for 30 years and bob and i talked about it for
(17:35) like a minute and people are asking well how did you turn the reactor off bob if you if the reactor is on and you're putting your hands to it there's a gravitational field right and you can't push chance how did you turn it on or off and that seems to be one of the things like the people that want to just not believe just bring up it's not even in like a nice way just asking a question so publicly just how did you turn the reactor on or off bob are they implying that it can't be turned off or
(18:03) yes the implication is with the gravity field as described oh so you can't reach it okay that's that's not how you turn the reactor off you don't touch the reactor i mean there there are actually a lot of ways to do that but the way we most commonly turned it off is if you take one of the emitters and rotate it i don't know what the angle is i think it was like 80 degrees or something but if you rotate it it the reactor shuts down so it's kind of a load sensing reactor and rotating the uh emitter to that angle

(18:37) at magical angle whatever it was um that's like a null position the reactor shuts down and that's how we turn it on and off but i mean there's there's not an on off switch everything is very fluid and operates when you really don't think it will yeah so how has your life or business how has your life or business changed since the release of the movie besides the raid bob yeah yeah the raid was not a good okay let's think about the goods how has your life or business changed since the release of
(19:14) the movie or has it um not a lot you know it's a very specialized business we sell scientific equipment and you know radioactive isotopes and chemicals it's not like the average person goes i need some strontium 90. and you know they're not gonna so it really it's not an increase in business although you gave me some of the extra movie posters you had and we put them on the website so we sold some of the posters but i mean bob's having a sale on strontium 90 this week right no really it it hasn't affected it at
(19:48) all i mean that's not any big degree i should say the effect that i have seen is that uh now in light of what is known publicly around the world about ufos and about the projects that people are now not with their pitchforks in the audience they want to hear okay maybe he is telling us the truth they want to hear what you have to say and i think that's the biggest change you know bob is not profiteering off of my film he wants me to succeed as a filmmaker he just wanted me to tell his story accurately i just want to make that clear because
(20:20) you know the hardest thing that i see is that people try to vilify or try to attack the messenger to dismiss the message and that's what i've seen and i think it's ridiculous but here we go um next one small stature aside why else do you think they might have been called the kids remember they called they never said aliens they said oh they always said the kids yeah yeah yeah so why do you think they call them the kids that's just conjecture i mean it says small stature aside but that's the only thing i would grab onto was
(20:56) just because they were little creatures obviously but i don't know i really don't know uh do you think that you were part of some sort of covert operation unbeknownst to you at the time so you know how people say you were there they showed you like a movie set they faked stuff you know do you think you were part of a culvert no okay so how do you know how do you know that what they showed you wasn't faked and uh it's important for people to hear well first of all the stuff that i had hands-on experience with
(21:31) um it is impossible to fake things like that you cannot fake a force field you cannot fake time slowing down i mean these things are not possible at all and probably won't be for hundreds of years using our technology so that you know there's there's no doubt about the technology i was involved in was way way beyond what humans are capable of at this point the way the craft was assembled like i said you know huge amounts of power moving around without interconnections and i mean this is beyond what tesla would
(22:11) have ever dreamed of again these things are not possible so yeah a movie said that's ridiculous bob has always made that distinction to me i was like how do you know the difference between you know the documents and he goes what i had hands on is what i can tell you about you just said two things i want you to clarify force field and time just slowing down time or stopping times time dilation explain those the force builder when we had the reactor fired up it was one of the things that barry my co-worker showed me and i think
(22:45) i mentioned that in the movie you put your he said put your try to put your hand on the sphere or the top and you couldn't it just pushed back it was like two like poles of a very large magnet and you know without having a metal hand it was uh it was an amazing feeling i mean i was i was really excited at that point i said oh my god it's a force field i mean this is this is awesome um jumping over to the other question the time dilation when we had the reactor and the uh amplifier and emitter set up in the on
(23:21) the test bench we did a couple experiments and one of them was how we could get a watch to run at different speeds in the gravitational field so we actually saw time dilation so it was really fascinating one of the things i had mentioned a long time ago to george he lit a candle and you can see the flames stop flickering but it still emitted light which it kind of shouldn't have so i mean there are lots of indications that some of our physics wasn't complete in explaining what was going on so that's why some of the stuff is so
(23:56) important that it be released to the public but i just i don't know what's happened to this information or the technology since i left the project you know bob

and i had discussed many times over the years could this be disinformation of some sort were you shown something and they assumed that eventually you'd spill the beans and it serves as a diversion or cover story for something else that's going on out there that they wanted to divert attention away from something else that was being tested at groom lake that was the first
(24:27) round of disinformation accusations sent our way what would be i know specified than that yeah what would be more classified than flying saucers that's the first but the other thing is if somebody did have an idea in mind that we're going to put out this flying saucer story then we're going to crush him and crush his credibility and will distract attention from something else out there that was kind of a miserable failure because as a result of bob's story every media organization in the world
(24:53) beat a path to area 51's door tens of thousands of people have gone out there with binoculars looking in the sky for whatever it is that's flying out there area 51 is a really legitimate national security site the men and women who toil and obscurity out there have helped us win the cold war they protected our country they do great and important work and they don't i mean this is not a good thing to have so much attention focused on that facility it's still important they still do important work
(25:20) so if somebody came up with a plan let's put out a flying saucer story to divert attention away from the x project man they they got sent to to alaska or something and because that was a really bad idea and and again bob has always made a distinction between the technology that he had hands on and the stuff that he read because some of that is pretty wild stuff and it fed into narratives that were floating around in the ufo world at the time we've met secret treaties with aliens and we've given them permission to abduct
(25:50) people and they've genetically engineered us he doesn't know if that's true and he doesn't know exactly why he was shown that information and we've discussed it a bunch of times you know it's possible that maybe that was an added little bonus that they put in there just to fly it up the flagpole and see what happens but big secrets can be kept big secrets are kept that was one of the arguments uh about us tackling this series back then is that nothing this big could be kept secret well i will ask commander faber about
(26:19) that later today whether big secrets can be kept um because they can be you know 1969 project blue book ended we didn't know until december 2017 or at least the public didn't know that they had an ongoing ufo study that it was going on that millions of dollars were being spent that a lot of people working on it and we've learned since that there are other classified projects along the same line that we still don't know the names of we don't know who's involved and what their focus is so secrets can and are kept so i want to
(26:48) keep with your questions to honor the fact you wrote them i can't get through all of them but i i do want to bring something up right now the raid the fbi raid there's recently released agency assist reports and i just want to tell you my experience i make this film people accuse me of fabricating the raid to dramatize my movie i made it up i dealt with that for months they said bob's wife joy was this was the fbi agent that you saw the photo of the back of i mean just crazy stuff so there i am one day defending that i'm
(27:22) a documentary filmmaker i'm just i don't need to share it with you i'm trying to document and share with you what i'm experiencing and seeing so there i am defending that next day a friend of mine he was able hours before us to get a local agency assist report we were unable to get the fbi report bob said there was a warrant he goes i saw it upside down but you know they didn't hand it to me and we're thinking well we can't find it so we get this agency assist report and then like the next day i'm defending
(27:55) something else people are saying oh now it's prosaic it's just prosaic why there was so much law enforcement multiple agency wasn't the first time bob that uh people came to bob's place of business i said we were surveilled we have our own reasons to understand that the report comes out i thought there you go it proves what i said in my documentary it proves the scope the scale the forensic truck the surveillance and i'm like oh now i can relax on twitter not the case it is my belief and bob's and george's
(28:31) that they were there for 115. and we have very specific reasons that i can't prove yet to you but we have specific reasons to believe that's the case i want to hear from bob what was the experience i want to hear your personal experience it was swarmed with over 24 individuals from what i count but two came up to you at a door

two came up to you with something in their hand they were coming in anyway were they looking with hazmat teams no there's no hazmat okay so tell us tell us your experience though on this
(29:06) and i'll clarify later now when they first came in they gave me the cover story and yeah the place had 24 or so agents in there it was shoulder to shoulder you had to kind of move around there were so many people in there and which already struck me as being weird i said if you guys are just looking for receipts what are why did you bring everyone here and uh some of the other underlings they brought with them just gave me some paperwork they said yeah we're looking for you know thallium metal and i said oh
(29:38) okay i'll get it gave him a little vial here of thale metal and i said is this what you guys have to say now or just you can put that away so i went okay these guys are starting to section off the building into cubic meters and holy cow what are you doing they had everybody else working down below and then they took me upstairs we went up there then they had the guys jump on the computers and try to suck everything off of those and that's when they played me your you know our conversation which was we what we were
(30:12) talking about is where the 115 was hidden i want to get a little more specific about that the experience though they said hey bob they showed up behind you two people and they're they have a upside down obvious warrant from fbi and like you know we have a couple of people coming can we come in so you're allowing in two people and then all of a sudden there's about 24 forensic collection agents truck multiple agencies the report the agency assist reports proves this it also says that there was a hazmat
(30:44) team you know in the whole suits hazmat and they cleared the place to make sure that didn't happen that didn't happen right so i talked with zach about that too because in the film he he just said hazmat because that was he just told me out there you know that's the word that came to his mind he goes but it wasn't like that from what my account that i've heard from you and zach they appeared disinterested with this basic idea of toxic materials the whole thing was they wanted to talk to you upstairs
(31:12) is that correct yeah that's that's correct they wanted to talk to me and the other guys all they wanted was a couple sheets of paper so they did say to you out the door we're looking for receipts and an order form from a client of yours that's what they told you in their world yeah this is something that happened like two years ago right we had already been over all this so it was clearly just a cover story to come back in and have access to the property which is which is our opinion based upon our experiences
(31:40) but i just wanted you to hear from bob the agency assist report very odd it's very detailed and not only that bob's experience of what happened doesn't jive with what you're reading in that agency assist report in a lot of ways no it's a lot of that is not is not true we are convinced behind a shadow of a doubt that our conversation was taken in the woods at his property the day before but i just wanted you to hear from bob his personal experience of that moment because every turn we make you know there's people that just
(32:14) they'll never believe and they look for anything to dismiss it or almost worse they just believe without thinking so well either way they're welcome to dismiss it and then they ask me less questions and that's fine okay back to back to some details from the audience have you ever looked at s4 from a satellite image could you identify it great question about s4 like could you see it from a satellite image have you ever looked for it on saturday yeah a lot of times um and i do like to make that distinction
(32:46) it is not area 51 it is s4 area 51 is to the north although a lot of people relate them together they say s4 is part of the area 51 complex but that even that gets into some technicalities there because people say oh i know somebody that worked up at area 51 there's no flying saucers or anything like that up there and they're right there there isn't it's down at s4 there's only 22 people when i worked there and um as far as seeing it from the air yeah i've seen it many times there's
(33:18) a lot of people have sent me emails where they they think they see the hangar doors at the right angle and yeah you can see it on google earth it's it's not obvious but you can see the road that i drove to down from area 51 that's where i flew into and took the bus down and uh yeah i can point it right out to you in fact uh you your buddy john farat uh hired some time on a russian satellite to take a photo of an exact time that you said take a photo of papoose lake the americans wouldn't let him do it so he went to russia and they

(33:51) did yeah and he's and he's got the original uh negative and on that negative is a there and they posted it back in the days it is a circular metallic object hovering right over the mountain range of papoose have you guys seen that this poster they made it into a poster yeah it's it's great i mean they he hid it right on the nose it was awesome right when bob told them they should shoot that shot from a satellite from russia george knapp has said to me before we've and this is something that project i
(34:22) think we're going to do together we've learned more about the u.s ufo programs from russia than we have from the u.s and i think that's specifically because george took a trip during glasnost and porostroika and came out with some documents from the ufo program in russia which the world has yet to truly be able to see and i think we're gonna coming up soon next project george over my dead body oh yes yeah we'll do that project sometime yeah uh it he's not exaggerating i went went to russia i had a unique
(34:58) opportunity in the early 90s when you know they were trying to open up to the world they were experimenting with uh capitalism and democracy glasnost perestroika i read in the new york times that the kgb had opened up the lee harvey oswald file and i thought this might be the time to go and see if we could get uh ufo files so we did we worked on it we had a russian physicist who had been a national security adviser to the russian parliament and to boris yeltsin and we sent him he had been in the united states lecturing on nuclear disarmament at our
(35:30) national laboratories had nothing to do when he went back so we hired a company i was working for and and set him up and said go find people who were in a position to know about the russian ufo studies who have never spoken to journalists western or otherwise and let us know and it took him eight months and he set it up and i went in 93 to russia and i met a guy named colonel borisokolov ministry of defense who had been in charge of this russian program it was the largest ufo study probably in in history and for
(36:01) 10 years the every unit in the vast soviet military empire at the time was ordered to every anomalous aircraft or ball of light or ufo or strange object in the sky when you get those reports from military personnel fully investigate it get pictures get witness statements put it all together and send it to one central location and they did and we were able to acquire a lot of that information and interview colonel sokolov and basically he said they were doing the same thing we're trying to do he said we're
(36:31) we know that these craft have capabilities beyond anything that we've got and we wanted to study this to figure it out so we could gain an advantage over the us in terms of stealth capabilities we wanted to figure out the technology which as it turns out is the same thing we've been doing you know trying to figure it out to be continued bob back in 1989 when you were terrified and i just released a new video on my youtube talking about that time when you were scared you took friends multiple groups three
(37:05) wednesdays in a row you said guys things are really complicated for me it's one thing to tell you it's another thing to show you there's this little place called papoose lake it's not area 51 it's south there this obscure mountain range there's a test flight and i know when it happens and i'm gonna i'm gonna show you and you brought friends out there and you showed them those test flights as proof to your friends because you said to me it's one thing telling someone it's
(37:32) another thing showing someone right well working there i had the test flight schedule so that's when i took it was i mean the majority of my friends at that time we went out there and um you know the craft came up you know over the mountain range at the at the time i indicated and you know clearly everybody was amazed we watched it uh you know do some amazing maneuvers since we got away with it you know we did it a couple more times you know and right up until we got caught so and uh george and i have talked with i
(38:07) think everybody now that was in those sightings and they don't agree on most things in life they do agree on one thing that bob was right he took him out there and what he showed them they had never seen anything before like that or since so they also filmed it and there there's a it's an old 80s camera not like our iphones even iphones you pointed at dark you get a light however there's a gentleman in the audience that did some incredible analysis of bob's original footage of the flying saucer coming up
(38:40) over papoose lake with the new software and analytics that he did it it's pretty incredible and he had a question why does the shape of the craft in your video change from frame to frame so radically are we seeing localized gravity

lensing yeah that's exactly what you're saying because remember there's three emitters in that craft each emitter is producing its own gravitational field out of it and gravity bends light so it's just like taking a prism or cut glass ball and rotating it and you'll see different
(39:17) facets of light so the same thing happens as the craft move around and you see through one gravitational field to the next the craft's going to look different so it looks like it's jumping around or flickering and and that's that's exactly what you see in the video uh you're probably familiar with the m drive which is that propulsion device do you think this technology the em drive i'm sorry okay em drive do you think this technology is close to breaking the barrier for space travel no it's useful but i i am not
(39:54) that impressed with it i'm i'm sorry you know it's the hardest thing sometimes to ask i said bob bob look after all this time you know they've proven element 115 was fabricated and he looked at me as like yeah of course it is german but not the stable version i talked about there's you know dozens if not hundreds of isotopes or whatever he said he was unimpressed with the fabrication you know even though they called him when they were doing the experiments in fabrication uh you know a particle accelerator
(40:24) because he was unimpressed the next one i go bob they just came out gravity is a wave you're vindicated it's a wave it's it's not just a graviton like you said he goes well jeremy you know if you think about it i had 50 50 chance of being right so it's hard to impress bob he's a very skeptical dude so i think the most pressing question i saw on all of these cards bob what is your favorite pastime [Laughter] that's actually tough to say um well i don't know that's that's a
(40:59) stumper there i can tell you it's making laser beams and shooting off rockets come on yeah i mean probably building weird things i guess would be a pastime blowing stuff up comes to mind well i pyrotechnics i've been yeah i've i've done pyrotechnics since i was 12 so probably probably that or any kind of technical thing i love building stuff so i i tell her to say i i really enjoyed the making of the film because the breaks of our film were usually blowing things up or building lasers or hearing bob um you know talk on the
(41:35) phone to you know physicists from universities or government labs that are asking him about you know the the atomic weight of you know certain isotopes however they're explaining it is above my head but just hearing you do your thing my goal in my film it was not to prove bob's story bob said from the very beginning i i don't have everything to prove to you my story that's not why i'm telling you i'm telling you to save my own skin and i'm also telling you because he believes you have a right to know
(42:05) take it or leave it he's always been like that however however the movie after 30 years um it's really hard to ignore some of the evidence but most importantly what i hope you got from my film is what i got what i personally got getting to know bob and george told me this from day one when he challenged me in 2012 to try to get you know the bigfoot of ufology the elvis born again on camera the reluctant ufo messiah on camera when george challenged me to just show you who bob is to humanize him to show you his daily life
(42:37) the big question we're all sitting here with is he's telling you a story is he worthy of your trust that well no that's the question that really is the question if we can't prove it definitively it's telling your story you have to decide is he worthy of your trust and and the world has changed now and i think i would love to hear from george we are living in a different world now we're living in a world where we it is now admitted there are unknown craft of unknown origin flying in our airspace
(43:06) with impunity and an increased frequency and our own government is not only interested now but has been for a long time proven so george can you just touch upon bob's story and that well it's a really exciting time and things are starting to move so fast i mean two weeks ago the u.s navy comes out with an announcement it just is astonishing to say we're going to try to make it easier for our pilots to uh report ufos these encounters are increasing there there are dangers to aviation there are legitimate concerns legitimate reasons
(43:40) why we need to start making it easier for pilots to talk about that would be unthinkable uh months ago i think commander fravor who we're going to hear from later today probably had a big role in that happening in speaking to people in washington and letting them know this is going on and the fact that these reports keep coming in that there are a lot of them that keep coming in now dramatic sort of encounters and and things that are are undeniable and the fact that you know we've

we've learned a lot about
(44:07) atip and awsapp uh and you know things that uh that i had been allowed to know about but couldn't report for a long time is spilling out there's so much more that's still to come there's there's so much more to still to come and uh i don't know how much of it and how soon but it's coming you know and and the fact that it it's synchronized with bob's story and coming full circle 30 years ago he comes forward and now jeremy's film is out and and and all at the same time all these news events
(44:39) are happening where the doors are opening up a little bit i mean they're not wide open but they're opening up quite a bit and uh it's an exciting time i don't know if it's vindication i never felt like we needed to be vindicated but yeah it kind of feels that way it kind of feels that way yeah um so i want to hit a couple things too uh you know bob has always said to me like in private he goes look jeremy i i'm explaining to you the best i understood in alien technology i i'm explaining to you the best it was
(45:09) described to me and what i saw you know i don't have all the answers i'm sorry but i can tell you what i saw in what i think and one of the things that was always really touching i just want to be straight you know did element 115 was the known fuel source for the extraterrestrial craft that you worked on at one time in 1989 you said that you got a piece of element 115 out of los alamos where it was being machined under the code name la-1000 you say that in my movie you did have a piece of 115 at one time
(45:45) right well what where are you going with this well i i'm just i'm just saying the the element 115 was the key it is the thing that generates it's the fuel for the craft if you want to look it that way yeah and it has unique properties oh absolutely can you explain the unique properties of element 115 so that everybody really grasps it the way i feel like we weren't a hundred percent sure how how it worked because you just can't cut open the reactor to find out what's going on but it looked like the 115 is bombarded
(46:27) with radiation and it produ and it produces a stronger gravitational field now the rest of the equipment in the craft the reactor it takes that that wave that gravitational wave that comes off of it it roots it throughout the craft in a conduit just like microwaves and through the skin of the craft it takes that and funnels it down to the amplifiers and then to the emitter so it seems to behave a lot like microwaves do which propagate through tuned channels but it all came back to one little triangle of 115 that was the center of the whole craft
(47:05) and no i mean we don't know everything about it i'm not sure i could duplicate you gave me a piece of 115 i'm i'm not sure i could do much with it i could probably make it explode but i don't think i i'm not sure i can make it propel anything but um you know a lot of it was was guesswork too we were just trying to do our best educated guesses to come up uh with how this worked and you know our number one aim was to see if we could duplicate this technology with what we had at hand and uh you know
(47:40) clear across the board the answer was no all the time so we're talking about a stabilized form of element 115 so for example i learned this it's not okay it's stabilized it means you take something yeah i mean let me let me clarify so those i i learned this from bob and i can hopefully translate to you so for example there are 37 different isotopes for gold one is stable it's what's on your ring right right the rest are radioactive and yeah decay so the versions that have been fabricated by
(48:15) slamming particles in a particle accelerator and getting maybe four atoms at about a million bucks a piece that lasts for 220 milliseconds we're talking about one or two different isotopic combinations where there could be many many more combinations in fact it's predicted by science that there's an island of stability right in that sweet spot for 115 so what you're talking about is stable physical element 115 220 something grams that was highly machined that were used in these craft is that correct yeah that's correct well you
(48:48) know say you were trying to use gold as your as your example i mean say you were just trying to fabricate gold you know just from atoms i mean would you say there were 37 isotopes or something like that look you only have a 1 in 37 chance of making it so most likely you're going to make unstable isotope after unstable isotope until you know one day you fall upon the combination that results in a stable isotope so yeah they just began playing with 115 and just the fact that they made you know four atoms of it on their first
(49:27) try and it was unstable you know that that really doesn't tell any story you

have you've got a long way to go before you figure out every combination and if one of them is stable you'd said back then um that you didn't think we'd ever be able to make it it would be too expensive take too much energy to make a stable version that you thought it had to be natural wherever we acquired it it was performed produced naturally supernova double star something like that well i stick by that when i say we
(49:59) can't produce it i mean a usable quantity four atoms is not not visible not useful it it's nothing i mean to make to make a gram of it is still impossible even the version that they made so um yeah it's the amount of energy and time it takes sitting there plugging neutrons in is uh it's a time consuming expensive task and so you were told that there we had a stockpile of 500 pounds of element 115 however in your hand or you were able to work with about 228 grams highly machined in this triangular formation
(50:35) so you physically saw was it two to an hour it was 23. it was 220 something i said because that was even i can't remember but yeah that's all i ever okay but even that amount that couldn't have been made by any human technology oh hell no not even within our supernova do we think we could i mean it had to come as cargo from somewhere else is that correct well i mean you don't know there might be advanced ways of you know arranging atoms and fabricating you know elements on it on a gigantic scale that we haven't even conceived
(51:11) about so the only way i know of is you know the energies required and pressures and temperatures you know is some you know gigantic natural you know foundry like you know a neutron star or exploding supernova something along those lines but i don't know look at the technology that these guys have i mean that nothing set and since they can control gravity and they have force fields and things i mean they might have a machine that can crank this stuff out you know like we make plastic but my point is humans humans can humans cannot no
(51:48) did not cannot no no not at all if humans can't fabricate this and you were told this story what's so interesting to me is you the first time you go to site four and by the way site four it's not toxic you're not gonna die of cancer just being there people try to debunk bob story being you can't step foot on there too much radiation you're gonna die i've talked to two employees of area 51 who have gone on papua's for extended periods of time and they are not sick so that's another thing people try to
(52:20) debunk with actually one was stopped by civilian contractor egng security and he was a navy guy and kind of pissed about it and they stopped him if so if there's no if there's no facility there i'm not sure why he got stopped but i got him on record and i will be able to release that later one of the things about your story that i find really interesting your account of it bob didn't believe this was extraterrestrial his friends that knew him before that i spoke with said that bob felt bad for people that
(52:50) believed in ufos you know they got to be crazy so that's who he was before the first time and i want you to tell us this feeling the first time he saw the craft in the hangar he he ran his hand along he wasn't supposed to touch it and uh he thought wow everybody that saw flying saucers it was us it was america that's what he thought but i thought that was the first time i saw it when they let me in through the hangar i thought oh wow i mean this is the new advanced fighter we're keeping secret and this explains all those crazy ufo
(53:27) sightings and um you know it all made perfect sense to me until you know i got in contact with everything until you stepped inside walked inside tell us how you walked inside because people want to know that but that feeling you describe of seeing everything the size of the seats the feeling you had can you explain that to everybody like you explained to me yeah there is a hatch on the side that extends below and above the center line and when you go and you pretty much have to crawl in there they have a little
(54:03) stanchion to go up there but it was obvious i mean immediately when you go in there why did they make this thing so small what the hell is going on you couldn't stand up in the middle it was clearly made for something much smaller than a person you know it's aside from all the technology but just the physical aspects of it that the material you know was all the same everything was the same color the way it was assembled everything started looking stranger and stranger to me um you know and then it became obvious
(54:34) once we started having discussions about what i was working on that this is a reverse engineering project you know it took a while for this to hit me because i was uh i really didn't buy any of this ufo nonsense for a long time so george i

wanted to ask you know again through the lens of 30 years i know neither of you expected this to transform your lives and take over like this how has reporting and taking that risk on bob's story because you vetted him you didn't just believe you vetted him hard how has it changed your life over 30
(55:09) years well it certainly affected the arc of my professional life um i think i probably put a cap on what i could do because i would forever be the ufo guy and you know i've done a lot of ufo stories over the years starting with bob uh but i've done thousands of other stories and and uh i've got you know matt and i have had some success in terms of uh recognition for those stories but it doesn't matter wherever i go i'm the ufo guy and i'm stopped in you know in restaurants and bars when i
(55:42) end up in a bar and uh at men's in men's rooms and urinals as i told yesterday and uh and in foreign countries and airports and you know the ufo guy and grocery stores and people want to come up and hey do you really really believe that stuff and you know they don't they don't really care what i believe about ufos they want to tell me their ufo story and it's just amazing to me that everybody's got one and you it everybody's got one it's somebody in their family they've seen
(56:11) something or somebody else in their family or their grandma has a story or something landed in the backyard or out on the farm it's amazing how far it reaches so it has changed changed me in a lot of ways in that uh i was not really that interested in it you know until started working on this and and then it it's captured my attention ever since it's uh i don't work on ufo stuff all the time but i think about it all the time so i would add just one other thing in that skepticism in this topic is
(56:39) important it's important for you to be skeptical and ask questions but skepticism in the sense of hey i want to know more i want to learn more i want to ask questions i want to be i have those questions answered that's fine you it you need it in here because there's so much crazy stuff in the ufo world it's right to ask questions of bob and ask about his background and and figure out if there's uh logic to what he's saying but skepticism and debunking are two different things there's so much garbage
(57:05) and junk there's so much backbiting and infighting and turf wars and debunking by ufo people presumably people are interested in getting to the bottom of this who because a story comes from somebody else they got to attack it and it's just an amazing learning experience the last year or two since atip osap ttsa all that stuff came out how vicious the the field can be it's debunking it's not skepticism so ask questions be skeptical but have an open mind and an open heart and be willing to learn stuff about it
(57:38) what we've learned from bob is i i think it's true if it wasn't true i wouldn't still be reporting about it 30 years later this mystery seems to be tantalizingly out of our reach we learn a little bit more and it moves a little bit away the goal post seems to move a little bit maybe it's leading us somewhere uh maybe it's a learning curve i hope so but we don't know and uh but it's an exciting time i'm so glad for bob that some of these other events have happened to sort of like take the burden off of
(58:08) him as being this lone nut ball talking about flying saucer programs reverse engineering uh because he hasn't deserved the uh the scorn and ridicule and uh you know all the stuff that's come with it over the years it's been it's been a well i just want to end on one question for you but i i just want to say you know thank you uh bob thank you george for letting me go on this ride with you i you know i hope that we were able to bring things forward in a way that were logical for people to be able to consume
(58:44) thank you for letting me be a part of it you guys i know i've been in this war together for 30 years just trying to get to the truth kind of last question what do you want the audience here in mcminnville from your story what what is it you want people in the world to know from watching from what is it you you're telling them what do you want them to understand very simply it's just like i said in the movie the events that i portrayed everything that i said happened exactly like i said it did that's that's all the government really
(59:16) does have or at least at that time had recovered alien craft and they were spending a lot of time and money trying to figure out how they work and see if they could duplicate it i have no idea where the project is now but back then that's what was going on and that's what i did [Music] [Music] you

Bob Lazar lost interview? - YouTube
https://www.youtube.com/watch?v=EVd8aD-0ipM

Transcript:
(00:14) hello and welcome to on the record one month ago we began a series of reports about ufos with the exception of a few cranky newspaper people the response has been overwhelmingly positive we've had requests for more information from all over the country and from all over the world tonight we're going to delve a little deeper into the subject with the man who was the impetus for our reports in the first place bob leslar bob good to have you here uh a thumbnail sketch of yourself for those who might not be familiar with
(00:39) with your background i worked at los alamos national labs uh as a physicist as a physicist and uh essentially hired as a senior staff physicist at uh area s4 essentially for what i was told anyway was uh united states navy where is s4 it's about uh 10-15 miles south of groom lake about 125 miles north of las vegas how'd you get the job uh i really don't want to mention the guy who i got it through but i was referred uh to a person at egng to drop off my resume to that's where i was interviewed though the job is completely unrelated
(01:22) to uh eg g would they tell you you're going to be doing or did they tell you no they really didn't tell me until the very end it was uh they said a job of a high technology job something that i'd be very interested in okay so you get hired and uh what happens you fly up there fly up there first day was reading briefings and that sort of thing and uh it became evident to me pretty quickly uh the you know level of technology they were dealing with gravitational propulsion and uh you know things that science really has
(01:52) only barely touched on we'll get into the things that you saw in a couple of minutes but it's been about a little more than say three weeks since your identity was made public we had you on another program a couple of months ago but using an assumed name and had it had you in silhouette but since since your identity has been made public and since this information has been made public what's it been like what's been the response from people who see on the street well the response has been almost all
(02:17) favorable in fact everyone that i've run into has been very supportive very interested but i i guess they're just two or three letters from people who don't believe yet yeah essentially uh responses from other media outlets as well yeah yeah that too and uh they want interviews what do they want essentially everything yeah radio interviews tv interviews a lot of people want to you know dig back into my background and retrace everything you know the list is endless many of many of the people who have been calling calling us as well
(02:52) are under the impression that that either you've gone underground or you've been silenced or uh that we've been silenced by dark sinister forces any anything like that happened to you so that's ridiculous people are always going over the deep end on that and uh you know no one's told me other than originally not to say anything and i'm sure no one's uh come forward to you and but in the beginning they told you to keep quiet about this oh yeah it's the most secret program in the united states
(03:20) in what way did they try to to make sure that you kept your mouth shut uh everything up to death threats i mean constant reminders of it signing away my constitutional rights uh for for fair trial and and that sort of thing uh and since since this thing has uh your your phone's been tapped you believe yeah i believe i have a well i have a tap detector and uh just occasionally after i pick up the phone you know a little red light goes on and the reason you came forward with the information to begin with is it related to the fact that they were
(03:55) bothering you yeah it was essentially to stop that and uh what had happened was i sent in a request for my birth certificate and it as it turned out it wasn't there anymore they said i wasn't born at the hospital and that kind of got me wondering what's going on so i put in a request for some other information previous jobs and you know that was also gone and i thought something had to be done before i disappeared but the same thing los alamos they've never heard of you yeah um anything happened since since the
(04:25) reports have aired uh they let me know that they're around by doing stupid childish little things but uh nothing serious no you were worried about your life though for a while there weren't you yeah that was uh one of the reasons to come on and you know let everything out on the air it's a level of insurance you're worried

anymore i mean you got the feeling that you're over the hump and to some degree yeah you find that most people really believe you or they're just they just want more information
(04:54) i think a lot of people believe what i said and uh but the majority i think do just want more information too it's a you know in-depth subject and you really have to look at everything well let's look at some of the technology you saw now when did you first get the idea what's the first thing you saw that that made you convinced that it's not from here uh the first thing with hands-on experience was the antimatter reactor and explain what that is and how it works what it does it's a plate about 18 inches
(05:24) in diameter with a sphere on top and then we have some tape of it a tape of a model that a friend of yours made if we want to roll that you can maybe narrate along there it is okay inside that tower is a a chip of element 115 they just put in there that's a super heavy element the lid goes on top and as far as any other of the workings of it i i really don't know you know what's in what's inside the bottom of it the 115 sets up a gravitational field around the top that little wave guide you saw being put on the top
(06:01) that essentially siphons off the gravity wave and that's later amplified in the lower portion of the crafts but just in general the whole technology is is virtually unknown now we saw the model we saw the pictures of it there looks really really simple almost too simple to actually do anything right working parts uh and undetectable essentially what the job was was to back engineer everything where you have a finished product and just to step backwards and find out how it was made or how it can be made with earthly materials
(06:37) there hasn't been very much progress how long do you think they've had this technology up there it seemed like quite a while but i really don't know now what could you do with an anti-matter generator what does it do well it it converts it converts antimatter doesn't convert any matter there's an annihilation reaction it's an extremely powerful reaction 100 conversion of matter to energy unlike a fission or fusion reaction which is somewhere around eight tenths of one percent confusion uh
(07:10) conversion of matter to energy i mean how does it work what starts the reaction going in that thing uh really once the 115 is put in the reaction is initiated just automatic right i'll understand i mean there's no button to push or anything no there's no there's no button to push or anything it apparently the 115 under bombardment with protons lets out in any matter particle this antimatter particle will react with any matter whatsoever which i imagine there is some target system inside the reactor this in turn releases
(07:47) heat and somewhere within that system there is a 100 percent efficient uh thermionic generator essentially a heat to electrical generator in there now how does this how's this anti-matter reactor how is this connected to a gravity generation that you talked about earlier well that reactor serves two purposes it provides a tremendous amount of electrical power and which is almost a byproduct the gravitational wave is formed at the sphere and that's through some action of the 115 which uh the exact action i don't think anyone
(08:24) is anyone really knows uh the waveguide siphons off that that gravity wave and that's channeled above the top of the disc to the lower part where there are three gravity amplifiers which amplify and direct that gravity wave in essence creating their own gravitational field their own gravitational field you're fairly convinced that science on earth doesn't have this technology right now well we have it now i guess and that's for but we didn't create it right why not why couldn't we the technology is not even we don't even
(08:53) know what gravity is i mean there's there's just uh well what is it what you learned what did you learn about what gravity is well gravity is a wave uh there are many different theories about wave included uh there's it's been theorized that uh gravity is also particles gravitons uh which is also incorrect but gravity is a wave uh the basic wave they can actually tap off of an element why why that is i'm not exactly sure and so you can produce your own gravity what does that mean what what does that
(09:28) allow you to do well that allows you to do virtually anything uh gravity distorts time and space by doing that now you're into a different mode of travel where instead of traveling in a linear method going from point a to b now you can distort time and space to where you essentially bring the mountain to mohammed you almost bring your destination to you without moving and since you're distorting time all this takes place in between moments of time it's a such a far-fetched concept

but uh we're gonna get into it a little
(10:04) bit more we're gonna take a short break stay with us for more on the record [Music] [Music] welcome back to on the record we're talking with bob lazar about flying discs alien technology and other matters uh now of course what the ufo skeptics say is uh yeah there's life out there elsewhere in the universe it could never come here it's just too darn far with the kind of technology you're talking about it makes such considerations irrelevant about distance and time and things like that exactly because when when you are
(10:40) distorting time there's no longer a normal reference of time and that's what producing your own gravity does you can go forward or backward in time is that what you're saying no not essentially it's uh it'd be easier with a model on the bottom side of the disc of the three gravity generators when they want to travel to a distant point the disc turns on its side the three gravity generators produce a gravitational beam what they do is they converge the three gravity generators onto a point and use that as a focal point then they
(11:10) essentially bring them up to power and pull that point towards the disc the disc itself will attach onto that point and snap back as they release space back to that point now all this happens in the distortion of time so time is not incrementing so the speed is essentially infinite uh we'll get into the discs in a moment but the first time you saw the anti-matter reactor in operation or demonstration you had a couple of demonstrations tell me about that uh the first time i saw it in operation they just put
(11:40) my friend i worked with barry put the fuel in the reactor put the lid on as was shown there immediately a gravitational field developed and he said feel it and it felt like you bring two light poles of a magnet together except you can do that with your hand and it was fascinating because that's impossible except uh you know on something with great mass and obviously this is just us and it was a a repulsion field in fact we kind of filled around with it for a little while we threw golf balls off it and and uh it was just a really unique thing
(12:12) and you had they had some other sort of demonstrations to show you that this is pretty wild stuff right yeah they did they were able to channel the field off in a demonstration booth they uh created an intense gravitational area and you began to see a small little black disc form and that was the bending of the light just like a black hole floating around you know uh black holes of bad analogy but yeah essentially um and time they gave you some kind of demonstration about time involving a candle explain how that worked
(12:41) yeah they took a candle and lit it and uh put it in the distorted gravitational field which distorts time and the candle just stood there it didn't melt or burn it was uh i mean it was it was really unbelievable you had to be floored by seeing all this i was i mean that's why i'm kind of laughing about it now because it must sound ridiculous to everyone but uh it's it's just phenomenal i mean this is really alien technology about the 115 we talked a little bit about it in a series of reports explain
(13:11) what it is again and why you believe it could not be manufactured here okay it's a super heavy element meaning [Music] that on the periodic chart which lists all the elements found on earth and that can be synthesized it's uh i think the highest element we've synthesized has been about element 106.
(13:32) now from 103 or actually anything higher than plutonium up the half-life begins to drop in other words the element disintegrates when you get up to element 106 it's only around for a very small amount of time even science today theorizes that up around element 113 to 116 somewhere in there they should again become stable this is in fact true that's what element 115 is it's a stable element to synthesize it would be impossible the way we synthesize heavy elements is we take a stable element like bismuth or something like that or
(14:09) plutonium whatever put it in an accelerator and bombard it with protons essentially what you're trying to do is plug in protons into the atoms and increase the atomic number uh to do that to the level of element 115 would just take an infinite amount of power in an infinite amount of time what kinds of things what capabilities would a heavy element like this have i mean other than producing power obviously it can produce a lot of power right well it in itself is not any matter it just has a unique property of
(14:41) producing it uh any of the other basic properties that has them i really don't know of but uh using just the any matter producing property uh you're in the potential for a weapon is staggering is absolutely staggering like like what i mean a pound of it what could it do well 2.

(15:07) 2 pounds is uh the energy equivalent of 47 10 megaton hydrogen bombs i mean it's a good bang and a pound of a super heavy element is you know maybe the size of a a plum or something like that i guess what i've heard most from the people who just don't buy the whole story is that uh sure maybe you worked at an area called s4 and maybe that it is a secret area but uh what you were shown is stuff that we've made that we made this 115 if it is 115 that we made the flying discs that we made these animator reactors because these are advances that you just
(15:38) don't know about hardly why not uh it well the 115 it's impossible i mean that that's and the fact that the main job of everyone there is to find out how everything's made i mean that just contradicts everything right off the bat the materials are completely alien to us and just the overall idea of the project is hey can we duplicate this with the materials that we have here so obviously it was something that was found or given for that matter and uh we're just trying to duplicate it well 115 where do you suppose it came
(16:15) from then i mean what where what kind of an environment would that kind of the only place uh the only place that 115 could be made would have to be in a natural situation somewhere maybe on the fringes of a supernova or somewhere around maybe a binary star system where there was more mass in the primordial mix of that of that system where heavier elements would have had a chance to form when the stars were collapsing and there were huge amounts of energy being uh you know released something along those lines it has to be
(16:53) a naturally occurring element all right you saw antimatter reactors you saw gravity propulsion systems in flying disks flying saucers you saw this element 115 you also read a series of reports that had other stunning information can you give an overview of the kinds of things that were in these reports the reason i didn't do that before was first of all they were just reports everything else i had hands-on experience with now there's lots of strange information in the reports but there again is just printed material and
(17:27) it could be disinformation i don't know but certainly the information i did read the reports about the 115 the disagreement i mean that all had uh you know material that related to that uh the reports went into uh aliens and even even went along the lines of religious background we should let our audience know i mean we discussed this when we were putting the the series of reports together whether to get into the alien thing or not and we decided not to for the time being it's not like you're hiding something
(17:59) from the audience or whatever was just a decision we made but you did see uh reports whether they're true or not government reports about aliens what were in the reports they had well or photographs of aliens or autopsy reports uh there was really a wealth of information but there was as far as what what do they look like the typical gray uh i hate to say that like anyone knows what a typical gray is it's a it's a creature probably uh three and a half to four feet tall uh a large hairless head black slanted eyes long arms
(18:40) very thin looking uh i don't know how else i would describe it what does an autopsy report look like with what's included in the autopsy report that you said you read the reason i call it an autopsy report is i saw that carcass was obviously a dead alien the carcass cut up and it was all dark inside like an iron base the reason i say iron is because it was a very dark blood or whatever so i'm not a doctor but it seemed to be one large organ in the body as opposed to you know identifiable heart and lungs
(19:13) and that sort of thing but just one one gooey mess in there what did what did the report say i mean it had pictures i had to have some words uh here's exhibit a and alien essentially so they had weights and densities of the organs that there were no conclusions drawn but just uh it was just a basic description of what the person who was cutting opening or cutting open the body saw say where they came from yeah in one of the reports it said they came from reticulum four was what it said where is that any idea
(19:43) well i'm told it's a star system and zeta reticuli reticulum is the constellation uh and by reticulum four they meant the fourth planet out from that sun in the same reports we were identified instead of saying earth we were identified as soul three meaning the third planet out from our sun so now you've read a lot of ufo material do you find yourself mixing what you've read and what you you learned from up there no that's why i stay away from the offal researchers and things like that i really don't want to be
(20:17) associated with that i don't research the stuff it's it's interesting to read but uh no i'm not mixing anything that i've read and you know in this stuff

we're going to get into that a little bit more we're going to take a short break stay with us for more on the record [Music] welcome back we have a few minutes left with bob lazar we were just talking about the ufo field in general and you feel a little reluctance to get mixed up in it although you are right now unfortunately yeah i mean why is why the reluctance
(20:49) uh i don't know there are many stories circulating around everyone has their own view each ufo researcher says they have the right story and uh essentially i don't want to side with anyone because uh you know i don't know where that information's come from uh though they do all have the basic story is uh you know there are alien crafts here how they got here is probably aliens brought them here unless we have a really neat setup with ups you know you really there's just so many different factions of them
(21:29) and they all kind of war between each other i i really don't want to get associated with them before you got into the the program at s4 though you had an interest in ufos i mean it it must be hard for people to swallow that here's a guy who has an interest in it and he gets hired into the program well it was a very brief time there uh i had sent out resumes to several places because i wanted to get back into the scientific field again almost simultaneously i met john lear and read some of his material and
(22:02) initially i thought he was just absolutely crazy but apparently he did have a good source of information because as it turns out some of the information that he had i actually had hands-on experience with uh but your regard for ufos in general i mean as a scientist did you think there was something to it or absolutely not absolutely nothing no i would have stood on that until the day i died that was bunk many of the people who have been calling or ufo groups or ufo researchers who have demanded that you talk to them
(22:31) we've got to talk to this guy we want to give him a lot more publicity so he stays alive we want him to give us information so that we can further check out his background etc uh we want a protecting we want to help him you've resisted i mean you've done this program you've done a couple of reports with us and you've done a radio show or two but in general you've resisted going into the ufo circuit uh why is that well just like i mentioned before i just don't want to be associated with those guys uh
(23:01) and how many people are you gonna open up your background to and let them you know run rampant through it i mean private detectives every ufo group in the world wants to do that the idea was for me to release the information essentially to protect myself and take some of the heat off and i've done that and you know that's all that that needs to be done really a certain certain ufo researchers claim they've been getting information from you all along you've been leaking stuff to them and that they've
(23:27) read these reports that verify the information you've been working with ufo groups while you were in the program at s4 not ufo groups i did mention a couple things to some people that's all i'm gonna say okay in essence uh were you breaking your your vows that you know that you made to the government yeah and why why did you feel that was necessary i mean you took an oath didn't you yeah but look at the magnitude of what was going on i believe that some of the technology maybe all of the technology should be
(24:01) kept secret until we have a handle on everything but certainly the overview of what happened just cannot be a secret from from anyone not just the american people but the rest of the world let out the basic fact that we have these crafts at one time uh aliens did at least visit and drop off something however they got here uh that there was some contact made and then cut it short you don't need to release information on the gravity generators the weapon potential was which is enormous and and so on what could you do with that we
(24:32) got about a minute left what could you do with that technology of say you took the flying discs the anti-matter reactors the gravity generators gave it to los alamos or livermore let them examine this stuff i mean how how would it affect life on earth if this stuff was widely available non-mass producible that's tough to say i mean you have a different a completely different mode of travel what happens when you can play with time uh that gets into a a really deep philosophical you know question there but i mean we could it
(25:07) would change a lot of stuff change everyone yeah it would change absolutely everything you think it'll ever come out personally no what do you hope happens both to yourself and with this information uh that there's been enough thorns put in their toes to where they do try and release something we'll have to have you come

back bob thanks for joining us we'll see you next week

bob lazar, radio interview on billy goodman, the happening, KEVG, december, 20th (1989) [remastered] - YouTube
https://www.youtube.com/watch?v=DCyf9ScYJAs

Transcript:
(00:00) four mean uh i really don't know i think it might be uh referred to a site four that might be what the s is for but uh i really don't know there are three s4s in all of the nevada test site i don't ever mention that no the nuclear test site itself i think has uh is a small area and it has uh uh sites or areas 1 to 29 or 30.
(00:25) the s4 there i think is a nuclear reactor there's an s4 just south of the tonopah test range and there's an s4 the one that i worked at just south of groom lake all right and bob azar while working there as a government scientist saw not only one but as many as nine flying saucers while he's working there as a government scientist and he's telling the whole world about as a matter of fact he wants everybody to know that in fact there are flying saucers up there last time you never really told us what are their plans with these
(00:57) flying sources you have any idea why we have flying saucers at this point why we have them yes it's just uh essentially research the the idea is to back engineer them to go back and find out how they can be duplicated using earthly materials and technology don't know off the top of my head so that could be used like a time machine right uh essentially yeah that is time travel that is possible wow that's really something yeah that's uh thanks for your input sure what did you get your answer yes you did 606 huh
(01:30) thank you very much okay buddy you take care bob lazar is my guest in studio here we are in las vegas and if you have a question for bob lazar our phone numbers are four five one this is like a snowball going down the hill and will become an avalanche and ignorance will be wiped out we got to know the truth for once and forever they are here let's find out why they are here on who they are and what their purpose is well thank you okay bob you're all behind you and billy get that show going and it's the number one show in america
(02:01) and talk show well thank you very much fritz he did you he did explain to you why we have flying saucers right well i'm aware why they are here not the general public has to become aware they're just waking up it's like a veil being lifted from their eyes i mean they've been laughing for 40 years you know why they're here why are they here for it well first of all it's a conditioning process you got it we are not quarantined because we are so ignorant the ignorance keeps us from meeting them that big
(02:30) brother reaches out the hand and say come on little brother just have the cosmic connection but then we become a world together earthlings we have to become earthlings we're not we are about 170 nations 170 languages we become we have to become togetherness when we have a spokesman gander will meet on us an equal ground very good fridge thanks for the call thank you take care bye bye bye bob lazar is my guest let's go to any line that's available i don't care who it is we'll follow this hi who's this
(02:58) son of a billy government happening on kveg yes mr lazar yes yes you're a big yeah okay so go to the line go to the line don't even there we go hi you're next in the billy give it happening on kveg hi billy this is tim from pasadena yes jim from pasadena how are you hey i wanted to talk about a lot and i'm really glad i got through he's right here hey bob uh can you tell me a little bit about when you looked into the saucer about how the hatch works and about how it might feel up and all the
(03:27) mechanics involved jim do you have your radio on uh yeah please turn it down okay thank you is that better i mean turn it off if you would because you're getting feedback i can hear it okay there you go is it better now uh okay okay the uh the hatch the hatch or whatever was the hatch was completely removed it was there was just an opening in the side of the craft and uh well i really don't know how did the opening have any kind of ceiling around it or kind of a lip or anything like that uh i really don't remember because i was so
(03:57) interested in looking inside i didn't really catch a you know a strong glimpse of the ceiling mechanism or any other thing around it no your last talk uh if you'd go along with me a little bit your last talk when you were on the billy

show here uh you said something about you looked into one and it was all smooth like it had been a wax uh casting or something yeah exactly now was that the only one you looked into or was the other one was there another one you looked into no the only one i looked into
(04:25) the the other ones i just saw from a distance so uh you know i i don't know any detail and the one you looked into was that the sport model yes exactly and that's the only one you saw fly as well right okay uh what can you tell us what what your work was there well like i said before is essentially to back engineer the propulsion and power system so you weren't really uh involved in the in the mechanics of the craft itself no not at all and but mostly just uh the element 115 and all that kind of stuff you were
(04:58) learning about right well okay well i'll get off now and let somebody else ask you another question thank you thanks thanks bob all right bye-bye all right bob lazar is my guest listen to the billy given happening we are in las vegas well gravity's a wave it's uh it's a force essentially uh just like uh electromagnetic waves are a different type of force uh there's i really don't know a good way to describe gravity actually it was not the same thing with like einstein and other scientists they
(05:29) really don't have an answer for what gravity is do they totally they don't really understand it totally do they no no not at all in fact i don't think we understand anything about gravity yeah um and uh why is it that we don't just float away ourselves why what keeps us down on the planet well that that is the uh attractive force of gravity attractive force so it's an attractive thing as a opposed to a you know some people say because they've asked me it sort of like presses down but it doesn't does it
(05:57) no it doesn't it's an attractive force it's like on an atomic scale the uh strong and weak nuclear forces hold the atoms individually together as my guest will give back yeah you can use either one now you are no longer uh a government scientist or physicist right uh not employed by the government by the government okay but you are continuing in the science end of things what do you do uh to keep yourself up uh and build uh advanced radiation detection equipment mainly uh alpha radiation equipment for uh uh
(06:35) essentially use in detecting plutonium oh uh national laboratories very interesting okay let's go back to the telephones and your telephone calls from my guest tonight bob lazar hi who's this and the billy give it happening on kbeg hello ellie yes lee uh lee samuel yes lee hello billy how are you bob how are you hi i have a couple questions number one i'm cruising down jones avenue on my cellular phone here uh how long has that craft been been on the on this earth oh i really don't know i don't even know how long it's been down
(07:07) at uh s4 do you know where where i had originally landed that no you got me on on all that stuff that really never keep me in is to uh i could have been here for years yeah yeah or it could have been you know uh brought in in pieces from uh from somewhere else too okay did you see just one craft or a number of crap i saw a number of them okay but didn't the other workers talk about it and say you know where it came from or moore's being towed in or whatever i don't know there really wasn't that much
(07:36) conversation between everyone were you by yourself would you investigate the craft uh by my by myself as walking by myself there were security people around me but uh when i crawled underneath on the subfloor to look at the gravity amplifiers you know i got away from them but there was no one you know right next to me the whole time any evidence of uh live aliens helped captive uh nothing i could put my finger on i think then you didn't see any at all then in that sector nothing i could put my finger on uh does the craft of sleeping quarters
(08:10) really is it like a regular like a star trek craft what kind of crap i know it's actually a pretty vacant inside uh granted a couple things were removed they were sawed off at the base i don't know what they were i just saw little stumps on the ground so i really don't know what was removed but it it doesn't look like it had anything like sleeping quarters or anything like that okay any writing or anything it detected or any sort of language or anything no on the walls nothing any panels or anything did you
(08:36) say like that's like a like a dashboard on a car yeah in fact that was one of the things that there were more than one uh control panel uh setups but uh it looks like one was removed okay and was this crap all from the same source i mean or what do you mean i mean it was all from the same uh or the crap all identical or no each each craft was completely different in physical appearance and i didn't get to

look in depth at the other crafts but uh i only really fooled around with one thank you bob i applaud your courage
(09:07) thank you great for you to speak up at least before you leave uh uh tickets go on sale tomorrow for the donald curry fight yes there are valleys the valley's casino uh big fight donald curry against irish brett lally both fighters are in town yeah that's a real real big show curry says if he doesn't win he'll retire so uh he's a two-time former champion and he's up against it this is gonna be a real real big show and you see i know you're coming to the press conference tomorrow yes i am and i and you and
(09:35) you have we'll pick you up okay before you go though let me ask you a question did you say that donald curry is actually the underdog in this fight yes six or five's taken either way last time donald thought he was 100 to one favorite and he lost the fight who do you lose to that renee jacques and and france the wbc uh championship fighting and he lost the fight it was incredible why why are people so down on him that they think he doesn't have anymore yeah okay but i i know i'll see you at the
(10:10) press conference tomorrow thank you bob thank you thank you all right bye-bye uh bob lazar you were saying something about uh entering the craft you know and that seems to be the report every single time someone says they reported a spacecraft they were inside there's nothing in there except like you say a panel board and some chairs and things but no sleeping quarters no nothing at all i guess they just don't have it they don't need them because they don't sleep or whatever they get here so quickly
(10:35) let's take another call yes sir you know there's only 62 tickets left no i didn't know that yeah i went there today i bought a ticket and they said they almost sold out is that right well that gentleman that was just not in the line leaves i can see the smile on his face right now yeah because he was the he's the promoter of that event you know oh is that right yeah so he's smiling look at the smile at least face now only 62 tickets left for the as of 12 noon i guess okay yeah uh i've got a magazine from borderlands
(11:07) sciences in front of me and they mentioned one of the books the the energy grid foundation equations and ramifications by george resumes have you heard of him i i think i thumb through that book once i think john lee what the heck is an energy grid on on our planet uh i don't know i don't really buy that by that theory or really anything in that book it's a grid outlined all over the entire globe and uh at each intersection there's an energy vortex of some kind and uh uh you know i i'd just rather not
(11:39) comment yeah i really hope you don't find it yeah on tv you mentioned something about the time warp and you you mentioned folding over right what did you mean by that uh it's how uh gravity whether produced artificially or naturally distorts time and space gravity distorts time and space yeah oh boy i like to think about that no as a matter of fact we were talking off the air and and people have been calling me at the office about this gravity thing and bob lazar has kind of leveled and set it right straight out
(12:12) nobody really understands gravity yeah and what it does and everything else it's it's still being looked into and even iceland couldn't figure it out yeah i read about nikola tesla questioning einstein's theory of relativity says that energy doesn't come from matter where does it come from if it doesn't come from matter can you answer that bot uh that's a syringe question yeah uh it can be extracted from matter uh but it can be extracted by other means too i really don't don't understand that
(12:45) yeah are you going to be there january 7th uh no you're not going to be there well i wish i could talk for an hour but uh everybody else wants to talk so i'll hang up all right all right thank you here guys let's take uh another call a new member let's talk to a new member and see where uh hi who is this in the believe it happening on kbeg hi this is tom yes time for where um la la land where is la la land l.
(13:15) a okay la la okay i'm sorry yeah i have uh one general question in a couple of specific ones um ufo reports have been going on now for 30 40 years i don't doubt the credibility of mr lazar i just wonder how how this can be kept secret for that long and ask him to comment uh i i did pose that question to some people at s4 and the answer that i got was it's it's the easiest thing to keep secret because of the subject matter do you have a feeling that uh one of the reasons that is is because it's tied in with a lot of
(14:01) parapsychology psychic type stuff national empire maybe so i mean there is

so much disinformation and that is made so available to the public via tabloids and things like that that you know any true information getting out is uh assumed to originate from those sources and things like that uh another question is um uh carl sagan is uh more or less a people scientist he's brought science down to the general public um right what about getting him involved in this somehow is that possible or how would you go about
(14:42) doing that i would imagine uh i imagine he's fairly open-minded i've never met met him one of the biggest ufo debunkers that's why uh what i was thinking of doing actually is uh making getting some copies of the uh the shows that you're on the happenings i'm sorry and uh you know contacting people with the planetary society i don't know if that would do any good but well you know there again he's going to need his own own proof as everyone should require and uh you know it's it's impossible to make an
(15:20) absolute believer out of someone that that hasn't had hands-on experience or have seen something for themselves uh you know that's the way any scientist is going to look at it okay a couple more quick questions around 32 light years something wrong okay so uh these ships do they travel faster than white or do they get around [Music] oh it's kind of an irrelevant question because they get around it because they're not in a linear mode of travel since they're distorting time and space there's no true time reference
(15:49) and since velocity is distance over time when you begin to fool around with time you really can't uh state a true velocity all right john thank you for your call one more quick question quickly okay he'll answer off the air hurry up the city program uh the search for radio signals um couldn't uh some of these uh you know observatories or telescopes be aimed at uh you know places where they these people or aliens have supposedly come from uh that i i think um cooper mentioned uh barnard okay that's
(16:24) your question thank you tom okay uh well it's my understanding is that that radio waves and uh frequencies along that bandwidth really aren't aren't utilized it's gravity wave communication and uh a radio telescope really isn't gonna pick up anything of that sort all right but i don't think people realize this because you said it so nonchalant but your first time on the way you got to see this ufo was really not planned by anyone wanting you to see it right you were like walking with security and you went under a doorway
(16:54) how did you describe that before uh it may have been planned by them but i i had no advance warning of it i have i've been brought in a separate door the whole time and uh one specific time i was uh just let into the area where i work uh through the hangar doors which i had never been in before i walked directly by the craft and uh began to slow down by it and they said just keep walking keep your eyes forward and uh and it was just just like that it was that nothing was said and uh just went and sat down in an empty room
(17:27) you went and sat down in empty room after you saw it yeah waited for this guy that i work with barry and then we went to uh you know work on some of the uh work we were assigned what were some of the things what was some of the work that you actually did that you were supposed to do what what did you actually do at s4 when you say work you had to wait for an assignment when you had the assignment what would it have been like for example well mostly like i said before most of the time i worked there i was being
(17:51) briefed on uh and being brought up to date on what had been done before right and most of the hands-on bench work essentially was with uh the reactor itself and uh being shown how it operated uh and giving demonstrations and and things of that sort when you say reactor you know nuclear reactor type antimatter reactor antimatter okay bob lazar is my guest and i'll tell you it's fascinating to hear this stuff let's go back uh to some of the stuff you already touched on us and try because someone asked earlier about
(18:21) communication with some of your fellow workers there's practically no communication right yeah they kept that to an absolute minimum they were on the buddy system you worked with always worked with someone and that's the person you communicated with and there was really no crosstalk between groups and you as a young man there you are in the midst of this thing when when you went there for the initial uh interview you said at the time they actually had a gun at your head uh no that was at the security briefing security whatever that means
(18:51) the initial interview when you went to work at s4 i'm talking about did they that's not where the gun was at your head no no no okay when you went there what was your understanding that you were going to be doing uh some high technology work and

i had assumed that they were talking about some sort of gravitational propulsion system and were you excited about that oh yeah very much so because there was uh some talk about that uh because it's something that i was interested in something they knew i was interested in
(19:21) right you know that was that was the hint that i got did it come to fruition did what you were told you were going to do actually happen yeah no it did for a period of time so how long were you actually there before you uh let people know what was going on up there how many months or days whatever uh approximately i know yeah i really don't know uh [Music] probably a couple months i guess before and every time that you went there you literally had to fly up land at the groom leg take a bus a bus that was sort of
(19:53) blocked out of the windows right and no communication on the bus what were you thinking as a young man you're a very young man let's face it what were you thinking like well you're a very young man i think you're anyway what were you thinking were you just saying well this goes with the territory and i'm just going to go along with this oh yeah you better i would i would have done that and much more just to be involved with the project ah the excitement was just being there being a part of the of what
(20:15) was going on behind the scenes in other words the secret part about it or oh sure i would have taken a lot more crap than they had built out [Laughter] can you picture it okay he's in his 30s so i say young man and he's in his 30s sitting on a bus and accepting the fact okay i'm going to work this morning not talking to their his uh compadres on the bus is looking straight ahead uh blackened out windows not driving on asphalt all dirt roads didn't that also have something to do in your mind say how come they never did
(20:43) anything up there as far as the dirt roads uh i don't know it was a good dirt road a lot of the roads around there are dirt i know it's almost all right that's what i'm saying didn't even take the time to uh to pave them i guess it's not that important bob lazar is is my guest and what i'm fascinating hello billy yes can you hear me uh we sure can okay uh this is mark the artist in los angeles all right i got some specific questions for bob lazar that i'd like to ask real quickly
(21:12) he's right here he's waiting uh i talked to you once before on the show bob about uh the propulsion system on the device yeah and you'd describe the central column as being a gravity guy there was a disc towards the bottom of this thing down near the uh antimatter generator that uh that spins and i want to ask you what that disc is made of this that spins no there's no spinning disc what is the disc made of is it a capacitor well a disc uh the wave guide extends down and it widens out and sits on the curved
(21:45) portion of the reactor uh the bottom of the reactor is a plate uh but nothing rotates or moves it's all it's all connected together is that plate a capacitor no but what is it made of uh metal that's the only way i can describe i don't know what kind it's uh oh collection determined the kind of metal it was no not to my knowledge um i understand that part of the propulsion system involves a very large capacitor uh which is usually the the entire lower surface of the disk uh making use of something along the
(22:19) lines of the byfield brown effect and i just wondered if you had any information on what the components of the dielectric material in that capacitor is well if the bottom of the disk is one plate of the capacitor then the dielectric material would be the air uh if you're going to look at the earth as another plate of the capacitor but as far as the capacitor being integral to the actual craft itself now i found no evidence of that now uh i understand that there's an antenna section in this device and i'm one of
(22:47) those i wanted to ask you what the resonant frequency that that operate at was what it was uh well the resonant frequency of the gravity wave i do know but i don't know it off hand i can't i can i just can't remember it can you can you uh give me a ballpark like 2 000 kilohertz something like that 200 kilohertz i really i really don't remember it's a really odd frequency is it really yeah well is it is it is it measured in kilohertz or gigahertz or megahertz i i really don't remember the other thing i wanted to ask you was
(23:24) when you first started to go public and you were meeting with people at john lehrer's house i understand that there were a number of witnesses at those first meetings one of whom claims that you did say that you had seen an extraterrestrial while working inside one of those saucers trying to back engineer the uh the propulsion system and that you've been looking out through a doorway or through a porthole in the side of the device and that you'd actually seen an extraterrestrial

walking around on the outside one of
(23:51) those devices devices meaning discs excuse me devices meaning discs yes no so so you're saying that you've never seen an extra dresser let us before [Music] uh i really don't want to get into that well the reason i ask is because someone else is claiming that you have uh well stated the way you did no i didn't uh and i never did look and see an extraterrestrial as the story goes and the reason i i never bring it up is because i thought i saw something once at walking at a glance and uh and that's all there is to it and
(24:26) i never did i won't i i won't stand on that fact because uh you know it was just a fleeting glimpse when i came back whatever was there was gone uh you know it it could have been a zillion things so i had one last quick question and i'll wrap it up real quick here i have a contact that claims that you were responsible for determining that element 115 was not in fact necessary to operate an anti-gravity propulsion device in the earth's magnetic field is that true no it's the exact opposite
(24:54) thank you mark for the call okay all right thank you bob azar hello hi there hi can you hear me we could hear you perfectly i better turn on my radio okay okay why are you going public with this whole subject what caused you i mean there's there's obviously a lot of other staff on the project that since there's a greater a great degree of loyalty or something along this sort and why are you going public uh well the the thing that really was the the straw that broke the camel's back essentially was uh
(25:25) after i left the program i kind of became concerned about what happens now i made a routine request for my birth certificate uh which i needed for just for id purposes and i was told that it doesn't exist i wasn't even born at that hospital i sat on that for about a week and just wondered and then i began to inquire at previous jobs and uh also at other schools and uh that information was also gone and i kind of got the idea that soon someone was going to disappear so that's when i contacted the tv station and you
(25:59) know essentially let everything out but you left the program under very amicable circumstances uh no that's a long involved story that i really don't want to get into okay all right that's fine are you afraid of any repercussions from the government you know oh yeah i was i was uh really concerned at one time but uh so now yeah less so now but i you know you still keep in the back your mind yeah i imagine of course it seems like to me that if anything were to happen to you now that that would cause such an
(26:24) uproar in itself exactly the last thing they'll do would be to go anywhere near you right as someone someone said in the media somewhere that uh if they're following me now it's uh to make sure that nothing happens to me yeah i would think the same thing okay your experience up there on the program did you um did you witness any working models any models of the of the vehicles that were operational models yeah i would say the vehicles the vehicle is operational yeah some of them were operational yeah i
(26:52) only saw one operate and they were actually operating oh yeah i saw one at uh at close range while i was at the area and then at the extreme distance about 15 miles when uh i brought some friends up to look at it using the technology that's uh that's being used they the craft are very agile aren't they oh yes very in one specific mode of travel one specific mode yeah in one direction at a time something like this no there's two modes of travel there's a low speed mode and in a you know a high-speed mode i don't remember
(27:22) what they call they had a specific name for them okay but uh what was the size of the staff working on the project uh there's 22 people that i knew of 22 people well 22 people in the area that i worked in and uh you know how extensive the rest of the facility was i don't know i i i gathered from one of your uh earlier interviews that you were frustrated a little bit on the size of the staff you always thought it should have been larger oh yeah it could have been more could have been learned about the program quite more
(27:49) quickly the problem is substituting uh earthly materials really yeah and uh there's really there's really no easy way easy way getting around that okay thank you for the call sir uh can i just question you go ahead you'll answer all right uh pick up just one one last thing that an earlier gentleman was commenting on that he sounded very knowledgeable as well can you explain uh about the element 115 and how uh how it's involved in the in the in the construction of the vehicles all right thanks for the call you're up there
(28:18) thank you sir okay uh everything seems to come down to 115. it's a super

heavy element element in uh it seems that as you get uh into the heavier elements and i'm sure this property extends to uh as yet undiscovered elements in excess of atomic number 115 that the atomic gravity wave inside uh the atoms holding things together begins to extend outside of the atomic structure itself and it's this wave that can be tapped off and uh in quantity you know small quantity actually this wave can be amplified contained and
(28:59) uh you know used for a useful purpose very very good answer bob lazar that's the voice the power plants and stuff of that nature uh to work under that stuff not nuclear power plants weapon where they is plutonium yeah right like the latest uh flight up way above us right there's a plutonium flight going on right now uh the galileo yeah yeah are you involved with that mr lazar uh no not directly i mean someone may have used our probes to detect it okay we'll get back to bob lazar and your telephone calls but persons uh
(29:35) at any time uh i really don't know i only was witness to a couple tests and uh i really don't know i don't know how far they go i think they're very careful with them like i said i don't i personally don't think that they're whipping them around the solar system uh because i don't know how proficient they are with operating them but i really don't know and let me ask you do you read any ufo literature yourself in book form that's out in publication uh nothing really in book form uh
(30:11) i occasionally get handed little tidbits here and there and and glance at them but no i don't i don't delve into uh you know reading because you mentioned some uh stuff on the uh billy myers uh uh a case there and i was just wondering if you had read any of that information because you mentioned you had seen some pictures yeah i looked at the uh what caught my eye was certainly the uh whatever that book's called contact from the pleiades or something but it's essentially a picture book i mean there's really no text in it uh
(30:44) and uh that one of the craft in there looks strikingly similar to uh this the one they call the sport model that's interesting i have to get your opinion what did you think of that similarity did that puzzle you uh uh yeah because originally i had kind of discounted the billy myers stuff but that that craft looks amazingly like the one that i worked on and another thing is he showed uh somewhere in that book they had a picture of a grassy field with three round indents in the ground uh now that would coincide with the three
(31:16) gravity amplifiers in the bottom of the craft and the imprint that they do make so that kind of makes me believe that that that really did occur i see that's very interesting one last question is uh on the first program uh i had heard you say towards the end of the program that you wanted to say one thing which was you didn't necessarily uh share the same views as bill cooper and john lear as far as the big picture was concerned and i didn't really understand what you meant by that a little bit well i'm really not exactly sure what uh
(31:50) what each individual story is i think there john lear has a specific story bill cooper has a specific story i do agree with both of them in in the fact that yeah there's alien craft here and so on and so forth uh uh i don't i think john lear or someone uh thinks that they're here to use us for food uh i don't exactly remember bill cooper's story but the uh the little intricate parts here and there i it's you know i just i just haven't seen any evidence myself of it you know i don't know
(32:24) uh what these gentlemen have found out on their own and from everything that you know about it do you believe that there is possibility that there are beloved creatures in the universe oh sure oh sure thank you number 37 thank you my pleasure bob alien beings or are we doing it when i say we meaning the military do you think i think the ones that we're testing the one that i was involved in i think is being flown by the military okay now you know whatever else is going on right i don't know and and there you've got a
(32:53) picture if that was taken over air 51 yes according to what was left to me yeah and it looks like it if you look at that if you recognize it like a peak yeah of course that's a daytime photograph and i i was told all the testing is done at night and i mean that's uh interesting i don't know okay uh so getting back so you think it's more done by the military they're flying them because you described when you went inside one of these little puppies that the they were very very small seats almost like a kindergarten type right
(33:24) exactly so they have to have some small guys doing it we have to have them some really jockeys or something yeah you can squeeze yourself into it okay bob lazar is my guest let's go back to your telephone calls because i don't want to you

know steal this whole thing but this picture is just totally uh a mind blower hi who's this in the blink of an happening on kveg paul from las vegas yes okay bob i got a couple questions sure do these uh craft appear to be shuttlecraft not the main craft uh i don't know how you'd
(33:59) well i need to differentiate but between the two other than uh or you know who says there is even a well in most instances uh people speak of them joining up with another craft and then going out of the atmosphere when they speak of you know some of these experiences they saw them with and i was just wondering if these assorted models that you've seen could be classed as a shuttlecraft in that respect you know they wouldn't carry a big fleet of people no definitely not i mean they are small uh yeah i'm guessing right in uh you know
(34:35) mid 30 to 40 foot range somewhere in there uh and as far as carrying a lot of cargo or uh or or beings or whatever you know there's not a whole lot of room there so uh yeah possibly there is a larger craft that they join with but you know i didn't see any okay and uh uh is it true that there's uh [Music] like more propulsion more engines than there are craft that s4 that's a good question uh hmm well there's nine craft uh you know i really don't know i was really wondering it would be something to explain how we got more
(35:17) crap more engines than we do crap yeah there had to be some kind of an agreement or somebody helping us get them right there's certainly more fuel than there needs to be yeah all right paul how do you know so much about it paul well i follow a lot of you know watching them every chance i get let me ask you something though you were talking about pictures i got it right here at bob lazar okay now did you see this uh little girl from south carolina who took a cassette on halloween night and saw lights in the sky
(35:47) that was shown nationally now as she was viewing those lights and recording it through her uh cam recorder a plane flew by which is always one of the big gripes they have of these lights that they never get anything to reference right stuff with and it showed her house it showed the plane go right by the lights and mufon and them have gotten in touch with her and you know evidently got these big now has somebody researched and come out and showed us that these pictures are you know valid i don't know anything
(36:17) about that that's one case i'm not familiar with are you bob no i'm not familiar with that but i will there are some strings that occur i'll tell you a story that roger nelson related to me that uh one night in san francisco with the two uh uh anchor people uh reported the news it and one of their reporters had gone out and done some filming and while they were filming they had something and the guy scanned up on the sky and right over their shoulder showed up a ufo right over the shoulder you could see it
(36:48) right there and they you know they never released it they would never never release it but only the san franciscans actually saw it let me ask bob one more time go ahead you have one more question and then check out time uh i'll take i'll take that well maybe not just a question but a statement bob in view the fact that they have uh released you and taken away your uh scientific livelihood i hope you go on a national circuit i hope you go on 60 minutes a carson show everything you can get on and milk it for every dime you can get
(37:19) you know because you have a right to do that since they've interrupted your career but i think that the big important thing is is to get these people to get this stuff into the hands of the scientific community that can do some good with it they've been toiling with it for years and nothing's come out of it we can't get anywhere to get we got to get it out of the hands of these power mongers i agree 100 and uh i think that's why you took people up there in the first place you were tired of their gains all
(37:46) right paul thank you very much all right take care guys bye-bye let's go to uh line two i mean what like uh wha where are they calling from hi who's this guy are you billy fine uh this is what's calling you from charleston illinois how are you wesley crumb yes sir hey how are you can you hear us yeah well i can i can just pick up what you're saying uh okay well bob lazar is right here in studio well hi bob how are you oh not bad i just want to say it's a great privilege to a good chance to speak with you and
(38:18) that i greatly admire your courage in coming forward i've had an opportunity to uh see a tape of the klas program you did and uh made it out that far huh well it's uh i've been i forwarded all the way to atlanta georgia and i personally when i first heard about you i have called uh well i ran up about a 300 phone bill calling new york in chicago and everywhere i got a rejection notice today from the donahue

show that they don't want to do a program about you so yeah yeah anyway uh seeing how i've got you here i'd like
(38:52) to ask a few quick questions sure okay uh when you uh became involved with this program did you get an opportunity to go inside all nine air spacecraft no no just one just the one yeah uh when you were inside the craft did you see any indication that either through markings on the controls or otherwise that these ships were from a different place was there any writing on any controls or anything uh no not on controls and and things like that but i i did i did see some evidence of of writing okay uh when you saw the uh flight demonstration
(39:32) that was performed for you were you the only person that was there that saw this crap operating no there were several people i was standing right next to the person who was in radio contact with the craft oh i see how long did this demonstration last uh it was a short duration uh it lifted off the ground uh slid over to the left then back to the right and sit back down it it was a very short duration but you never saw actually who was that to control no because i was brought out uh when i was brought in like the craft was
(40:05) in the hangar when i came out it was already out of the hangar and sitting on uh well sitting out away from the hangar some distance and so i don't know how it was brought out who brought it out who got in it uh you know i can only guess uh what's interesting that's where is it the entire thing underground all nine different hangers no it's not underground it's just butt up against the side of a little mountain little hill kind of and uh but it's it's kind of inside do you feel that the billions of dollars
(40:33) that are being spent on the space program by the administration is a waste of money as we already have these ships in our possession uh no because look at all the technology that we that we did get out of the space program so was it ever uh disclosed to you that these uh craft were on loan to us is there a chance of them being repossessed at any time no none of that was ever disclosed to me the origin uh you know any uh anything about the origin essentially oh well i i uh one one last question here but i'm gonna let you get back to
(41:10) the other calls here uh i heard a rumor earlier this evening that your van was shot at recently is there any troops i don't have a van oh well the highways i was shot at in my car but i don't have a van no no there's no truth to that one no can't be no truth on that one how would you get that information out in illinois well uh it got passed on to me from the video clearinghouse in yucaipa and uh we've been keeping pretty close touch ever since uh this news broke and i've uh like i said i've been running up
(41:40) phone bills and trying to get uh people interested i did get a call today or yesterday from the national enquirer and i don't know you know tabloids and what they say but uh they might follow up and try and do something for you bob i hope that well the enquirer is not exactly the best way you want to go but at least does have some uh national exposure and uh all right wesley all right wesley settle down thanks for the call and keep all the good work out there in the midwest foreign okay by the way what's the
(42:08) weather like out there oh we got about uh four or five inches on the ground as you know and it's real cold yeah like what is the uh temperature i'd say it's about minus 10 degrees sorry goodbye it is a chilling ending to a call all right bob lazar is my guest in studio and we're almost i'm working on it changing the name to that bob thanks so much for coming back i really had some doubts about you coming back and i'm so glad you have come forward i've got a number of quick questions for you one thing that just
(42:44) intrigued me you just mentioned was you said there's more fuel than necessary at the test site yeah i well i don't know exactly where it is uh but there's 500 pounds 500 pounds of uh element 115. yeah and it takes 223 grams for a craft so this is definitely an abundance of fuel out there right now uh could you quickly describe the underside of these ships uh no because i i only saw a as from a side view of only one craft uh the other ones were always sitting on the ground i never saw it but the the
(43:23) underside is is essentially flat now i don't i never got directly under it uh to look there might be some features down there but i really don't know okay the reason i asked because you were talking about the three uh distortions that could come down from the gravity engines to distort the uh the grass uh are you aware of any time distortion within the saucer itself while they are running yeah there has to be okay i've heard reports of that and uh but that's about all you know that there is some yeah there has to be what about

(44:00) size distortion within the ship i've heard reports that people who have been in these that the inside seem much larger than the outside would indicate uh i've heard that too but uh i really haven't seen any evidence of that okay uh what about the difference you were talking about basically the low speed and the high speed modes and the control factors in there can you kind of describe each one of the modes and what the ship looks like at the time that it's going through those modes okay uh the low speed mode and i really
(44:36) wish i could remember what they call these but i can't uh as i can't remember the frequency of the wave um the low speed move mode the uh the craft is actually very vulnerable it kind of bobs around and it it's sitting on a weak gravitational field essentially sitting on on three gravity waves and uh it just kind of bounces around and it can focus the waves behind it and essentially keep falling forward and hobble around at low speed the second mode what they do is they increase the amplitude of the field and
(45:07) the craft begins to lift and it performs a roll maneuver it begins to turn [Music] essentially roll begins to turn over as it begins to leave the earth's gravitational field they point they point the bottom of the craft at the destination this is the second motor travel where they bring they converge the three gravity amplifiers focus them essentially on a point that they want to go to then they bring them up to full power and this is where the tremendous time space to talk distortion takes place and it uh you know whips
(45:41) them right to that point billy one quick last question here for bob uh now did you actually bench test a small a unit away from the craft itself the reactor yeah and about how large is this and can you describe it okay off here thank you yeah the device itself is probably a plate about 18 inches square uh i said diameter before i think but it is square uh there's a half square sphere on top uh where the gravity wave is is uh tapped off of but that's uh that's about the size right bob lazar bob lasar answering all
(46:21) your questions on an inside to me where would one procure that information uh books or something i mean where would that come out maybe i already forgot his first question well you know it was very in-depth right uh he was talking about uh oh boy yeah the modes of travel right uh i don't know maybe he's been reading literature and uh so there is literature on it uh no but there's you the ufo lore essentially like he said he's heard stories about time distortions and yes craft uh i i imagine yeah that's what he meant
(46:53) that's where he got it from so there are people outside the government right now looking into what you you're talking about i would imagine ah well that's good to hear because we may never hear from the inside right yeah like of course we will never hear from the inside okay let's check out uh hi who's this on the bill given happening on kveg it's amy hello amy how are you fine good um first question are there any um other items or subjects that you won't go into that you won't talk about regarding what
(47:25) was going on at green lake uh about what was going on about yeah about the project no i don't think so there's no other okay uh do you have future plans for for more publicity uh there are several uh networks that are interested uh 60 minutes uh that's that's been mentioned but uh you know i haven't heard anything officially are we going to be would you do it yeah yeah i'd do a major network thing sure okay um are you familiar with the movie that was made uh several years ago i think it was the beginning 80s
(48:03) hangar 18 yeah i saw i think i saw that when it first came out from your memory or do you remember any parallels to what you know now i don't remember enough about the movie yeah tell you the truth um on your show you uh there was a co of the newspaper that had you in it in an article about you uh i was wondering if during the time that you were at los alamos i was wanting to remember what paper that was that was the monitor the monitor do you remember when it was written it was uh like july 82 or something like that yeah
(48:39) that's uh i think i still have a copy at home oh i won't ask you to send me a copy it's okay um another girl amy did the alien uh craft create harmful radioactivity in the area no they don't no um well that's good news yeah because there was that the woman that you talked about bailey on the show a few days ago about the child and the two women yes and they now have cancer yeah kind of doesn't correlate yeah i i believe that was a uh i've heard of that before and that sounds that sounds like a really
(49:13) poor attempt at us producing a craft yeah a nuclear-powered craft really dirty spewing nuclear material all over the place it sounds something that we would

make you heard it first nothing good been happening with something we would put together right not anyone else it really it really rings of humans okay amy thanks for the call can i ask you just one more question go ahead um as best uh as you can tell do the aliens appear to be the same general physical makeup i mean from your research on on the on the the craft itself can you tell if if they're
(49:53) similar to us by the way that it was designed uh certainly smaller but there's no nothing other than that well not from the crafts i mean i i read some material pertaining to you know what they call the typical gray yeah you know i believe them to be that thank you amy okay thank you okay bye-bye all right uh well let me touch on a couple of things here you know you go do your thing we can't do that right now explain to that person please um it was interesting what you said about when they when you asked for your uh
(50:28) birth certificate uh-huh and it was sort of you could not locate it and they told you literally you did not exist they told you this i mean in so many words they said we just have no record here right uh and then you felt within yourself you didn't exist you're saying uh well i felt that's what they're trying right this mode of travel that uh involved with moving these ufos around can you see that as being a mode of travel for us in the future i mean you said it only takes like grams of fuel that sounds pretty good to me as far as
(51:01) being efficient do you think it's possible that we could be traveling like that in the future well obviously they do so oh they do think this uh i imagine it's possible in the future yeah i'm talking about like our automobiles would be something like that and travel like that uh and do you have to be off the ground in order to travel like this you can't be touching yeah you have to be off the ground so we'd be going like this all over the place yeah it's not a very good no mode of uh slow speed
(51:30) traffic right it wouldn't be getting anywhere and it'll be all kinds of things i don't think uh we touched on by the way folks in case you're wondering why i'm doing the interviewing right now at this point in time we wait for a report from houston which is called road watch america and i have to wait some strange things are going on in your life you mentioned about car doors being open describe what happened the other night when you and your uh shelley left the house and he came back and the doors are wide open i mean what
(51:54) what do you think about all this uh it's crazy a friend of mine shelley was over and uh we went out to uh a bar to have a uh uh buffet uh we went out we locked the doors checked everything and uh we came back uh several hours later and all the doors were open and uh nothing was disturbed in the house nothing was uh you know taken uh in her car that was left in the driveway the seats were moved all the way back like someone big said in them i've gone to uh with other friends to a health club that i go to
(52:30) we lock the doors and check them and in fact you know i usually keep a gun in the car uh and put my wallet on the on the dash uh we've we've come out and the doors have been not just unlocked but actually open not not even the wallet taken or the gun certainly kids would have done that uh it's just like someone wants me to know that uh there's you know yeah they're still there they're still there and getting back to being still there the last time you were on the happening you revealed the gentleman's name
(52:58) if you don't want to say it again it's up to you you probably do you didn't care i don't remember exactly what was his name dennis marion okay you revealed his name saying he was the one that was threatening you and he was the one that was really the biggest problem in your life have you had any problems with him since then uh no not recently no no so that's interesting okay bob lazar is my guest we'll get back to your telephone car well it's i don't know if i'd use that in a car but if you wanted to you could
(53:25) use it as an a tremendous electrical power okay which goes back to the beginning of time we're gonna have electric cars and we were uh convinced we shouldn't have electric cars because we were told we had to plug them in along the way since you've gone public with this you've had contact with them calling you and wanting to know what's going on et cetera oh yeah well there were a couple that i uh gave into information to as we were going along and uh they they knew what was going on already
(53:50) okay well they knew what was going on already uh through me oh i mean uh the reason i ask those questions that i'm wondering is is in other words if you had other people to back you up and support you i think it would might lend more credibility to what you're saying that was part of the idea of getting it on the

news and i thought hopefully i would shake the tree and have these other guys come forward and i'll be able to cooperate the story and so on and so forth and then also have the 115 under my belt but then i'll plan
(54:19) backfired so the rest of them don't have to have and this is for them if they're listening and the rest of them just don't simply just don't have the guts to do anything i wish they apparently okay uh let's see another question here um let's see i i wrote these down of course anything i think you mentioned this a little a few phone calls earlier but anything in the uh in the works in regards to any other uh national television coverage or news media coverage of any sort that you know of
(54:48) uh there's been uh you know lots of talk but uh nothing nothing definite i mean there's no date set for anything but uh there's been a tremendous amount of interest okay well that sounds good national line and international too and uh one more question is uh reference to the uh i've heard some talk about the there's a big underground base up there too did you know anything about that i've i've i've heard that story but i you know i have no something like that of her yeah i have no first-hand knowledge of it i
(55:19) haven't been in any tunnels or you know underground stuff so and i still have time for another one one quick question just bill okay uh these ufos it seems kind of strange to me that if these uh the aliens that have these ufos uh obviously are thousands of years in advance in tech technology it seems sure how in the world would it seem that the the government would come into possession of these ufos if in fact the ufo uh aliens that didn't actually want them to have them all right bill thank you for the call
(55:53) he'll answer afterwards okay thank you uh i don't know the thing is that they look in in very good condition it doesn't look like they were crashed uh that they were retrieved somewhere it really looks like they were they were given so uh i don't know that might be the case have you ever given any thought to the fact that maybe they were invited here and they actually landed here and that's why they were here too uh yeah it's possible it's possible right they're gonna come right to this area
(56:17) amazing let's let's go to uh one of our new member line and see who's out there hi who's this and the delivery happening on kveg hello jim yes jim from where uh from las vegas all right jim first time caller first time well i'm glad you finally decided to push those buttons i have a big curiosity here good good um for bob of course um i saw on tv spoke of observing a demonstration of this anti-matter gravity couldn't wave controller device that he assimilated one i guess made one himself a mock-up copy or
(56:54) something yeah a friend made one yeah uh well i saw you do that and i heard you speak of uh bouncing golf balls off of the anti-gravity field yeah and also about the candle the wax and the flames stood still right and then the hole that you saw up here yeah it wasn't a hole it was a little a little disc a disc yeah yeah a darkness what i want to know about is uh under what conditions did you see this demonstrated and maybe you'd elaborate a little bit on this and how large was the force field the forced uh
(57:31) the force field where the candle was and the force field created by the uh anti-matter device uh i'd say it was probably about 20 inches a 20 inch radius from the uh the surface of the sphere where was this area just above the device yeah surrounding the sphere yeah surrounding the sphere yeah surround the device no the sphere sits in the center of the device [Music] oh okay it's a half sphere sitting on a plate is the best way to describe it oh okay field surrounds the half sphere okay and you just place a candle in
(58:19) there no no no no that that was a separate demonstration i'm just telling you where the field extends from uh oh that's what i'm curious oh okay no they tapped the field off uh using a wave guide uh off of the sphere and uh this was a completely different setup where they had a a mock-up small a gravity amplifier and they were three focused into a point and that area of focus was probably uh nine or ten inches in diameter that area they displaced this area or moved this area uh no it wasn't displaced it's just where the where the
(58:53) field was generated right and and then there you put the cancer right yeah just could actually bounce golf balls off of it no no the golf ball thing again had nothing to do with that setup the golf ball thing had something to do just when the reactor was energized before the wave guide was put on or anything uh we were just pushing on the field i was you know it was being demonstrated to me and we just bounced the golf ball off the top and and the candle doesn't melt and the flame stands still in this disc that

(59:20) you're talking about well in the area yeah and you don't have to put it in the center or anything right just anywhere in the area well the the actual flame of the candle was in the uh in the area in the center of the desk and you saw this happen yeah uh thanks a million no no problem though okay take care jim all right bye-bye bob lazar people are saying thanks a million there was that one of the crafts that we made or was it one that was uh here brought here by the agent from another planet this is a craft of alien origin
(59:55) some that was brought here by them from another planet yeah and do we know anything about their way of life no i i'd really like do we know anything about their way of life or death i really don't know language or what i i really know very little about that i'd like to know a lot about that i mean you assume that they mass produce the craft so there must be some sort of factory somewhere that means there must be workers in the factory do they have a social life i mean the questions are endless i'd like to know myself
(1:00:25) and it's also said that they are here on this planet well if they are here where are they that's another good question yeah i've got some good ones for you yeah you have another good one for us what do you think about that now uh as far as what where if they say they're here so where are they i you got me i i really don't know well if one walks up to my door what my book to do i mean everyone thought about that they walk up knock on your door yeah that's a good question about we make a joke of
(1:01:01) that uh but if that were the case see the government doesn't give us any information how would you handle something like that uh i don't know i guess you'll find out really quick if they're benevolent or not yeah that's probably but as far as as far as what to do who knows but let let's take an example there man hold on one second like that's bob and i'll ask you the very same question let's say you're out in kansas out in the farmland and you see this person that looks really far out do you think
(1:01:29) they're just going to wait for them to come to the door do you think they're going to shoot and ask questions later i'll probably shoot an earthquake that's the problem wouldn't that cause all kinds of consternation amongst these people if they find out one of their people where well you have all the stories of the abductee reports about uh you know people medical examinations i mean they go through a lot of trauma and stuff like that when it came right down to it if i was confronted uh by a bunch
(1:01:51) of them my car stopped or something to that effect you know crap obviously in sight yeah i take on a hostile uh attitude really quick sure sure unless you were told differently right by the government these people don't mean to harm you they're going to be landing in your cities whatever just handle it differently okay one more question go right ahead uh do you ever think that in the future that our president will tell us uh on national television that the ufos are here that he will make it known to us i doubt
(1:02:23) it you don't think he ever will no i i don't think he could muster up enough to do that all right thank you one of the presidents in the past was supposed to say that if he got elected carter yeah he was going to tell us all about it but he didn't yeah that that tells tells you something right there because he never got in and denied it he just got in and didn't say anything all right thank you for the telephone call thank you very much thanks bye-bye let's go to a new member brand new caller hi who yes uh yes uh this is bob
(1:02:55) i've got a few questions for bob lazar okay uh did you have a badge when you went to work bob sure did uh did he have any designation on it uh as far as what uh what does it say it's a a white badge it has two uh a light blue and a dark blue uh diagonal stripes through it on the top it says maj12 uh the clearance level is called majestic i don't know if that was like i said before i don't know if that means anything as far as the majestic 12 documents go uh or if they just called that clearance that uh as a nostalgia
(1:03:31) type of thing uh my picture was on it and uh [Music] what else was on did it have both maj and and majestic both words no the only place i ever saw majestic was on dennis uh dennis's badge who was my supervisor and his back looked slightly different so i don't know if it was an older kind or or what now you mentioned that you were doing back engineering but specifically what was the breakdown of your duties during for example one day uh with respect to say what what your co-workers were doing how what was the
(1:04:04) breakdown the division of tasks i i have no knowledge of what the other people were doing but you were working with more than i mean you were not working

simply by yourself no just with one person and what was the difference between what you did and what he did well you know we were in basically the training phase he was he was getting me up to date on everything so we never split off and you know he went and did his thing what were you actually um did you ever skip to another question did you did you ever see an analysis or a spectrogram of
(1:04:32) 115 yes and how what did that tell you uh well that it was an unknown element uh then we did uh density uh and uh weight calculations and uh which are pretty basic and of course it was too heavy for its physical size uh we did uh it was an x-ray spectrograph uh i don't remember what other tests we did to it okay two last questions so one how did you know what the times of testing would be to go up to these sites to view the objects and and second uh do you know where it's being tested now uh well first of all dennis told me the
(1:05:14) testing times and uh of course those are the times that i relate to other people and we went up there uh what was the other question and do you know where it's being tested now oh i have no idea in fact uh you know if i was them the last place i would test it would be s4 thanks for the call thank you very much i really appreciate it okay sir next to the really good happening tom good night uh el nico five are you familiar with that magnetic material that we use here for uh yeah that's a common i never heard
(1:05:44) the five designation but okay well it's a developed it's a very dense magnet is that close to the material of 115 oh no not not at all that's that material is uh that's an acronym for aluminum nickel iron and cobalt yeah uh none of them being anywhere anywhere near it whatsoever okay uh the is there portholes in that craft how do they uh at the very top there's uh portholes or square though but they must be able to see by tv or or i don't know i didn't i you know that i just saw from the
(1:06:16) outside when i was inside i never i don't think i really even bothered to look up there i just i i don't recall but gravity generator is running is there a thermal radiation no not at all that was one of the uh runnings well i don't know about i was never down on the bottom uh while the gravity generators are running but the reactor itself there's no there's no thermal radiation whatsoever learning that was one of the the really shocking things because that violates the first law of thermodynamics
(1:06:44) yeah right that's what i wondered about the atomic weight to the 115 material is that heavier we know that 115 and atomic weight would be different from the gravitational wave the gravitational weight of that material is very heavy yeah how does that stuff break off do you saw it or does it grind up how do you get to 10 grams or whatever it is i don't know uh you know i really don't know how that's machined into it uh i i know it is machine but i don't know if there's any special procedures employed uh does it
(1:07:15) melt i'm sure it does i'm and just historically uh all heavy elements are also toxic i imagine it is a very toxic thing uh what else and if you use the standard designations as started at 103 its name would be unpentium and it's it's symbol if it's going to be plugged into the periodic chart would be uup and uh in fact i have a friend that gave it a kind of a cute name he called it unobtainium like berkelium yeah exactly okay the other question variable question was that do you think you would be able to
(1:07:57) in your wildest dreams be able to create any of this stuff on earth uh you need to in order to do the same thing well certainly i can i can in fact i'm in the process of that fabricating the gravity amplifier but then uh i'm at a tremendous shortage for power so yeah i have even tried to do that stuff on my own is there any electronics like as we know to chips transition no nothing like that there's no there was no uh even because of the tremendous power involved too uh there was no direct connection
(1:08:30) between the gravity amplifiers and the uh reactor itself one more little question the waveguide you're talking about that's similar to what we're using in microwaves very very similar very similar very good thanks a lot bob this is bob uh avon okay vaughn thank you thank you for the call thank you um you touched on something you mentioned all heavy metals are toxic yeah they seem to be yeah they're all very bad for us then when you say yeah proportioning lead is toxic right you get up you know higher you can
(1:09:02) get rainy and plutonium i mean they get healthy and okay let's go take another call let's get right back to the telephone and talk to you how you next look at happening on kveg hello yes sir uh yes good evening fascinating uh first question uh is this uh sector four also called proposed dry lake bub uh yeah okay so that's

interesting it's in a place called immigrant valley not immigrant like people who come but immigrant like people who move right as you you can see tapu's dry lake from out
(1:09:37) of the hangar door right okay next thing in regards to the long-range method of travel with these things isn't a propulsion unit maybe the wrong idea let me bounce this off of you i feel that this device is creating a situation where it is diminishing or removing the localized gravitational field and the long distance being or the body that they're heading towards is actually pulling the vehicle rather than it being pushed am i correct in this well the v yeah the vehicle is not being pushed so maybe a propulsion is a uh but
(1:10:07) it's not being being pulled implies it's being pulled by something externally it's pulling something else to it it's creating the gravitational field great what do you what about monopoles is this any kind of relationship to monopoly you know they've been looking for the monopole yeah they've been well they've been looking for the monopole magnet exactly uh we got a similar area yeah but then you know it's a gravitational force they're different things but exhibiting similar effects right okay next thing uh
(1:10:35) rather put the hair up on the back of my neck last night i saw a small white four-door japanese car and on the right side rear passenger door there were three nine millimeter bullet holes about a 12-inch group i was just curious if that was the vehicle that was shot at now that's similar to my car but this one here but they missed me yeah well this was really weird we've done that okay the next thing the last time i spoke to you i mentioned about flashings and pawns in their fusion operation have you heard that nec
(1:11:03) in japan has duplicated the results of their experiment uh no i really haven't heard much of that well it was on the news several times okay good i'll get off here and let somebody else in great good keep up the good work okay sir thank you for your call connection look at what happening on jveg hello how are you there i think they left hi how you doing thank you uh first of all i just want to say i'm 15 i listen to your show every night while i'm sleeping i don't know how i came across it but you're 15 yeah have you
(1:11:34) joined the uh billy's young listeners youth group yet no you haven't uh well i heard some kid the other night when i was that's right well that's brian he's coordinating that why don't you give him a call a month all right her number is 369 uh okay five three four seven and just ask for brian and call him during the day and i know he'll put you on the list all right okay i have a question for bob yeah uh hi boss hi hi i just wanted to ask you do we give something in exchange for that for all this information they're
(1:12:06) giving us uh i i really don't know you know i don't know what went on behind the scenes as far as how we got the technology uh uh also uh this i15 or 115 whatever it is one open yeah does it come in like uh did they give it to us in large quantities or uh yeah 500 pounds is what i'm told it comes in though the way i've seen it it comes in discs like uh little thin discs like close to the size of a half dollar yeah and uh did you ever did you ever own any or yeah you did what happened to it it's
(1:12:45) gone it was it was stolen at my house along with some other stuff that i got from there oh it was that from the govern government uh that's that's what i assume i i hope it's in their hands i'd hate it to be in uh a few people did know about it uh some ufo related people and i i'd hate for unexperienced people to be you know in possession of this stuff but uh yeah that was taken we did attend we did get some film of it and some film doing it uh of it doing some uh uh really unusual things but
(1:13:15) yeah [Music] also uh how did you uh get hired in area 51 uh i was referred by a well-known physicist uh to talk to someone and i really don't want to go all into that because then i'm pointing fingers at specific people is is like uh like when you went to work there was everyone like really quiet you know but you know where they like uh like where their mouths shut now or was it yeah there was not everyone wasn't just talking and you know and that they it wasn't a really happy environment you know it was just into
(1:13:52) what they were doing and that was it yeah all right young man thanks for your call what school do you go to uh hyde park junior high hyde park junior high when you call brian join up with that group i think you'll find it fascinating all right i keep listening okay but stay awake all right take care yeah hello hello hello i i'd like to ask bob a question sure um what year were you doing this were you working up there uh last year last year huh okay uh i heard from from someone

that i know that's a pretty good source that uh
(1:14:26) that a small amount of plutonium like a like a picogram or something might be good for you is that true no not at all you don't know anything like that at all no i know information completely contradictory to that okay well i was just wondering thank you okay thank you for the call he said good for you like what would you do use plutonium for it to die yeah really that's deadly right yeah it's that simple yeah in the lungs it's almost you know immediate lung cancer uh it's a toxic in itself a body has a
(1:14:59) tough time getting rid of it and uh it's just bad news in in any concentration and you're messing with it right i mean i don't have any at my house no but i mean you said that's part of what you're working on the plasonia thing uh uh electronic equipment to detect plutonium oh it's they're called alpha radiation detectors or air proportional okay why do you want to detect the plutonium i asked that question uh they use them to screen personnel that are leaving an area uh that's plutonium contaminated
(1:15:26) they uh check equipment for plutonium contamination uh so on and so forth they don't this is as bad as uh uh radio was it what's that what i'm thinking of radiation i guess right well yeah plutonium does produce radiation that's the whole thing so it's as bad as when they've been clearing the people in nuclear power plants and stuff like this yeah oh i get it and you're the one that's that's devising a device that's going to be easier uh no our device is just less expensive
(1:15:52) okay all right good bob lazar no bob lazar is uh regarded as the nation's leading authority on ufos he plans a three-hour presentation including visuals of ufos drawings of aliens sketched by eyewitnesses a startling videotape regarding the jfk assassination evidence that a live being alien being being held captive in new mexico an evening of astonishment a show you'll talk about for years and years and your special host will be billy goodman of billy goodman happening heard on superstation am 840 kveg in las vegas 10
(1:16:31) to 1. that's a night with bill cooper sunday january 7th at 5 p.m call the showboat at 702-385-9190 for ticket information yes and don't forget can you hear me yes we certainly can very clearly as a matter of fact i like to speak to mr lazada he's right here he can hear you too mr lazar can you list your credentials uh as far as what your schooling yo your degrees i have two master's degrees uh uh one's in physics one's in electronics uh i wrote my thesis on uh mhd which is uh magneto hydrodynamics
(1:17:15) uh i worked at los alamos uh for a few years uh as a technician and then as a a physicist in uh the polarized proton section uh essentially dealing with uh the accelerator there uh i was hired as for as a senior staff physicist uh to work on gravitational propulsion systems and and what not associated with those crafts what what school did you go to i'd rather not say the reason being is currently i'm working uh with them under contract and i don't wanna i'm having enough enough trouble with this as it is okay
(1:17:58) why did you leave the groom lake project i don't want to go into that either that's uh that's a big long complicated story it gets into my personal life too and i don't want to get into that have there been any attempts made on your life yeah when was the last one uh well there's only one direct one and that was uh i really don't remember when that was uh i don't know maybe uh six eight months ago or something like that uh just being shot out getting on the freeway another another car drive by and shoot
(1:18:32) you yeah okay are there any weapons on board the alien crash uh not that i know of of course the gravity generators themselves can be focused and i imagine that can be used as a weapon how many how many alien people do they hold i don't know how many people can you fit in the car you know it's i imagine if there's a bunch standing up you can pack them in there regarding this uh uh element 115 yeah uh it's extraterrestrial material yes definitely how do you suppose uh the s4 project came to acquire 500 pounds of it if it
(1:19:07) is from if it's not from this world i would imagine it came on one of the crafts oh extra fuel yeah maybe how close uh how close can a civilian get to the area 51 or the immigrant valley i mean i mean what is security like how many guards and so forth i think closest you can get is probably about what uh 10 miles and then you get a mountain between you and and them a lot of patrols huh oh yeah thanks for the call sir okay thank you okay right all right so bob uh we were talking off the air and i want to touch on this you said that you
(1:19:41) traveled one time on hydrogen in your car yeah i had uh a 1978 trans am i converted to run on hydrogen we were talking about this one night you know as a new

uh mode of transport not motor transportation but a fuel uh for transportation and the question that came up was is that more dangerous than gasoline or depends how it's stored there's ways you can do it you can store it as a gas compressed in a cylinder where yeah it's dangerous and explosive you can store it as a liquid a cryogenic liquid where
(1:20:12) it's also dangerous and explosive or you can also store it in a hydride and hydride's a chemical it absorbs hydrogen like a sponge absorbs water and when it's in that stored state it's really not flammable and you heat the chemical using the radiator water or electrically or the exhaust gas to produce the hydrogen there's only a small amount at a time ever produced and in that instance it's a lot safer than gasoline and that's the method i use i love to hear that now so in other words we could put these
(1:20:38) in automobiles getting back to something new absolutely definitely yeah yeah and there you're looking at the only exhaust is water vapor essentially steam and very just little lock site are you hearing this america well you know we touched on this one night now we're hearing it direct because we people are calling and saying we'd love to hear what scientists tell us this now you're telling us a scientist is telling us you know getting off the ufo just for a little bit but what is important is how we're
(1:21:03) going to get around in the near future if we lose fossil fuels and things of that nature and they're probably going to turn to something else but if we just turn the hydrogen hey we could save a lot of money and it's even safer that's what you're saying yeah if you use the right way sure right a lot okay where do we get hydrogen from where we get it from well the most common place is to get it from water when you pass electricity through exactly yeah from water yeah you break down uh the bond and you wind up with us so what
(1:21:29) could what could we be charged if we were to pull up to a tank and have some water i mean really well there it takes energy to separate the water back into its molecular okay all right atomic state but i mean if we were the driver of a car forgetting what what the components are inside the car if we were to drive up they would just have to put water into this particular unit uh you could make it that simple yeah during this america that's how simple things could be uh has this been known for years in the scientific field well
(1:22:00) there's been plenty of cars that that have been made that run on hydrogen i mean there's in fact one state somewhere has their entire postal fleet the little jeeps that run on hydrogen there's a company called billings energy uh those are the conversions is that billings montana by any chance uh you guys when you say you said it was one wednesday that had their postal things right it might be i'd like to look into that that is fantastic why do you think it's not being made and availability i mean you know you've
(1:22:30) got that problem too the problem availability what do you mean if you're gonna just use gassy as hydrogen okay what would it take uh to change our current uh motors a motor in a car to accept this oh not very much at all it's very similar to a propane conversion oh wow that sounds good to me does it sound good to you folks out there we've got to get on this somehow or other this has got to be brought to the forefront and i hope someone we get someone on the vip panel to talk about this this would be a great topic to add
(1:23:01) to that uh sunday january 7th because you heard how simple it is you have now heard it from a scientist have you heard from mr teller at all no not one word in other words he does nothing at all and the other thing he said was the anti-matter reactor we are nowhere near being able to have one no no not at all the first thing we'll come up with uh uh when we toy with that some more is uh and there's already been talk of it is uh an antimatter weapon uh that's unfortunate that's the easiest thing to to produce so
(1:23:36) first we'll see that before we'll see you know potential useful the jurgy being grown up this man is something else i mean he says it he likely throws a right hook and i left that quickly at them he's getting the message across and this hydrogen thing is phenomenal and we will get back to bob lazar and okay back with more of you billy goodman happening i'm just talking to bob lazar off the air and bob is a jet car driver jet and he says that's how he relaxes doing 350 miles per hour that's his relaxation in life well
(1:24:07) that's a that's great okay let's go uh uh to line one and talk to you how you're next in the look of it happening on jveg he's right here hi all right uh you said that there was nine different discs are they quite different in appearance yeah they're all completely different in apparently are they then from perhaps different

uh star systems uh could be yeah in other words you said the first one or the one you looked at the sport model was from reticulum right yeah that's what i read okay so that has the
(1:24:44) the gravity propulsion system right and then some of the others may have some other type of propulsion system isn't that right well i was told that the uh reactors are all similar in them and from that i just assume that the propulsion system is the same but it is it is possible that the the other ones have different propulsion systems yeah yeah right you know uh the light years from earth to reticulum is how far above what did you like 32 32 3 34 somewhere and they must get away from the earth before they amplify the gravitational systems
(1:25:20) do they match they don't they don't have to but it has to be a line of sight where they can move to uh in other words it wouldn't be have any effect on the earth even though they were close to it when they turned it on no no i see okay the other question i had was as far as religion goes uh in the aliens where do they fit into it they must say something about it i've heard something about that they mentioned that uh they had a bearing on us through religion uh perhaps through colonization or uh some other method what have you heard
(1:25:53) about that i've i've read some about that uh uh you know i don't want to go into that you don't no because that's going to upset everybody yeah okay well i thank you very much for the time thank you this is roger the dodger by the way roger are you uh accepting telephone calls oh yes after 12 o'clock you bet no one o'clock oh one o'clock oh that's right all right roger yeah you're trying to dodge it again that's roger the dodger folks and by the way uh if you'd like a copy of what you're
(1:26:23) hearing tonight or for that matter any other proceeding happening you just call roger the dodger he's right there waiting for you at area code 702 564-4404 at four 702-564-4444 i was calling to ask two questions i wanted to know what the top speed of this crap was getting now can you say uh it's tough to say a top speed because uh to save speed you have to compare distance and time and when you're screwing around with time and distorting it you you can really no longer judge a velocity but they do have a fee though is there a
(1:27:00) speed that you could judge or something i'm sure we don't have but no because they're really they're really not traveling in a linear mode where they just fly and cover a certain distance in a certain time so that that's the real definition of speed uh you know they're bending and distorting space and essentially snapping it back with the craft so it's the distances they can travel are just phenomenal in in little or no time so speed has little bearing i'm curious is the lasers part
(1:27:31) of their technology uh their flying scene no i haven't i haven't seen anything along that line and last thing is rockwell involved with that uh not that i have seen that okay thank you very much all right thank you for the call let's go to uh our new new member line and uh find out who's next annabella happening on kveg hello yeah this is pistol pistol how are you pistol i'm fine good i've got a question for bob and i'll be calling you tomorrow okay uh i've heard you mention both uh
(1:28:08) a gravity or anti-gravity generator and then that anti-matter generator and i wondered is are they different are they just a different terminology or uh yeah i it's not a gravity generator it's a gravity amplifier okay i get tongue twisted all too often the antimatter reactor provides the power for the craft and the basic low amplitude gravitational wave which is too low of an amplitude to do anything uh it's piped into the gravity amplifiers which are found at the bottom of the craft there it's amplified into
(1:28:43) an extremely powerful wave and that's what the craft is uh flown on i see but there is an anti-matter reactor that's what provides the power okay thank you sure take care pistol okay all right bob lazar is my guest and boy it's a pleasure to have bob lazar in studio tonight if you have uh a question for him uh feel free to give us a call let's go to line two and talk to someone uh on a happening you're next on kbeg hello hello hello hello hi this is roger nelson how you doing roger how are you
(1:29:16) i'm just fine hello bob lazar hello um say uh by the way i got through a couple of times last week but didn't make it you know uh to the finish line so i'm still in there listening don't worry about that part billy the question i had for bob last time he was on um that i talked to him i asked him about uh the hyper light uh propulsion systems he had seen he said yes uh like roger the dodger just pointed out the the craft have hyper light capabilities or beyond the speed of light bob do you know anybody in our government or any

(1:29:48) people there who worked on the craft or do you know of anybody who might be from this planet from earth who's taken those craft and flown past the speed of life to other galaxies no i i don't and i don't know if they've been if they've been used for that uh how would be there is there anywhere to go on it i'd be very interested to see how many of our guys on particular programs have gone to space what they're learning exactly where they are now and whether or not there's any tie in with
(1:30:13) the alternative three uh the escape earth plan that supposedly the government leaders are stirring up now is there any place that that you know of where uh this information can be found uh i imagine if if any of that's in fact true it would be found in the in the midst of s4 or 51 down there of course how to contact those guys and actually get them to talk is uh you know that that's a feat not yet attained yeah that's what i was afraid of hey what is it that i didn't hear what it is that you now are doing for a living now
(1:30:44) that they've cut you off at the knees uh i do other scientific research and produce and design repair uh alpha radiation detection equipment uh well a number of uh copies of these broadcasts and the show on channel 8 and all the other stuff has been getting around perhaps even internationally uh has has anybody bothered you since you went public uh other than the silly little things that have been done uh no nothing nothing big to be concerned about well that's good uh are we going to see you at any of these uh things like the
(1:31:20) january 7th conference or other symposiums in the future i don't think so no okay well look i think you're a very brave man you know with that kind of an onus on your head it takes a lot of courage to uh keep coming back to the airwaves and um i stand up and cheer as one well thank you all right take care billy and we'll see january 7.
(1:31:38) all right roger okay bye-bye that's roger nelson uh who is a radio announcer out in san francisco he said kba wise matter of fact he has one headphone tuned into the happening and he does his radio show with the other headphones in fact it's true that'll drive you crazy no he has it totally under control he has a totally under control and he's a wonderful man he's come down before he was over the blue diamond and uh the other excursion that we had in town he's going to be in town and he always has information and he's quick
(1:32:06) with his questions and i mean he's just a pro that's probably why let's take a little time out for these messages and we'll get back with more of bob lazar and your telephone call line one you're next in the bill government happening thank you mr lazar yes could you comment something on your studies into uh magneto hydrodynamics as the result relates to the hot spots in the earth's flux magnetic flux and does that relate to the deep hole theory that soviet unions are playing with uh well i don't know exactly what
(1:32:38) the soviet union is playing with okay go ahead i looked at it from a a power point of view exactly as providing a on a large scale producing uh plasma generated energy in like a power plant situation or producing something that would retrofit like a coal-fired plant that has a lot of waste heat and you know high-energy plasma the question is uh are you experimenting using the earth's flux no no okay they're just stand-alone uh high-energy magnets today okay i know there's a lot of study of the web changing in here
(1:33:17) especially west of the uh uh grants okay uh i've got zero premium one other question just also one uh can you roughly give us the atomic weight of one's uh the gas i won't have this 115 the atomic weight i know you have to guess but compared i hate even to guess i know it would be a big wrong shot uh i i hate to guess i i know it because i've written it down because we've we've calculated it yeah i really i really don't think it was a ballpark no because i'd be wrong just like if i gave a ballpark on the
(1:33:54) gravitational wave frequency and that's really bugging the hell out of me because i just look at the lights if i could get that frequency in fact what i'll do is i'll if there were three things as a matter of fact that for some reason i developed a mental block on i'll have to call uh billy and then well yeah this afternoon i didn't think i'd get through today sure that's that's no problem i'll just call him and he can he can relay it to everyone my pleasure all right thank you billy thank you thank
(1:34:19) you okay uh i want to remind you folks when he says that billy and all that for all of you out there listening think of it happening on kbeg hello sir hello yes you're on the new member uh i'm local caller yeah first time well welcome in thank you and i'd like to stand up and cheer for bob yes here let's all stand up

and cheer come on let's all stand up and cheer for bob lazar let's all do it that's right come on let's all stand up and that's right [Applause] i was checking that myself
(1:34:54) right right it did take a lot of courage and it's about time somebody stepped forward with some information that's being kept from us for so long here here uh one question uh yeah uh how long do you think it took them to make their journey here uh using their method of propulsion an extremely short time oh is that right yeah you know i'd hesitate to say again but uh i don't even think you're looking at days is that right yeah well is that because of this gravity uh lying to force thing or uh well because
(1:35:37) time stands still for them and it really does take a long time but they don't know it because time stands still no well they're actually traveling almost in between time because of the way they distort time and space so that they're traveling vast distances without really the incrementation of time you know the time would be very very little i i spread days is probably i'm way off saying that too but there again i i hate to say something and uh you know be really far off i had so many questions uh but most of them have been
(1:36:13) answered tonight by other callers well that's good one more uh if i could sure do you think that these aliens could be robots of some kind and they're not actually the native beings from that galaxy uh i imagine it's possible i mean who knows what actually flew the craft yeah whether or not aliens have ever been down on that in uh area s4 down there but uh it's possible that some automated you know creature who knows good question thanks for your call okay all right keep coming back bob sure keep coming back never heard that before
(1:36:53) and i guess it kind of fits in when you were inside the uh the spacecraft itself you didn't see any sleeping quarters right so perhaps they just start in the morning and appear in the afternoon and it's that simple as far as our time goes if it even takes that long it takes that long all right where are we going line one okay we go back and forth line one we got line three down there sometime that person must be hanging out for a long time that poor person uh you're next to the billy given happening
(1:37:17) on kveg hello hello hello oh it's me yeah oh i just called i didn't expect to be honest i didn't i don't know why that happened either i guess you just got lucky go ahead yes okay um yeah i have a question about you instead of uh my name is barbara and i've asked you about alan i'll leave that alone hold on time today um i want to know about elaine keck your hypnotherapist yeah um now when he talked on the air about you did you request that did he talk about me uh no george knapp requested that and then
(1:37:55) lane called me to find out it would be okay and uh i said yeah go ahead george okay because i i called the office and that's what i was told and it didn't seem quite that i requested to go on no that's not that's what the person in the office said and how was your how was your experience there with him did you um can you talk about how you felt about your experience uh as far as what how i got along with lane no as far as how you felt comfortable with with um going back to to some unpleasant experiences
(1:38:27) uh well you know there again the emotions came up when uh you're under hypnosis and you know that that part wasn't exactly pleasant and how do you feel about it today uh i mean i feel better at at the time it wasn't very pleasant but uh in general just being under hypnosis is a really good feeling do you have um the videotape of that uh yeah oh what's in your possession uh i don't want to say where it is but yeah yeah i i know where it is okay all right because i'm going to be doing that and i
(1:39:00) because i was with him and so i just wanted to to for my own personal information i want to do that because i'm i have i have good aliens bad aliens um you know it runs in my family and um there's a an extreme reason why why i'm going to be doing it so i i wanted to clarify that and try to make myself feel comfortable although i can do it on my own i won't go deeper than a certain point all right thank you for your call and please get that line cleared up please get that line clear whoa what was that noise
(1:39:38) the alien's bothering her okay hello line three you're next on kveg hello hello yeah i'd like to ask bob a question he's right there go for it is there any limit on the distance that the space ship can travel i mean did it actually travel like out of our galaxy to the andromeda galaxy or basically how far could 223 grams of that element thank you i really don't know uh from what i understand the the actual consumption of the element is very low so yeah i imagine it is possible uh

with enough jumps made you know to
(1:40:13) travel to another galaxy so basically they travel out is there is there any big difference between the i assume the gravity wave is more powerful than the gamma rays correct than the gamma waves or as in spectral waves they contract what's the limit on light waves with it 10 billion light years or something and how far light can travel no there's really not a well a a limit as far as what it depends on the interaction if the gravitational fields that the beam passes through you know the photons pass through and and so on
(1:40:44) and so forth so there's no no real limit in true dead space yeah that's true okay thanks it basically answered my question alright thanks for your telephone call

Bob Lazar Interview With Art Bell | 1992 - YouTube

Transcript:
(00:02) industrial design and college then pursued his aviation career flying airplanes deep lanes gliders gyro planes helicopters balloons and fighter type aircraft while attending high school in switzerland lear became the youngest american to climb the matterhorn in zermatt in 1968 he pylon raced a douglas b-26 invader in the reno air races the largest aircraft ever raced at reno at the time at age 28 he was one of the youngest boeing 707 captains to fly in commercial airline service a former nevada state senate candidate
(00:43) john is the son of william p lear senior designer of the lear jet executive aircraft the eight-track stereo and founder of leader incorporated now lear siegler corporation a large defense contractor lear has written extensively about airplanes and other subjects and was middle east correspondent for combat illustrated between 1975 and 77 while stationed in baruch lebanon with a cargo airline although real father was outspoken in his belief of the existence of extraterrestrial visitors to the great concern of the pentagon by
(01:23) the way particularly because lear senior was head of a large defense contracting company john only became interested in the subject himself seven years ago after talking with an air force pilot who was stationed at bentwater's air force base near london england where three small aliens were photographed by the air force actually photographed by the air force walking up to wing commander general gordon williams lear's extensive worldwide civilian military and intelligence contacts have made it easier for him to penetrate the
(01:57) secrecy surrounding the subject of ufos then in 1988 john became acquainted with a government scientist who worked at area s4 part of the super secret area 51 at the nevada test site the scientist was a member of the most classified government research team then in existence it was their job to research and try to duplicate the propulsion system of nine recovered alien aircraft in storage at the nevada test site rear is an amateur astronomer and photographer and has won several awards for his photos taken during his worldwide
(02:40) travels he owned and campaigned the 12 meter america's cupboard soliloquy out of marina del rey california for two years he is vice president of the generals ward and post number one the soldier of fortune post of the american legion and the member of the special operations association john currently is chief pilot for a cargo airline flies bowling 727 throughout the caribbean and south america lear has four daughters lives in las vegas with his wife merrily a former actress and youngest daughter jacqueline 15.
(03:20) his hobbies include gardening carpentry and ufos i added the last and so away we go uh without any further introduction and that just about did it uh here is john lear good morning john lear good good to hear you again uh john there's been an awful lot of stuff going on and that's that's mainly why i had you back besides the general discussion which we always end up in uh there's a whole bunch of i want to ask about number one is is my sighting um now i don't know if you've heard anything about this or not but i'll tell
(04:02) you john uh i really did see a couple of things that maybe nothing more than you know fallen something or others uh but on my way in from peram toward las vegas i have now seen in three different times what i i i don't know what it was john he looked uh it looked on the one hand a little bit like a falling star seen falling stars alive and uh this was not typical of a falling star it was more like i've

described it as a green fireball trailing uh fire behind it uh in a trajectory across the sky it wasn't
(04:45) small it wasn't like a typical falling star that we've all seen for years it was and i'll tell you why i'm mentioning this john it's because i said it on the air and you wouldn't believe the derogatory myth that i've received i didn't i jumped around said it's seedpod or something coming down but that was just a joke and uh for having seen this and reporting on it you can't believe the mail that i've received john if i can't uh and and so that sets me to think if that got me
(05:19) that kind of mail and i said at the time could falling saw i don't know but sure was strange i can understand what you've gone through well it's been uh been quite an adventure since i accidentally got into this in 1985 it sure has um i bet i bet uh do you get uh john quite a quite a bit of uh abuse of uh come on what kind of nut are you kind of you know [Music] any of those at all one or two in the last uh or five years oh i i got all kind of you know hard to take a vacation art uh working these nights must have gotten to
(06:00) you it's really but i really did see these things john i don't have any thought or i've heard anybody else uh talk about it lean fireballs is what worked well it could have been the uh helicopter right all unknown nor was it gas uh hero desert it may have been a gigantic calling sorry i have no way of knowing john but uh you know there's a lot of reports in 19 i think it was 48 49 50 and new mexico agreed by fireball um uh i haven't heard too many recently but uh there certainly was back then
(06:38) you could only describe it as trailing fires farts and so on and uh sucker was really moving i mean it just went across a trajectory uh in the sky and just oh i don't know four or five seconds uh it was really moving and there's a lot of streets things fly out yes there are out in my valley john i see some mighty strip stuff uh all right i watched uh i suppose you have to see sightings last night did you no i approached what was that um sightings last night uh did a little segment on uh angels and uh i hit start starting on this oh
(07:16) early but uh they commissioned the gallup poll people to do a poll and ask the american people how many by percentage believe in angels this will surprise you 65 of the american people according to uh according to gallup believe in angels how about that well it relates in a sense because if that many people can leave in angels i would think that also a very very high percentage could believe that these ufos um are are more than just something uh identified so wouldn't that make sense yeah i think okay um i've got a number of other
(07:59) things i want to cover with the associated press a couple of days ago john uh reported on a very close call for earth at first i thought that it was an old report but then they began to say as we slept last night a two mile wide asteroid passed within two million miles of earth which they considered to be just close within a uh a cosmic uh blink and i note that in all of these and there have been several instances like this lately john they always tell us about it after it has passed john can you hold on a sec she's gonna
(08:40) do a break stand by book radio in the night time from the great american southwest i'm art bell with john lear and we're gonna be talking uh ufos and other strange things this morning so uh back to it we go and john john um that was a big rock i mean a two mile wide asteroid that passed right by i think tell us right afterwards i think that happened about six months ago but uh yes it did yes it did that's what i'm recalling and it's been a series of these john uh are we just going to sort of not wake
(09:17) up one day uh probably be like that remember a couple years ago they got dan quayle ahead of some deal that was supposed to to uh look out in space and see if there are any asteroids headed this way everybody pooh-poohed it uh i was all the time oh what a waste of money they said but i'm tired of hearing this uh uh about all this um like a baseball score you know um it seems to me aren't we keeping track of these things shouldn't we be well it seems though there's certainly a lot of them out there well here's the
(09:51) big sixty four thousand dollar questions john suppose they saw one headed our way that wasn't gonna miss would they please uh intercepted him and he thought well i'll go along with them they can't prove anything and then shot him down when they got him over russia only not but they couldn't prove it one way or the other and they didn't want to risk the 707s which i was flying so they uh they went another way that's my understanding i didn't participate in in the other one but my understanding
(10:18) they went through dubai which would just cross the persian gulf into

terrance and you're pretty confident that uh because they have officially closed this which was my reference the other day uh that they will not upon hearing what you've just said reopen it or there'll be tries to reopen it no i don't think so because they'd have to let russ parker testify and he's the sr-71 pilot that brought him back and they just want to get into it wow well we just uh killed one hour dead john uh so stand by
(10:48) relax get some coffee or whatever and we'll come back and do another okay all right stay right there [Music] american southwest i'm martell back with john lear in a moment and i uh responding uh to uh what john said i know john's listening right now um i regard the possibility of aliens and ufos in the same way i guess i do as the existence of the creator and uh that has always been a problem for me i'm probably not agnostic i i would say an agnostic people will call me and tell me you must admit the presence you must
(11:27) accept him and i know all that i've heard all that a million times but i'm the kind of person that has such a hard time accepting something i can't put my finger on something that i can't prove and um i'm still that way uh and that leads me into a position where i appear to vacillate back and forth and i do i don't i don't i can't say it that our lord exists i hope he exists i believe he exists but in terms of absolutely my being able to say it's just i don't know that i can uh and
(12:01) that that the same thing tries uh with uh with ufos which i have never seen anyway we'll get back to it in in just a moment you're listening to the cbc and vrn radio networks the perfect gift here here we are again i'm sure you heard what i have to say at the top of the hour and uh it is kind of that way john i i just am not an absolute believer nor a disbeliever my mind is open i am impressed with the number of sightings and the things that we've talked about in fact it's frightening but without hands-on you can't make that
(12:36) final or i can't i should say make that final step that leap to yes they exist but you can't you have haven't you oh absolutely um but if you'd have walked in my shoes for the last five years and had access to all the information i had you probably believe as i do yeah all right um so they are real what are they john that's what a lot of people want to know that haven't listened before what are the creatures that are in these flying things well i used to say that there was uh 80 different species visiting us
(13:11) there's probably more there's certainly more than that out in the universe and there's all different kinds there's these little gray people that do the abductions there's one that was the ones that look just like us and there's also you know some awfully uh weird ones there's just about any any ones that you can imagine what do they want well supposedly uh at least according to the documents that uh were read by um bob lazar at the test site we are an experiment uh we were genetically uh
(13:45) [Music] changed uh genetically experimented with they made i think uh 65 separate collections to make us what we are now which is containers uh they refer to us as containers what we contain wasn't specified in the documents you can speculate uh it might be souls it might be blood it might be enzymes but in any case the the aliens refer to us as containers and and they made these containers now uh according to the documents he read uh they also engineered the world's major religions and they did that in an effort to uh
(14:23) organize and pacify they created uh the miracles so that we would believe in an entity uh so we would uh you know not go off and uh uh rape and murder and pillage and that kind of stuff we were given the ten commandments to live by mainly so that they could organize and pass by and keep us all going in the in the same general direction they are our creators supposedly yeah are you is that one of those things you're certain about or does that hang in the air more as a theory john well it's uh it's looking more and more correct uh
(15:00) who knows what the truth is uh what i want to do i want to start taking a few calls john and we'll kind of uh hopscotch our way through the night here a lot of people that want to talk to you and i i should service some of these blinking lines so let us sporadically begin doing that uh good morning on the first time caller line you're on the air coast coast i am with john lear and art bell hello yes i'm here oh good where are you washington state in the state of washington okay you're on the air with
(15:32) john lear yes uh mr do you um believe that there may possibly be some sort of an invasion where they are taking over um phone lines slash messages over televisions and so forth do you believe this can be a possibility all right thank you that'd be a pretty open operation wouldn't it john uh yeah if the government

itself wasn't doing that uh certainly uh the aliens could probably be doing it well i got i got a funny uh facts the other day john uh listen to a little bit of this if you use a modem you are monitored
(16:11) every time you fire up the modem you activate automatic monitoring equipment i work for a large telephone network that routinely monitors modem and fax transmissions they view whatever is transmitted even encrypted data your government allows this under the heading maintenance monitoring in the fcc rules monitoring can continue for six months without legal procedure the rules are part of an obscure pre-world war ii action by the fcc's predecessor agency saying no information may be encoded or transmitted over public or private forms
(16:47) of telephone or radio with the exception of government agencies involved in national security so they they monitor facts and modem transmissions our government monitors all of this stuff well i was told the other day that not only that but they they can monitor your house to your table for your tv i decided to work for a cable company he said it was very highly sophisticated uh he stopped short of saying that they could actually watch you but they can certainly monitor you through the cable tv this comes by the way from
(17:24) a fellow hem radio operator uh who works for a company that does this kind of work up in the bay area so he knows what he's talking about and i guess just about everything is certainly is monitored uh have you ever been concerned about that john on a personal basis certainly if i were in the government i think i would monitor john lear very carefully uh no i don't worry about it because i know what goes on in 1987 just after my uh series of lectures here and i appeared on tv a couple times um i have a couple of teenagers here and
(18:02) the centaur guy was up here uh putting in some phones and he came in one morning and said hey john do you know your phone's tapped and i said really and he said you want me to find out where and i said yeah so he went out and he came back about a half an hour later and this guy said uh you know i went behind your house up to the pole then i went over to monroe street and then down hollywood boulevard and then down to nellis and down to bonanza and he says it's further than that he said i'll be back in a little while i
(18:29) want to i want to check what's going on so he didn't come back until the next morning and when he came back he said john uh i can't talk to you anymore and i said what are you talking about he said i'm not going to be on another route he said what happened is i got traced your uh phone cap to the mainframe at centel and he said i went to the fbi and the lady there said that if i didn't like my job i could quit he said i went home last night thought about it i went into work this morning and that same lady was
(19:00) walking out of my boss's office and said the same thing to me so they made it very clear that if i made any noise that uh that i wouldn't have my job and i know who the guy is he's still i know where he works and a couple of the other fentanyl guys uh often come by and say so-and-so says to say hello to you so john that's creepy but it's not a surprise there's no question in my mind that we're monitored um i i guess then your attitude just becomes who cares uh you know i'm i'm above board and uh
(19:33) i'm gonna just keep doing what i'm doing or does it intimidate you to know that doesn't it everything's on the up and up i'd like to expose some of this uh stuff that's going on i i don't think a lot of it is is right uh but it doesn't seem like we can do much about it wild card line three you're on the air coast to coast dam without phone john layer good morning oh good morning all right where are you calling from sir i'm calling from mesa mesa arizona they made it very clear
(20:00) that if i made any noise that uh that i wouldn't have my job and i know who the guy is he's still i know where he works and a couple of the other sentel guys uh often come by and say so-and-so says to say hello to you so john that's creepy but it's not a surprise there's no question in my mind that we're monitored i i guess then your attitude just becomes who cares uh you know i'm i'm above board and uh i'm gonna just keep doing what i'm doing or does it intimidate you to know that doesn't
(20:32) entertain me everything's on the up and up i'd like to expose some of this uh stuff that's going on i i don't think a lot of it is is right uh but it doesn't seem like we can do much about it wild card line three you're on the air coast to coast am without phone john lear good morning oh good morning all right where are you coming from sir i'm calling from mesa me sarah's arizona yes sir all right i'd like to uh ask him if it would surprise him to know that clinton's mother's maiden name was
(21:02) rockefeller and that uh his real name was william jefferson b-l-y-t-h-e the

fourth right like the foot all of that a surprise to you jim uh no i think what he's saying is everybody's connected that goes in the go and we think that we're getting somebody new but uh really the president of the united states is just a figurehead it really doesn't make any difference in there good morning everybody of those nights we've got julia with us and some of the information you're hearing and we'll
(21:38) hear will be very troubling even even frightening to some and if have a good night's sleep and we'll see you some other morning for the rest of you we now continue uh john um clean out the petri dish is where we left off and uh you know i've got to say john since the ending of this cold war here we are in somalia you and i talked about that the other morning here in the air and there are uh how many other somalians out there the uh this earth john is a mess right now it is the most unorganized world-like
(22:18) mess i've ever seen well you're right on that is just wondering why it'll all become apparent to us in about six months and i really don't know what the reason is but there's obviously a method to this madness of going into somalia um i'm troubled by the whole operation and i see it as the first step in the brand new world order uh john i wonder if you view it the same way well i don't know about the new world order but there are some very strange things going on by the way for the guy who wanted russ
(22:52) bach's address uh you can write to his wife her first name is r-a-y-d-l-a-n ray ellen westbacher r-u-s-s-d-a-c-h-e-r and it's post office box 3078 carmel california and the zipper is nine three nine two one and she's trying to help get him out but uh back to the uh back to somalia um it certainly is a uh a i was back there in 1977 uh during uh a uh an arms airlift there when we went in after the tamales uh kicked the russians out and we wanted that uh that people ought to pour it on the red sea right and uh what happened is that the
(23:39) somalis had traditionally had uh been supported by russia and the ethiopians where they were fighting were traditionally supported by the west and but they didn't have any ammunition but they had the guns uh so since they changed different sides uh we had to get the uh the russians or the what they call east black ammunition to the somali so i was in an airlift uh that left from uh hungary through saudi arabia down there and went on for months i think three or four months uh taking ammunition down there so that
(24:13) they could fight the war we took east block ammunition yeah it was coordinated right at the very top of the uh state department um we had to get some ammunition somehow so there was kind of a high-level trade going on and i don't know where the west block game is and i think it came out of vietnam this was in 1977 so there was a lot left over from there sure is insist incestuous isn't it this arms thing uh well again back to the broader picture john they claim absolutely no national security interest whatsoever purely humanitarian
(24:51) and uh i'm sure they would say the same thing if bosnia is our next objective of attention i have felt rather manipulated all the way through this john as though we saw all the pictures of the starving and we were emotionally worked up and they prepared us the media literally prepared us for what we're now doing over there and uh would i be wrong in saying i was manipulated manipulated but uh to one end i'm not sure i know it was a lot easier going into somalia than it would have been well support for the elation and if it
(25:27) is a success uh there are many many already calling for uh bosnia to be the next uh the next one and uh from there why there's a whole list of places we could intervene in and try and make this a better world to live in we certainly have to find an enemy because we have billions hundreds of billions of dollars being fled on defense and we're not flying a moderate aircraft 285 000 to the air drops into somalia so uh i'm sure that uh if there's not a legitimate enemy out there that they can certainly uh whip up an enemy
(26:04) for us to fight all right another quick break john we'll be right back and i you know that's a good question exactly why offline that aircraft it's sitting and john has some strong views in many areas including uh aliens ufos and i guess our political course in this uh country as well and uh back down to john john exactly why are we developing the aurora aircraft and then you know the exact same question that you just was asked by senator robert byrd who's the chairman of the senate house appropriations committee
(26:40) committee and he went to the deputy secretary of defense and said hey what what is that airplane that goes mach 8 we don't uh don't see anything in the in the budget now senator byrd is one of 16 people who is allowed to see everything in black budget so he said i don't remember signing anything there was nothing under

there so they had another some other questions too uh nbc april 20th ran a story about saucer like objects over groom light channel 13 has some strange lights uh that they photographed over groom lake
(27:11) aviation week may 11th and august 24th had uh pictures of strange contrails you know there were those sky quakes in southern california wall street journal comes out with a story uh all these things seem to say that there was something strange going on for the senate so bird sent out a guy to uh las vegas here last saturday with dick damato senior legislative aide and he was going to make a surprise trip to groom lake and he told us that uh you know if there was stuff going on and it wasn't through the the normal budget that here he was going
(27:43) to pull the plug on area 51. so he goes up there on monday to uh to groom lake to to true around and see if any of that stuff is there that we are seeing is there uh namely aurora uh s4 uh the disc down at s4 the uh the new unfunded secret airport called sandia next to uh mesa and uh he went up to groom lake as they would have it it was snowed in that day and they told him that uh that they couldn't take him anywhere because of the snow he said he wanted to go down to s4 and they said oh you've been talking to that
(28:18) bobbles our guy huh so uh apparently he's going to go back in two weeks and they said that they would take him down there in two weeks but they wouldn't find anything that they told him that they uh that there was nothing there so i imagine two weeks will give them enough time to move stuff out and there won't be anything there in two weeks i don't have anything against black budgets or anything against secret projects but when you consider the american taxpayer is footing the bill for these operations
(28:44) and all likelihood is paid two or three times the real cost for the legal budget programs to support the black budget programs you know you might want to know who the enemy is that we're really preparing to fight well that was the nature of my question uh why do what do we need this aircraft employees we have met the enemy and healed us and in the sense that uh with a well-defined understandable enemy or not we're going to keep doing this uh period sure uh wild card line three you're on the coast to coast am i going john later
(29:18) morning good morning i would like to ask if he has heard of l [Music] correct and i really got an enlightenment about vietnam and why vietnam happened yeah also fletcher wrote a book about 20 years ago called the secret team and he's just recently written another one that elaborates on that yeah he's one of the good guys all right thank you ma'am appreciate your call john i i'm going to do i'm going to ask you to comment on a kind of a general topic here for the good guys you said the ufo community and it's pretty large
(30:12) there are a lot of people talking lecture uh you're probably one of the most effective community and uh there is an unbelievable amount of ascension uh in uh among uforologists or why or what's going on here why is there so much dissension is it why not the other day they get down to their first year [Music] it's just difficult to do everybody has a different different axe to cry i've noticed that uh every time uh well two people don't agree the standard thing seems to be to accuse the other
(31:14) guy being a cia disinformation operative [Music] information and uh boy these charges and counter charges just flying don't they all right let's take some more calls good morning on the first time caller ryan you're honored close to him with our phone chuck good morning uh good morning what are you calling well all right turn your radio off and go ahead john's right here okay how you doing john pretty good how are you doing girl i got him uh my comment john is you were talking about how the uh uh how to flame the things
(32:05) difficult um i'm thinking the christians think this is came out the way that you're talking all the christians or a good percentage of the christians would probably uh have a second thought about christ and that is the reason that the government is kind of holding this back is that the way you're trying to explain it well that's correct but when you say all the christians you know you think you're talking about a lot of people remember there's six billion people on this planet and you know five billion of them aren't
(32:41) waiting for jesus to come back yeah but uh how about the idea of maybe uh satan who is supposed to be running this world uh prior to jesus returning uh drawing up this uh evacuation well uh beautiful hello jesus christ you know you're looking on both aspects and the way the bible reads i think is that satan's supposed to be running this world until uh christ returns and maybe this is the big play that satan is playing well that that could be here or the vote knows i try [Music] myself

i believe in jesus christ that i
(33:43) still am open-minded to these uh uh ufos and when what have you but uh i'll stand by here and listen a little bit more of this program we're watching on television if i'm doing through the satellite build yeah i appreciate the call all right all right sir we appreciate your call thank you very much um it is uh it is inevitable that uh people want to mix the uh religious aspect into it somehow and there it really is it's just that when we don't talk about it it really gets a lot of people angry
(34:20) which is exactly why exactly why the government will release all this in information isn't it exactly it's tough to talk about it a lot of people have grown up with that belief and they really believe it and it just could cause a lot of problems right you can see the point of view of that opening the door in the first place while you were correct that five billion people are not waiting for price to return uh of that billion uh quite a significant number of them are here in this country and uh it would disturb them greatly
(34:52) right all right um let's take one more quick break here john stand by a sec you're listening to john lear on the cbc and drn radio network and again i say if this is all going to disturb you then turn it off don't keep listening to see how disturbed you can really get it was human form that was on the uh earth at that time and that's what the 64 collections were made from uh they didn't clear them from uh from the beginning then our ancestor ancestors um are some other sort of space creature
(35:26) that was modified genetically into whatever we [Music] documentable reality there is a missing link there is a period of time and they just cannot calculate how mankind made the jump made the leap how the intelligent aspect of man was and there is that in in hard science there is that uh that area is there not john yeah uh it's tough to believe uh uh when you figure out what the odds are either uh there's two general beliefs that we evolve from uh uh [Music] greatest size that you can think of wouldn't have permitted man to
(36:28) uh to have uh genetically uh come from that kind of a sequence of events the other is that the man was made out of clay so uh you can you can pick those or as gene hoff says you can be an externalist and believe that we were modified by an external practice um all right this brings me to something else then john all of these abductions these cattle mutilations if uh it kind of gives uh credibility to what you've said because if we are in effect an experiment surely those conducting the experiment work from time to time
(37:08) need information to continue the experiment or decide not to heaven help us um and so then would that would that be the reason for the abductions inevitably they talk about medical exams they were examined medically john right that that might be the very reason for these subjections uh all of the abductions are are kind of a medical exam they put something here and put something there and sometimes it's painful sometimes it's not but but that would you know they're checking to see how the experiment is going
(37:37) and whether it's time to clean out the petri dish or not all right uh wild card line three you're on the air coast coast am with john learn art bell hi good morning um john i'm not being personally argumentative it's just that i have a set of ideas too and i'm i kind of think it's challenging to think this way because we all want answers but um how would you explain near-death experience and that would be my first question secondly you say not to turn it into religion i've never been religious per se like i
(38:14) don't go to church and i don't believe in that but i have a very strong sense of god figure for many other reasons and having been an atheist when i was young read a lot of books by people who gave me better answers than a bible as far as actually should man create god or god create man and and i'm a real strong believer okay you know in a beginning and a creator um i would say that as far as they go i don't say they're not real i've never explained even on our belt show my experience with it all right all
(38:53) right all right we're gonna hold it there listen on the radio we'll get you an answer uh it is an interesting area john this business of uh near-death or uh death experiences uh you know the bright light a little bit uh so many have had it john any any thoughts on the matter of my personal opinion that the soul goes on forever and ever and that when you depart this body there is a short time when when you can see down and see what's going on before you go to wherever it is we go now uh reincarnation uh was something
(39:29) that jesus taught but at the first meeting of uh nikai i think which was uh

in uh 325 bb and then there was also a meeting at constantinople about in 1200 a.d uh they modified the what we call the king james version of the bible they took a lot as a matter of fact uh they really took about 95 of what jesus taught out of there one of the things they took out was you can see down and see what's going on before you go to wherever it is we go now uh reincarnation uh was something that jesus taught but at the first meeting of uh nikai i
(40:08) think which was uh in 325 a.d and then there was also a meeting in constantinople about in 1200 a.d uh they modified the what we call the king change version of the bible they took a lot as a matter of fact uh they really took about 95 of what jesus talked out of there one of the things they took out was uh the idea of reincarnation uh i do personally believe in that and i believe the soul goes on and on and on uh so that's the the uh the answer or what i think the answer is to linear death experiences um okay this is going to get into the
(40:48) area that i was afraid of but i can't resist containers vessels that's what we are possibly containers or vessels for the human soul that we're now talking about probably an experiment with what john pure speculation do you suppose our creators our alien scientists that have created us what use would they have for the human soul oh i don't know um apparently there's a lot of interest by one species um the glaze in emotion and uh they they take a lot of time to uh apparently talk to the about emotions i've heard of experiments
(41:38) they do uh with people to create emotions for instance there was a case down in florida where a guy was abducted and he was put in a uh a long uh curving corridor with two children and uh down one end has destroyed the space sound here comes a fire bearing breathing dragon so he turns around one field the other way and there's a door he goes into the door and there's a barrel and his decision was does he put one kid in each barrel and and let the dragon eat him or does he get in one barrel himself and try and put the
(42:18) other two in there or uh or what and this was one of the experiments uh i don't remember how it came out but this is one of the experiments they do in trying to either understand or experiment with emotion so then you might conclude that emotions anger jealousy all the strong ones um have some some some value to them or or they are themselves some sort of energy that can be used in some in some way well apparently uh at least according to the addictions the uh the graves don't understand that they don't have emotions themselves
(42:58) uh at least like we do and they're trying to understand the emotions as we feel them wow wow well we're plotting a lot of new territory this morning very very interesting um let's pick up another call quickly wild card line three you're on the air coast to coast and with john lee or north delhi oh thank you thank you i have two uh quick questions and i'll listen to them off here number one what these these are people that have been effective abducted by aliens and been experimented on have they ever suffered ill effects when
(43:34) they get back to earth from the medical experiences second question says john letter ever known many navy aviators and has he ever had a desire or has he ever landed on an aircraft carrier and i hang up and listen you know the first one was about it that these and what was the question that [Music] foreign some of them uh go maybe a short ways out but most of them are relatively close here yes they do such real effects some of them are quite traumatized by the experience that's why they form these encounter groups where they can uh talk to
(44:15) others who have had the same experience uh but falcons is quite active in in those type of groups where they try to help people who have been uh traumatized by this right john did you see the one i'm sightings if i'll have the returning red marks on his belly now that i've heard about that case similar to it yeah let's talk a little bit about that i've got a break coming up so uh stand by john we'll do that in just a minute and we will give you this question because i want to answer that
(44:41) all right all right we're listening to the cbc vrm networks with john here and we're going to continue through the night with some pretty strange stuff by all this sort of thing turn your radio off don't expose yourself to something that would be harmful to you personally for the rest of you with strong uh good morning again john uh let's cover what we were going to uh we'll get to the naval aviators okay uh but the lasting effects and i was telling you about fellow the returning red marks uh that i think was on
(45:20) sightings a very convincing uh uh chase how many people have physical effects that endure so i don't know what do you mean percentage-wise well i mean uh how many have you ever heard of i you look into so many of these cases you'd know more lots we all have a little that little scoop that's uh taken out uh as far as

physical things a little scoop little scoop of skin that's taken out they have a mark on their ankle or their leg or their arm or something they're told that it's uh they're just
(45:52) taking genetic materials back to wherever they come from uh interestingly our own government has recently announced that it has begun a program of gathering uh first on the military and then probably others uh blood samples for genetic recording yeah was where that were you i yesterday uh naval aviators have you ever landed on an aircraft carrier first of all he asked if i ever knew anything uh my answer is yes i was taught by enable my savior out of first house fly he was a transport pilot his name was hal hermann uh he used to live in montague
(46:33) california i don't know whether he's still there or not but i've known a lot of navy pilots if i landed on a carrier no but to me that would be the most exciting experience uh to land on a carrier with a hundred and a quarter visibility uh on a pitching deck at night that would be uh the epitome of airmanship and i know that there's a lot of guys that have done it would you endeavor to do it if you have the chance well i certainly need a lot more training than i have now but what that really takes airmanship is to
(47:04) land those jets on the pitching uh deck at night in extremely low visibility uh john i'm told is that what that what you have just described is one of the most terrifying things any pilot can ever do oh you can imagine because you know we don't have all that much fuel it's not like we can say well if i miss you know i'll just go back to shore you know sometimes there's quite a ways from sure you know that's their only chance all right uh very quickly uh we're short on time this hour wild card line three you're on the
(47:35) air coast coast and with our phone john learn [Music] [Music] and um the last part he goes uh he is taken in by the thermal uh electric uh generator yes so that means that the gravitational system is the electricity [Music] works and basically the gravity b wave forms like an electrostatic charge on the top of the antimatter reactor uh and it's channeled and amplified through the waveguides down to the gravity amplifiers and that's what's used to uh to make the uh pull the space towards you all right carla we're out of time this
(48:40) hour so i've got a scoop i guess uh there'll be uh yet another tape that will explain all this john we've got a break uh for just a few minutes from the news we'll be right back okay stay right there how are you doing you up for a few phone calls oh you're good all right uh good morning on the first time caller line you're on the coast to coast am with arthel and john lear hi i have two quick questions from mr we're on number one a little while ago you said we might start seeing something in about six
(49:06) months and second of all when is your next speaking engagement all right you want to take that on the air right here [Music] what was that what did i say about six months uh some that he well okay we'll go ahead and take him take it on the air um he said that at one time you had stated you thought that perhaps something would become apparent to the american people in about six months or something would start happening well like a uh a german interviewer told me the other day i'm a great researcher but a terrible prophet
(49:43) uh you were interviewed by the german press is that correct uh yeah there was a guy in here and a very interesting guy i started my next speaking days and i you know i only gave about two a year and i don't have one planned two a year i don't have one planned all right uh i want to take a few local calls here john uh let's see line one you're on the air coast coast i am with john lear and art bell good morning hi i live here in las vegas right and one morning at nine o'clock my son and i were going out to take the
(50:13) trash out and over a junior high school on the western side of town we saw it objects that was somewhat triangular and hovering and it hovered for 39 minutes it changed its uh attitude a number of times it shined bright lights on us and it changed its color a couple of times it went up it went down and went diagonal back again we watched it for a long time i had two radio towers two uh airplane towers on the i had two phone lines in the house and they saw i wish i could see it they wanted to see it they couldn't
(50:53) and i could see normally they used towels from my home i told this story to a couple of people two of which were in the air force and they both cautioned me never to tell the story to anyone again [Music] approximately um twice as big as the uh step you know it went from silver to it changed color my portable phone went red and i ended up on the uh regular phone it was it wasn't scary it was fascinating yeah a lot of that happens around the las vegas area and they can fix it so that

only the one that they want to see
(51:38) can see it as is you can even be in a crowd and the rest of the people won't see it you're saying what do you mean you can't see this right there i don't like that i don't like that i don't like that either and let's ask about that thank you ma'am thank you uh john any any explanation for the kind of technology that i don't know how they do that some sort of uh hypnosis mass hypnosis or you know who who i guess could guess anyway you don't know okay good morning first time caller lion
(52:12) i'm here with artbell and john lear in las vegas yeah i'd like to ask john lear if he's familiar with uh zechariah sitchin in any of his writings regarding the sumerian tablet yeah where most his books and he's got some real good ideas he's probably on to a lot of good things there and i just wondered how your your research has uh ties in with any of his uh things or not well most of it uh most of the ties right here uh he had a particularly interesting one called the 12th planet and there's some very interesting
(52:49) aspects of that should be uh back around soon i don't know when did you feel it was coming back yeah i'm not too sure about that yeah no yeah it's a real real interesting set of books there i would recommend that to uh to anybody who was interested in his his research shows that uh there's been visitation from other planets since you know back in those days and uh could you kind of confirm that no question about it uh he's got some very good evidence but there's been all kinds of wars and
(53:24) monkeying around with the human race and modifying this and modifying that with very good books okay well thank you very much thank you for the call john aids aids aids looks like it's gonna end up taking an awful lot of people out john and i guess it is your view that aids which is a unique genetic bonder of cells i mean so unique as to almost be impossible you would think um engineered engineered by humans engineered by aliens purpose what do you know well it's my personal opinion that it was engineered by the government
(54:07) specifically the us government [Music] it wasn't an accidental release it was specific it was first released in africa and i think 1975 uh through the smallpox jackson that was uh that was raised for the aids virus and it was uh released in the united states i think in 1978 they specifically wanted to infect a large number of people but i don't know why and that's just opinion all right uh pretty dark the picture pretty awful to imagine our own government would have done that to us and the world purpose uh unknown
(54:46) population reduction possibly just well when you see population reduction uh [Music] [Music] affect uh infect everybody in the next five years age doesn't kill immediately it takes one to ten years and you would certainly over tax the uh hospital's ability to respond to so many people long before you'd be seeing a number of deaths it's an awfully good point right first time caller line you're on the air coast coast and with john leonard bell heights yes sir thank you very much let me give you a short story i'm a
(55:33) somewhat of a theologian and an amateur uh ufologist uh um do you find yourself in conflict well that's an interesting question uh actually no i studied the bible profusely i was one of the original jesus people and i you know used to go to bed at night with the bible on record and i i find so many things being explained to me now by uh recent phenomena and people like john lear and of course there are as many questions as there are questions answered but uh you know the human mind is a phenomenal uh creation and uh uh you know
(56:17) in addition to being somewhat of a theologian and uh you follow just i'm also an optimist i do believe in the reality of jesus christ and of course not to dwell on the religious aspect but i do believe that the book of revelations is now being opened and revealed to us and the amazing things that came across and that will be uh revealed to us now as it said that they would be sealed until the last days and uh i have a couple questions let me get to them yeah okay uh i i just came across some recent writings on uh creating
(57:05) the start constellation of pleiades and there seems to be a lot of [Music] tie-ins with thought atlantis and also i'm curious about what your opinion is of the billy meyer experience i'll hang up and just listen to those three things billy meyer ladies and atlantis thank you all right when i first got into this what they call upology i found out that to be accepted by the uh the mainstream you had to uh uh disregard billy myers adamski george zamanski uh howard menger and then those contactees but when i started really looking into
(57:53) it all those guys were telling the truth uh so i even went on tv and i said it was a fraud and six months later i had to come back and say hey wait a minute

i've looked at this thing i cannot find anybody who can tell me why it's a fraud uh on the other hand i can look at the moving pictures and say that looks that looks real and hear the embryos with billy myers and say yes yes that did happen i can't explain it i don't know who they are they say they come from the pleiades i have no reason to believe they didn't
(58:24) uh so yes i believe that the ability myers case is a true case uh and that would probably answer your question they certainly fit into um this question how i don't know exactly and then the uh the third question was uh what kind of thing all right do you remember uh now i don't uh well billy meyer was i believe the third question john meyer and the pleiades and something else i forgot oh well okay now i have two um i i know billy meyer was the spirit question i tried to hold on to that figure and you tackle him in order
(59:03) all right uh i want to ask uh my audience something john uh i'd like to give some of the people you talked about at the beginning of the program who have seen these craft including bob lazar an opportunity to call in so i'm asking everybody on the first time caller line to uh uh to please uh hold your calls please hold your calls and if bob lazar or any of the other people that john spoke about are out there uh please try to call us at area code 702-385-7213-7213 uh how does that sound john that sounds
(59:41) great you know bob has taken so much flack from the uh the public that uh you know if he's real gunshots i'm not sure what he'll call in but it would should be no perhaps not but uh it's a legitimate discussion we're having and uh i would hope he would decide to do so gee bob uh back to the time thing for a second now if we might um if you were saying a it would be possible well it's it's only possible it happens quite often i i mean this sounds really far out but it's known scientific
(1:00:15) facts that the closer you are to a strong gravity force the slower time moves time gravity and space are all intertwined like that in fact there was a famous experiment that was done two synchronized atomic clocks were placed side by side they were at the same time and one was put at sea level the end was put up at a either in a plane or a high mountain top i don't recall which and when they were brought back together they both lit different times that was because of the change in gravity one was further over to that area near the event horizon
(1:00:55) or somehow was able to survive it spent a second there you could come back to earth and a billion years could have elapsed you know the time reference has completely changed so the whole key is distorting gravity creating a strong gravitational field which in fact is how they craft these cracks they have it f4 are powered and um they bend uh or jump through bends in space or create bins in space how would you explain that bob well they essentially create them they're using uh a device to artificially create gravity
(1:01:33) this device in turn is part of its nature gravity distorts time and space it bends space it spends time and this is how they this is how they travel uh the discussion i got into john was well you know is it possible to build something like that well yeah if you did have an antimatter reactor a gravity amplifier and somehow could contain the field so it wouldn't crush the occupant and uh yeah i guess i know there's a gravity amplifier just not too many miles from here you're right kidding it's the problem um
(1:02:07) so if you put your hands on something like that that might be then one practical application of the alien technology well is it that practical though well you did have some good clumping like that and could turn it on sit in the chair and uh there's really i don't see anywhere going back but theoretically there should be i i did ask john this and let me try it on you he couldn't answer it said i ought to ask you if you could uh first of all could a biological entity pass through a black hole um without
(1:02:38) being disrupted or something and if so what would be on the other side bob i don't know and i don't i don't believe anyone does know um there's just isn't enough information about black holes to come up with that answer as a guess you know you look at it from a physical standpoint the gravitational tidal forces entering the black hole should absolutely obliterate anything that even comes near it but you know stranger things have happened and maybe not so really who knows how much technology are you missing aside from the gravity
(1:03:18) amplifier uh the ability to to make a time machine or effect inside something that would cause you to travel through time uh are we missing a lot of other technology or given the gravity amp could you go from there well you don't even you really don't even have to do that another way is uh you know just accelerating close to the speed of light slows time also uh that doesn't take any

technology no it's probably not the safest thing to do um what would theoretically occur to somebody who either
(1:03:52) came to is it possible dog to exceed the the speed of light in the physical universe without bending uh uh warping space to do it oh it's not oh no it's not as you got near the speed of light what would occur in all likelihood biological energy all kinds of things first of all it's not it would you know because of several things that occur one of them being is mass increase as you approach the speed of light you begin to increase in mass and therefore requires more energy to propel you further or faster at it
(1:04:29) you kind of get stuck in a little loop there so then great distances really are never going to be traveled that way no they can't be that uh that just isn't practical on top of that um yeah you can go on for a long time about that it's not practical it really isn't okay um i guess you left the project with the discs at one point um you do our audience a great favor by describing in as much detail as you're able to what it is you saw and worked on worked on one particular craft that i called the sport model because
(1:05:14) it's a very sleek appearance [Music] specifically like i mentioned before there was a small reactor that was removed from the craft and we essentially back engineered it what we needed to do was find out not only how it worked but also very important to the project was to see if this technology could be duplicated one of the main problems in uh any kind of aircraft [Music] is power and with a tremendous amount of power you can basically do anything and here's a reactor that operates you know many times more efficiently
(1:05:57) than a uh efficient reactor or more efficiently than a fusion reactor which we haven't even developed yet um you know ever could and it supplies a tremendous amount of power and this is essentially where we decided to start from was to work from here and then and go on but uh in all the time that they have this and the time that i spent there the short time that i spent there really is there's just not a lot you can do we just don't have the materials to duplicate it any ideas what this craft was made of
(1:06:28) what kind of metal or substance it was i i say it's metal just because i felt it it felt cold it had the appearance of metal the grain structure appeared to be metal but i don't know i you know like i'm sure john has mentioned that the information is very compartmentalized and could you describe the interior of the craft were you inside the interior was very there had been some equipment removed from it there was a reactor there were two seats there were two consoles left one large console i call them a console
(1:07:11) there was nothing on top one of them was removed uh i believe they're part of the gravity amplifiers that are connected directly underneath uh they're in a triad formation these are going to be some silly questions but were there windows i mean by what manner could you see or understand any of the technology that was in front of you normal buttons switches gauges or it really really wasn't anything like that uh buttons and switches there wasn't it really wasn't even wiring um i i i know that sounds really bizarre
(1:07:47) but it really isn't that that strange a lot of the uh it almost appeared to be something similar to a tesla coil the way uh so every time i hit on a topic i have to regress and sure understand what i'm talking about but it almost seemed like every piece of equipment was tuned to whatever it was supposed to be receiving signals from and it uh it was essentially electrical power transmission without wires which is not something far out there was something a man named tesla accomplished in the 30s um however they seem to be along the
(1:08:26) same line but much more of them well while we're on the subject do you think mankind will ever manage to bring power from space to earth uh through some method or another [Music] what was it like when you want to move i mean i can only imagine they would lead you in these guys with their little badges and so forth and they would lead you into the area you're going to be working on these things and you must have looked at them and said you've got to be kidding well i only got to physically view the
(1:09:06) craft twice once was when i went inside to see the placement of the parts that i was to be concentrating on the other one wasn't a short flight test um ah a flight test i wasn't inside i saw it from inside the hangar and what did you see just lifted off the ground almost violently it had a slight hissing sound to it and drifted it was quite amazing i mean i speak of it nonchalantly right now but uh it's you know there again this was several years ago wow um you know again back for a second of magnetism uh

(1:09:46) large magnetic fields have indeed done strange things do you um recall anything of the story the philadelphia experiment i've heard a lot about about it and uh i want to run things this is an unusual opportunity bob so i want to run something by you i had a friend somebody i regarded as truly honest and extremely credible and he told me about an experiment that he saw participated in in arizona in which a very extremely large electromagnetic field was created and he claims that uh that he saw something disappear
(1:10:28) i mean flat completely proof disappear when exposed to this field is such thing possible uh well it's kind of a loaded question is it possible for something to disappear when exposed to a large electromagnetic field yes do i think it's that happened during the philadelphia experiment no do i think that mankind right now is capable of doing that no there isn't sufficient power generated in the entire output of the planet at this time to create a field of that distortion wow would the power plants uh inside these discs
(1:11:10) be capable of that kind of generation yeah yes what uh what uh what what was the fuel of these uh craft bob uh there had this there's some sort of fuel energy burned expanded used right yeah the fuel was well let me grab for a moment here that there are three types of nuclear reactions one sufficient reaction which everyone's familiar with it's uh essentially how atomic bombs work it's a splitting of atoms and uh causing a chain reaction it releases x amount of energy another more efficient reaction is a fusion reaction
(1:11:52) which releases a little more energy both of these for instance when putting bombs or the thermonuclear the hydrogen bomb or the fission bomb an atomic bomb they use about nine tenths of one percent of that fuel gets converted into the actual explosive energy now if you really think about that when you're dealing with um a plutonium bomb for instance you're dealing with oh somewhere on the order of about eight pounds of plutonium which is about the size a little bigger than a golf ball now eight tenths of one percent of that
(1:12:32) makes that giant explosion that you see all the other other material is wasted that's how efficient that explosion is now an annihilation reaction which is a conversion the direct conversion of matter to energy is a hundred percent efficient all the time and you can see if um if that were put into a bomb i made a tape explaining this so i didn't have to so you didn't have to explain it all the time to people like me right you know i didn't get in fact on the radio all right as long as we're in the categories of fusion i want
(1:13:10) to ask one more uh question in that category and it has to do with cold fusion a number of people even some very recent claims of the creation of cold fusion is it going to be possible uh bob do you think eventually to have a cold fusion process absolutely not no absolutely not i'll make a bet on it right now these scientists came up with that caused the bubbling and the heating and the you know the the apparent uh creation of energy any idea what it was i i'm sticking with los alamos explanation was essentially
(1:13:48) an electrochemical uh reaction that took place uh did fusion occurred now there was far far too many experiments done that supposedly duplicate experiments and uh i mean these yielded no results at all and the physics behind it don't make any sense either all right again going back to the discs the the fuel they use apparently elements something or another uh that goes beyond our table of elements so is that correct yeah it's uh element 115.
(1:14:26) there's not an absolute definite but that's what it appears to be element 160 114 chances are it's 115. and um interestingly enough at the stable element and those familiar with the way the periodic table works when elements go as they get higher and higher on the periodic chart they become less and less stable and begin to decay but uh this is a stable element and again this isn't something that's a total surprise i mean we've known all the way since the 50s and six well probably the 60s that somewhere there's a magic
(1:15:00) combination of protons and neutrons that again somewhere in the higher elements will make a stable element and apparently that does happen up at that level have you had your hands on any 115 bucks i have had my hands very close to it is there any 115 that exists outside of s4 now you don't have to answer all of these bob i don't know um let me since i've got the two of you on the line uh what would you say is your greatest area of agreement for two of you well we live in las vegas well that makes the next one then very
(1:15:47) are you gonna say that i'm not no no i i'm just kidding around uh john has a lot i essentially have cut off whatever i haven't had contact with so there can be talks of reptilian like aliens or abductions and things like that and i know there's

lots of evidence that people were abducted and i did see the thing on fox the other day was a guy that got burned on him and that's all interesting but right it's something strange that happens to you once you've been actually involved with something you
(1:16:21) kind of put blinders on to the rest of the world and now you only want to deal with something that you physically had hands-on experience with oh more much like what i said earlier and you've had hands on one of these discs have you ever seen right now i'm kind of taking the attitude some people take through it to me but i'm not doing it on purpose well you know if i actually get abducted then i'll start believing that and yeah but bob why having had your hands on a disc are you not easily uh able to make the
(1:16:56) loop to the the grays or the blacks or any of the other 80 uh 80s supposed to uh varieties of aliens in terms of accepting their existence i'm sure there are other civilizations all over the place i just i don't know i don't i haven't seen evidence of other civilizations i guess are you absolutely convinced that those discs and that technology uh did not come from or originate here on earth oh behind the shadow of a doubt well unless they were robots somebody brought them here then oh certainly you know some form of other
(1:17:34) creature had to have brought them here there's no doubt about that um i just don't know if there are a hundred different civilizations visiting earth i don't know if a hundred other civilizations could find it um it's possible i just i just shy away from that right this sounds then like an area of disagreement between the two of you uh i really can't take a stance on it because i don't know this is just a personal feeling you sort of are cautious though in commenting in that area sure uh what would you two
(1:18:10) say is the biggest disagreement you have regarding all of this would that be it or is there some other area i i don't know you'd have to have john i'm about to jump i don't think i can't figure it out so no real disagreements all right gentlemen um i would uh i'm going to do my best to hold on to you for a while here if i can bob uh and maybe even take a few calls you up for that kind of thing are you up are you ready to go sleep sleep is kind of on my priority list here is it uh can you give me a few more
(1:18:46) minutes sure all right very good and uh both of you stand by what a distinct pleasure uh bob lazar and uh and john lear uh both here both uh together uh again i guess they are frequently and uh we'll get them back on the air together here in a moment southwest i'm ardell uh gentlemen you're on the air once again thank you uh good morning uh bob while we've still got you um you know after you've gone through all this this disaster uh that's been what how long has this been going on now bob
(1:19:29) for a couple years now um is there anything you want to say to everybody about having gone through all this i mean would you do it again would you go public again or would you say it well i'd no more open my mouth and the man i don't know it's a tough call it's something that has to be decided on you know as as things are happening what given the same sort of circumstances i probably would have done the same thing perhaps a little different given the same set of circumstances i probably would have done the same thing
(1:20:02) perhaps a little different uh a lot of magazines are writing a lot of things about both of you uh do you find they generally get it right or is it exaggerated uh baloney that most of them print well most of the people don't have access to the information what and i'm part of the problem i don't do interviews i don't do talk shows i don't do that i don't go out with lectures i just don't do anything um and i'm constantly being hounded for information uh so without the information they tend
(1:20:37) to make some of it up probably well so some of the information has come out especially in george knapp special i i you know that's why i essentially spilled my guts said everything that happened to me and kind of wanna wanted to really leave it at that to the technical information i made a tape about for the people that really wanted to know the nitty-gritty and left with that and that was it and you know people would look through those two things you know everything essentially that i experienced and happened
(1:21:03) was was contained within those two things um but you know inevitably things get screwed up and a lot of hearsay and there's an awful 99.9 of the ufo community is uh oh crazy these these people are just absolutely out of their minds and i really want to have nothing to do with them and uh they're they're tied in with i mean all kinds of strange factions of groups and uh yeah it's really

impossible to weed out any real information coming from most of these sources these magazines and even the larger groups so i really
(1:21:45) have to stay away from it and that gets people upset and thinks i'm trying to you know hide things from them and i'm called government agents and stuff like that and uh it's you know the list is never landing um and 99 and nine tenths percent perhaps more um with your continued association then with john lee i take it you view him in one of the top very small percentage points of those who may be on to something no i don't i don't really associate john leo does his own thing and i you know i i don't
(1:22:26) john um some of my ideas are proud because i'm not a scientist bob is a scientist he dealt with things that he saw with work with we're [Music] and that's what i'll deal with well exactly but to the casual observer somebody like me anything you've told me john about uh how they travel what means the propulsion uh the kind of creatures they are all the rest of this sort of thing uh is is underwritten or strengthened by what bob lazar says i mean don't you realize that bob you're saying i saw the disc yes they exist
(1:23:07) oh yeah the the information like i said the only information i know are the technical aspects of the craft and that information john has we've talked about that and he understands it and the information that he relays like that is absolutely correct and i i'll verify that i i actually got to work with that stuff i don't know you know i aliens didn't take me to their planet i don't have proof where they came from i don't know how any deal was cut i don't know about objections i don't know about
(1:23:41) all that others listen to me we've got to stop here i've got a newscast i've gotta do please stay around you for a little while longer will you bob yeah all right stay uh right there we post am with arthel live on the cbc radio network to call the show locally style 383-8255 to call toll-free all across the west dialed 1-800-338-8255 the wildcard direct lines are area code 702-385-7214-385-7214 and finally if you've never called the show before try the first time color line at 702 [Music] 702-385-7213
(1:24:33) we invite you to participate on the talk of the last table and the cbc network when your call is entered please turn your radio down each caller will be allowed up to three minutes giving more listeners a chance to join in good morning again from las vegas and the great american southwest for the nation this is coast to coast a.
(1:24:55) m and i'm mark bell my guest this morning john lear now along with him bob lazar businesses a man who actually public hands on an alien spacecraft worked on the propulsion system and we'll be back to in just a moment bob lazar you're both back on the air again okay well um this is uh flooring me a bit but it's fun [Music] it's really a privilege and know here's my friend but he just never goes on any of these interviews and uh it's just really nice to have him on for once too he doesn't back me up on everything but
(1:25:35) he does back me up on the stuff that he saw well let's try a question on you here that's very nice compliment for bob if bob lazar did get the the equipment or the technology never did build a time machine would you sit in it while he pulled the switch you would i think he would bob you know it's strange i've i get a lot of letters from people and uh there have been of quite a few people that really think that i have a time machine and i would i would really like to know how this got started i mean there were people with honest
(1:26:14) requests wanting to know how much that i would charge them they need to go back to the 50s to rescue their their brother from being killed or something like that and they you know i really have to make it clear i i really don't have a time machine and i don't possess the technology to make one either right well please don't don't write to me asking that well there is this though bob if you had uh built a time machine using some of that technology um would you be likely to admit it that may give you some clue as to why
(1:26:52) people think that you may have it even though you say you don't yeah well i'd i'd like to do it all taken i guess i would like to uh take just a couple of calls just for the front of it uh and let's see if anybody has any questions before we do can i just still try to get a hold of this tape that bob put out because he won't advertise himself but that's what i think it's important but if you do want to know uh about this technology and whatnot uh off of the test site he does have a videotape available and
(1:27:23) you can write to try dot corporation that's t-r-i-d-o-t try that corporation 13-24 south eastern and that's in las vegas and the trustee was 89104

and the price is 29.95 plus three dollars shipping and handling and uh if you want to know about this stuff you just can't make a better investment i know bob doesn't sabotage this very much but i think it's really important there's gonna be another one too isn't there bob uh you know it's kind of in the works and but that uh tape was a lot of people
(1:28:03) that viewed the first tape it was it's a technical take but it's made for the layman to understand all the technology and how how it works and uh there's just been a request for a tape that goes heavy into the physics uh a lot of technical people scientists and that sort of thing uh want all the specifics exactly formulas and things along those lines and that's what the second table probably cover i'm not really sure about that yet nothing's been done with it and what kind of technology would that
(1:28:36) give away is talking about the how specifically the amplifiers work uh things things along those lines with the knowledge uh bob of roughly how they work would it be possible for somebody on this earth uh to eventually do a field build or duplicate that technology and build something that would do what that powerpoint does well it's just a matter of having access to certain materials [Music] with some super heavy elements such as element 115 with the proper material we could absolutely build it the technology is not millions of years
(1:29:27) ahead of us uh you're looking at technology that's maybe hundreds and hundreds of years ahead of us it's not that phenomenal it really isn't a lot of people you know we're looking at technology that's maybe hundreds and hundreds of years ahead of us it's not that phenomenal it really isn't a lot of people you know talk about it even billions of years and it really isn't this technology is not that professed once you get your hands around it so it is quite feasible that we could
(1:30:03) eventually duplicate these systems but not the materials that we have regularly available right now there have to be another source for these to the less materials i did an astrologer uh he said that the sun over the last two months god has lost roughly one tenth of one percent of its output now while i guess the output of the sun which [Music] supply which has been confusing the election has been converted to helium and uh you don't really have to be concerned about anything running you know for probably about 50 billion years and then at that
(1:31:00) point there'd be some pretty dramatic changes there's no real problem that could develop in it causing enough of the drop to affect us ecologically as a matter of fact when the sun begins to run out of fuel it's going to swell so it's not [Music] [Music] good [Music] uh was must operate off from some type of communication frequency uh way possible to put together some sort of a transmitter so that one could [Music] and of course there must be some in the
(1:32:13) craft is that because of the gravitational field everything is going to be distorted around the grass whether it's radio waves whether it's light waves and in fact someone had asked earlier um i think that seemingly disappears or underneath it well this again is characteristic of the gravity amplifier that it actually pulls right around it for instance i even mentioned in my case that uh there are stars that are behind the sun where the sun actually blocks our view and we can see those stars the reason why is the sun has tremendous
(1:32:49) amount of gravity pulls the light from the star up and around the sun so we can see it you can't see it you can only see the sky above it by the way light is bent around the craft now the way i understand is to envelop the crack i can't see how radio waves can get into the craft you know something has been with me for a while so there must be some other form of communication gravity amplifiers uh themselves possibly provide the key uh to the kind of communication they use in other words something uh [Music]
(1:33:50) and so i wonder if their technology might have any of the key uh to their communications it's quite possible it's quite possible there is something called along the lines of a gravity phone something that john and i have spoke about in depth that it essentially is a gravity amplifier with a modulated output and it is received again you know this is just an educated guess but it's certainly possible but as far as there's been a frequency you can tune in or transmit i i don't i haven't seen anything along
(1:34:24) those lines that the craft was received so then the communications might be a bit as advanced or different uh would be a better way to put it than anything more familiar with traditional rf frequencies probably because they're traveling such tremendous distances uh the crap would get years before the transmission did so they can't use regular radio transmission they have to use something that actually bends appointments that any insight into that at all might give one ability

eventually then to communicate
(1:35:01) [Music] hello [Music] um [Music] many people [Music] [Music]
(1:36:09) the basic plan and uh you know what they're attempting to do um now you know again [Music] an incredibly heavy element like that uh other elements that we've synthesized up to 109 and that hasn't been really documented but these have been put in accelerators for an incredibly long time and he had it at a tremendous cost of electrical power and you know we essentially have a yield of one or two atoms of the substance if you're talking about something much higher than that like in [Music] with several atoms uh of
(1:37:06) if a substance be done and that's why i've always contended that settlement 115 has got to but it must have been naturally created um i'm right on top of another [Music] uh uh [Music] uh [Music] good morning
(1:38:18) [Music] oh thank you uh yes thank you and thank you for the call [Music] all right well at least you addressed it thank you uh good morning [Music] um
(1:39:27) [Music] [Music] or any of the publications or any official government agencies subjected you to any sort of uh truth-telling trauma injections machines that can do anything to try and verify what you said uh well when i first mentioned it to the uh you know television network up here
(1:40:28) uh i just i voluntarily took my detector test and i never took any two trails and no one else has come after me or force me to do anything our local news anchor um i guess went along with you and along with that and investigated uh what was his uh personal determination uh after he finished looking and finished looking into this and due to his show did you know george and aguilera [Music] is [Music] [Music] may have is access to some information
(1:41:34) uh but now george wasn't that of a believer in the beginning as i wasn't even before he got involved with the project but uh george did go to great lengths uh [Music] and he essentially put everything together and uh you know yes i have that show on was really humbling really something all right just one more very quick interruption gentlemen i'll be right back to you right there uh my guests are john here and bob lazar and if you've been with us and you will understand the nature of the discussions
(1:42:28) is there anything uh bob that uh since you don't make public appearances and we don't go on talk shows is there anything that you've been wanting to say to the public and they haven't had a chance to for a while now uh no not nothing that comes to mind all right let's take a couple of more calls uh good morning [Music] [Music] [Music] is [Music] they're in australia they're in too many
(1:43:38) places for two guys and a board and a chain you know what could have what could they be i don't know certainly um it can be i mean it's possible i'm sure there are other explanations it could certainly be the footprint of one of the crafts the crafts can certainly be an altitude and compress a wheat field down like that but that's not a problem as far as what else it could possibly be another prosaic explanation i really i really don't know and john i think it was more of a question for you
(1:44:19) um that was supposedly what people call the graves the delays from greater [Music] [Music] approximately two miles inside um [Music] suggest oh you get that article in the los angeles times and very enlightening i was curious if you were able to make any connection between
(1:45:26) the neutrino what specifically were the russians doing well it's a combination soviet and [Music] [Music] matter [Music] one of them it's kind of useful too there are a lot of things you can do with an accelerator on the sub-atomic level but certainly one of them is the building block that actually compromises protons and neutrons and [Music] [Music]
(1:46:53) time able to detect neutrinos from the sun here on earth is that correct well first of all i'll just train those pictures really who work very much [Music] uh [Music] really hard to interact them with any matter well the field of comment was they were worried uh that they have not been detecting as many neutrinos as they once did and this was some sort of source of worry don't do any what happens when you collide with a
(1:47:58) black hole that's the only problem as far as the antimatter explanation [Music] of that reaction that could probably still be detected today but uh really again it's after the fact it was a long time ago i think it was in 1918 maybe 1934 that just flips my mind uh but that's fascinating line three in las vegas you're on the air coast coast with the group here good morning las vegas line three i guess not gentlemen las vegas uh yeah uh my question is and it has to do with the way the areas communicate i

(1:48:50) had an experience many years ago where i received a message and it was a worthless knowing [Music] well uh i always thought it was a message from either the creator or the savior or a guardian angel however could be annoying because they communicate telepathically and that's i think what this was and it by the way it was a kind and helpful uh knowledge i was [Music] unless you have a temperature i'd say
(1:49:58) my first question is for mr lear i'd like to where i could get a information on that hands-off regarding intact ufos fragments and the occupants [Music] and it is [Music] um [Music] [Music] will be
(1:51:19) very quickly uh do you think the recent advantage advances in ceramic metal technology will be used in a buffer ramjet project and the last question is are biometals being developed for use in data storage and retrieval as well as espionage all right thank you can you handle that well as far as what biometals are using being used for i i don't know i know very little about them um i i couldn't possibly regurgitate that i could answer that one first because i uh gave the answer to that one oh you had that one uh hold on
(1:52:04) all right think about it listen folks uh bob i'm only gonna request that i have you for about seven more minutes if i can handle that long and then we'll do the last out with john bob it's been such an honor both [Music] [Applause] bob good morning again from las vegas [Music] [Music]
(1:53:24) when they were on the air and listening to that show gave me shivers for a couple reasons in 1989 i had an experience in the mountains of new mexico which after stealing homages from a skull i started to write down some things in the following days one of the things that i drew was something like a sphere with almost [Music] [Music] all right this is the first time bob's ever been on the air with me that i'm aware of anyway um uh but indeed uh john was here and talked
(1:54:26) about bob's house well there was another gentleman with john yes that's right with the imaging program that's right [Music] documents about [Music] that goes [Music] pertaining to any form of communication or imaging coming through dna strands nothing nothing along those lines all right very good actually one morning good morning on the air coast coal dam with uh john lear and bob lizard where are you coming
(1:55:30) from places [Music] um [Music] um [Music] good question all right uh we're so out of time one i want to say it has been an honor bob lazar to have you here this morning thank you and i know you've got to get to bed and so uh quickly uh john give out the address [Music]
(1:56:39) [Music] what a pleasure it has been thank you and uh will you join us again sometime out sometimes all right uh i know it doesn't happen frequently but it has been on this morning so thank you bob thank you thank you and uh that was really nice john uh i'm gonna try and talk you john into staying with us for yet one more [Music] so stay right where you are in fact everybody stay where you are there's yet one more hour to go you're listening to coast coast a.
(1:57:23) m on vrn and student team radio networks you're listening to coastal coast a-1 with our go live on the cbc radio network to call the show locally dial 383-8255 [Music] direct lines are [Music] 702 [Music] we invite you to participate on the talk of the last kingdom and the cbc network when your call is answered please turn your radio down each caller will be allowed up to three minutes giving your listeners and 10 hours shipping and handling or together you get a free art belt t-shirt number is
(1:58:28) [Music] 1-800-257-3825 38 25 and now back for another hour and that has been an incredible show uh with uh with john lear and uh johnny there right here this has been something that we've got sure has uh i really enjoyed having bob and uh the only thing that really irritates me about bob is he's so gracious people can ask him the dumbest questions [Music] some questions and uh the god is really really gracious yes he is and uh it was rare to get an interview with him as he would suggest that he just doesn't
(1:59:24) do them all right uh back to the phone uh for john wayne good morning on the first time color line you're on the air coast to coast and without bell hello hi hi i'm just calling to comment on the lizard tape i haven't heard about it and objects when john is on your program and it's very informative it really answered a lot of questions for me and i just wanted to thank god for mentioning that all right well he's now gone but i'm sure he's hearing you that's okay all right thank you and thank you for
(1:59:55) calling good morning uh wild card line three you're on the air coast coast and without going john leader hello hello i'd like to talk to uh your guests here about uh uranus and neptune when they crossed their path and their little wall came

down and now it crosses its path february the 3rd 1993 three different times and uh an astrologer told me that a cataclysmic event may take place i would invite you to check your astrological signs and check this equality thank you uh and john what about astrology it's worthy of comment i suppose um
(2:00:41) scientist that works for a major corporation who uh really believes that there is something to astrology and he has a book that he's trying to publish now which [Music] uh event in our near or foreseeable future any reason to believe that something's coming i've already proved myself a terrible [Music] problem good morning good morning where are you calling from last week sorry uh incredibly interesting tonight thank you [Music] uh i think this was about 15 years ago
(2:01:52) who invented some sort of a machine that um i'm not quite as scientifically oriented to the best of my knowledge [Music] he was [Music] do you have any comments on that in other words more output than input oh it's just uh i don't have any comment but that's one of the things i like hanging around bob is he gets to the bottom and he tells you immediately whether it's or not all right [Music] um
(2:03:00) [Music] [Music] um [Music] successful experiment [Music] um are you familiar with the uh rainbow project the monto project and uh the phoenix project uh
(2:04:09) exactly [Music] to 1983 and then back again to 43 and this is all a result of uh attempts to make a battleship for a destroyer [Music] [Music]
(2:05:16) good morning [Music] how did you hear all that um john tell them what you know about souls and containers and such [Music] theories [Music] [Music] [Music] uh [Music]
(2:06:30) don't [Music] [Music] all right thank you um john you just have to wonder where some of this stuff comes from um all right uh let me see here uh wild card line three around here

UFO top secret: the bob lazar, interview (2003) [remastered] - YouTube
https://www.youtube.com/watch?v=bjdOExyDkaU

Transcript:
(00:02) [Music] ever since man has looked up into the stars he has seen strange objects in the skies but the search for proof of extraterrestrial intelligence has produced disappointing results the best so-called evidence has only been a few photographs and film clips but now all that's about to change since 1985 more than 15 million americans have reportedly witnessed unidentified flying objects but despite the seemingly overwhelming evidence mainstream science has chosen to ignore the subject but now for the first time in history
(00:38) one of the greatest mysteries of this century is unraveling a former government scientist has come forward to discuss the military's classified work on extraterrestrial spacecraft [Music] human advances in technology have exploded in a million directions and show no signs of slowing down the ever-increasing pace of achievement in the last several decades is unparalleled in human history the high cost of developing and producing these technologies has limited the number of contenders from the private sector leaving the government and large
(01:23) corporate businesses on the cutting edge of new discoveries always in the public eye big business competes for high-paying contracts working night and day to invent or further develop the next big thing to satisfy the masses the government on the other hand must conceal information concerning national security that for obvious reasons should not be public knowledge but when it comes to matters concerning the welfare of our planet the living beings on it or potential clues to the mysteries of the universe many believe it should be our right to
(01:53) know the end of world war ii and the invention of the atomic bomb signaled a new era of international mistrust since the earliest days of the cold war which coincides with the roswell incident and the start of the modern ufo era the military has been especially secretive about its advances and achievements while always searching for the perfect weapon or super sophisticated tool of espionage high-tech surveillance equipment around the world and even in space has allowed global intelligence to see and be aware of many things that the
(02:31) common civilian cannot even begin to imagine the military recruits many talented civilians when special expertise is required and propulsion systems expert bob lazar claims he was one of them in this exclusive interview he gets his detailed account of his employment with the department of naval intelligence at the top

secret facility known as s4 where according to bob he was hired to work on recovered alien spacecraft s4 is located miles north of las vegas and 15 miles south of groom lake this now not so secret military base at
(03:11) groom lake nevada is known as area 51 or dreamland as insiders like to call [Music] born in 1959 in coral gables florida bob has lived much of his life in las vegas nevada with degrees in physics and electronics from mit and cal tech he has dabbled in everything from chemistry to fireworks in an effort to understand the finer points of propulsion he has even assembled a jet car with a 22 000 horsepower engine salvaged from a navy f3d sky night that is capable of land speeds of over 350 miles per hour fate took a serious turn for bob in 1982
(03:53) arriving early for a lecture at los alamos national laboratory in new mexico given by dr edward teller one of the inventors of the atomic bomb bob was able to meet and talk to the famous physicist coincidentally dr teller was reading the local paper the monitor with a featured front page article on bob and the two struck up a conversation later bob sent dr teller his resume for consideration and soon after bob was hired by the los alamos national laboratory this los alamos based directory lists bob as an employee
(04:26) by 1989 bob was brought into the top secret program at s4 known as project galileo in the following interview bob reveals many details of this amazing experience did you witness any disc technology at area 51 no there was no absolutely no et craft e.t technology anything like that at area 51 this is why s4 was made specifically to separate it there people at area 51 do not have the clearance how long were you employed at s4 and when were you hired when was i hired at s4 i guess early 89 and i was probably there only about six
(05:14) months or so on a very infrequent basis how are you transported to and from work at the time that i was working there at mccarran international airport in las vegas there was a special projects eg g building when i was told to go to work i drove there parked my car there and got in a plane at the airport flew to groom lake where i deplaned and waited for a bus and the bus drove me down to s4 the s4 facility is an area just off the papers lake bed dry like that and it consists of nine hangers the hangers have sloped doors on them
(06:05) with a sand texture coating around the opposite end of the hangers there's the standard entrance where you're dropped off at go through a security check and inside there's a small complex there is some office space there are several laboratories the hangars themselves of course and uh a few other places i didn't have free rain to go wherever i wanted to everywhere i went to i was essentially escorted so that was really all about that i saw inside the facility what was the basic layout were there underground levels
(06:46) i don't think there were any underground levels to it though there could have been i i don't think it was a you know an extensive underground facility it just looked like an installation that was butt up against a mountain and you know i didn't see any evidence of any stairs going down elevators or but like i said i don't know there could have been and i just might not have been permitted in those areas it's difficult to to really surmise how long it had been operational everything did look fairly new
(07:20) by that i mean i don't think this installation was there in the early 70s nothing was worn things look fairly freshly painted so you know as a ballpark guess i would say it would it would really surprise me if the installation was older than five seven ten years something like that what agency is in charge of s4 who controls the program i was paid by the department of naval intelligence and what they're doing researching extraterrestrial craft is beyond me but that's that's where my checks came from so i can only assume
(08:03) that they were in charge of that did you see high-level government or military personnel at s4 no not at s4 anywhere in in the overall facility at all at area 51 i believe i saw some military personnel but uh you know no no one i can identify or rank or you know is this research confined to the us government or did you see any international involvement at one time the russians were involved and supposedly there was some breakthrough made by our team however this project was split up and right after that happened the
(08:50) russians were no longer permitted on the facility at all and you know that's that's all i know about it what was discovered why they were kicked out when they started working with us is all unknown to me you were hired to replace a scientist killed in the project what exactly happened there allegedly obviously i i didn't see this and i don't know to be fact but this is what i was told that i was hired to replace one of a couple people that were killed while working on one of the reactors

from one of the crafts apparently they
(09:28) for whatever reason cut open an operating reactor and the device exploded killing both of them the scientists that were killed there allegedly the detonation from the explosion was fairly large it would have rivaled a small tactical nuke so it was done at the nevada test site and it was to be passed off as an unannounced nuclear nuclear test did you have any direct contact or communication with aliens no not at all tell us about the briefing files under what conditions did you gain access to them i was put into the briefing room with a
(10:06) 121 or 22 briefings and really was just told to sit and read through them i think they were there just to mainly educate me on on what was going on they weren't a complete in in-depth explanation on everything else but just essentially a brief synopsis on some of the other projects that were going on there supposedly the information now this isn't something that i determine it's something i was told that the crafts originated from uh a planet that orbited the zeta reticuli star systems that articulate one and
(10:43) zeta articulate two or two two stars of a binary star system the craft allegedly came from there one or two autopsy photographs i saw dealt with just a small photograph a bus shot essentially just head shoulders and chest of an alien where the chest was cut open in tea fashion and one single organ was removed the organ itself in the in the other picture was cut and vivisection essentially the showing the different chambers in there this was totally unrelated to anything i was doing but from that photograph it looked like
(11:24) what you see in ufo lore as the typical gray so how tall it was from what i could see i i couldn't tell because i only saw a portion of the photograph but if everything else you see is correct i would imagine it was three and a half or four feet tall but there again you know all i had to see was a photograph and you know i didn't have much to go on you mentioned these beings have historically interacted with man how what was involved there allegedly this interaction has occurred since you know man was a
(11:59) simian creature and you know there were genetic alterations made how specifically did the briefings detail how the aliens manipulated our genetics over the centuries it mentioned 65 or 63 corrections or additions to the genetic makeup that finally resulted in you know a human creature in an earlier interview you had mentioned you saw what you thought may be an alien was it an alien what did you see what i had said and all that occurred was i was walking by a door a door that had a small nine by nine window in it little wires running
(12:44) through it and glanced in there and there were two either technicians scientists or whoever they were looking down at something and what that something was caught my eye and i never really did see what it was a lot of people have asserted well there was an alien there aliens working around there and so on and so forth i mean i don't think that was the case but uh who knows i was you know you're seeing all these fantastic things and your mind gets going and you know you catch something out of the corner of your eye who knows what your
(13:16) mind is going to come up with so i certainly wouldn't stand on that as fact by any means what was the incident in 1979 that brought the alien exchange program of information to a halt again this is a story that was relayed to me and allegedly what happened in 79 there was some sort of information exchange going on where there were actual live aliens at the facility and at one particular point there was an area where some security personnel went to enter and apparently because not the sidearms but the bullets in the sidearms from
(13:53) what i understand if they would have entered the area the bullets would have detonated and supposedly one of the creatures tried to stop the security personnel from entering the area and a fight ensued and the bottom line from the altercation was that the security personnel i don't remember how many were involved but were all killed and they died of head wounds and that's all that all that i heard of that story what was your job description at s4 my official job description was a senior staff physicist uh
(14:33) i don't know if i actually had that position when i was there because i was there so infrequently i wasn't supervising anyone so i that was the official position i was hired under but whether or not i actually acted in that capacity i don't know what was the size of the staff working on project galileo well there were 22 people employed there totally and that was specifically for the galileo project no for the entire project there were 22 people with majestic clearance i had majestic clearance majestic
(15:09) clearance was designated as clearance 38 levels above q clearance and q

clearance is the civilian top secret clearance when did you see your first disk the first disk i saw i believe it was the second or i think it was the third time i was up there normally the bus pulled around to the opposite end of the facility which was the main entrance and that's where we went in on this particular occasion it pulled up to one of the hangar doors which were normally closed and the last one was open we came out and i saw the disc in the
(15:47) hangar upon seeing it it struck me that well this explains all the ufo sightings not thinking that it was an extraterrestrial craft that this must have been some advanced form of fighter that we've been working on for years and you know people have just caught it being tested so on and so forth and it never even occurred to me even though i was looking at an extraterrestrial vehicle that you know this wasn't man-made when did you realize the craft was not of earthly origin well it probably really hit me when i got inside the
(16:26) craft and looked around and began to understand how the craft was operated and finally grasped the whole project as a whole as what we were doing the fact that we weren't building this thing we were trying to find out how it was made we were back engineering it what is back engineering well bank engineering is taking a finished product and finding out how the device or product was produced and essentially determining whether or not you can duplicate it now scientists aside what was your emotional response what were you
(17:12) thinking were the implications to the world or man in general from these revelations i really didn't think about implications of that sort as far as emotionally people have asserted that boy that must have been the most exciting time in your life and that's not the way it was when i first got to look inside the craft the all i can say it's an ominous feeling you walk in there and it's it feels as if you shouldn't be there i know it sounds kind of corny but it's real ominous feeling it's not an
(17:48) exciting feeling it brings up a whole lot of questions in your mind well where did this come from and you know that they won't give you the answers to the whole story but it's uh that's the only way i can describe it how many craft are housed at s4 and are they in fact all dish shaped there are nine and their shapes vary i only got to do a close inspection on one of them the others i just briefly saw and they they pretty much varied i give everything nicknames there the one i worked on was kind of sleek looking and i gave it
(18:23) the name the sport model there was one that looked like a jello mold there was one that looked like a top hat there was a disc that was turned up on its side and it had a large projectile hole with the middle bent outwards on it i can only surmise they were testing it to see if a projectile could penetrate it of course it's just a guess on my part but for the most part they were pretty pretty varied how many times did you enter the disc or did you only enter the sport model i only entered the sport model the other
(18:59) ones i wasn't allowed to loiter around to go near really even to look at i just at one point walking through the hangar doors all the bay doors between all the hangers were open and i got a glimpse all the way down the whole corridor but that was the only time it was ever open tell us about the lower level of the craft where the gravity generators are located the lower level of the craft the floor itself is hexagonal little hexagonal squares and the hatch or if you want to call it a hatch the access way to get in there
(19:38) is an ingenious little assembly it's a honeycomb structure and if you put your fingers and went into the honeycomb and push all the honeycombs will collapse in on each other making a hole it's kind of a neat uh a neat doorway something that we could you know use i don't know what for but i mean it's it's something that i haven't seen before and it's kind of a novel idea but a very efficient lightweight very strong access way i had to hang upside down in there to see the lower the lower level essentially and there
(20:19) were three large gravity amplifiers these devices looked like about a two foot diameter four foot long piece of pipe hanging by a smaller piece of pipe from the level above and they can be independently positioned and that's what what emits the gravitational waves that propel the craft the second level was the only other level that i was on it was the main level that contained the reactor where the seating was the gravity amplifiers themselves though we also called the devices that hung down on the lower level the gravity
(20:59) amplifiers because they were really one in the same they were probably the wave guides or horns if you want to relate that to microwaves and really that's about it that's all that was on that level so it's assumed this was not made for a

human pilot it would be extremely inconvenient for a human pilot humans really can't even function in there the because of the ceiling clearance the seats were so tiny it was obviously made for a creature much smaller than a human [Music] how does the craft achieve lift
(21:33) it produces a gravity wave which is similar to the gravity wave that the earth produces however the craft phase shifts the wave in other words it it turns the wave not really in opposite polarity but something to that effect where it will work against the natural gravity wave of the earth and it produces a lift in that effect is there any internal protection for the crew does the craft generate a a gravitational field inside the craft itself well the craft generates its own gravitational field being inside that field
(22:15) essentially doesn't shield you but essentially you're in and this is a terrible way to say it almost in a different realm because you're you're now influenced only that by that gravitational field for instance people wonder how a craft like this can make a turn at such high speed a 90 degree turn when they would imagine people slamming up against the wall or something to that effect well that really wouldn't happen inertia would have no effect uh you're you're in a distortion and don't forget that gravity distorts
(22:51) time and space so really nothing is going to influence you while you're in there describe the gravity amplifiers for us and some of their different operating configurations there are three amplifiers the craft can operate on a single one can lift off the ground the way in which it's propelled are two different ways there's what they call omicron configuration where the craft is using one generator or a delta configuration where it's utilizing all three delta configuration would be for space travel essentially the craft will tilt
(23:31) up on its side as opposed to a science fiction movie where you see a flying saucer moving around the craft will tilt up on its side focus the three gravity generators to a single point and move through space that way moving around a source of gravity is a problem to a disk because it's interference essentially so what they do is they work with that interference to their benefit they'll use one gravity generator to lift the craft off the ground and as opposed to what we're used to for instance a plane
(24:03) once it's in the air we envision thrust or some force coming out the back of it to push it forward the crafts work completely opposite of that what they do is once they're hovering in the air they'll swing the gravity two remaining gravity generators up in front of them and create a distortion essentially a downhill and the craft rolls downhill for infinity it's always chasing a little distortion that's why they look goofy when they fly around at low speed because they're essentially and anytime you run over you know the
(24:40) gravity field around the earth is not completely constant and stable depending on the minerals and density of the earth underneath it that gravity will vary somewhat and you will get odd movements of the craft so its low speed mode is is kind of unstable for the most part i only witnessed one test flight up close officially that i was in just inside the hangar the test was going off probably you know just as the sun was going down and it was a low performance test i believe there were some pilots or test pilots in the craft the craft must have
(25:22) been retrofitted to fit them because the seating arrangements were really not accommodating they were in radio communication with the craft which is kind of surprising to me because the gravity waves that the craft was producing should have distorted the radio waves also so apparently there's something there that i don't understand the graph lifted off the ground virtually noiseless other than a small corona discharge on the bottom of the craft indicating the presence of high voltage that dissipated at about 30 feet and it stood there
(25:57) completely silently and moved over to the left to the right and sat back down that was the entire test however that was an extremely impressive test maybe to someone that really knows little about science or anything that that wouldn't be a whole lot but you have to realize this craft was about 52 feet in diameter i don't know exactly how much it weighed but it weighed a lot and this was quite quite a scientific feat to lift something completely silently under control and you know perform a maneuver like that
(26:34) the craft itself was i assume it was metal it was cold to the touch that's why i say it was metal but it was a brushed aluminum actually just an unfinished stainless steel not shiny finish to it had no seams it was as if it was injection molded from one giant die i was completely amazed i i can't really reflect on how it made me feel but it that was exciting when you're on the outside you know you you

pretty much think you know how could they keep something like this secret that's a crime against
(27:12) science it's a crime against people and and all that but you know your feelings change once you're privy to the information once i was inside i mean there was kind of a bit of selfishness you know it's well i know about it now this is great you know we should keep it secret just so we all know about it you know that really does go through your mind though after a while it wears off but you know you felt privileged to be privy to the information how would you define gravity could you describe in layman's terms
(27:41) its basic principles for us gravity is something difficult to explain because it's something that we essentially don't understand is just something that we can observe not much is really known about gravity uh there are many theories about it but they are just mainly theories there's theories of gravitons which allege that there these are these subatomic particles that that act like an attractive force like gravity that exchange between two pieces of matter there is also a theory that gravity is a
(28:13) form of wave an electromagnetic wave but basically gravity is a force it's it's the attraction it was the inherent property of matter to have gravity a mutual attraction for each other and that's it's basically all that we really know modern science current science right now identifies one gravity it's one force in nature apparently through research at s4 or information gained from one of the crafts they were researching there it appears that there are two different forms of gravity one form works on an atomic scale on
(28:56) subatomic particles holding pieces of matter holding atoms themselves together another works on a larger scale the scale we're most familiar with holding planets in orbit holding ourselves to the ground things of that sort because it produces a gravitational field i i wouldn't say the craft is invisible during the day however if you're under the craft because of the way the gravity is being used gravity bends time and space and it bends light if you are looking underneath the craft or from certain vantage points
(29:32) you will actually see what's above the craft it's a it's really a trick of the way light bends under the influence of gravity for instance we can see stars that are behind the sun that are blocked from our view by the sun the reason we can see them is because the sun is a tremendous gravitational field and it's bending the light around it where we can see the star space time and gravity are all essentially interrelated they all act on one another gravity bends space gravity also distorts time when you vary one you essentially
(30:10) vary the other two if you as an example if you have a massive body say a planet or something that's making a lot of gravity producing a lot of gravitational waves if you will it distorts space it bends space to it it also slows down time these things aren't theories we know them to be true we cannot artificially create this because we can't create gravity but this is how they're all interrelated how are vast distances of space traveled by amplifying a gravitational field well because space time and gravity are
(30:55) all interrelated if you could produce gravity artificially an extremely intense field of gravity what you could do is actually distort the distance between two objects and make it shorter not just distorting the distance but now you're also decreasing the time the actual time between the two places so you're not traveling in a linear mode like flying a spacecraft from point a to point b you've actually modified the time and the space that you travel in so you're now traversing a huge amount of distance
(31:34) with little time and actually with traveling little distance as crazy as it seems that that's what's going on what are some of the inherent problems with traveling at the speed of light there are several problems traveling at the speed of light just a couple of them are the fact that as your speed increases so does your mass proportionally in other words the more energy you put in to go faster begins to slow you down by the fact that it's converted into mass you have other problems like just traveling at such an extreme
(32:10) velocity navigational problems the fact that you might run into little tiny micro meteorites at speeds like this they would undoubtedly destroy your craft there's just a whole host of problems that you're going to run into just attempting to do something like that aside from the fact the amount of energy required to accelerate to the speed of light is horrendous could you briefly describe project looking glass and project sidekick for us project sidekick was another project going on with galileo galileo was the project

(32:45) that i was involved in sidekick dealt with any of the weapon potential of the craft whether or not the craft had a weapon in it or could it be used as a weapon but it's had something to do with some sort of particle beam configuration where the gravity generator can be used as a lens to focus focus a weapon of some sort similar to the sdi device we were working on in the 80s but with the potential of a focusing device using the gravity generator and project looking class project looking glass dealt with the
(33:21) distortion the fact that there is a time distortion essentially looking back in time and by that i do not mean looking back years ago to see the wagon train days they're looking for distortions that are milliseconds in time and what what that was used for i don't know but that was just observing the time that the time distortion time dilation phenomena the craft and operation what is element 115 is it found here on earth or is it strictly an extraterrestrial material 115 is strictly an extraterrestrial
(33:53) material it probably occurs naturally in some other places maybe other star systems some people not familiar with science or chemistry say well that's ridiculous all the elements occur on earth you know but that's not true there are elements on the periodic chart that aren't found on earth i believe the heavy ion research lab in darmstadt germany has reached element 112 recently so 115 isn't isn't that far away and when they synthesize it it's not like they're making a a couple ounces of it they're talking
(34:28) about one or two atoms of it to make any usable quantity of a heavy ailment like that is virtually impossible element 115 is in the top of the reactor and the base of the reactor apparently is a small something similar to a cyclotron it's a particle accelerator a particle is accelerated to high speed and then deflected up a small tube and it's aimed at the 115.
(35:00) this transmutes the 115. similar to the way we we do that in a normal particle accelerator this causes a reaction a radiation emission that we really haven't seen before it produces antimatter this antimatter is guided down a tuned tube and reacts with a gas when matter and antimatter react they convert to 100 energy this energy is converted heat energy is converted to electrical power in the reactor itself this is done through a thermoelectric and this electrical power is used to power other subsystems on the craft
(35:48) though there is no wiring you know as we would know it also that's almost a byproduct of the reactor the reactor also sets up a gravitational wave from the 115 being bombarded this gravitational wave was present at the top of the reactor and is essentially guided in the same way microwaves are guided through tuned tubes and this goes to their amplifying cavities and through the projectors that are in the bottom of the craft with the gravity generators running is there thermal radiation danger to the crew there is no thermal radiation while the
(36:23) reactor is running the thermionic generator is 100 efficient which is in violation of the first law of thermodynamics but in fact it works element 115 is stable and for those familiar with chemistry we know that elements with higher atomic numbers have shorter and shorter half-lives however when you reach a certain point they call it the island of stability there is a place and we've theorized this for a long time somewhere around 114 to 116 there should be an area in there where the nucleus of the atom is geometrically
(37:07) stable with protons and neutrons where it it no longer decays it's not radioactive 115 is in fact this element in fact it does occur again somewhere around element 247. of course you know we're nowhere near synthesizing that we can only you know predict things like that but uh that's that's where 115 is did they the aliens give us element 115 in large quantities whether or not it was given to us i i can't answer that question however i was told that we have 500 pounds by one of my co-workers
(37:47) how it was obtained and you know where exactly it came from i don't know whether it came in one of the crafts or you know with separate cargo somewhere anyone can speculate but i was i was told that was the figure you were able to get away with a sample of element 115 how much did you get away with no comment you witnessed several nighttime test flights unofficially while off the base what did you see the test flights i saw off the base actually the the best test flight was witnessed by my friends who i brought out there at the exact
(38:24) moment the craft was hopping around and doing some really impressive maneuvers i had turned around and i think was looking for the video camera or something to that effect but i missed some of the most impressive maneuvers but the craft was uh similar to what was done before that i had seen close up other than the

fact that it went above the mountain range moved a much greater distance at a much higher rate of speed how are you able to find out about the test flight schedules the test flight schedules were told to
(38:58) me specifically because i was probably going to have to be present during those times and at that time the test flights were taking place on wednesday nights and from what they said that was because that was statistically the least amount of traffic in the area and that's all that they were concerned about does the propulsion system release any sort of discharge or exhaust there was a high voltage discharge on the bottom of the craft but as far as there being an exhaust there was not why did they appear as glowing balls of
(39:34) light in the night sky well that's kind of the same reason why a neon light or fluorescent light lights up what you're dealing with with is a high energy source in essentially a gas atmosphere oxygen nitrogen and when you apply enough energy to a gas molecule they emit photons they emit light and i don't think it's anything it's really a byproduct of how the craft operates when it's emitting that much energy the gas surrounding the craft emits light the same reason why lightning is visible you have a huge
(40:11) electrical discharge and the gas emits light in the form of lightning bolt if you were going to see one of these crafts at night operating it would appear really as a glowing ball or just a bright light in the sky from a distance even close up you'd see a glowing halo around it this is typically what you'd see in your normal ufo sighting if you've heard them a lot however keep in mind that lights in the sky are caused by much more common things than flying saucers tell us a little more about the aurora
(40:45) you witnessed taking off out of area 51. when i was leaving the area 51 facility heading down to s4 there was a tremendous roar and i have described it as the sound like the sky was tearing and i couldn't see out the windows of the bus all i can see out was the very front and as we came by i asked dennis who was my supervisor and on the bus at that time what that was he said it was an aurora a high altitude research plane and it was a large craft and the one glimpse i got of it was from the rear and it had two huge
(41:28) square exhausts with veins in them and it was just it sounded more like a rocket than a jet i don't know i'd even think he did mention that it was liquid methane powered but there again you know working on the disc technology i really could care less what was rolling around at area 51 but it did catch my eye as a result of going public have there been any attempts made on your life one day when i was getting on interstate 15 driving down charleston boulevard a car came up alongside of me and i thought he was just trying to race me
(42:09) to get on the freeway this was after i had left the project it was a white boxy looking car exactly what make and model i don't know but i accelerated to get on the freeway to go fast and there was a gunshot and the back of the car was hit and i skidded off into the median and i stopped and i was frightened and i just stood there because i thought the guy was going to be alongside of me and just shoot me i had nothing to do i was essentially paralyzed with with fear and i waited there and then nothing else happened
(42:48) and do i know it was a government agent trying to kill me no it could have been a drive-by shooting maybe you know so yeah wasn't it i mean it was an attempt on my life but by who specifically i i don't know though i was threatened uh before i had left that they threatened my wife's life and my life so i can only put two and two together and say that they were kind of pissed at me in an earlier interview you had mentioned that they had put a gun to your head tell us about that that was after we were caught
(43:24) out when i had the test flight schedule and i brought some friends out to show them the disc test we got caught out there and the following day i was debriefed down at indian springs air force base and i was in the room with the security guards that caught us my supervisor and some other people and some of the security personnel yeah they were essentially grilling me about security and you know how could i possibly bring people out there and uh i guess i wasn't as responsive as they would like and they got in my face and one of them
(44:05) pulled the sidearm out you know just pushed it against me have you maintained any contacts with your colleagues out at s4 no i never heard from anyone other than for a very brief time after i left dennis who was my supervisor did try and make contact with me at the uh the meeting place was the union plaza hotel and i took a friend of mine jean huff down there and another friend a former colleague and scientist from los alamos and we did we saw him but i also did recognize some

security personnel walking around there from s force
(44:44) whether or not it was a setup or what was going on or was trying to talk to me we never found out and we left it just was a real strange situation i never heard from him since as we enter the 21st century how has your experience changed your beliefs well if you want to wear the question how are my opinions changed i would say considerably before i was at s4 i was more or less one of the one of the guys that thought you know all these government conspiracy and ufo buffs and things like that were complete lunatics
(45:25) i even remember before i was involved there a friend showed me a little newspaper clipping and said john lear was giving a lecture who was uh touting that aliens from another world came to earth and there's 70 different species and i remember laughing on the phone that this guy had lost his mind and i was also under the impression that you know well the government's all for the people and they you know you know they're out here to protect us and all that you know after the experiences i had there uh everything is
(45:56) completely turned around you know the government is doing everything but looking out for us i mean the only thing they're looking at is for themselves you know obviously the et craft do exist something had to build them so there must be aliens and since there are in the craft there there must be some sort of factory and an entire civilization somewhere and if in fact that is true and it apparently is then there must be others actual crafts and technology from another world and that's probably the most important
(46:37) event in history he kind of moved from science fiction into reality in my mind and it really just i guess opened my eyes the big thing is whether or not we can duplicate them if we can understand what a device is or how something operates or what its physical makeup is that's great but if we can't duplicate it it's useless to us so there's really two phases to the project going on there it's understanding what we're looking at and then once we understand it is can we duplicate it with earthly
(47:13) materials and earthly technology and you know unless we've got a handle on both of them all that technology is useless to us and if it turns out we can't do that all we have is one single prized possession that we have to take care of and that's it after all that's been said and done would you do this over again what would you do differently i would probably have played along for a longer time i would like to have known a little bit more about the technology and probably kept quiet if i could have
(47:52) and possibly never have said anything i almost wish i had done that you know it's it's really only caused headaches and problems but i believe if i was given the opportunity again to go back in time and redo it i think i pretty much would have just shut up and gone along with the program i would have much preferred that instead of the navy or whoever it was that hand-picked a few renegade scientists here and there that they turn it over to some more qualified people obviously i was not the most qualified person on
(48:30) propulsion or field propulsion or anything of that sort i was just some guy i mean they could have picked i could have named 10 or 12 other guys that were more qualified than me but you know if they turned it over to the scientific community and not just a couple guys here in the united states i mean you need a large group of people in a large lab to research what's going on there not a little quiet installation it's the it's the security itself that prevents them from getting anywhere i mean it they never do work hand in hand
(49:03) you can't have a military mind science itself must communicate you have to have a free exchange of ideas that's how things progress and when you clamp down on a security system like that where you work in isolated groups and ideas cannot be exchanged you don't get anywhere and that's that's the problem they have what does the future hold for bob lazar well i'm not really involved in any of that stuff anymore that's kind of put behind me i have my own businesses that i work at some computer graphics some consultation
(49:45) other technical jobs radiation detectors and a few other things like that so really i just go about my life and that's you know something that happened that was fantastic and and it's over but it's kind of hard to shake it loose but eventually i will and that'll be that i think all the surveillance and everything stopped i don't think anyone's bothering to monitor me i've said everything that i know it's been all over the place so it's kind of a done deal as far as whether or not there are any
(50:16) craft out there i believe you know they were out and gone in probably the

late 89 early 90s and the only thing people see now out there are you know either flares or planes coming in to land but that's about it did you have an interest in flying saucers or science fiction in general as a child i was never interested in flying saucers as a child science fiction you know i watched star trek i guess with everyone else back then but for the most part you know i didn't even believe in flying saucers up until i was employed at s4
(51:01) i couldn't help at one point in my discussions with privately with general secretary gorbachev when you stop to think that we're all god's children wherever we may live in the world i couldn't help but say to him just think how easy his task and mine might be in these meetings that we held if suddenly there was a threat to this world from some other species from another planet outside in the universe we'd forget all the local differences that we have between our countries and we would find out once and for all
(51:39) that we really are all human beings here on this earth together well i don't suppose we can wait for some alien race to come down and threaten us but i think that between us we can bring about that realization thank you all god bless you all [Music] [Applause] [Music] back
(52:46) [Music] bye

Art Bell with Bob Lazar and Gene Huff - UFOs and Area 51 | 2nd Interview (1997) - YouTube
https://www.youtube.com/watch?v=aj2H_ykhkWo

Transcript:
(00:00) is the ex-government scientist who in 1989 came forward with a fact that he had been part of a team of scientists who back engineered extraterrestrial discs flying saucers in other words at a base known as S4 some 15 miles south of the infamous Area 51 at Groom Lake Bob's story is the main reason behind the state of Nevada changing the name of Nevada State Highway 375 the highway to Area 51 or S4 to its new name the extra terrestrial Highway indeed Bob currently runs a company that manufactures and repairs Alpha radiation
(00:50) detectors he also creates CGI computer generated graphics and simulations for Technical and legal demonstration videos for which he uses his Mainframe supercomputer which by the way is the second fastest computer in the state of Nevada second only to the one at Nellis Air Force Base Bob also has a small photo processing lab in his home in his spare time Bob does pyrotechnical and Rocket research and throws desert blast his annual fireworks Blowout at the Nevada desert and if memory serves he also fools around with alternative fuels for cars
(01:39) he comes this morning with Gene Huff Bob's a longtime friend and business partner who is the writer and co-producer of the Lazar tape Gene is a real estate appraiser and screenwriter is screenplay S4 the Bob Lazar story has recently been optioned and was chosen over three other screenplays on the Lazar story written by writers Jim Cresson I guess that's right croissant or crescent who wrote the morning after with Jeff Bridges and Jane Fonda Roy Carlson who wrote China Moon with Ed Harris and Madeleine Stowe
(02:19) and David Rabe I guess it would be rob a robe who wrote casualties of war with Sean Penn and Michael J fox and co-wrote the firm with Tom Cruise and Gene Hackman so this is quite a coup obviously for an entry-level screen writer but then again Gene has had the inside track uh good morning mob are you there I'm here and uh Gene are you there yes sir uh welcome to you both thank you Bob is it really true uh it had to have been four oh maybe five years ago that I interviewed you uh in concert with uh John Lear
(03:03) honestly don't remember that um my friends tell me I have about the worst memory that can be had but uh from what I recall years ago I remember John Lear apparently booking me on your show and never telling me about it oh yeah I remember that but I don't and then I really don't remember ever doing the show no there was a time maybe even a couple of years before that when we had you on for a short while all right I think he called in uh that was it that was it called then when Lear was on the show that's what it was yes
(03:38) yes well I don't even remember that but I'll take everyone's word for it all right well in fact we now have such a gigantic audience out there that hardly anybody knows who you are uh Bob except for of course you know you you followed this and so forth who would be very familiar with your story so the great majority of the

audience 99 have no idea who Bob Lazar is now I guess that means we have to begin at the beginning uh with regard to how you well first of all Bob you're a physicist correct or was at the time was it the time yeah
(04:23) um how did you become involved with or begin to get involved with whatever it is out there at Area 51 or is specifically S4 well let me try and give you the Reader's Digest version um some years ago I was working at Los Alamos National Labs in New Mexico um one particular day I was going down to the lecture hall to hear Edward Teller speak who as most people know as the father of the hydrogen bomb yes I got down there a little early because I wanted to get in uh assuming there was going to be a crowd of people and actually to my
(05:06) surprise there was hardly anyone there coincidentally that day the local newspaper in town the monitor had printed a front page article on me and right outside the lecture hall was Dr Teller reading the front page of the paper so I thought it was a perfect opportunity to introduce myself and just say hi absolutely um it was just a casual meeting and um the only reason I bring it up is years later I had moved out of Los Alamos after I quit working for the lab I opened up my own business that did some contract work for the lab and also
(05:49) started a one hour Photoshop for my wife that she ran there we later moved out of Los Alamos to Las Vegas and again sometime later I decided you know I had missed working in the scientific community so I decided to get back in and send out resumes uh I sent them out really all over the place to uh the places where I'd essentially like to live uh live a more um I really don't remember where else but one of the other resumes I sent was to Dr tellers uh attention and I had referenced our meeting back then
(06:29) uh a short time later I got a call from him and he did remember me to my surprise and said we might have a position you're interested in I said great um I went down and was interviewed at that time there were a couple uh EG and G buildings by McCarran Airport uh out here I recall Las Vegas um I really don't know what's there now someone tells me there's still one building but there used to be two before they expanded the airport one of the special projects and I don't know what the other one was but in either case I
(07:03) was told to go down there for an interview the interview was uh relatively short and I really don't remember specifically what the job entailed but they told me I was basically overqualified and would become bored with it in a short time uh I said fine but they said we might have something else in the future for you I said fine okay and uh basically went back home figuring they had blown you off right um I really don't remember what the job was but it didn't really even sound too exciting to me so I it really didn't
(07:38) you know really didn't ring my bell didn't recall anything about a technician level or something that would have been boring I really don't you know you remember this uh when I when I go through most of the stuff people are amazed you know boy how come you can't remember these facts you know this is a you know fantastic point in your life and yeah yeah but you know it's also a decade old now and it's starting to remember specifics here and there however um as it turned out they did call back and
(08:06) had another position um the position was stated to be something that was involving a field propulsion system which to me in my mind sounded something along the lines of some electromagnetic propulsion something that might be used in space maybe uh I don't know an ion drive system using mercury vapor or something like that or you you've always you've always been fascinated by propulsions anything anything with you know it exerts tremendous amount of energy from you know explosives to uh you know high energy weapons anything
(08:45) along all science propulsion and uh they um and coincidentally the article that Dr Teller was reading was about a car that I had converted to run on a jet engine now you see I remembered that and then you you converted another one I believe to run on hydrogen didn't you yeah actually I'm really surprised that you remember that I don't remember so that is one of the number one things I get asked about I know I have a good memory box um but in either case I I after a more or less lengthy interview I
(09:26) accepted the job and uh of course I had to go back a second time can you remember any of the details of this rather lengthy interview I mean was a lot of it security or security oriented well there were certainly a lot of secure yarn uh security oriented questions and so forth later on however keep in mind that I had just come from Los Alamos just a few or a couple years before where I had two clearance civilian you know top secret clearance uh so yeah lady really didn't have

to go and dig deep back into my path to see if I was
(10:04) you know of Russian descent or anything along those lines so um uh you basically the the job just seemed like a uh you know typical research and development job I was anxious to get started on it and uh things went on they all they told me is that it was in a remote area out in the desert and um that I would initially I would fly out there maybe once possibly twice a week uh just to kind of get caught up on stuff and they had to um uh reinstate my clearance which would take you know perhaps a couple weeks um maybe a month at the latest sure and
(10:45) um so in the meantime I was given busy essentially busy work to do or at least that's how it rang in my mind and this is typical too at Los Alamos you know if uh you're initially hired there before your clearance goes through sometimes you know obtaining Q clearance can take up to 13 months so they don't just have you sit at home you'll you know before you go to work for the lab sit around and work on alarm systems or something like that doesn't you know something usually below your potential but uh nothing to
(11:15) keep you busy that Rings true I was in the Air Force they did that to us all the time yeah it's pretty it's pretty common so I thought well this you know very typical um I had no idea what this would actually entail until I got into it and obviously they foreign looking through their eyes I guess if it made sense that they couldn't they couldn't of course divulge what this job had would actually entail before they had uh you know gone through all the security uh and whatnot but um you know that's
(11:48) essentially how the job came about all right one thing that I would think you would remember is your impressions of Mr Teller I do as far as what well what kind of guy was he you know just simple questions what kind of guy was he he was um he seems to have two faces you know which is strange and in talking to him uh one-on-one he's a very polite pleasant intelligent man um however virtually any interview you'll see of this guy he comes across as the most pompous mean person you have ever run into in your life
(12:39) um I don't know how else to describe him but um he was not nearly as short uh not physically speaking but I mean uh you know if you see him in interviews you'll see him answer questions specifically to the point short and on to the next question and not be very talkative not offer any information you know other than what you're immediately talking about and in person he was certainly not that way so there's you know the exact opposite very pleasant and willing to talk about anything let's talk about it
(13:13) you know nuclear weapons or anything oh well that's what I was going to ask about last night I interviewed Professor Michio Kaku uh a very um preeminent physicist uh back at New York University and he too has worked with uh Professor teller and I asked Professor Kaku why he had not participated in the hydrogen bomb uh development and he said he simply chose not to he wanted to go into a a different direction with physics and um had quite a bit to say about uh Edward Teller and apparently he was consumed during the Cold War years with
(13:55) National Security you know with the being concerned about National Security and uh this is uh Dr Tellier yes uh-huh and now back to Bob Lazar and Gene Huff gentlemen you're back on the air again all right Bob uh so you you got the job you landed the job and they had you doing busy work and then well not that busy work hadn't started oh um that's what I thought was going to happen uh instead um where did we leave off um well actually with busy work they were kind of well that's you know he had anticipated busy work but now you had to
(14:38) go to work the first day yeah essentially I I guess essentially it was to get caught up uh with what was going on and really to my surprise the security was a little more than oppressive um you know generally you're just assigned a badge and shown the general procedures and and things of that sort um this was a little different are you still talking about the facility near Las Vegas or are you talking about being flown up there no this is when finally I was flown um so I go to uh McCarran airport right by the EG building and I'd be flown to
(15:16) groom Lake um as I landed there the first time right across from where the plane parked um there's a security officer was a security office um and that's I I believe I spent quite a while there but uh you know reviewing you know how secure things are so on and so forth but um you know this is not where I worked where I did work was about for my estimates about 10 or 15 miles south of there we were taken there in a converted School Bus you know those big bluebird uh jobs that was painted kind of a dark navy blue there's a lot of people Bob
(16:00) who don't even believe that area 51 exists by the way much less S4 I live

out here in Pahrump uh but I think I mean people I can tell you people don't believe Area 51 exists well there are a lot of people who don't but I can tell you Bob when when you drive up by the VFW here in Pahrump at about 4 30 or 5 in the morning there's a whole bunch of buses out there and they've got signs right on the side of the buses I saw it about a month ago and it just says area 51.
(16:28) oh really yeah oh yeah not bothering anymore to keep that secret I guess anyway uh so then they take you uh in some from from Groom Lake the main facility and incidentally Bob up on my website I've got a picture a pretty good one the best one I've ever seen of the groom-like facility and it shows what appears to be three uh large hangers with the one in the center perhaps being the largest is that your recollection three large hangers yeah three big hangers uh there are a lot of other attendant buildings but three rather large hangers
(17:11) I don't recall there being three you know obviously large hangers on the on the approach and from Las Vegas you know that that stood out that much above everything else okay uh I recall a huge satellite dish but for the most part most of the time I was going there at night and certainly didn't have a run of the place all I did was get to go in one time I got to go to the cafeteria um but other than that it was merely a stop uh Ford S4 yeah toward S4 but um you know I don't really require recall there
(17:46) being three large uh hangers really that stood out more than anything else did you ever see anything unusual at all at Groom Lake the thing I did see that was unusual was um some sort of advanced rocket or Jet Plane um people have called it Aurora I don't I don't I don't know if it was Aurora or or if even or if it even exists but um John Andrews from the tester Corporation and a few other Aviation Buffs kind of interviewed me more or less about that it was uh something along the lines of an X-15 shape type of craft now we were
(18:30) driving away from this as it was taxing but it was a uh a horrendously loud uh tearing sound that the engines made and I think my original description was that it made it sound like the air was tearing and that's the the best description I could give to it now I certainly have heard uh about the new generationism of uh scramjet engines that have supersonic airflow inside that burn liquid methane and so on and so forth whether that was these I don't know but I did get a look up the exhaust as we were turning and it
(19:09) was uh they were rectangular exhaust with some sort of veins inside um that's all the information I can give and what it was I don't know but that was the strangest thing I ever saw do you recall the general shape of the aircraft was it close to what we would call lifting body no well even though the X-15 was a lifting body it was not a lifting body like you'd see on an F-16 or something where there'd be a you know a lot more a lot more Wing incorporated into the body it was more along the lines of a
(19:40) long slender body maybe a cross between an f-104 and an X-15 for those people that are familiar with those planes very short stubby wings um you know which translates to me you know in a high speed of rotation uh High Flight speed and sure things like that but uh you know again I didn't get a very good look at it and uh I don't know it could have been anything a scientific research vehicle or or anything I'm certainly not claiming that was Aurora but sometime later some of those people were down in Rachel and they heard and
(20:20) recorded a sound that they interpreted as the sky tearing and played it back to me and it was in fact The Identical sound so a couple of years later it was still operational whatever that thing was but that was the only unusual thing I ever saw there all right so you landed and they generally then uh you'd I guess get off the tarmac there and get right on a bus yeah well straight across from where the plane parked head in straight across from there in kind of a large parking area was the security building
(20:51) um and that's where we picked up the bus and went South uh the first time we I did go in and it was an extensive uh we'll get together with the security people there and signed all kinds of strange forums that uh were there a lot of people on the bus no not going down to S4 generally the person that accompanied me all the time was Dennis Mariani who was my supervisor at that time okay and so then they had you sign all kinds of forms what kind of forms well everything from signing a virtually signing away my constitutional
(21:25) rights so should anything go wrong as far as me uh pulling my guts throwing your guts yep uh they would um you know essentially be judge jury and executioner um as far as the authorization uh to attain the clearance there that was an order that was signed by President Reagan which I saw on the desk um I'm trying to remember

some of the other paperwork beforehand I gave permission to have my phone lines monitored um boy and can you remember any of the wording I mean it's not you said you signed something that would allow them
(22:09) if you blab to be judged during well I had signed something like that yeah I mean that that may be a slight exaggeration how the wording was but um certainly I signed uh I'm trying to remember what it was like a 10 10 agreement uh if you've heard that before I don't remember the exact title of the document but uh you know it says if you violate um you know National Security Secrets you're you know it's 10 years in jails and a ten thousand dollar fine does that sound familiar to you yeah I've signed something like that before
(22:41) but this is certainly far above and beyond that which was kind of shocking actually um but at the time you know you pretty much just blow it off and say all this means is that I'm going to be involved in something you know extremely interesting and uh you know it's great so what you know I'm not I have no intention of violating any rules or uh you know causing any problems so just no sweat I understand I mean by that time you're you're being you probably tantalized thinking this oh really I was
(23:10) you know it's uh this is pumped up it's gonna be real fun exactly all right so you sign all the forms uh including one to two to tap your phone huh right they did Uh I that was again before I went down there that was down to DG and I gave him permission to do that um but that was only for a limited amount of time I don't recall how long that was for and that's kind of a silly thing to do in the first place because if you're going to monitor my phone why tell me it kind of defeats the purpose maybe
(23:44) because otherwise they have to go through some sort of legal procedure and get some sort of court to something or another so maybe you would think in the interest of National Security they could circumvent all that but uh well they probably do actually when they need to I had actually doubted that they um were actually doing that uh you know once in a while everyone here is little clicks and pops and buzzes on their phone and um you know I I really didn't think that was it yeah my view is a good tap is one
(24:16) you never hear well this is my point exactly sometime later I guess we'll get into that but uh when things turn sour um actually before they did they had come to my house 30 minutes after I got off the phone with Gene one day and we were joking around on the phone they came to my front door 30 minutes later with a transcript of our conversation and outlined were the questionable phrases that I had spoken now this is amazing to me considering the closest FBI building down here is on Charleston and Maryland Parkway but
(24:55) I mean that's you know that that's an amazing feat it almost makes me think they had a little mobile setup somewhere um well it is you're a computer guy and I've heard maybe you could confirm this for me that the NSC has the ability to have super computers which virtually are monitoring perhaps even millions of conversations looking not at the entire conversation but listening to the key keywords well that's how they caught that drug kingpin down in uh where is it Panama or Mexico that's
(25:29) right and every single phone line right and uh just picked out certain words and grabbed them so I encourage my audience to constantly in the middle of a conversation just simply say kilo kilo all right actually we say assassination president things like that [Laughter] all right well anyway so uh so onward to uh to area S4 uh I guess is it a paved Road or a bumpy little ride that's a quite a bumpy little ride it's a uh a dirt road down there follows along the base of the mountain and um coming up to the facility
(26:12) it's right off of uh Papoose dry like that and there's a small mountain range on the side and built right into the side of the mountain is the installation itself the S4 installation and it's composed of hanger doors around one side and then I guess I believe on the East no on the south facing side there's a um is the main entrance into the facility were the windows on the bus uh darkened or could you see out as you no you could the only place you could see out was the front on the bus most of the times I had
(26:54) gone down there was the driver or security guard and Dennis Mariani the security guard almost always stood uh right up front uh not sitting down but holding that bar you know which is right by the door on those buses sure uh in I don't know if it was in an effort to block my view out there or just to intimidate me and stare at me but that's how he wrote the entire trip down there so it was always difficult to see exactly where uh we were and and what was in between right well there's

really nothing in between I
(27:28) pretty much uh desert Dennis Mariani uh who who was he he was my supervisor what his exact position was was pretty much unclear to me uh he's a stocky guy smokes a cigar kind of looks very military looking short blonde hair um anything's about the best I could describe and maybe you know late 30s early 40s um not gregarious more security-like yeah um so I really don't know what his exact function was in the world he didn't wear a military uniform though Diddy Bobby no no he didn't close right civilian but
(28:10) you can kind of tell military guys yeah just by the way they look and and the way they comport themselves and so forth and so on but you know again that's this is my guesstimation of what sure what this guy was about um was he your constant Shadow was he with you all the time for the most part for the most part until I learned how uh things operated there uh my I guess I shouldn't jump ahead that far yet um well I might as well for the most part you know for science to progress anywhere if you're doing any sort of
(28:46) research whatsoever um one of the things that is that is vital this free discussion open and free discussion amongst the people that are working on the project okay right well obviously you know it's how ideas are bounced off other people and that was the only way things can progress wasn't that one of the main uh contentious points during the development of the atomic bomb in the Manhattan Project everything was compartmentalized and other military just loves to do that and the scientists just hate it because they
(29:20) want to bounce ideas off each other exactly so you're saying really in 1989 that was still going on well yeah we're probably well I don't know how would I know how bad it was during the atomic age but um you know it was very oppressive so much so that our job was very compartmentalized every aspect was split into groups of people groups of people are quite literally two people you work on the buddy system in other words the only person I can talk to the only person I could discuss anything with the only person I can
(29:57) relate to is the one person who I work with any other aspect of the project any other questions are simply not to be asked so immediately you're interfering with your progress in that if whatever you're doing interacts with anything else anywhere uh you know you run into a black wall you don't even really know if you're the first person to come down and be assigned this task do you exactly oh really yeah but um yeah you really have no idea what's going on and I'm sure if you found that you know while part A
(30:39) connects to Part B which we're not allowed to see you know and you know I'm sure there would be some way to gain some of that information but uh Bob not only were you not the first personal assigned that task but this might be an interesting point to tell them why you were told you were hired no that's true I was uh actually one of the questions I've always had is why did they hire me certainly for this project um I would not be the most intelligent uh the most resourceful person that they could possibly hire out
(31:20) of all the people at Los Alamos or anywhere else in the world for that matter so I've always wondered exactly why they would have picked me and so why then did they I still don't know I have always wondered this I've ran a lot of things through my mind um you know a different possible scenarios and they really none of them make any sense was it because Edward Teller just thought I was a nice guy and essentially Juiced me into the position so that makes yeah it sounds that way yeah but you know in a project like this
(31:54) why would something like that happen where every person counts you're talking in a project where they're only actually 22 active people working on it um yeah but when teller speaks the military listens yeah that's true but I mean I didn't know him well enough um as far as my scientific background it was actually fairly limited uh the most I mean I was working at Los Alamos on the uh working with the accelerator at that point so it really wasn't a propulsion based uh job anything to do with uh
(32:32) you know what I was about to have my hands on maybe they assumed you did have the right background maybe they didn't really know what they had on their hands now to Bob Lazar and Jean Huff and the story continues here we are at area S4 south of Groom Lake and I guess by now you're in great anticipation Bob wondering what you're going to be doing I was actually I was just about to make a point before we broke and I can't remember it well that's why you have Gene Huff Gene Gene doesn't remember either Gene
(33:10) doesn't remember either boy I think my short term memory right before we

broke about it he had no idea why they chose him of all the people in the world but that's well actually Gene you had said why don't you tell him Bob why they chose you said I have no idea and we were talking about the work he did at Los Alamos right yeah he was uh I was implying something else and in other words I was I was telling him uh reminding him of why there were vacancies why they needed to hire someone's why someone wasn't in
(33:42) his Slaughter and we were talking about the fact that uh he was not the first one necessarily hmm uh and that makes sense in other words uh if they had something they didn't understand I can imagine they would bring in a an array of people of different disciplines to take a look-see well my that might have been the case but yeah you know I to this day I can't figure out why you know if um certainly you look at my record and the way I approach things and the work I had done before was a little more Renegade
(34:13) and maybe that's what they were doing uh was looking for someone that would approach a project from a different Road and uh are you able to talk about what you did at Los Alamos I did several things um initially I was um working on the polarized proton Target on the accelerator the accelerator there at Los Alamos is a linear accelerator it stretches about uh if I remember about a half mile and it's one of the more unique setups in that instead of running a single experiment on the output of the accelerator the beam is split into
(34:54) different areas and all these different areas uh are I don't know really if they're leased or rented to other countries or other scientists uh but several other people and other groups from all over the world essentially can conduct experiments simultaneously uh at different times they'll fire different particles down the target for different lengths of time and uh you know everyone can run their own experiments and you know see what's going on there was also some Star Wars uh development done there
(35:30) um okay I'm sitting here listening trying to imagine any application for what you were about to do and you don't that S4 yeah there is there's none there was no there was no direct connection at all this is you know one of the things that uh has perplexed me forever um but how could there be yeah maybe this was the point that I was going to make in fact it is it just popped back in my mind what was strange uh about the interviews I had had was you know certainly there was some technical questions here and there
(36:08) um they essentially knew my background already but what they were most concerned was what was what I had done in my spare time which I found to be very unusual now you're what had you done in your spare time you had worked with propulsion systems in your spare time right I mean they were essentially concerned with more of my you know for lack of a better word play time than they were was what I was or what I had currently done all right well let's take this back to Edward Teller when you had a conversation with Edward Teller did
(36:47) you talk about your play time did you talk about well I was talking about at that time the static Ramjet engine that uh that was in fact that was in the front of the paper so we were talking about uh in fact at that time I had filed patents on it um of how the device operated uh without the need for fuel pumps and things of that sort because of the type of fuel it used what is a static Ramjet engine it was an offshoot of a pressure jet engine which is uh which was invented by Eugene glueharf who was also coincidentally the inventor of the
(37:25) rocket ejection sheet seat that's used on all fighter aircraft indeed um he developed that I believe in the 50s and in the 70s I had run into them and really a as a kid back then started working in my spare time as I went to uh Pierce College at that time um working to improve on the design uh I came off with an offshoot of the design which was a little more complicated but produced a lot more thrust the basic design of the engine is it has no moving Parts at all um one property of propane is that it sticks to Hot Metal this eliminates all
(38:13) the needs for flame holders and things of that sort inside the engine which makes it more complicated um I'm trying to think of a couple other points about it but there were it was a pretty different design as far as jet engines go and with the changes I made it was essentially a different type of engine and uh after I had gone past the development of it on a test stand I've built a slightly larger one and installed it in the back of a car and it was a convenient mobile test setup as opposed well and additionally
(38:51) it was something kind of interesting to play around with in the desert sure uh which is where the whole article came from in the newspaper but um all right well then I think you've answered your own question but still in playing around with jet

engines really doesn't qualify uh qualifying him or her to work on something of extraterrestrial Origins no but but then again uh who does have qualifications to go work on something well there's there's a point so I I can understand and if here's how
(39:23) I would uh based on what you said I'll bet here's what happened uh the article in the paper the conversation with uh Edward Teller and probably his suggestion would probably amount to more of an order that you'd be a good uh a good person uh kind of a rebel to go take a look at this stuff they had at area Forum uh that's that would be my best guess that's a pretty good guess uh what what do you think uh Gene I agree I think that uh Edward teller's word carried all the weight in the world and
(39:58) and and I also agree with you that uh uh who would have a background who would be qualified to work on uh you know a gravity propulsion system and an antimatter reactor and the things Bob later ran into and uh Bob's a comprehensive Problem Solver as a background in physics and electronics and propulsion and uh and I can understand why they'd hire well yeah if you're going to go if you really have extraterrestrial craft and you're trying to figure out what makes them go then you're going to go find somebody who
(40:30) works out of the box in other words uh is a bit of a rebel and and kind of works out of the normal box and experiments and Tinkers and is interested in propulsion that's the kind of person you're going to go for because there's nobody out there with specific qualified occasions for that job obviously in addition to probably other considerations of a psychological profile and you know yeah that they were also very concerned with your psychological profile yeah they were concerned with uh how I handle
(41:01) stress in fact I remember one of the uh one of the questions was it you know have you ever thrown Tools around in the lab or to that effect that these were very strange questions for what uh you know what we were talking about but uh well in either case I you know I got the job and and wound up there but uh haven't you ever thrown tools no actually I haven't I have I've kicked radios too went all the way across the room put my foot through it anyway uh so so then uh you seemed qualified in most every way as much as one could be
(41:35) qualified for that so here you come to S4 and uh were you immediately led into this area where these craft were no absolutely not in fact the first day there I went in and uh I think my first stop was to go to the metal medical office there I believe there was a nurse in there um I'm pretty sure that was my first stop and I had to go through a series of what I was told were allergen tests allergens yeah they took my arm and Drew a little graph on it and pricked each little area uh in my arm with a different little needles nope and in
(42:22) fact I was not permitted back to work and I think for two weeks until there was a reaction or if there was to be your reaction with any of the substances they put on my skin and they said you know we're working with some extremely exotic materials here that were not all that familiar with and we want to know if there's going to be any problem with it well that's again odd but acceptable and I was also given an injection there too which was a uh oh yeah which was a wide spectrum what did they call it
(42:59) antibiotic no it wasn't a white spectrum antibiotic it was a wide spectrum something or other it's always good to know what they're shooting you with yeah I thought so now I mean there have been so many I'm sure which we'll get into later uh you know so many ridiculous stories offshoots of what actually had happened to me um you know people said oh well they injected you with Thorazine or so on or this was the memory drug that wiped out your memory so you could only remember back and forth and you know so on and so
(43:31) forth but uh I'm pretty sure that wasn't the case this was uh they were mainly concerned that about the uh well you know here you're dealing with actual extraterrestrial materials and uh if we're going to be crawling around on them taking things apart and having contact with them you know they imagine they want to make sure that the people working on it are fairly safe well that in one hand weighed against the fact that you know don't forget the United States government fit Fallout to people from time to time and uh you know
(44:04) did other strange things to them but uh when you originally told your story Bob years ago that wasn't known and and everybody regarded your story is absolutely incredible beyond belief uh but then when Hazel O'Leary stepped out and said the following occurred everybody went in into kind of a stupor as it my God we did that so your story Isn't So out well that has actually changed in the past 10 years if

you remember you know 10 years ago too the predominant theory about how gravity propagates uh in any physics test
(44:46) textbook you know related to gravitons and now the predominant theory is gravitational waves which is exactly how some of uh and and some scientists and physicists of that time uh you know pointed out one of the many reasons they say the the reason this story can't be true was that this was absolutely ridiculous so on and so forth and now it's spoken of uh as a matter of fact this is how gravity propagates through space and it's just interesting to see how things slowly over the span of a decade quietly change you know and uh
(45:21) that's one thing I do keep an eye on yes but um and I take it your arm didn't break out inappropriately so you passed I think I think it did develop a small eruption somewhere but it was nothing uh nothing to be concerned about or so I was told um so we just proceeded from there as you know there is a group of people suing the government over illnesses they have suffered from work they did at Area 51 and that is proceeding quietly in court it's not going to be so quiet when it goes to trial but that's underway now so
(45:58) indeed there are some pretty exotic materials up there actually you just reminded me of something when was that Gene when uh uh was it right after that where I collapsed from the kidney oh I remember that and right right you had was that there after I had left the project no you were still in the project that was right after right after they did these tests and gave me a shot you know it's kind of surprising I forget that it's like a strange substance and uh all I remember is that you were at a Toyota dealer or something
(46:31) like that and he was in he was in uh such pain as kidneys hurt so bad he thought he was going to die and uh to that point Bob had uh never had any health problems or had never had any sedatives or painkillers and the doctor gave Bob a shot of Demerol and I called him and I was floating on cloud nine it wasn't even coherent and I came to his house to see what what was wrong and then he was literally literally high from uh from a painkiller they gave him just so he could stand the the pain in his kidneys so whatever went
(47:05) through his system certainly stuck there yeah so there was an adverse reaction to something do you think that was well Chris you have no way of knowing whether it was the allergy test they put you through or the shot they gave you or wasn't it you know an amazing coincidence that you know uh but he had a prior kitchen or something yeah I mean it is you know well I take it you went to the doctor I did yeah what do you say I don't remember I think he said uh he gave me a shot of painkiller uh Demerol I believe it
(47:39) was and uh he took a urine sample a blood test and um he asked if I had any previous problems anything strange and you know obviously I said no no no certainly didn't mention anything about getting an ejection right in a strange place in the middle of a desert right um didn't they do x-rays or a CAT scan or something yeah they did a just an x-ray to see if there was any blockage uh but there was a day later or I think even the next morning everything was fine uh the x-rays came back negative and I believe the blood work came back
(48:18) negative too as did the urine sample so I in fact I think his conclusion was that perhaps I had passed a small stone and you know wound up in my bladder and then it would probably hurt coming out again but um you know that never occurred and you know whether or not that scenario is correct you know again it was just speculation but uh I don't know that you just stirred that up in my memory I don't you know I don't think well that's how nothing that's right that's how little bits and pieces come
(48:48) back um how's your health now by the way and and since then okay oh fine no problem all right um so anyway uh you pass all their little tests pass all that the next thing to happen was that I was um led into a room with uh quite a number of little briefing packages um briefing papers or these range from two pages to about five pages uh little folders with different aspects of the project um that I was working on this was uh I believe the part of the first day and the second day that I was working there um so they just sent you down at a table
(49:42) and had you begin to read about yeah what these were just basic overviews of what each group was doing just essentially to give you knowledge of what the other facets of the project were about a general overall right had no specifics whatsoever but if in uh for instance there was a group of Metallurgy and so on and so forth all right um one also contains some of the names of the projects oh it did yeah in fact Bob Lazar and Gene Huff now you're welcome to facts in a question as a matter of fact I already have many

(50:17) but I'm going to hold them until the story unfolds completely then we'll ask some of the facts questions then we'll go to the phones so if your dialing finger is itchy and it is because they're all ringing just relax we'll get to the phones in due time right now let us unwind the story back to Bob Lazar and Gene Huff gentlemen you're back on the air again all right um so here we are uh you're in a little room with a bunch of briefing papers giving you more or less an outline but not specifics of what of the
(50:50) work being done on actually at that point did they did they State what it was that was being worked on well at this point yeah this is the first time I really knew exactly what I would be doing and this is where it was stated that the the project excuse me the project was essentially that of back engineering and extraterrestrial craft that must be quite a line to read well it was and it was also hard to believe it's certainly going into the project I was basically on nuts and bolts guy and certainly didn't believe in UFOs and
(51:32) thought everyone was crazy uh that even considered the topic I certainly believe that there was life elsewhere certainly life can exist on other planets other galaxies other other solar systems but I just found it very hard to believe that there was any intelligent life visiting Earth and uh you had never had any Close Encounter of the Third Kind no no and I thought people were basically crackpots that's awesome whacked out but also art he was into science and technology and he certainly wasn't well read I mean he had
(52:06) never heard of the you know Betty and Barney Hill caser he didn't know anything about uh uh uh the Roswell crash or anything along those lines I mean he wasn't interested he didn't pursue it and and if you all remember uh really a decade ago I mean some of that information was available but certainly wasn't prevalent to the point that it is today with websites and movies and television shows Oh indeed as a matter of fact before we proceed Bob I'd be very very interested to hear your reaction I have interviewed now twice uh
(52:37) very rare interviews by the way uh hours-long interviews with Colonel Philip Corso and I'm kind of interested to get your reaction to Colonel Corso's uh Revelations about the back engineering and insertion into American industry he did of artifacts from the Roswell crash were you surprised to hear about that this is the first I'm hearing about this is that right all right Phillip uh Philip J Corso colonel um I rip believe it or not I really am completely uninterested in the topic UFOs and and never follow it at all all
(53:18) right well this in the darkest fellas this is a man who uh was given the job he's now 82 years of age by the way he was given the job of uh he was actually handed a filing cabinet uh by a general and he was given a job of figuring out what some of these things were and introducing them into American Industries specifically Bell labs and some others at the time and these were artifacts from Roswell and he is very very credible he wrote a book called The Day After Roswell What specifically uh what devices um devices that led to and I I'm gonna
(54:01) it's gonna be hard night vision scopes for example um fiber optics for example the transistor for example a lot of leaps that by the way particularly the transistor there's not much of a paper trail for uh if you if you look back at the development in Bell Labs of the transistor there's not a big paper trail yes it arrived but there's not a big paper trail about how it arrived well foreign I'm so skeptical or something like that the reason being well let me tell you certainly you've seen pictures of the
(54:38) first transistor we know it was developed at Bell Labs we know there are a couple of guys working on it um but you know what the first transistor was it was essentially just I mean it was more along the lines of a diode just uh a p a PN and a p Junction it's not a big slab of silicon it really couldn't do anything certainly if we had been given that advanced technology at that time um wouldn't it have been something a little more down the road uh a lot of it was a lot of it they had no idea and uh well is he saying that uh
(55:18) he worked with some of these guys or into no them or or was this all a big conspiracy and everyone was no he was a he was just a middle man and his assignment was to take something that looked interesting and take it to American industry and try and determine the function and whether it could be duplicated or not it's a long story and I don't want to hurt you with it but uh he's highly qualified I mean this guy is I'm not someplace I'm not immediately debunking him but I'm you know this is
(55:50) my natural reaction to jump on that he was an officer in the military and held some very lofty positions right oh absolutely well I'd actually be interested to to look at that I actually gave him UFO magazine so he could read about it but he

doesn't read about UFOs so I understand it really is true people don't believe this about you uh Bob they think you are the guru of uh you and it just isn't true no please you see I remember the interview I did with you before I remembered very well anyway
(56:23) uh so uh here you are reading about all of this and you get sort of an overview of it all and probably by what are you thinking by then I mean is your mouth hanging open extra Twisted it is it is to some extent and uh another part of me is beginning to wonder whether or not this is true at all or if this is some some sort of uh psychological test uh you know everything else was so way out essentially uh maybe this is you know another game that we're playing maybe they're just trying to uh determine what
(57:00) reactions of people in science would be too extraterrestrial craft or the fact of extraterrestrial presence of any kind at all right uh and and certainly all these thoughts had gone through my mind um from there the days have kind of Blended together in my mind I don't it's hard to separate what happened on each day after that but I believe that the next time I went there uh was the time that I was actually let in through one of the hangar doors now normally we drove alongside of the installation and came in the main
(57:45) entrance um this one time we drove up and one of the hangar doors was open in the hang of doors as plain as day or in the hangar door as plain as day was the craft that I had later labeled the sport model a very Sleek looking uh very stereotypical Flying Saucer my immediate reaction was this is the new generation fighter that we're working on for whatever reason it's saucer shaped but uh immediately in my mind I said this explains all the UFO sightings throughout history has just been the development of this thing here
(58:32) it is so here it is this makes you know perfect sense I've got a model five feet away from me here a tester model which I believe the tester Corporation built based on your description right it looked exactly like that is that what we're talking about the support model you you call the sport model yeah very Sleek sporty looking um yeah that's it exactly I'll be jammed all right um so you drove by this thing we actually stopped in front in front I was led out of the bus uh the security guard first
(59:09) then Dennis and myself Dennis walked on ahead of me and um the security guard told me to keep my eyes forward and just follow Dennis into the back and at the back of the hangar there was a door that led in to a hallway in the office area um I walked right by the craft uh the door was off the craft or hatch whatever you want to call it right alongside of it was an American flag adhered to it a little sticker not in really qualify now all that did was cement it in my mind saying well this is you know obviously this is it
(59:50) um I slit my hand along the side of the Craft um which the guard didn't appreciate and I was told again keep my hands at my side what did it feel like for it if I I say it felt like metal and the reason I say that is because it was cool to the touch um so yes it could have been an advanced ceramic or something absolutely but to me sure it felt and it appeared like metal um we continued in and this is where I first met um the person that I'd be working with Barry castillio or Castile however you pronounce that
(1:00:33) um and this is when I first saw the initial components of the craft that had been taken out so they had begun to gut this thing then not this particular one there was more than one there how many there were actually nine craft not all like this but from what they told me from what I saw there were nine craft and don't ask me where they came from or how we got them or anything I have no idea but um the craft were in different uh really different states some were completely dismantled uh some looked as if they would be operational you know
(1:01:17) that they hadn't been touched at all but apparently from what I understand all the crafts had the exact same reactor and propulsion system in them did any of the craft look look as though they had been in a collision or crash uh no the only one that had damage to it looked intentional it was a crap that had a um it's kind of hard to describe but the area around the craft the lip if you will was very Broad and flat and thin and it looked as if it had been stood up in a projectile fired through it uh the hole from the distance that I saw
(1:02:10) looked around four inches but it could have been at any size just it looked uh as if the metal was bent outward and uh so now that could have been dropped from the sky someone could have fired a a projectile through it uh who knows again it's very interesting in other words we're not dealing with Superman's cape here holes could be blown through it right of course on the other hand it's an

extremely unscientific test you take something as prized as that you don't stand it up and fire a cannon at the
(1:02:42) thing or a Howitzer you certainly you know take a small quantity off and you know do your analysis of that that piece but for whatever reason that was the only one that looked like it sustained any damage some of the other craft were dismantled to some point but certainly not wrecked uh the only craft that I was permitted to work on to touch to have anything to do with was the craft that I turned the sport model that's the one that you have a model of there well as you turn around as you walk in on all of
(1:03:17) this though Bob you know I did not see this all at one time this is I saw this one craft now the hangar doors are all the hangers are all next to each other and only at one time uh you know way down the road where all the bay doors open at one time and I got a glance to see in what was the other in the other Hangar doors but for the most part all I at this point all I knew was that there was this one craft and now in my mind I am convinced that this is just a U.
(1:03:44) S manufactured extremely secret you know right fighter reconnaissance craft who knows what but and the the little American flag did that for you oh without without question that was it it was a done deal um what do you say you look at it and say turn around to your uh companion we'll call him and say wow or my God or where'd these come from no nothing well I just had a smile on my face if I remember walked into the back door and then I you know the introductions began the only other person I really interfaced with was um Renee uh I don't
(1:04:19) remember his last name um but and I actually can't remember what in the world Renee did but for the most part Barry and I worked closely together um now this is also the first time that um my supervisor left me alone uh with Barry and um you know this is where the learning process essentially began this is where my view of everything changed did they tell you at that point what your specific job was in other words there it is and it's sort of like okay what am I supposed to do well that that's what this
(1:05:01) you know that that's where we begin now this is exactly uh what this meeting with Barry uh entails is the description of precisely what I'm supposed to be working on what my function in life is now at this place uh and this is where I find out that we are essentially well number one that the briefings I was reading are correct in other words they are extraterrestrial right these crafter extraterrestrial the the scope the aim of our project is now to back engineer these craft or this one particular craft
(1:05:38) with the intention of duplicating it or duplicating the sub of the subsystems within it using Earthly materials so that's that was the project uh now this hit me quite hard at that time and needless to say now this night I didn't get any sleep it was fairly exciting before that but um yeah and and certainly Barry just telling me this wasn't enough this is when we also had some demonstrations on what we had found out um or what information had be had been gleaned so far from the technology that we've seen
(1:06:20) um you know it was all very fantastic and uh I was absolutely mind-boggling well I know you don't follow all this but I have to ask have you seen Independence Day oh absolutely oh okay good at least you've done that uh you remember when they brought everybody into uh Area 51 and they opened the big door and you want to say well they invited it made to the premiere of that oh they did yeah in fact they made me stand up for some reason yeah they introduced me um I see but um in fact someone called I don't remember the people involved
(1:07:02) there but when they were talking about the movie The Making of the movie so on and so forth the uh lab technician there um I don't remember his name in the movie but who wore the white lab coat they called The Bob Lazar guy yeah Steve Devlin was the writer I don't remember the other people that were there but uh I I thought that was pretty funny but as they said they had taken uh the for the movie they had taken much of the UFO Allure stories and everything that had been circulating around for years and you know threw together the
(1:07:40) script in a short time and you know produced it so that wasn't uh great it looked nothing like that by the way but uh you know the idea was the same right same idea uh all right well we're at an interesting juncture here and the real fun is about to begin uh were you told that you were going to be working on one specific area of back engineering or were you going online powering propulsion system and everything else was essentially off limits meaning you couldn't even touch it no I couldn't touch it however I did
(1:08:17) get uh I did get to go on the craft uh one time and this was for the

express purpose of only seeing the placement of the reactor and how the the gravity amplifiers worked uh how the emitters moved freely underneath on the the primary level and uh just how all the sub components you know fit together all right Gene is a real estate appraiser and screenwriter as a matter of fact uh he has written the screenplay and has won the competition for that as for the Bob Lazar story and in the first two hours of the program
(1:08:54) we've moved through Bob lazar's employment early employment in New Mexico uh to his introduction to Edward Teller to his employment uh finally and we've had a lot of details we've never heard before at area S4 and we have just arrived at the point in the story where he has met up with what he calls the sport model craft and I've got a studio cam here and I will endeavor over the next 30 minutes to take a good picture of the tester model which is said to be a faithful reproduction and we'll
(1:09:36) confirm that with Bob of what he saw I've got one right here by the way you can get one of those from tester so all of that and a bit of a surprise coming up in a moment [Music] now back to my guest Bob Lazar and Gene huff and gentlemen I have a surprise for you uh Bob you were in effect recruited I think by Edward Teller I have a friend who's listening to the show this morning as we speak uh believe it or not all the way down in Perth Australia his name is Stan Dale and he was also recruited by Edward Teller and he's got
(1:10:36) a question or two for you I'm going to see if we can bring him up all the way from Perth Australia there's a slight delay in the phone line transmission uh Stan are you there uh yeah art okay very good um Bob Lazar is on the line and I know you followed the Lazar story and you might briefly just very briefly recap yours and ask a question uh all right very briefly um I was working um in the computer business in Dallas in 19 oh I think it was 70 71.
(1:11:07) and um I among other things I was also doing some investigation for the FBI uh at the corporations where I was working it's undercover um kind of plant um during this time at this company where I was working it was a large corporation it was called dial Tech's Optical at the time had 100 sub corporations and a lot of them operated in Nevada and um during the time I was there I was approached by one of the senior Executives of this company to go meet with a Doctor James R Maxfield at the radiation research Clinic over a couple
(1:11:42) miles from where we had the office in Dallas and I I didn't go for about a month and then um I met this same executive at a morning coffee in the executive Tea Room and uh he said to me I hadn't been to see his friend Maxfield and the reason he'd asked me to go is because I had talked to him about some work that I've been doing in my time off my private time at home in my own Laboratory working with two things one was a thermionic electrical converter and the other was I read the novel method I
(1:12:13) thought of propelling a flying aircraft which was circular shaped and you know flying sauce you'd call them today anyway in the course of having told this guy just over coffee Well he kind of got reasonably interested in it and tell me how to go talk to Fred the his and didn't do it so 30 days passed and he says to me look you haven't been to see Jim Maxwell yet please go this afternoon I booked you an appointment at three so I go over this place and it's not like a place that saves people very
(1:12:39) often it was um it was open the door was kind of a jar but there was no cars in front of it and daylight and um I walked in the lights were off down the hallway and I walked down the hallway and it was kind of dark and this suddenly this nurse uh well I guess a reception type lady appears out of nowhere from the side and she asked can I help you I said oh gee I didn't know anybody was here look I I think I've got the right building I'm looking for this Dr James R Maxfield and um she's oh yes Dr Maxwell's here he'll be
(1:13:07) out in just a second he's down the lab and so sure enough we're gonna sell this big tall dude comes out yeah in a white uh medical coach smoking a cigar wearing cowboy boots and says ah yes yes I've been expecting you come on into my office and at this time is when I first got introduced to uh this clandestine organization in the United States that was headed by Dr Edward Teller and who Maxwell worked with with teller and this organization um had been working since the mid 50s on something like 50 some odd projects all
(1:13:41) related directly to Flying Saucer technology if you wish to put it down to that level um I was just the the late camera on the scene they showed me about their base down to South Pole of the ice cap I had to access it by submarine or something similar and um they explained to me they knew what I was doing I even knew what I

was thinking version because they asked me about my physics and I said well look thinking I was talking to some of the greatest physicists in the world which which I was um I didn't have my degree in that area
(1:14:10) and uh you know I said well look guys um sir you know I um uh been working on a way to to unify gravitational electromagnetic and magnetic effects uh and he said oh look spare me all that he said you're working on Andy gravity and let's get to the major matter how are you doing it and that's when they started or when he started telling me um that I need to finish my research with them down in Australia instead of America and that's why I'm here today is because those guys packed me up and sent
(1:14:36) me down here we parted ways um in 1970 two or three I think it was I was only with him for about a year and I got rather um disenchanted with all the technology they were holding back from the people I still was young enough to think that we could um that we could save the world by giving technology to you know countries that needed food and grain and water and stuff shipped back and forth rather rapidly but uh anyway because of that we parted ways in a in a real huff and I kind of hid in the bush for a while because they
(1:15:12) they really kind of thought it'd be better if I was buried and then after coming out of that I wrote the book The Conspiracy to kind of be insurance and told a lot of what I had gone through in there and left the rest for I'll tell the rest if you get short with me so now that's my side Bob story did you ever run into Jim Maxwell at all on your side of it no I haven't actually now you I've got a thousand questions now but one of the uh a prominent one on my mind here is what what function what
(1:15:45) was teller's function well you seem to be in charge or overseer of all the projects at the highest level that's all that that was told see this is something I've always wondered about the project down down where I worked and uh you know no one had really ever spoke of him but I got just a gut feeling that he was silently in charge of everything and uh it's well what you're saying is also very interesting because uh a lot of what uh you're talking about seems to mimic some of the things we were working on
(1:16:21) uh in fact Bob when if I remember right when teller called you when you originally got the call from him to uh contact the gentleman at EG and G teller said that he was no longer active but worked in a cheap consultant capacity that's right uh-huh something happened after I left because in fact I'll tell you I I had minders appointed down here who really run this country and run the prime ministers my mind was operated out of a group called The Melbourne club and they're you know the old kind of British Raj you know uh
(1:16:53) cigars and Port white haired guys anyway they brought me into their Halls of power and I had lunch a few times with the kingpins there and my my mentor was Sir John Williams and um uh Henry Somerset or Henry Somerset anyway we were sitting there one day at lunch and they were talking amongst themselves about someone moving in on them or they were like like an undeclared war status and that they were losing and they never mentioned aliens and all that kind of stuff so so don't jump the gun but I you know I heard them say well
(1:17:26) yeah Henry it looks like um we're going to lose this you know they're they're just moving in and I waited and nothing else was said and I said well excuse me gentlemen I said by day you know I think I'd be clever I said you mean the European economic Community because we've been talking you know large corporate or money deals in the country and they both look at me like I'd you know done a route at the table or something and said oh um maybe we'll do some fishing up the farm this
(1:17:50) weekend Henry yes John and you know immediately I knew that I asked a question that I should have known the answer to already and didn't anyway they they indicated at that point that they were being taken over well I got away from the organization and wrote the book and all that years past and about seven years ago I have a friend in in Scottsdale Arizona uh named Conrad Murphy and Conrad goes to a lot of places and he's a he races uh boats into cars and he's he's you know fairly active fellow in business anyway Connor
(1:18:21) is invited to give the morning devotional at some big business breakfast like for the you know Arizona 500 Club or something like that and and so he ran me says look guess who I'm going to give the the you know the breakfast benediction right next to it who's sitting right next to me next week is you know Edward Teller and I said wow I said can you get to Dr Teller and say you know take a message I want to talk to him he said not a problem so I waited and waited and the week passed

and so Connor would bring me back and he said wow he
(1:18:54) says well I sat next to him and he said you know it was all kind of you know normal conversation give the benediction eat a bit and he says after he had a couple bites I said to him look um what do you know about um uh this fellow named Stan Deo you know down in Australia working on anti-gravity and you know flying saucers and he said Keller looked at him very blankly and said oh no the fellow he says oh that's odd and he reaches in his coat and pulls out a copy of my book with my photo on it and turns it up in
(1:19:23) front of Ed teller he said the blood drained out of his face and he looked away and a general over on the side who was in uniform came over and took teller and said Dr Keller's got another meeting and took him away so I wondered at that point where the teller was in charge of anything anymore you see what I'm saying I do that's very interesting I've never been able to get back to the team it's uh you know I think they did lose whatever whatever was trying to take him over did and so anyway uh after all of that Stan
(1:19:51) uh had to sort of lay low for a while and he just sort of ended up staying in Australia will art I had to give up my U.S citizenship to keep from being extradite at the time that they were trying to to get to the bottom of this okay I'd love to be back in this were they trying to prosecute you for for anything I mean what was well I wasn't sure sorry sorry say again see that's a delay we have oh all right my fault uh no just go on it just what what was the reason what were you uh were they trying to ask
(1:20:25) you for uh there were a number of things Bob one of them was that oh there were a number of things oh geez can I just put the dog on she wants to say something here just like I don't know um the as I said to you I was doing some undercover work for the FBI and they deny of course that there were 700 of us doing it's a clear dog from Australia believe me it's coming through very clearly at least the most popular dogs on the planet they've seen a bird out here and they're trying to eat it all right the
(1:20:59) question is uh Stan were they trying to prosecute you or were their threats on your life how serious was it both um when when I went underground they they had really determined they were going to put me underground permanently in in Melbourne I ran and for a little over a year I I traveled in the Australian bush with you know let the hair grow out and wore the sunglasses and uh traveled with the hippies and whatever just disappeared uh finally I got hungry and had to come back in and when I did I came in under
(1:21:29) an assumed name and worked for a while and uh but eventually they caught up with me because I applied for work and companies and had to show my passport uh can I interrupt you for a second what was the threat that you presented to him well were they afraid of the information that you had or yeah okay so that was their main concern that you were running around with information that you you could possibly divulge to someone else and well first of all I would be able to identify them I mean I could identify you know like by name that people were
(1:22:00) ahead of it in in the the um aeronautical Research Center at Fisherman's bin in Melbourne and uh in the Australian Club who of course controlled the prime ministers of this country and there was a number of things that I I was privy to that would be rather embarrassing but in their defense let me say this now that I've had time to think about it if I'd have been in their position and they were holding the secrets they were and we're under the pressures they were I would probably have ordered my execution
(1:22:30) as well um it um it's bigger than one person's life it's a really I'm sure you would appreciate this Bob what we're talking about is a cover-up of incredible proportions were you able to continue your research or did they have all the requisite Hardware ugh of course they did I did do something I I did play around a bit what I could do but um you know I couldn't I didn't have access to high temperature coding I couldn't put my barium python or anything else on on the uh the capacitive surfaces uh but
(1:23:00) your little that video you did with the little ship that had the thermionic converter on it I don't know why you had to have an element uh whatever it was 115 because we were quite aware that you could convert thermal energy at around 37 gigahertz on the on the sampling frequency you could you could take random heat and convert it into flowing electric energy well that makes the thermionic generator I mean yeah that's it that's it um yeah but all that does is that yeah that's just uh that's just providing
(1:23:32) electrical power that's correct that's correct as I said we didn't need

one one five to do that though well yeah no one does I mean that's how uh yeah I mean space uh space thermionic generators issues uh you know plutonium to warm uh essentially a a thermocouple using the you know sea back effect or whatever to produce uh you know electrical energy however the the basis of The Craft that I worked on the electrical energy was merely a byproduct that was not how the entire craft operated that's where the 115 came
(1:24:01) in now the other thing I notice in here is you're using gravity wave a and gravity wave B uh Focus uh Fields um in the stuff we were working on it it um the field we would generate was in a toroidal field that would curl well that's exactly how this was generated was it essentially in a torrid around the craft ah okay um in fact there's I just have some some of the animators uh gave me some fantastic Graphics that uh I haven't really been able to post anywhere but I did want to put them up on the web somewhere because there are a
(1:24:41) lot of people that are interested in the actual propagation of the gravity field and I was just about to uh give those to the guys that uh handle our web page and uh you'd be it might be worth having a look at that what's the website uh it's it it looked uh yeah just go to my site and you'll be able to jump right over a stand we're out of time in this half hour but what from what I've heard I think that you two should be communicating I know well I never have been able to reach Bob he kind of did like I did went
(1:25:14) to ground I think yeah well what I'll do is I'll provide Bob with your number in Perth okay if with your permission is that all right fine excellent Gene and Bob you're both back on the air it's kind of interesting when you listen to people like Stan and you listen to people like Bob as far as we've gone with the story it's all laid out in such a calm matter-of-fact way that I think a lot of the public has a tendency to lose sight of the implications of what they're hearing but you've told the
(1:25:44) story so many times Bob that I guess it comes out that way sort of in a matter of matter-of-fact way huh yeah it pretty much does um all right let us return to your story now you're in you've had a chance to get in the craft and what are you doing what are you working on what are you seeing well if I remember this I have just uh met with Barry and we're now going over things um let's see well this is as I said when I first realized exactly what was going on what the implications were and um precisely what I'd be doing
(1:26:31) um in the room this is a lab off the main hallway and in the room is uh one of the reactors from one of the crafts and one of the amplifiers from one of the crafts also how big are these um the reactor I would imagine is about oh two feet somewhere but 18 inches two feet somewhere in that general area not really big then no not not not large at all yeah odd looking thing has a bottom plate and then uh half of a sphere on top of it um the amplifier itself is about again about two feet in diameter probably four feet long cylindrical
(1:27:26) shape with something that would look like plates on the outside of it black in color um you know these are very unusual and essentially Hollow uh very very unusual looking devices this isn't actually the amplifier that I always catch myself calling it that it's the emitter it's the device uh that is moved on a pivot and it's where the gravity wave actually is or emanates from uh quite similar to a horn on a microwave system um you know as it turns out gravity waves behave a lot more like microwave
(1:28:17) um at least the gravity waves that are being produced by this system do uh so you have wave guides and things of that sort that you'd see in a microwave system um those are the main components of the craft that were in the lab at that time what does that suggest uh or tell us about the nature of gravity well actually you have to look and see what we really know about gravity and you know we really as it turns out don't know anything about gravity um as people have said we can certainly measure its forces or measure its effect
(1:28:58) on things but really to um to this date there is no and a lot of people don't know this uh that there is there's truly no conclusive evidence at the present time that gravitational waves have ever been detected in a laboratory now there have been several gravitational wave detectors uh built and um you can assume that if you're taking gravitational waves but they can also be detecting uh many other energies of or or fluxes of energies from from who knows where so it's uh it's something we can hardly measure something we
(1:29:43) certainly know the existence of but um we know very very little about it it's essentially a big hole a black hole if you will in physics as we know it actually the physicists that I've talked to are not altogether certain uh whether

it's a push or a pull and uh the one I think I'm pretty sure it's it's a pull but in physics today it physics itself is so fluid yet so many people either true physicists or armchair physicists or you know scientists whoever you run into uh really stand their ground on on theories and yet
(1:30:25) most people tend to forget that these are just theories you know they are not you know these are not facts this is a topic we know very very little about and as I said some time ago we um or The prominent theory was that there are gravitons alleged subatomic particles that actually you know accounted for the force of gravity however uh people that do bring that up really don't know much about that theory either because there was never an actual particle called a graviton the whole concept behind the graviton was
(1:31:05) that um because um I'm trying to think how to put this in layman's terms they basically wanted to to quantify gravity um maybe I shouldn't get into this yeah all right you're looking at this thing when you see it do you know what it is what are we talking about the well the uh okay we're looking at the the amplifier that's right that's right well we'll save a technical discussion for later then um no basically I I have no idea what I'm looking at okay um you know I had to be led through
(1:31:45) everything the first demonstration uh that was presented to me was the actual operation of the reactor now this in itself is nothing short of a miracle we're dealing with something extremely small maybe two foot square maybe six inches high just on outside dimensions uh and the power output of something like this is equivalent to a little nuclear power plant I mean it's very impressive um also the fact that it's not producing any waste heat which is a violation of well the laws of thermodynamics you bet
(1:32:25) not to interrupt too much but didn't you say that that reactor put out as as much power as as Hoover Dam I really I remember I recorded all the uh data I had about it but off the top of my head now I don't remember the way that's the output of the reactor the way people like me in the audience so they can imagine the type of power we're talking about but there's a huge amount of power coming out of essentially a very small small place what did the demonstration actually entail I mean was
(1:32:53) um was certainly not the electrical output of it but it was uh showing me the gravitational field around the device now the only reason I started going off on a tangent about gravity is because I I guess my whole point was that we don't have a machine there is nothing in exist of that can make gravity I've seen a lot of people uh just lay people uh telling me stories about how they're watching film on NASA and how the astronauts are training and they're in a little chamber and they're floating
(1:33:28) around and they're you know in a weightless environment they don't realize it's an airplane doing a crash dive that there there is no machine that makes gravity I mean at all nobody has that on Earth on earth right and uh here was a device that in operation was doing this uh to do that Barry told me uh well he started the reactor when it was operating after a short time he told me to uh put my hand or attempt to touch the sphere on the top of the reactor and as my hand got close to it you can feel a
(1:34:06) force exactly like putting two light poles of a magnet together kind of that soft push yeah it's soft push but uh you know what what you're experiencing now is more of an anti-gravity field which is something you know something entirely different oh no that's extremely interesting Bob because as you may have seen they've done experiments now in Sweden with Incredible magnetic fields generated in a fairly conventional Manner and they have actually levitated frogs and plants and all kinds of strange little things
(1:34:43) they've levitated with is this documented oh absolutely I haven't heard anything about with a magnetic field oh absolutely yes they're not magnetic I wonder what is this just a a raw magnetic field an electromagnetic an electromagnetic field raw and gigantic and they had a little chamber conducting uh yeah and they they're levitating a frog you got it and it's not written up anywhere oh absolutely huh I wonder how this uh I'm glad to be delivering so much news to you tonight dude but but obviously
(1:35:22) where can uh what do you have any uh is it on your website run off on a on another tangent here but uh is there a name of any of the people or anything you can reference me to where I could look uh I'm sorry the second I can it was Finnish scientists it was carried on NBC ABC CBS all the networks had it they had the photographs oh the frogs floating there boy that's a tremendous Discovery there um well it is it just when you mentioned to me the tremendous gravitational field and

the effect on your biological hand
(1:35:56) it immediately flashed to that experiment in Finland so there you are let's do one more question have they levitated anything non-conductive something with no water in it like just a uh well I don't know what up well they they levitated or something like that no I don't think so uh I think that it was plants nuts uh frogs spiders it was all biological material yes yes but but you said yourself you felt you felt the gravity with your hand now that's the biological effect right anyway I don't want to stunt your
(1:36:36) story I just couldn't resist telling you that no I'm glad you brought it up that's that's actually a very very interesting to me um as time went on we uh tossed a little golf ball at it too uh and you never did hit the sphere it merely ricocheted off the field which again was an impressive display indeed um a golf ball uh is not in any way conductive it has no uh moisture it has no well or minimal amounts very so minimum aside from the fluid sure oh that's right they are fluid centers aren't they but um
(1:37:15) uh in either case this was a quite a uh impressive demonstration uh just on the fact that this is producing a you know uh gravitational omnidirectional gravitational field around the unit um it was later connected up to the emitter and the amplifier um and where the gravitational beam out of the emitter can be focused uh this again was extremely impressive um the gravitational wave or waves coming out of the emitter we're focused into a small point and produced a little black dot in the air hovering in the air
(1:38:00) really um now this is not to say it was a black hole but um what it was showing me was that it could bend light now the only thing that can bend light is gravity you know it's uh that's right the the only a lot of people say well light can be bent so on and so forth usually that's diffracted or refracted but uh where you can only bend light is with gravitational waves so to me again this is another impressive demonstration uh but it really was a kind of a black hole well in the sense that it was
(1:38:36) absorbing at least you know by definition itself would be the source of the gravitational Distortion as opposed to you know this focusing on then you know you're also you know a black hole a quantum singularity and blah blah blah sure but but the theory is the same isn't it in other words you saw the Blackness because of the intense focus of uh right where light was an escape yeah yeah essentially true um still I've been extremely impressive demonstration to me oh yes um so basically those were the well there were
(1:39:16) we did get to essentially fool around with it a little more but uh he was updating me with um basically what had been learned in the time that they had the craft there uh he wasn't really specific on how long the craft was there I was very elusive on many of the questions yeah that that's something I want to touch on you must have had a million questions by then I did I did and uh they he would answer them uh peripherally he wouldn't uh really get down to the meat of the question but at that point uh very had a higher
(1:39:57) security clients than you did didn't you uh yeah that's probably true um that may have been the reason yeah who knows if he was told to do that or that was his own decision or or what but um again he was just basically filling me in with what they knew and uh what my job was going to be and and uh this was it this was uh finding out how this subsystem of The Craft operated it operated in the craft operated outside of the craft could this eventually be duplicated uh using another power source could this power source be duplicated
(1:40:36) itself without using exotic materials and uh so on and so forth sometime later I got my only view inside the craft which again was uh you know extremely exciting yeah no kidding now can you describe what you saw in that craft yeah I was let in uh Again by um what's his name not Barry Dennis and um we walked up a small roll away stairway that led into the craft it was very cramped getting in the doorway the hatch was removed I really didn't pay attention to see how it was fashioned to it or if there were hinges or anything a lot of
(1:41:27) people have asked me that but it was uh you know you don't spend time looking at how a door was connected somewhere when there's a flying saucer in front of you in either case I went inside initially you must bend over to get in there is very little the Headroom so whoever originally flew in this was small right whatever flew in it was paying and if you notice our uh if you're looking at the the models of the sport model there out near the equator of the disk I mean it literally comes to uh to a point and and it
(1:42:01) graduates as you go towards the center so obviously it's very low near the

edge and for the benefit of the audience with uh internet access I've got a photograph of the sport model on my live studio cam right now oh okay go ahead Bob I'm sorry I didn't mean to interrupt um as you walk into the Craft um first of all it's I should address a few questions that people constantly ask me all right please one of them is certainly well how did you feel going into the craft wasn't it the most exciting thing in
(1:42:35) your life and I know I've said this a thousand times before to uh to many other people but um it was not the feeling at that time was not of excitement it was a very ominous feeling very much so it was more of feeling like um it's actually I can't I really can't describe it it's difficult to put into words but it was a very ominous feeling more like are you sure we should be here uh but um of course after the fact you know it was certainly exciting but it was a very very odd feeling because and it was no
(1:43:13) pun intended it was a very unearthly setting inside all right that's a perfect place to hook them and hang them up until we come back from the news so our now turns it back to Bob Lazar and Bob uh you're right uh I'm sure you know all the questions that people would ask if I started picking up phone lines now so what about being inside that craft what do people generally ask and how do you respond well first of all is the overall description inside um entering the craft is um like I said certainly uncomfortable for
(1:43:48) an adult human being um it's um you realize that you're not in a place that was designed for humans exactly and it certainly [Music] is different from anything that you're familiar with and what I mean to say about that is um everything is basically one color normally any area you're surrounded in is always different textures different colors uh so on and so forth the inside of The Craft is essentially all a dull pewter aluminum color very metallic looking there are no sharp right angles anywhere and the description I've given before is
(1:44:37) it basically the crap looks like it was just injection molded essentially like the model was there are no seams anywhere um everything inside the craft looks like [Music] it was fashioned out of wax heated for a short time and then cooled to where everything basically melted into what was next to it what it was sitting on that's about the best description I can give as to how the inside looked seamless seamless and and very unusual uh again no right angles anywhere the um the structure of the craft the skin from
(1:45:26) the outside was smooth inside uh this is very difficult to describe but if you can picture yourself inside a disc of a flying saucer shape and you're inside looking at the uh the wall surrounding you there was an additional structure kind of a secondary wall uh it was kind of repetitive archways that looks like it was either for a structural Integrity or as we later found out uh something to do with the wave guide and the gravity amplifiers themselves but if you have the box there you're looking at you notice what I'm saying is kind of
(1:46:14) difficult there's a little booklet that came in there that has a nice cutaway view of the craft but it's um it's very difficult to describe [Music] without drawing a picture or seeing something visual well the lucky people on the internet can see what I'm I'm holding up uh the others are going to have to make do with your word pictures or go out and get the copy the tester model or how else might people see uh is is there something on your uh well again it would be your website so it's
(1:46:48) just people with computers so we've got to formulate word pictures for people without yeah I'm not really good at that but um that's basically what the there are three levels to the craft when you enter you enter into the main level and that's basically what you see as far as what's on the main level um well first of all the dimension of the crab is about 52 feet in diameter about 16 feet high that's just the overall measurement now back on the inside of the craft what you'll see in the center of the craft is
(1:47:18) the reactor itself um extending from the reactor up through the top of the craft is the wave guide it kind of looks like a little chimney more or less surrounding the reactor in the center of the craft are three seats these seats all face One Direction also near these three seats are the three gravity amplifiers themselves they look like consoles uh just solid rectangular objects there's when I say consoles I don't mean there's any buttons lights or anything of that sort and in fact there were no buttons light
(1:47:59) switches or wiring in the entire craft really really um that's also quite an impressive feat um no levers no buttons no lights no switches however I did not get to go in one part of the craft so I really can't say what was there um but I do

have a good idea as to what it was now this was all on the center level immediately underneath there's a small Breakaway part of the floor as you walk in to the craft over to the left it's a collapse of a collapsible hexagonal very unique doorway if people have asked
(1:48:45) me have you ever seen anything uh in any of these crafts any of the technology that could be used today something simple uh and that's certainly one of them aside from the uh high-tech gravitational propulsion system so on and so forth something's very very simple to understand and easy and anyone that's taken a six pack of beer or bottles or anything like that you'll notice that if you push on the sides of the you take all the bottles out you push on the sides of the uh the box it all collapses flat yes and
(1:49:27) um the floor itself was hexagonal in shape and made of little square hexagons like that of thin metal this is a little Notch cut out so basically to operate it you just stuck your hand in the Notch and pushed and the entire thing collapsed flat and left a hole open however since you're when it's uh I'm getting tangled with my words here trying to because there's so many other things going through my mind um when it's extended and it's the opening is closed off it's uh it's a very strong
(1:50:09) structure because you're standing on the top of hexagons the metal is relatively thick even though it's it's am I you kind of have a an idea of what I'm trying to present here I am absolutely do of course I understand how it drives the strength yes uh so yes it's very easy to collapse one way but uh that's one simple thing I thought would find uses somewhere somehow something that could be made right now in fact I've fashioned one of thin metal I have absolutely no use for it but um it it's just one of those
(1:50:43) strange things I've never seen anything like it and it's uh certainly something that could be I don't know uh used in some sort of architecture somewhere now the craft you were in had all of its the generator the amplifier everything was intact absolutely all right well let me take that back one of the amplifiers was removed all right on this craft um when you do collapse this little porthole you can fit your body through at least the upper part of it and look underneath this is the lower level of The Craft
(1:51:24) This is where the emitters that what I sometimes call the gravity amplifiers hang down these are three of the cylindrical shaped black objects two foot diameter four feet long that actually emit gravitational waves from them like a microwave horn right they are positioned directly underneath the larger rectangular gravity amplifiers on the first level and are in fact connected to them the actual physical connection between the emitters and the subflooring above it again is something very interesting it's uh our short piece of pipe I'd say
(1:52:09) oh maybe uh 12 inches longer maybe slightly 12 inches long maybe a little longer than that but um this mounting Flexes in any direction but it's a solid piece of pipe it's something very very unusual and we see the same thing being used on the wave guide to the reactor from what we could well from what we could see by applying an electric charge to different parts of this um of the structure would bend uh quite easily really yeah it's uh again something very difficult to describe uh without drawing it exactly
(1:52:57) how this operated but it's uh it was not made of uh tell us in a telescopic Forum where you'd see something like a car antenna where it would collapse down on each section would collapse down onto one another it was a solid piece if you can imagine just a solid piece of pipe and applying an electric charge to it and having the pipe Bend but remain rigid after it had done so anyway this compromised the uh or composed the focusing system for these three amplifiers they receive signals from other parts of the craft of the
(1:53:36) amplifiers would focus in on a certain point and you know this is basically how the amplifiers were aimed I'm very uh and the craft had again it's kind of a lengthy explanation but there were two different modes of The Craft we found would operate in uh one is called Omicron and one is called Delta the Omicron configuration was the standard operating mode of The Craft and it's where it used one single amplifier to maintain its elevation in the sky one of the other amplifiers was rotated 90 degrees and essentially pointed
(1:54:18) straight out ahead of The Craft so with one amplifier working it essentially produced an anti-gravitational pillar to stand on with the amplifier that was rotated 90 degrees instead of what we would normally think along the lines of propulsion uh where a jet would essentially exhaust material hot gases out the back right where we would normally think along the lines of a propulsive or of a

propulsive force what the craft did was essentially create a distortion in front of it a distortion now a gravitational Distortion is is that like sort of
(1:55:08) creating a well in effect exactly create a a little Distortion a divot in time space if you want to call it that um a well is a good a good analogy too to where the craft would actually this is kind of the low performance mode if you want to give it a name but where the craft would actually continuously slide downhill yes a very awkward strange motor for polishing I mean we have nothing that would even really relate to something like that but it's kind of backwards if you see what I'm saying I do uh the other motor propulsion and you
(1:55:48) before we go to that you would imagine this mode of propulsion to be used in in what configuration uh in other words uh in an atmosphere for example in an atmosphere uh just maneuvering around small objects you probably never planet or Moon would you say I would imagine so yeah I don't think it would be used in space there would be somewhere by definition of this mode it requires some force uh some large amount of gravity to be acting on the craft so you would have to be near some sort of gravitational body all right imagine as
(1:56:26) it was hovering around the ground this is what would it all right makes sense and then there was another mode the other mode is the Delta configuration and this is how it normally travels through space and makes large jumps the craft flies with the belly facing the direction you want to go not as you would normally see the craft in a science fiction movie ah the gravity amplifiers are all brought up to power and they're focused on a single point this point now becomes uh an area of intense gravitational Distortion many
(1:57:03) many times more than what we were talking about before and this is where the the true warp drive comes into effect this is where you actually Bend you begin to distort space and time and instead of The Craft actually flying you're basically distorting the fabric of space around the craft and and move without actually traveling you're not um if I'm visualizing this correctly it's kind of like the other mode except far more intense and you're you're constantly moving toward this warp or
(1:57:41) with this warp I don't know which way you actually become part of the other space um it's a pretty wild concept but something that it really isn't unknown to us uh as I've stated before you know to most people it sounds like wild science fiction however we know most of these things are possible we know for example as I stated in uh in that tape that um we can see stars that are behind the sun and the reason for that is the intense gravitational field of the sun bends not just light but it bends space around the
(1:58:23) Sun and we can see some things behind it we know that um not just we know space gravity and time are all interrelated we know this for a fact we know that around areas of intense gravitational fields time essentially slows down I mean it's certainly been theorized that if one was to orbit a black hole an area of tremendous gravitational uh Distortion of gravity will for instance that time would virtually stop right so with all these things interacting this is how you can travel a great distance with essentially no time elapsing uh first of
(1:59:04) all you're bending space towards you by doing that you're actually slowing time not to say that this is a time machine it's just a a byproduct whenever you whenever you produce a gravitational field whenever you're around an intense gravitational field time slows it's just Bob did you discern all of this yourself after a long examinate oh no this was okay they gave you this then right all right and so God you've got um so then you're in the craft then your job I guess is to go back to the uh the
(1:59:42) the gravity amplifier and the rest of it that they've already got assembled and try and back engineer the thing or try to make it work with materials that we have here on Earth to Bob Lazar and Gene Huff uh Gene basically the silent one right now sort of helping out as he can uh let's see Bob we in the interest of time because you know we could spend 10 hours with this uh perhaps not before you fell asleep but uh well we did make some coffee here I was I just think that I started rambling and not saying anything so hopefully
(2:00:15) this will help we are about three hours past my bed back I see I I appreciate it the nation appreciates it uh this really is an incredible story now briefly you went to work obviously trying to back engineer this right how far did you get what'd you learned well not very and uh I need to digress for a moment here and this is where I learned uh one of the reasons why I was hired initially our work started on the reactor uh we forget that's the center point of everything and this is where we should really concentrate our efforts

(2:00:47) and apparently that's what the people before me did too uh apparently uh there was an attempt to analyze the operation of one of these reactors and I got to read the notes that the gentleman before me had left there was a fatality or actually three fatalities if I remember um when they attempted to do this for some reason they attempted to get into the reactor while it was in operation under load and it was never very clear in their notes as to why anyone decided to do that um however again in the interest of time
(2:01:29) I'll cut this short but um they did attempt to do that the reactor did explode and uh the gentleman were killed I was to replace one of these people right this is did anybody at any point suggest that you go in oh no no I think this is something I think they reached a point of frustration couldn't get anywhere in uh you know went on from there again this didn't sound very sensible to me but uh this was a story that was related to me and uh just something I thought I'd pass along another also let me add one other point too that has
(2:02:06) really nothing to do with this but we were also talking about static on the phone a few minutes ago um coincidentally earlier today uh now I have no cordless phones in the house um I was on the phone with Gene and my neighbor comes to the door and tells me that she can hear my conversation on the phone on her cordless phone I found that kind of hard to believe so I picked up her cordless phone and listened and could hear everything fine on mine I mean that's very unusual let's just say the least he he called me and I
(2:02:43) could literally hear his neighbor talking on a cordless phone in her house from my house what you need then is a sweep of your house absolutely well I called sit and tell and they should be here tomorrow too but uh you know what an odd coincidence that 10 years ago uh I certainly haven't had any problems like this for a long time but that is uh pretty unusual anyway back to what we were talking about sure uh three who went down before you three who died and so there you are what do you do well basically followed in their
(2:03:18) footsteps up to that point uh what we did find was that the reactor operated at least the lower part of the reactor the base plate uh operated like a little cyclotron and in fact the first cyclotrons were almost exactly that size they accelerated particles to a high speed in a circular fashion along this base plate uh the particles were then diverted by uh electrical and magnetic fields up into a Target area which is what was inside the domed part of the reactor these uh and this is now where we get into some exotic material one of
(2:04:03) the elements we identified in the reactor um we then found um well again we had identified uh an element an element a super heavy element one that doesn't uh naturally occur on Earth and certainly one that we haven't synthesized uh this element was identified as 115. now normally uh the higher level elements the ones that we have produced in accelerators decay in a fairly short time um in this case what we're seeing was a stable element one that was not undergoing any radioactive decay which is very unusual however again this
(2:04:54) is something that uh science and chemists have uh already theorized that there should be an island essentially an island of stability for elements around the 114 115 116 area however we certainly haven't been able to uh produce anything that that high up on the Periodic Chart but apparently you know this is what we were observing how much of this element 115 was available 200 well if there were 223 grams in the craft in the reactor 223 grams I heard a story I think it may have been from John Lear that and this jumps us way ahead but
(2:05:41) that you somehow got some of element 115 out of that area is that true uh we're in I really don't want to comment on that all right I didn't think so John didn't want to say much about it either uh but that was that was rumor we'll we'll let it stand as a rumor um all right so Element 115 uh something that we don't have yet I think we have progressed a little bit up the scale uh but we're certainly not at 115 where are we now what is that I believe the uh the last isolated was 112. 112. and most of the
(2:06:21) more recent uh more recent work has been done in darmstadt Germany all right um in fact I believe there's um their plan to produce element 116. uh uh is coming up next I think they plan on I don't I don't really I think it was californium and uh no calcium or something do you remember that Gene uh yes uh I think they were going to fuse uh curium with calcium and and they were going to end up uh with element 116 which they then thought would decayed and chain of unknown nuclides and see where the island of stability actually settled but
(2:07:09) they are they are very close to uh attempting to uh you know Pierce that island of stability and and uh seeing what's going to happen however producing one

or two atoms of it really isn't going to let them determine uh you know how the substance is going to react but at least they're there they're almost to the point now where they can begin to look at some of these exotic substances right there are a lot of people waiting to to see if they can perform in experiments or find this uh you know gravity Aid that Bob alludes to
(2:07:43) but really when you read and I'm certainly a lay person when you read on these for instance the website for the the uh lab for heavy ion research research in darmstadt Germany you can see that they actually detect these atoms when they make them and and getting an atom are two uh it doesn't put them anywhere near having a quantity of it that you could hold in your hand and actually study for any macro scale type effects you bet uh Bob how long were you then at S4 doing your work it was from uh December of 88 to April
(2:08:20) of 89. December of 88 to April of 89. okay uh what went wrong when did the whole thing begin to go to a sour oh and why boy then there's a long story um okay the Raiders died this this story Reader's Digest version yeah I read a digest version of this which is typically longer than the entire story itself um do you want me to tell it if you got a shorter version than I do well go ahead how about this at what stage of work were you when it began to go bad well very actually very early um well go ahead Gene give it a try well
(2:09:12) you know Bob had been on an all on call basis and right when he got to the point where he's told you about up to this point uh they stopped calling him into work and and this was very frustrating he wasn't a fun guy to be around and what had happened is when he uh as he told you before he had to sign documents allowing them to monitor his phone and fax and computer and anything that came into his house over a phone line and to make a long sad story short Bob's wife was having an affair and they found out
(2:09:44) and uh when they gave him his security clearance they deemed him to be financially stable emotionally stable and just generally stable and uh so now they knew that he was going to be having some emotional problems and they stopped calling him ultimately they heard his wife um admit that she had had an affair to her mother over the phone and that and she and she ultimately told Bob and uh they called him in and yanked his security clearance saying that he would they deemed him to be a sure candidate for emotional instability and that he
(2:10:16) could reapply again in six to nine months I I've never heard any of this before you've never heard this no yeah that's the reason that he lost his clearance it had nothing to do with him all right well you had signed all these papers Bob what motivated you to go public I mean that that's weird in itself I mean why did you go public surely you had to worry about your life you had to worry about your career and I I don't know whether it's everybody knows but you were virtually the modern term is erased your
(2:10:51) educational records uh were erased uh a lot of the work you did in New Mexico was erased saved for one little mistake I think your name was uh uh you know and still is recorded in a phone book isn't it right for the most part uh yeah for the most part everything was they what was it they missed where was that a phone book where that was uh well it was an old phone book in Los Alamos Los Alamos however certainly they they couldn't erase the uh as I mentioned at the beginning of our conversation the the newspaper article
(2:11:30) at that time clearly clearly stated on the front page of the local Los Alamos newspaper that I was a physicist working yeah yes um so you know there they said certainly couldn't go back and make that disappear but um they made a lot disappear didn't they yeah however are you know they they did lie to begin with as you know George Knapp uh for your listeners as the uh at that point in time was a a news anchor for the CDs affiliate here in Las Vegas generally yes and um he at extensive correspondence with Los Alamos as well
(2:12:05) as Kirk Meyer which was one of the subcontractors that Bob worked for and uh they all denied uh Kirk Meyer did say he was issued a z number which was a number uh required to be an employee and to get a paycheck but none of them had said that they retained records that far back and at this point in time it was only you know five or six years earlier it wasn't you know 10 years like it is now and that they didn't retain any records at all and George gave them numerous chances or he said are you sure you have no record of Bob Lazar I think
(2:12:39) he has Kirk Meyer you sure you have no record of Bob Bazaar they denied denied denied and then uh that's when Bob came up with the Los Alamos phone book with his name and uh station number in there and then also he had a copy of the Los Alamos newspaper from 1982. how did they react to that well well they're we're also

talking about two people when I was initially hired on I was hired on uh via a Headhunter essentially for Los Alamos sure and I worked um like I said the uh initial time you work for anyone uh in a
(2:13:13) secure job you have that uh time before your clearance goes through and that's when I worked for kirkmeyer uh and then later the game hired on directly uh at Los Alamos however both people uh you know either quote-unquote lost their records uh or just flatly denied the existence of me even working there well what pushed you to go public what pushed me to go public essentially Was Fear um fear of what fear of death fear of prosecution fear of well in general I I imagine you can add them all together and that was essentially what I was
(2:13:58) feeling at the time uh you know at that time I had nothing other than what I had said to anybody for the most part if I suddenly disappeared off the face of the Earth uh nobody would have noticed well not only would nobody would have noticed I certainly have friends and family that would send me but no one would have known exactly what happened and people disappear all the time right well especially in Las Vegas so I at least wanted to get what was going on out in the open and uh I believe it worked very well it was
(2:14:36) essentially a push back uh against all the force that was leaning on me uh where if I I thought if I just went on in a subdued Fashion on television and maybe just said a little bit um and just kind of gave a little shove back they would lay off and uh yeah it was perhaps it was a big gamble but it worked exactly the way I wanted it to also art uh at this point when he was trying to show those around him what was going on is when he took uh people like me and his wife and John Lear out to the uh BLM land outside of Area 51 and we
(2:15:16) actually saw one of the discs tested in the sky now Bob did this after he after he told us the story after he was in trouble and in fear for his life he told those around him the story and obviously we were a little apprehensive when her friend said you know we thought he was just working in in you know some project for the government none of us really cared what he was doing and uh you know so he wanted to prove that uh not that we thought he was lying but it's still an outrageous story to tell your wife and
(2:15:44) friends and say oh by the way I'm working on flying saucers sure and John has told me the story of the trip up Area 51 and there is video to support your claim as well right right plenty of video when uh the screenplay that you are now developing that is going to tell this whole story Gene uh when will this be manifested into something that we can go out and watch at the movies well you know I don't think Steven Spielberg could tell you that the fact is the first movie deal literally the president of the studio came to meet Bob and said
(2:16:17) I'm going to make this movie do you want to help her now yeah and and five years later that movie's still not on the screen so I would I would not be so bold as to give a date but these people do seem serious and if they could wave a magic wand they'd like to have it on the screen in the in the summer or fall of 1998 but I mean who knows well the atmosphere for it now after the way the genre has been going has got to be just right well they say that if a mediocre movie like uh Men In Black and and we
(2:16:48) all had hoped Men In Black would be great but it was kind of mediocre uh it did 230 million just here in the United States so I I would say that's more than encouraging Bob are you going to uh you going to act at all in the movie well actually I don't want them to make the movement you don't no really why not he's afraid they'll make it outrageous and won't stick to the storyline this is the problem he's probably right by the way they will you know well you have to when you sign a contract for a movie
(2:17:22) deal you have to sign you know you have to sign away every right I mean they could turn it into anything they want and so Bob is is they get that close to the vest and and restricts what they can portray they can't portray any live aliens and oh I don't know by the time it's over you'll have little guys going well not with my name on it Stevens will be fighting him with a machine gun probably well it sure has been a pleasure doing this and we sure did get a lot of good information out and I want to thank you
(2:17:54) both and I I I'm sure you both want to go to bed we do we got that right all right have a nice vacation all right thank you good night to both of you okay thanks all right that's Bob Lazar and Gene

Transcript:
(00:02) we're actually honored to have our next guest in the studio with us he doesn't do interviews unless he's with george knapp um he's been harassed uh almost constantly in the last seven years since you came out with this information bob lazar is with us cool dude so you're the man that came out in what year was it 1988 uh yeah late 1988 yeah came out on the channel channel 8 news in silhouette you didn't show your face right told all the stories about what actually happened at area 51 this is before all the stories
(00:35) came out about ufos and extraterrestrials and all that you're the guy that actually came out and divulged the information right how long had you worked there and what was your job before what before you came out and told the story right that you wanted to gather all this information um it wasn't that long i would i would just say uh a few months i really can't remember yeah what did you do what did you do out there actually my job was back engineering one of the alien crafts specifically the power and propulsion system of that crap
(01:09) back engineering so i mean that means they have the craft and you had to figure out what made it work finished product and we worked backwards in trying to essentially discover the manufacturing process and the materials used was it crashed or was it in one piece that was it was in perfect condition it was in one piece wow what does it look like yeah uh you know like i always say the typical flying saucer it essentially does something like you'd see in the movies it's a sleek uh 52.8 foot in diameter about 16
(01:42) feet high uh craft wow did you get that thing fired up and running not personally but it they they have run it through several test flights and uh yeah i was in the hangar when one of them was uh well when that particular one was test one well what was your impetus what was the uh kind of straw that broke the camel's back that made you come out and start saying some of the things that you saw going on there well that's a really long story a little bit of many many smaller events that happened and began to
(02:15) get me concerned and uh i initially confided in a couple friends and at that time you know no one really had heard of anything going on out there and i had the flight schedule the test flights so i knew the dates and times of the test and um on one particular night i took myself and a few friends out there just to show them what i was talking about and uh you know back then you could get in pretty far the security really wasn't that great and uh you know they all got to witness the test and you know we repeated that several times
(02:50) until we finally got caught wow now this was the crap that you had been working on that they were flying testing okay so what was it made of did you analyze it what was the propulsion system i mean what was this thing all about the propulsion system was a gravitational propulsion system and for those people that are into physics or into science it's it's kind of the gap that we have in science right now we know what gravity is but and what it does but we have no way to make it and the reason that gravity a gravity
(03:20) propulsion system is such a revolution in uh a way to propel something is that gravity has a really neat effect in that it bends space and distorts time and um this isn't a theory we know this for a fact and we can see stars that are behind the sun that are blocked from our view by the sun by the fact that um the sun's gravitational field bends space around it so we can see behind it wow and uh any system that would use something like this any craft would certainly be uh you know an amazing way so it didn't need like fuel it didn't
(03:56) need it did it had an extremely advanced reactor is that the beryllium thing that you're hearing about or no something different okay we're trying to keep up with this yeah no i don't know what that guy's talking about but it has nothing to do with the alien crap um the reactor there's essentially three forms of nuclear reactions a fission reaction which is you'd see in an atomic bomb and in common reactors a fusion reaction which you'd see in a hydrogen bomb and those are reactors we're currently working on
(04:25) to develop and then there's a total annihilation reaction which is a matter antimatter reaction and the reaction there is so much more efficient than the other two in a fission or fusion reaction you may only get one to ten percent of the fuel converted to energy in an antimatter reactor you'd get a hundred percent conversion it's extremely powerful and comfortable but it doesn't take a lot of this stuff to i mean so for like long voyages they wouldn't have to have huge fuel tanks or anything

just
(04:55) well there are no long voyages really yeah the craft does not fly for very long i'm kidding they come from a mother ship or something no they can traverse tremendous distances in a short time however they don't fly in a linear mode they don't just cruise around in space like a normal spaceship would they would essentially bend the fabric of space it's very tough to to say without demonstrating somebody like me that flunked algebra two i would not get it well these are concepts also that we're not normally dealing with
(05:28) because we don't know normally i mean comparison we've known they can theoretically exist but because there's no way to generate an intense gravitational field we can observe things like we can observe what we think are black holes that exert a tremendous gravitational force so much so that they slow down time around them and that we can see spaces bend so if you could actually create something like a black hole an intense gravitational field like that you could bend space and because time is distorted you're not essentially
(05:58) elapsing as much time as you normally would so you can almost jump from point to point well this is very exciting stuff i mean for someone like like you to work with this it must have been incredible oh this is my dream you know i could i could really care less about aliens whatever the technology is what i was interested in i was fortunate enough to uh what'd you do before that how did you get how did you get the invitation to come out and work on this thing i had worked before that at los alamos national labs in new mexico uh
(06:29) essentially a maison physics division working with a particle accelerator while there edward teller who's the father of the hydrogen bomb was giving a lecture and i went with a couple of colleagues to see him there we got there early and coincidentally that day i was on the front page of the los alamos newspaper because i had built a jet car and they had an article on it and uh dr teller was outside reading the article so i introduced myself to him and we had talked for a while time had passed i moved to las vegas i
(07:00) quit the lab i was kind of burnt out on science and uh we went into some bizarre things out here and uh later on i decided to re-enter the field and i sent resumes out to places where i either like to live or work including the test site here egmg and i also sent with dr keller uh referencing our meeting that we had you know some years ago and he remembered me and what he did was uh say there was someone at egmg not that worked at egmg but that there would be an interview set up for me if i was interested and i went down had the interview and
(07:39) i was told that what the job entailed is i was going to be working on an advanced propulsion system which was great that's exactly what i wanted to do and i thought uh you know this is going to be the next generation fighter aircraft or something i had no idea we're going to be working in reverse from uh something that was created you know a great distance away so what a shock when you found out what your job entailed yeah i would say and did they enforce secrecy did they tell you you're not allowed to talk about
(08:08) this or you know everything i had essentially a way uh signed away my constitutional rights to a fair trial if i was convicted there was a 10 10 10 year in jail 10 000 fine automatically imposed for divulging information uh i had signed uh authorization of my phone monitored and uh so it was a very strange time in my life and it began to build up this paranoia because you know you begin to think well if you're monitoring my phone these guys are following me around is my house bugged i mean you begin to lose your mind yeah i don't see how
(08:45) everyone else was dealing with it there but uh it became it became increasingly difficult for me so did you do what they wanted you to do did you figure out how to put that jet that propulsion system into like a modern day fighter is that what they were trying to do yeah well they just wanted to be able to make more of them and the bottom line is no one's going to be making more of those just because you can't make that gravitational field my uh analogy to this is you can take a brand new honda dirt bike
(09:14) and drop it off you know and uh [Music] in the times of a wagon trains and so forth in the old west and everyone will gather around it and say wow look at this eventually diddling with it they will figure out how to start it and eventually they will become proficient in writing it and when it runs out of fuel the party's over right [Music] i mean the plastic on the thing will amaze them they'll never even be able to make that much less the honda label on the side so this is exactly the situation we're in i mean it's like
(09:44) it's a prized toy and you can't do anything with it at all and they're

afraid of losing it so they're not going to take it out of the atmosphere but you know they have done several tests just on our mountain top level and you know bring it back down and say wow so is it out of gas now no they have a sufficient fuel supply for it but uh you know there's just not a whole lot that we can do and they can just drop some bombs on underneath it and fly over and visit the dom with it you know well i wouldn't doubt that they would
(10:13) eventually use it for that well how is that the only craft that's out there no there are actually nine there's nine yeah each one being different and uh no i don't know this for a fact but i assume that they've been collections either from other countries or whatever i don't know how we talked about out of crash retrievals or whatever but i don't know that they're crash vertebrals i don't know where they came from and i was only allowed inside and to work on one of them so i know nothing about the other craft other
(10:40) than that they all look different what about uh what about the pilots [Laughter] [Music] you know there are certainly accommodations for him inside but uh this one you know 52-foot craft only fit three beans they're only three seats inside oh it is yeah is area 51 and under are there underground uh i've heard all areas where where these crafts are they above ground or underground well more specifically this is an area called s4 which is 15 miles south of groom lake and everyone just says area 51 and i just gotten tired of correcting
(11:27) everybody okay area 51 is a place where they develop a whole host of things like the they had the stealth that's dealt everything i mean there are thousands of people working there there are no flying saucers at area 51. it's too you just couldn't keep something like that secret there that's why it is specifically separated down at s4 and it's not that far from area 51 so i guess you can call it part of the green lake complex but um where i worked there was only 22 other scientists and it's a small installation well the
(11:57) installation is fairly large to house the uh the craft but uh as far as a compliment of people it's fairly small did you live out there and live right on the facility did they keep you in no there were some people that did yeah into the craft and kept in there well i flew in and out now i i flew from mccarran because at that time egmg was out at mccarran they since moved it to uh you know nellis air force base but it flew out of mccarran landed at groom lake and they put us on a bus and drove south down to a papoose like that
(12:27) well your life has just been turned upside down inside out scrutinized and it's amazing that you've had the stability that you've had in the last seven years having come out you have people that even call you the modern day messiah yeah i mean you've had all of this would you like to talk to some of the true lunatics meaning our good listenership on the phone or and i understand it's necessary well not necessarily they're even doing a story on your life they're doing a movie about you now is that true yeah yeah
(12:54) that should be out next year and in fact they're uh kind of going all out they're building a full size installation against the side of a mountain out here when they uh when they do that filming wow i can't imagine your level of paranoia when you came out and talked about this or when you realized that you were being well that was part of doing it in silhouette and so forth and uh now it's you know it's been five years since it happened and you're yeah chances are that installation isn't
(13:21) even there anymore and uh much less than doing any tests out there but you know i i don't know we i guess we need to take a quick break do we dave maybe we can play some tunage so we're just going to shut up and rock and roll and um maybe we can take some calls and we're talking to one of the foremost experts in the field ufo week with larkin craig comp 92.
(13:45) 3 the rocket launcher we have to do commercials before we talk to bob or what producer dave i'll go ahead and talk to bob do we have some people on the phone and we will have that in the cycle okay we'll have that in a second yes they're on hold on who worked at the area 51 back in the early years uh and uh was the one is the person who went on channel eight and revealed all the secrets about ufos and and uh alien craft and uh everything that went on at area 51 and since then become pretty much public knowledge and
(14:14) and the focus of a lot of special special tv shows like uh uh larry king just did a special from out there not too long ago it was kind of strange i didn't care yeah they wanted me to be on that and i turned them down yeah they were hammered beyond that you've turned a lot of people down in fact you don't do interviews do you no very very rarely well what's with george mason that's about it

i know we had to twist his arm quite a bit to get him on the show today you know do you think because it's the
(14:40) 90s and a lot of this is uh that's been held secret from us that the government has been doing over the years has been has come to light do you think that we'll this will information will come out that they'll finally come clean with it or not no you really don't why are they hiding it from us yeah i don't know why do you think they're hiding probably national security they want to take this propulsion system they had you working on put it in fighter jets maybe but you know why can't they at least release the
(15:05) part saying you know by the way this happened and we're keeping you know all the specifics about it secret yeah i don't know and you know i'm sure you've heard you know everyone's speculation about that but you know you have to look at if you know if people claim they can't keep stuff like that secret well you know look the stealth was in operation in you know the late 70s and it didn't become public knowledge right until they wanted it to there were thousands of people working on that and uh
(15:34) you know you look at other projects like that yeah in the 50s they were feeding women fallout we never thanked them so uh these are a group of nasty guys yeah they are yeah they are well we do have some listeners on the phone that were lucky enough to get in and i guess we're going to talk to them now okay i can't good morning if you ask if they use unleaded or regular you're adding we're going to slap you here's bob lazar what do you want to know okay that contract you mentioned he signed about
(16:02) 10 years in jail why isn't he in jail now the secrecy agreement that's a good question probably because they became public with it of course if they decided to prosecute they'd have to admit that everything i said was true so i imagine they're at an impasse there no didn't want to bring any more attention to it okay thank you thank you okay good morning what's your question yeah bob i just basically wanted to uh all the listeners out there uh after you uh they tried to uh get you for pandering uh that was my
(16:38) apartment building as a matter of fact i lived right next door to that and i just wanted to let everybody know that that is totally uh false i never saw you around there or any prostitutes and i just wonder how you feel about that actually that that's only partially false what i did was uh this was of course after i left the project is i had written some computer software to make uh the brothels run smoother oh really yeah and uh you know there was an illegal brothel running in town there and who bought the software from me and
(17:17) it did get me in trouble that was technically aiding and abetting prostitution so interestingly enough sneaky god but i as uh i guess punishment for it i had to perform community service and interestingly enough the community service had to perform was installing the same computer system for clark county uh i guess it was good enough for them though to make your credibility look bad yeah yeah they did well at the time i was in the middle of the news and uh you know they looked at that as the perfect vehicle to hammer this into the ground
(17:50) and uh and it was and actually it it kind of helped out because it got a lot of the heat off me well it certainly helped help me believe i i was somewhat skeptical but after that i i was a true believer thank you for your call yeah so what was in this software what kind of software you don't need to know hi good morning hi what's your question for bob hello it's an alien he's been abducted that's okay what's your question for bob um i was watching the afternoon that he was on with george knapp and i saw the
(18:29) documents that he brought on that were all blacked out and essentially what was said afterwards because that whole show went off the air and was gone and essentially what was said afterwards was that uh they literally wiped him out as a person he had no medical records no school records no nothing now my husband and i do a lot of you what we call ufo when going out and checking out and looking for things and we have seen some some very unusual things in the sky late at night especially up by sheep mountains um my
(19:03) my worry is that some of these people are going to come up out of wherever and do the same thing to us and i want to know if that's a distinct possibility i don't know i guess it depends what level of threat you present to them let's let's talk about that thank you for a call you're welcome it is interesting that your life did that happen to you they tried to wipe you out they did try and discredit you that happened that continues to happen oh sure what like school records medical records

(19:32) uh yeah just about everything the um one of the best ones was and why i don't understand it because it you know it's just not that effective you know they had uh i worked at los alamos national labs for quite a while and uh you know if you call and asked you know if i had ever worked it they say no absolutely you know i'm in the phone book i'm on the front page of the paper you know back in the times you know stating that i work there my colleagues and friends are still there i said you know yeah in
(20:05) fact i had taken george knapp to los alamos brought him inside the lab to speak to some of my you know uh co-workers and uh colleagues and you know they said yeah bob used to work here and this and that and you know showed him around where i used to work you know so what is the point what if i bet you still get a bill from the irs don't you what do you mean well i mean if they wiped you out if the government wanted to wipe you out that would that would be part of it you still pay there's a big gap in my irs records
(20:33) i let one of these ufo researchers i can't remember his name go to track down you know i gave him signed permission to track down irs records to see uh you know what's exactly what was deposited in my social security account and from where and there's a big gap that occurs in there which is you know really interesting during the time you were working at los alamos and areas all the way up to uh you know a few years and last year that's yeah they say i have no contributions you know um yes i was unemployed
(21:10) haven't you been blackballed by the scientific community and in fact um mr heller and teller who who you is how you got the job out there won't even speak to you is that true well i know i don't think he would no um they they're not happy with you no no yeah i would say um well i certainly can't get a clearance anymore and and uh that's unfortunate because a lot of the you know the neat stuff to do in science is all you know of reasonably high security uh so that leaves that out interestingly
(21:44) enough i do own a company and it does have a contract with los alamos labs though i don't think that los alamos labs knows who owns the company but uh that's about the only thing i'm doing as far as science right now we uh design and build and repair radiation detectors what about this what about this model that's out now that's like the hottest model on the market right now the thing the hobby stores uh testers company approached me with it and they said we want to make a flying saucer model and uh
(22:21) you know would you help us and initially i said no and they said well then we're making one anyway so you can help us make it accurate or we can make it how we think it is and uh so i essentially said uh you know go for it and gave him actually it was one of the people that are working on the movie people that are doing the special effects had um already assimilated the model on in in computer data so they can uh you know do the computer animations flying around and so they essentially just gave that data to
(22:56) testers you know just plugged the disc in and machined out the parts and in fact the cover of that box is actually a clip a one frame from the movie oh really yeah and they won't tell you who they're considering to play the part because they know you can't keep a secret right right yeah they didn't say that but the the last i did here was uh john malkovich but you're trying to keep it pretty accurate pre pretty um close to the truth instead of what happened to travis walton in the movie fire in the
(23:24) sky it was pretty hard there were other other companies other movie companies that wanted to do it uh steven seagal really really wanted to do it he still does warner brothers did colombia wanted to and i could have gotten an awful lot more money from those bigger companies and i went with the new line um who left me with the impression that some of the guys had to sell their car just through them just to buy the rights to it and uh because it's just a little company they didn't pay very much but they let me not have right of script
(23:57) refusal but things had to be technically correct and approved by me so uh that was worth a lot more to me than you know than the money when can we expect a moving out uh next year i think john mcafee would be great for the role wow well this has been very interesting ufo week we have learned so much i know i mean some of these things flew over my head like a low flying spacecraft you know what we're trying to do is remain open take in all the information without judging it without censoring it without giving our opinion on it because there
(24:31) is so much out there so many different ways to look at it and uh we just want to have the opportunity to have a forum where we can at least talk about it and

like everything that's censored from your background we appreciate you coming in we sure do appreciate it very much and uh that's bob lazar the man who uh george knapp i'll bet sends you a nice christmas card every year well george and i have become good friends so he's uh his life was totally changed by meeting you his life his career i mean look at
(25:03) what's happened to him in the last seven years i guess that's true he's he's the ufo guy yeah he is he certainly is he gave us a copy of the the thing he made the three three video series of the special it's not even available yet well if george is listening i've never got a copy of that oh oh rut ro and bob it's interesting that you really don't have any interest in uh the alien part of it and uh no but where's the fourth topic at all i don't want to talk ufos i don't want to hear ufo
(25:33) stories i don't want to listen to advocates i am not interested and everybody has come after you right yeah maybe that's why well it's very very interesting stuff and we appreciate you coming on today with us bob lazar look forward to seeing the movie good luck with that and uh i guess we're going to wrap up the ufo week with a very special all request hour every friday we do all requests and uh this one we want you to use your brains we're gonna do like all a ufo alien space anything you can think of that has a
(26:04) sort of a tie into ufo week it's the all request hour a special one and that'll be next

Art Bell with Bob Lazar - Area 51 | 3rd Interview (2002) - YouTube
https://www.youtube.com/watch?v=_91ZSTc9T-s

Transcript:
(00:00) we have a hell of an interview to do this is The Real McCoy uh coming up of Bob Lazar now this is a physicist who worked at area 51. so I'm kind of glad the other story is uh clear of us now and that you understand just as I do everything we just heard in this last hour however coming up what's coming up next uh uh you've never heard Bob lazar's story uh you are really in for a treat he worked with alien craft at Area 51 S4 actually and he's got new information if you've heard in the mid-1980s
(00:45) story emerged a man claiming to have worked out at a test site designated S4 which is part of the groom Lake test side came forward to tell his remarkable story to local Las Vegas news anchor George Knapp I'll bet you George Knapp was out there at the Prescott Affair tonight with cameras the man was Robert S Lazar Bob never claimed to have made contact with worked with or has ever seen any aliens at S4 but he did claim to have worked on a revolutionary propulsion system seen saucer-shaped craft in a hangar built
(01:25) into the side of the mountain and Witnesses live trials uh had witnessed live Trials of of a Man flying disc his story made headlines around the world brought hundreds of thousands of people to the desert spawned a multi-million dollar publishing and Merchandising circus shook up a country to the core of its beliefs it is worth noting that for nearly 15 years now Bob Lazar has never tried to embellish his story change it uh and neither the U.
(02:00) S military nor the government has ever denied any of it to be true Bob Lazar The Man Behind The Legend of Area 51 uh as the center of a massive U.S government cover-up surrounding craft alien spacecraft has recently signed a deal with uk-based blue book films to finally bring his unique story to the screen and this is a man who does not do interviews he's even worse than I am I mean he's very shy probably somewhat reclusive I get I get accused of being reclusive a lot and I am uh and and I guess Bob is too Bob are
(02:35) you reclusive I guess you could say that you uh you hardly ever do any interviews I had one or two with you over the over many years and that's been about it I mean you have not given that many have you no actually I I really hate doing interviews and uh I understand well you know I do know too and I I just I refuse almost all of them every now and then I'll do one I don't know why but uh I hate him and I I especially hate television yeah I agree um however your story is really important it's so important
(03:16) they're now going to finally do a movie about it how do you feel about the them doing a movie about you well you know this is the third try initially Columbia Pictures wanted to do a movie uh some years back and they hired a writer and spent

somewhere around four hundred thousand dollars to pay this guy to write the story oh my goodness that's a tremendous amount of money that is and uh you know essentially it's just a chronological list of events that you're gonna have to form into a movie however writers want
(03:54) to get creative and uh you know this guy turned it into a James Bond story there were actual scenes of the guy playing Bob Lazar running on the tops of cars that were parked uh on Las Vegas Boulevard and the silhouette of the erupting volcano in the background and they had robots holding me underground trying to drown me to stop me from talking I mean some oh real ridiculous stuff and you know my point is if you're gonna go make make up a story about flying saucers don't bother using my name just go ahead
(04:34) and make up a story but if it's going to be accurate to the facts then it has to be accurate to the facts I understand there has to be a little glitter put in it somewhere to make the story flow or whatever makes Hollywood happy yeah but that's too much glitter though yeah you've got to stick to the facts and make it at least somewhat factual so what would you got a chance to read this and said I'm sorry I'm not associating with this or what well they never give you right of refusal to the script uh you're dealing
(05:05) with a with a movie company and I'm sure you know that so then you go oh my god what have they done to me exactly but the I mean the only thing you can really do is just say you know hey I'm not going to support it because they essentially force you to go do other interviews on TV and whatnot and you know they're going to sit you down and the first thing you're going to say well is this an actual account of your life and you're gonna have to say no yeah and you know there goes the movie so
(05:33) the thing the thing is though that this the real story itself um is so compelling or or have we gone so far into the world of science fiction that as compelling as your story is and it's an incredible story it it's not enough for the screen uh without embellishment maybe not there's no explosions there's no shootouts with aliens you know there's it's it's just an account of events that you know happened at a secret installation out in Nevada and the end of the exact same thing happened
(06:07) with a new line who bought it from Colombia they tried it they tried to now produce the film but first they tried to get it written and get it into production and they hired another writer and one of the first things I said was make sure you get a guy that's familiar with science to some degree because it's a technical film right and the first day I met this guy they flew him down he said now what are these things called atoms again this is a terrible start yeah and uh anyway so now what about this okay so
(06:44) what about this new company uh Blue Book uh that's got it now what what what's the promise well supposedly and for everything so far that I've heard sounds like they're gonna follow an actual account of the events that happened of your story yeah which is great you know that's that's fine I've got no problems with that at all and uh you know they're really not going to embellish anything they're not going to say anything that didn't happen and uh what more could you ask for okay let's
(07:16) let's get the real story um Bob you're you're a physicist correct um well I was at one time right now I'm not doing anything yeah I know take me back to way before S4 um and before Area 51 and all the rest of it uh and tell me something about yourself I mean how did you get interested in the things you're interested in that eventuated and you're getting that job how'd you get to be who you are well I wonder how far I should go back I guess that at one point uh I had moved to New Mexico in the
(07:53) early 80s and that was to take on a job with Los Alamos National Lab what kind of work well that was physics that was was the uh at the loss almost Maison physics facility which now has a different name okay that's been quite a while ago but uh at the time we were running experiments on their linear accelerator there and uh really looking into the basic make up a matter that's pretty exciting uh that's pretty exciting work period oh it was it was fantastic it was uh it was a lot of fun working there
(08:26) very strange town to live in but uh you know I I enjoyed it quite a bit how long were you with them with illness well I can almost I believe I was there only a couple years before um I realized that you know I I could make a lot more money on my own just operating as a contractor and Consulting for the lab as opposed to working for them that happens a lot oh and it's it was certainly worth doing so I

left the lab and at that time started Lazar Energy Systems and we developed design and repaired radiation detection
(09:05) equipment radiation detection equipment specifically Alpha radiation detection which is uh the type of particles given off by plutonium and Los Alamos making bombs and that sort of thing yeah has a lot of plutonium laying around so they want to be able to detect even minute particles that may cling to clothing so on so in other words this was a sort of a protective uh detective device right foreign it also scans the floors and cars as they leave too was that a pretty good business being that was fantastic huh it
(09:46) was absolutely fantastic at the time and we were awarded a government contract about four years in a row and uh things were great well I did still uh go down to the lab a lot because I knew people there and one day there was a local Los Alamos newspaper called the monitor right and uh you know at the time I was building all kinds of strange projects and it was really into building things with jet engines in them and built uh really yeah race cars and I even built a little Honda passenger car the jet engine and a
(10:23) jet engine yeah in a car well how does that work Bob how does a jet engine in a car work I mean I there's this famous myth of the uh uh the guy who plowed himself into a mountain with some Jets I mean how does a jet that was a jado rocket that Jato rocket that right yeah yeah it's a famous urban legend it is but but in real life uh how in God's name do you in real life this was I I think it was uh I don't remember the year in 1980 something or other Honda Civic which had the engine up front right and the back
(10:56) in the back I installed the jet engine so you could drive the car around normally yeah and then um push a lever on the license plate would open up exposing the nozzle to the Jet and fire that up and take off at high speed and uh they had put that on I think it's the June 82 uh front page is a monitor newspaper and um what kind of jet engine was that do you recall it's a it's a pressure jet engine which is kind of a it's a jet engine with no moving Parts at all right and you know if you know how jet engines
(11:32) turbo jet engines and the like work I do generally that's real confusing because you need some moving Parts in there to make things go that's right and uh it's not a Ramjet and ramjets need to be moving extremely high speed before they can produce thrust but this is kind of a strange hybrid and it produces thrust statically without it moving that's really cool uh how much thrust you know that was about two thousand pounds two thousand sixteen hundred pound car that was yeah oh yes so in other words you're
(12:03) already moving it like 50 60 miles an hour when you let go yeah exactly and then what well and then you better hold on yeah well how fast I mean it takes you from 60 to what 212 was the fastest we ever had that car going 212 miles an hour yeah you out your mind where were you uh driving these things that well the the high speed run was done at El Mirage Dry Lake in California and uh the car was pretty much retired after that because it was a unibody construction and the whole car started pretty much bending from all the forces but uh I mean the
(12:42) only reason I brought up the whole jet car thing was that uh you were the driver right right did you have a death wish know that kind of stuff isn't dangerous if you know what you're doing well I mean for example the car had shaken apart during you know maximum thrust yeah but it didn't well right it didn't but it did it then itself up pretty well huh yeah that was kind of expected I know I know that you have a car that uh I remember when we interviewed before you you would build a car that runs on
(13:12) hydrogen weren't also right yeah that was a 1978 Trans Am and uh in fact I entered that in an alternate fuels contest which was a race at that time from Woodland Hills to Calif California to Kitt Peak Arizona and uh it drove non-stop there on one tank of fuel well you know that's interesting because that's a long time ago and now all of a sudden President Bush is saying we are going to begin moving toward a hydrogen economy oh we should I mean it it's the perfect fuel in fact I was just talking to my
(13:49) girlfriend the other day saying I think I'm going to go ahead and convert our existing car over really and uh I I kind of miss making my own fuel I mean it's it's essentially free okay but here's here's the question and I I talked to a lot of people about this Bob right now uh I think the oil companies imagine hydrogen is fine because you know they'll use fossil fuels to put the hydrogen to create hydrogen get it in in the cells uh you still have to use energy to make energy right however

(14:19) there are other ways now of course the oil companies and the gas companies want you to crack hydrogen from methane or some other hydrocarbon fuel absolutely that's ridiculous you're defeating the whole purpose of using hydrogen water is H2O now you know every school kid knows you take a glass of water you know add just a drop of salt in there to get the ions moving around and take a 12 volt battery and put the positive and negative leads in there you see one lead let off a little bit of Bubbles and the
(14:50) other lead lets off twice as much bubbles well the lead with twice as much bubbles is the H2 and the O2 is coming off the other one so just running a little electricity through water gives you a flammable gas and so the way to make hydrogen okay so uh other than the creation of the voltage do that which well the way I had done it before was I had a fairly large solar array and what that did was during the day it took and cracked the height using an electrolysis set up right which is what I just described uh crack the hydrogen
(15:30) out of water and during the night it was pressurized using the available water pressure into the hydrogen tanks which contained an iron titanium hydride that's kind of a granular substance that absorbs hydrogen like a sponge soaks up water as opposed to just compressing a tank with hydrogen which is a dangerous I was about to ask you in this process is there a danger no once it's uh chemically stored in the hydride you can shoot incendiary bullets at the tank and it just does nothing but smolder but the gas uh itself could be
(16:08) dangerous yeah but it only the tank only produces as much gas as the car needs at the time the way the the setup that I came up with is that the car radiator fluid Heats an outer jacket on the tank and when the hydride heats up it evolves hydrogen and it gets into the carburetor so there's never more than is a volume of hydrogen that fits in the tube from the tank to the carburetor or fuel injection system so it's it's it was a very safe system all right what about what about the car itself the performance of the car compared to uh a
(16:40) piston engine uh what was the performance like are we talking about the hydrogen car or the jet oh Hydro no the jet I can imagine that no no the hydrogen car hydrogen car it it is a piston car and you know the beauty of the system is you can convert any existing piston car to run on hydrogen yes but you just need to the timing because hydrogen Burns so much faster the flame trunk uh just flashes through the cylinders and it'll cause detonation or knocking but uh with a couple minor modifications any car can
(17:10) run on it and um you do lose a little horsepower because it's you know there's a difference between spraying A flammable gas in there as opposed to having you know a liquid hydrocarbon with all that carbon energy in there well when you say a little uh how much real difference in performance well I lost I I lost a significant amount in the Trans Am and you know probably I believe the car was 220 horsepower and I think I was down to about 150 running on hydrogen oh but still usable then oh yeah you weren't
(17:44) you weren't following electric cars by any means uh well that's pretty good uh that's damn good actually so why not do that now to all cars I am you know I mean I'm going to convert my car over but uh you already did that you're what your wife is okay with this right right Bob hold on a sec we're at the bottom of the hour [Music] once again uh here is Bob Luzerne it's good that you've told us some of this Bob it gives it you know kind of everybody a background for you know what
(18:17) kind of guy you are and uh what you've been doing and sounds like you've been having a hell of a lot of fun actually I mean I mean putting a jet in a car that's got to be a lot of fun yeah it was a crazy thing to do and a lot of people if you ever do you have a website well there's a website about me that's not mine my website is my uh the United nuclear.
(18:42) com which is scientific supplies and and whatnot that we sell somebody was hoping you'd post the process for the creation of hydrogen uh some website somewhere or something well they'll have to dig back in the archives and listen all right so um now how did you get involved if you can remember the first moment or the first Contact that anybody made with you regarding uh Area 51 and S4 and all that stuff over here well this is the reason why I brought up the jet car initially that day uh June 82 um the front page of the Los Alamos monitor
(19:26) newspaper had a picture of me in the jet car on it and on the flip side of the front page there's an announcement there that uh Edward Teller father of the hydrogen bomb was going to be giving a lecture down at one of lecture Halls at the lab and uh I was anxious to uh to hear the lecture so thinking there were going to be lots of people there I got there really early because at the time I was still

working for the lab right never wasn't now I'm trying to remember well that was still working for it but in either case I got
(20:05) to the lecture hall real early and as it turned out there was nobody there and now I'm kind of waiting around about 15 minutes goes by and I see Ed teller sitting on a little wall outside the the hall reading the front page of the newspaper which I thought was a perfect segue for me to introduce myself because you know he's sitting there reading about me and I always wanted to meet the guy of course and um so I want to introduce myself and you know we talked for a bit and um actually the lecture got delayed a
(20:39) little bit so we had walked around and and uh you know I I got to talk to the guy what was he like out of curiosity I mean how did he describe a very stubborn guy um yeah and it's um it's a feeling you get speaking to most of the older scientists and physicists in almost every lab I've seen uh you can't present them with anything new that they didn't think of first you know they're they're a scientists they're supposed to be open-minded and explore new ideas and things but there is nobody
(21:18) as close-minded as a scientist or physicist that's been in the business you know for over a decade can you remember the conversation that uh that made you form that opinion no this is an opinion not just based on him but based on the other scientists and physicists that I've worked with they all act exactly the same oh and you caught the same Drift from him yeah identical and uh anyway uh I got to see the lecture and you know time passed and actually as time went on I moved out of Los Alamos and moved to Las Vegas
(21:57) and after some time there uh involved in other businesses I kind of missed being back in the mainstream science field and uh started sending out resumes EG and G and uh I wonder who else is around there at the time but people might not know EG and G is uh I think they're a contractor for uh for Area 51 for the test side right their EG and G measurements in fact those are the guys that uh Edinger who's the E and EG and G is the guy I think that invented the Flash the Xenon flash bulb or high-speed flash
(22:37) photography something like that because EG and G started out as uh the company that came up with a way to photograph the atomic tests which was which was really difficult and um flash Big Flash very be very hard to photograph yeah very high speed and you know they wanted to actually see the fireball expanding as it cracks the case and moves apart and you know you're talking over a million frames a second wow and they came up with some fantastic cameras uh in fact I was just told the other day by uh a movie a movie studio executive that uh
(23:16) all those old cameras found their way into most of the motion picture companies now and they use them for special effects all those atomic bomb cameras yeah we got a lot of uh you know scientific Advance uh from defense if you wish to call it that and uh the defense industry of course you know they develop the latest stuff I guess so it's not a surprise um so you applied to EG and g i I'd send a resume to everywhere that was in driving distance now there wasn't a whole lot in Las Vegas but you know I I
(23:50) gave it a shot and what I also did was I sent one to Dr Teller who was at Livermore at that time hoping to remember you I'm sure right and I referenced our meeting and so on and so forth and uh you know any suggestions you know just pass them along and I believe it wasn't too long after that um but I got a call from egmg really now at that time EG and G was located at McCarran Airport egng special projects and for the people who lived in Las Vegas a long time they they remember that they've since moved
(24:30) it behind the fence at Nellis Air Force Base okay um and they they said to you what they told me to come down for an interview I did and apparently this was under the recommendation of Dr Teller which was fantastic of course and uh did you know that by the way at the time I think I found that out after if I recall okay um so in this interview uh what were they what what did they want what were they after what were they curious what they want to know the initial interview was uh for a lesser position and I was interviewed by a board of people uh over
(25:16) a span of about an hour and a half and that's some yeah it was pretty intimidating you know it was uh it was an uncomfortable interview do you recall the uh any of the key questions I asked you I was an hour and a half my God not for that because I did go back for another one oh um I mean they did ask me one of the strange things I found about it was that they weren't asking me that many technical questions they were asking me questions about my demeanor about uh what I do under stress if I get all Angry do I start throwing

(25:52) screwdrivers and things around and uh which was kind of weird uh you expect them to you know certainly have well they they did have some technical questions and and test my abilities but um well you know that that is though not that irrational question uh I've thrown screwdrivers well generally I don't I just you know give up and walk away for a while yeah I know but um I assume what they were doing was just uh they knew of my work at Los Alamos and the other things I was doing and they you know they just
(26:24) assumed that it fit the bill sure but they wanted to know about your demeanor for op for some reason right and and as it turned out this all had to do with security as I found out later but um I went home I wasn't that thrilled about the interview and it was several days later I got a call back and they said you know as it turned out we felt you were overqualified for the job we were offering and we're pretty sure you would become bored with it after a while however there is something else that we have it's at a re I'm trying to remember
(26:56) Verbatim what they said I believe it's that it's at a remote site on the test site so you will have to fly out there and everybody should know that those flights leave every single day from Las Vegas and go up to the test site right yeah at the time they were called the key flights because key something Airlines had the contract they were they still fly every day do they yeah oh sure I didn't even remember I didn't know if that site was still operational now oh yeah it is we have uh here in Pahrump it's it's
(27:28) kind it's kind of interesting the test site that doesn't exist uh we have every morning they may have stopped it now but up at the VFW Lodge up the street from me here they have a parking lot at VFW Lodge and they have buses at about I don't know like four something in the morning a little before five in the morning and on the side of the bus it says area 51.
(27:50) no kidding yeah no kidding yeah no kidding and they Pile in and they bust from here in Pahrump but there in Las Vegas they fly and they still fly so yeah you're right about that well they had me come down for an interview that was a little more in depth that time and uh I did very well and um they would say it would or they told me that it was going to be fairly heavy security and it was going to be working on an advanced propulsion system now that's that's great this is exactly what I want to do and here's the guy that's tinkering around with jets and
(28:25) depending on hydrogen I mean propulsion was my thing stuff I even played around with when I you know was at home a natural thing for you right you know certainly excited about it and I I was under the impression that this was going to be a field propulsion system for some new fighter aircraft a field propulsion system like uh some sort of electromagnetic Drive something with uh uh that uses some of the basic forces of repulsion and attraction whether it's extremely high voltage or or who knows what at that time
(29:00) you obviously knew about the test site everybody knows about the test site did you know about some you know had you heard the rumors of a secret base up there when when way back then I'm trying to remember I probably did and I in fact thinking back I probably I almost remember there were some silly stories about aliens working out there and and whatnot and you know I was a hardcore non-ufo believer I mean I thought all that stuff was absolutely ridiculous and the people that believed it were even more ridiculous so I I
(29:38) didn't pay much attention to any of that stuff but I think I did hear you know on klstv or something or one of George Knapp's interviews with John Lear or something like that okay that there was uh there were aliens working up there or eating people or whatever the story was about okay yeah those were back in the days uh in fact I was doing shows on it with John Lear back back then and so those rumors were around so you you sort of vaguely knew about them but didn't pay a lot of attention and so did you
(30:10) have any idea where you were going to be working did they tell you that no they just said a remote site a remote area on the test site and um you know wherever that was going to be was fine what else got to get your blood going a little bit I mean well it does I was excited and it was uh you know a job on The Cutting Edge of technology so I was you know I was back at home again um they had a strange way of calling me to work it was initially apparently I was supposed to be replacing somebody and there was kind of a rush to get me up to speed
(30:53) now because I worked at Los Alamos I had two clearance which is civilian top secret so you know they knew I wasn't a foreign agent or anything like that right uh however this required a higher clearance to work at this site higher than Q right and um what happened next well they probably invested they probably investigated you

as what happened yeah they started doing that and there were visits to the house even when I had a house full of people over a guests having a little get-together uh there would just be guys
(31:26) knocking at the door and would just show themselves in and start looking through the house and you know lots of people witnessed this stuff going on and it was it began to really interfere with my life um shortly after the investigation started they allowed me out to the site now they didn't start handing over everything or showing me everything how did you get to the site I drove well first they'd call at what the the job was not something like a nine to five or every day at seven o'clock be there you you had you were
(32:00) almost on call initially and somebody would call from EG and the phone call would go exactly like this they you pick up the phone and they say hello Mr Lazar it is now 4 43 pm we expect you to be at the installation at you know 6 25 it was always an odd number and that's it and they hang up the phone it's very strange yeah and but every time I went out there they I pick up the phone they tell me what what the current time was and they tell me what the time they expected me out there was and I drive I
(32:40) drive out to um McCarran Airport I drive to the special project CG building yes and right in back of that at the time is really where the key flights took off from or at least where they parked or anyway that was the gateway to getting on the plane did they block the windows out there's stories that people who traveled up there but once you got the plane flew from McCarran to groom Lake right which is the only big Runway out there and it's really big yeah it's it's giant um once you get there you get in a bus
(33:24) and drive about 15 miles south that was the bus with the blacked out windows locked out those stories are definitely true in fact I've got a picture of one of the buses how many uh how many people typically would be in that bus ride with you uh going south I never saw more than three people myself included wow wow okay uh so your initial employment was that just at the test site or did they begin taking you uh South to S4 immediately they began taking me to S4 immediately in fact we weren't really allowed to
(34:02) wander around or anything at at groom we just sat there waited either at the cafeteria or right where we were for the bus if it wasn't there and it drove us down south to S4 which is which is a short drive on a dirt road huh uh you know of course they don't admit any of that even exists out there but there are now zillions of photographs uh photographs courtesy of the Russians and other satellites and even planes that have been nearby and all there's a lot of photographs of Area 51 so we all know uh it's out there and we all know the
(34:39) runway's there despite what they say a lot of people even disputed the road that I talked about right and said no it's impossible to be there and John Andrews the guy that uh worked for the tester model corporation that was so into all of this he's the one that came up you know that tried to buy the satellite photograph from the U.
(34:59) S government and they wouldn't sell it to them because they said it's classified and he's the one that bought it from the Russians for fifteen hundred dollars is he really the one that's where that photograph came from and with that photograph you know we blew it up and there's the road exactly where I said going right to the side of the mountain where the hangars are so it uh that really did help out so it's kind of strange that Americans have to go you know to a foreign country to get stuff
(35:25) that they're hiding from America yeah especially the Russians yeah that's just absurd but uh do you remember clearly and I bet you do uh the first day that you took that bus uh to S4 did you know it was called S4 yeah they told you you're going to an area called S4 yeah yeah they did there's actually signs out there uh there are signs yeah there are there are actual signs the average person never gets to see that no no all right a good place to hang everybody up uh hold on once again Bob Lazar Bob can you
(36:02) remember the the first ride down to S4 in the bus blacked out bus you remember that huh yeah I do it was it was quite a day well well give me a sense what was it like well the uh the first time I went down there was essentially to read I was brought into a a small room at the facility they had there and these uh I guess you just call them briefings because they were just an overview of some of the other satellite projects going on uh that's interesting well going on that we're connected to what I was doing I'm
(36:50) just trying to find the a good way to put this in other words they had to

give you enough of an overview so so you'd have some understanding of what you were about to work on right because just like they do at Los Alamos or any other National Lab where you work on high security uh systems and subsystems as they compartmentalize everything and what they do is they have people working on different aspects of one project so nobody really knows how the whole thing connects together well some people do but for the most part most of the people
(37:22) working on it only work on you know a specific module a specific subsystem and you know they somebody else worries about what it connects to and that way you're acknowledge about what's going on is limited just to the thing you worked on makes sense it was the same here and because this was a back engineering project we weren't teaming together to try and build something we were essentially teaming together to try and find out how something was built you had to have a little knowledge of what was
(37:54) on the other side of the wall yeah you know what the next guy was doing so they gave you a little briefing about some of the other aspects of what was going on but not doing really not too much in detail but just enough so you go well okay I know where this plugs into uh did they did they tell you that you were to be working on propulsion systems that were not ours no not until later even though it became pretty obvious that's what was going on initially uh I began reading what the people had done before me and
(38:33) immediately they're talking science fiction about uh power sources that put out tremendous amounts of energy um at propulsion systems with technology that doesn't even exist and you begin to wonder if these guys are just are testing you in some way of course and this is just a joke or uh or what so it was like it was like reading science fiction initially it was and um it was until the next time that I came down that I discovered it wasn't the the following time I came down which was the only my second time to work one
(39:13) of the hangar doors was open now I believe it was open intentionally sure instead of going around the side of the building in the main entrance we stopped out in front and cut in through the hangar and it was obvious it was in the hangar the second I stepped out of the the bus there was a large disc shaped craft sitting on its belly on on the ground okay not on what would be some sort of touchdown or landing gear landing gear no man-made support it was sitting on the concrete on its belly on the ground and it was a disc the typical Flying
(39:50) Saucer type disc yes how big do you think it was well John Andrews and I spent some time working on that and he brought some people down from the model division so we could scale things up by uh trying to guess my distance from it and looking at objects that I knew approximately what the size was so they could crunch all the numbers through and figure out within a a fairly good estimate how big the craft was that came out about 52 feet in diameter pretty big 52 feet huh yeah it it was big it was big and when you saw that there
(40:31) must have been this moment where the jaw drops and you go oh my gosh you know well not at that time you would kind of think of it but uh when I left the bus and I saw that to me it had the opposite effect it said see I'm right there are no flying saucers this is just an advanced us-made aircraft and they've been testing it people think it's aliens from outer space it made complete sense and in fact when I walked by the craft there was a little backwards American Flag stuck on right next to the opening in the craft
(41:07) well that absolutely does it there's no offense or buts oh so I was by the time I walked in it made complete sense this was the big new secret fighter that was going to replace the F-15 and and who knows what else and uh you know I was going to work on the propulsion system so yeah actually it would make more sense that you would think that especially with a little American flag that was a nice touch yeah absolutely later did I learn to find out that that was more or less a sticker that says this belongs to us now as opposed to we
(41:41) made this did you uh get introduced to who was to be your uh boss is boss the right word yeah kind of it was tough to really figure out who your boss was there they worked on the buddy system and you know what what moves science forward is free discussion it's people sitting around working on a common common problem and discussing sure you know it's just brainstorming especially for something outrageous like this but that was not permitted what they did is they had a buddy system you had one person who you
(42:18) worked with who you could talk to there was no communication with anybody else not even if you sat down for lunch now how interesting is that Bob because uh you were talking about the atomic bomb earlier in teller and they had the same

arguments in the development of the uh the atomic bomb that they were exactly that they were not allowed to sit around and and throw ideas back and forth and that it was holding the whole damn project up it's exactly what was happening here and all that has told me is that since the
(42:49) the 40s the military has not changed the way they do anything and it's probably the reason why this project moved ahead so slowly they were more obviously more concerned about security than moving anything forward and of course I guess they did not give anybody any idea where they got the SE crafts or did they well in one of the briefings they said information gained from the craft and they really didn't say how but uh that the craft came from The Zeta reticulus star system which is a apparently a binary star
(43:33) system that you can only see from the southern hemisphere that is exactly correct and uh the one thought to perhaps hold a possibility of harboring life uh and you're right it can only be seen uh from way down south uh it can't I believe it cannot even be seen from uh Puerto Rico where sibo is now that's that's really interesting so they actually did say from information gleaned in the investigation of this craft they thought it was Zeta reticuli that's how it was worded um Okay so to work you go on what
(44:12) well the first person I was introduced to was a guy by the name of Barry Barry Castillo or Castillo I don't know how you pronounce that name but um I was introduced to him this was the guy I was going to be working with and we had a a moderate size lab and specifically we were working on the power source and the propulsion system of the craft so he was your buddy he was my buddy that I was going to work with um in the lab the first day in the lab meeting him it was a very down to earth guy and what was there was
(44:50) a reactor moved from one of The Craft and one of the propulsion mechanisms that were on the bench so they had already removed something now I at that time I had only seen one craft the one you described yeah right okay um and as it turned out there were nine there nine right and we'll get to that but these this portion of the propulsion system or the main portion of the propulsion system do you remember what your initial impression Listen by the way I I don't know if we've we're gonna I'm gonna press you to talk about things
(45:26) that you are unable how much are you unable to talk about or unwilling to talk about or we'll get in trouble for talking about is there is there anything that you hold back that you have to hold back well the only things that I there are a couple things that I haven't said and and for a reason um it's not that oh there's a new news flash or something I just want to say that's new the only reason there are some things I've held back was so I can recognize somebody from the area yeah you know all the chats and whatnot
(46:02) that go on on the internet they are they're they're full of just Nut Cases I know and on both sides of the fence though I mean you have people that will swear up and down you know I never lived in Los Alamos I never worked there or or who knows what but on on the other side of the fence you also have people that just because they want to support me say that uh yeah I was a security guard or something there and I saw Bob going to work every day well you know both of those people don't help because because neither of them are true
(46:38) and and it and you know as much as I appreciate the help from people that say stuff like that it really doesn't help because all it does is confuse matters and you know and this this field of UFO research or whatever they call it these days is so inundated with garbage and just ridiculous stories you do not need to add even one percent more because it's impossible for anybody to take anything seriously so um there are there were only 22 people working there 22.
(47:17) yeah and I have the list of them you have a list of the name of every person that worked there every person that had clearance for that now that's the only thing I've kept to myself there were a couple other little things here and there and uh they talked me into releasing them in the movie and and that's fine but uh the number one thing are the names I mean the name of course there's so many times you hear people say well I've got a friend that worked there really what was his name you know and it's never
(47:49) I've never seen a name come through well when you and your your buddy uh uh first saw when you first saw this propulsion stuff how did it hit you as a physicist uh what did you you know when you look at it you said to yourself I'm looking at what well the first thing I saw that was absolutely mind-boggling and I will never forget it was the reactor operating now this is something very small uh probably on a base 12 or 15 inches Square with uh with a about a basketball size sphere on top

okay well semi-sphere it's
(48:35) you know right the basketball setting on the on the plate right this was the reactor for The Craft it is produced a tremendous amount of energy and also it was the source of the gravitational propulsion system where it got its its its basic gravity wave from that they amplify now these are you know we know what with the effects of gravity are but we cannot produce gravity or anti-gravity you know I've uh I've spoken to a lot of people and I ask people you know you see uh in NASA training films astronauts floating
(49:16) around and uh you know that's all done in that large plane that they put into a crash dive and people go weightless inside vomit coming right the vomit Comet exactly um you know the majority of people I've spoken to even people it seem fairly knowledgeable to me think that NASA has an anti-gravity device in this room where they just turn it on and people float around now if we had something like that there wouldn't be airplanes anymore cars would fly I mean the world would be teams we don't have a machine that can make
(49:49) gravity because if you do you can also control time so if we had something like that the world would be so different this device that you just talked about that you just described how did you uh and your buddy Endeavor to measure its energy output and in what form how did you take a look at it well the like I was describing the first time I saw it operating um all he had to do was put the lid the semi sphere on top of this device and it became operational and he said just put your hand on the top of it and when I
(50:30) did I could not touch it it was the exact sensation of taking two like pole magnets and trying to push them together wow but it was just my hand approaching a metal sphere now that in itself is shocking because there's nothing that can do that in other words you felt a repelling force uh as in like a wall I mean you just could push on it and yeah I could push uh starting from probably about a foot away I could begin to feel something and as I got closer it got more intense and probably a two to three inches it was impossible
(51:06) to make contact with it and you could push on the top your hands would slide to the bottom it was it was a very intense field and he had a golf ball there and we even you know even something moving at high speed could not penetrate the field this was the basic gravity wave that the that the system produced did you determine it to be a 360 degree field no it wasn't it wasn't it wasn't and again that's that's something else it's a completely directional gravity field only on the skin of the hemisphere
(51:44) oh and it didn't appear on the base at all and so this alone was just absolutely mind-boggling because here's a machine doing the impossible uh the next thing that I was shown and I and you know it couldn't be a magic trick it's my hand approaching a metal sphere there's there's no room for any question there and what did your buddy you and your buddy discuss at that point I mean you obviously asked questions or he offered information or he just said well this was the initial introduction
(52:16) to what was going on and yeah I mean you could see it in his eyes he took pride in showing off what they had because the the next thing he showed me was connecting it to the amplifier and he said you want to see something really neat now yeah yeah as if that wasn't amazing um there is uh how am I going to describe this there's a fitting almost like a pipe that slides down and makes contact with the hemisphere okay this apparently from what was described to me as a tuned pipe almost like uh resonance wave
(52:50) guides are tuned uh for microwaves would be resonant exactly um so once this pipe is placed upon the hemisphere the field completely disappears so that's giving you evidence that it's now traveling through the wave guide the waveguide goes to another extremely large two probably about two feet in diameter four feet long and has plates I guess is the best way I can describe it on the outside this well this is actually the emitter the gravity emitter there's something in between the two which is the actual
(53:28) amplifier hold it right there Bob we're at the bottom of the hour once again here's Bob Luzerne by the way he's not in Las Vegas anymore I don't think uh Bob you're somewhere else now aren't you the mountains of New Mexico back to New Mexico huh yeah cool that's a that's a little place to be yeah all right what you were describing the first thing you were describing that you saw that was obviously a driver well you know in broadcasting it would be The Driver unit in the generator itself and
(53:58) now you're starting to describe uh what terrestrials would regard as

waveguide or whatever carries this energy to some kind of amplifier huh exactly however if I can take one second and just step back to the hydrogen thing the only reason I'm saying this is because I guess because of the shell sure there are a million people hitting the United nuclear my United nuclear website and asking about asking me to post some kind of instructions about I told you yeah so I'm gonna go at I there's no way I can
(54:30) answer all the emails so I'm gonna I'll go ahead and generate a web page about that so uh or you could either do that or give out your home phone number yeah I'd rather do the website so there'll be some information up there eventually yeah thank you okay Millions out there yes back to the the reactor right or the propulsion system anyway uh the way it was configured was supplying the basic wave the basic gravitational wave to the amplifier and to the emitter in the craft there are three emitters
(55:07) free in in a Triad pattern and what I found interesting is you know after being involved with the project that kind of made me start looking into UFO stories to see what's true and what's not sure and there were so many stories uh especially uh rash of Belgium sightings in the early 90s I think or middle 90s where they saw from the on the bottom of the craft three bright spots of light right and that is exactly how this operated another interesting thing was I know I'm jumping ahead of myself here but the other craft that
(55:46) were there all had the same power and propulsion system in it I found all three emitters yeah which I found really interesting in itself which means that whatever civilization made these it's almost as if there's I know it sounds crazy but a factory that's producing these and subbing out the propulsion systems for different models of crafts I mean it almost sounds like a cart well that's how it manufactured that's how we do it but uh it was The Identical system in all crafts um all right now he demonstrated the
(56:22) amplifier to you yes that was the uh the reason he connected up the the reactor um how was the amplifier demonstrated in other words what further did you see when he brought the amplifier online when he fired that up he took an ordinary candle and put it probably about six feet in back of the emitter and I was waiting for things to get started but he really didn't do anything at least that I saw and went over and looked at the candle and the flame was no longer flickering huh it was essentially Frozen the way it was
(57:04) frozen yeah it just the candle was there and the flame was like a two-dimensional picture of it oh my God and it wasn't the flame wasn't moving but it was still emitting light um which means well it could mean all kinds of things it was just it's just another thing that is bizarre that you really can't I mean how how in the world would you do that no wait a minute now we know uh don't we physicists know um that gravity bends and effects oh absolutely amazing but without using gravity how could you do that
(57:41) you couldn't yeah exactly so in within that field it froze to your eyes it froze that image right to my eyes solid the candle was removed and to show me how this how the emitters can focus gravity because this is very crucial to how they operate they must be able to focus and diverge the gravitational wave apparently he set it for a tight focus and increased the power to it and at the focal point which was at that time probably about three and a half to four feet from the rear of the emitter right a black dot formed a black ball now not
(58:27) a black hole where it's gonna suck in the desks and things there yeah so what it what you were showing me was the fact that light was being bent now there is nothing that we have that can do that that would have been at the focal point now for example with the Satellite Dish a lot of people know about satellite dishes not parabolic that's right out at uh a certain point which is the focal point on a good dish it's about the size of a quarter or even smaller that's what's called the focal point where all
(58:56) the energy from that sunlight dishes radiate right to that little tiny spot and that's where they put the collector or the LNA or lnb to get the signal um and that's a focal point so you're saying just like that at the focal point but out in the middle of nothing in the middle of air there was a black dot right and that he was demonstrating the fact that the that the device was bending light away from the area I mean it was a completely black black dot later to find out well I again I don't want to jump ahead of
(59:29) myself but um anyway there were a couple small demonstrations like that that were extremely impressive and uh you know this is what we were supposed to be working on and you know our mission was really not just to find out how it worked

but the aim of the project was to see if these systems and subsystems can be duplicated with Earthly materials when these uh engines uh a better word we're running was there any uh was there any audible noise uh you were there in the room I I mean was there other than the test of putting her hand
(1:00:11) up was there any uh anything that hit your sensory system that you could describe when these things were running on the test set up in the room it was completely silent that's I wasn't even sure if the thing was operating however during The Test Flight of The Craft with all three amplifiers operating there was a definite hiss and Corona discharge on the bottom of the craft oh yes yes like a high voltage his if you've ever been around oh yeah you know high voltage power lines or you know high power
(1:00:42) transmitters you must have of course and um you know you have that familiar arrival to Jeff and if you said a Corona Corona discharge which is uh kind of uh not a Saint Elmo's Fire but a uh a blue glow uh that you typically see again around high voltage systems and what's happening in the air is breaking down and emitting photons and you know it glows it's the same reason why lightning bolts are visible um so but that it was obvious there was high voltage on the skin of The Craft and obviously it was leaking off because
(1:01:20) that sound is unmistakable as the craft lifted off higher uh you know an approach 20 or 30 feet the sound disappeared so it was obviously interacting with the ground in Free Flight there'd be no sound at all no do you know you say there were three emitters on each craft do you know offhand how these emitters uh in Flight were manipulated to for example leave the ground and then begin propulsion that would take you horizontal or vertical or wherever you wanted to go do you know energy was manipulated yeah the
(1:02:00) the craft operate in two modes it's Omicron and Delta Omicron is using a single amplifier to move the craft and Delta uses all three amplifiers whenever a craft is near another gravitational Source such as the planet Earth or whatever it's only using one amplifier to lift itself off the ground the amplifiers are these you know like I said or I keep using word amplifier the emitters or these up four foot long two foot diameter pieces of pipe essentially held by a two or two and a half foot three inch diameter
(1:02:40) flexible pipe and these hang in the bottom of the craft one of them points down and it produces a gravitational wave that will lift the craft off the ground the other two are swung almost horizontally so in the bottom of the craft they're really pointing out in front of it gotcha now most uh vehicles and aircraft that we're used to either accelerate hot gas out the back or use a Repel propeller and you know throw air out the back and the craft moves forward sure these do the exact opposite and my a best analogy for
(1:03:23) it is the uh the old rubber sheet or the bed if you take a uh a bowling ball and stick it in the middle of your bed and in front of the bowling ball about two feet take your fist and just push it deep into the back what happens the bowling ball rolls forward absolutely so this is exactly what they're doing the craft is standing using one gravity emitter standing on a gravitational wave and they're using the other two essentially to make a little divot a gravity well in front of the craft it rolls forward and it's why they
(1:04:02) look so ridiculous when they're in that low speed mode because it's an unstable form of flight well that was going to be my question when they do the vertical lift I wonder how um of course I don't understand how that energy is distributed but I wonder how the craft is stable as it goes vertical uh it's well the the gravitational wave is propagating from the emitter not in a linear fashion but it's diverging so it's on a pedestal almost like a pyramid oh the bottom is so stable yeah it's in
(1:04:34) fact as it goes higher because the the area of the base increases it becomes more stable it's only when it's very close to the ground that it's it's wobbly and and kind of goofy looking for such an advanced machine no I've got it oh and look people should understand that uh not just your word tonight but thousands and thousands of people have gone to uh you know as close as they can get to Area 51 and they have seen uh there's a million eyewitnesses that have seen craft being tested over the years
(1:05:06) over those years um so that a lot of witnesses to what you're saying right now about how they oh I had you know if you remember at the time I had the test flight schedule and I brought you know when I started to leak some information I brought my friends out there at night uh John Lear was one of the first people out there and you know we brought a big tenant Celestron telescope and uh you know at

that time you could get a hell of a lot closer to Area 51 than you can now yes I know uh you know we all saw what was going on
(1:05:39) I I'm I am curious about this uh let me ask uh you obviously had been treated to plenty of security warnings probably had to sign a bunch of crap and and so you made some kind of decision at some point to begin leaking stuff describe to me how you went through that metamorphosis you know how did you get there well I was perfectly content with the way things were going um you know once you're on the inside it's a different state of mind and uh you know if you're on the outside of something you know hey it's not fair we
(1:06:17) all should have this information so on and so forth but you know you get kind of a change of attitude once you become privy to the information you go you know those guys don't deserve to know anyway but uh that does change after a while and uh the impetus really had nothing to do with me uh initially uh remember they were still going through all my security uh whatnot whatever they do to it goes on uh yeah I mean they they do everything in there they're very concerned about your your mental state because that you know if a person is
(1:06:54) very depressed or despondent or something like that's going to affect their work performance and especially if they're trusting them with very important Secrets there's going to be a problem National Security exactly and now I had given a written order to have my phone monitored and uh myself monitored um now that's something to give I mean I know you're a pretty private person but to give I was excited to work on this that was that was nothing more more exciting than being monitored Oh by far and I was
(1:07:25) absolutely following the rules you know at the time I was married and I wasn't saying anything to my wife and initially this is where the problem began and you know I mean what do you say you leave the house at 11 o'clock at night where are you going oh I'm going to work yeah really and you know night after and then you come home you know six seven hours later where were you I was yeah we're at work yeah and you know after a while it begins to sound like you're having an affair yeah of course well that's
(1:07:53) exactly what happened that's exactly what happened and uh oh brother as time went on my wife began to have an affair and they knew it and I didn't because they monitored the phone this is all new stuff I've never heard any of this so they had all the written transcripts of what was going on oh my God and and they stopped calling me out to work because they had to make a decision on what to do they either gonna just let it sit and you know see what happened you know if we broke up or you know that
(1:08:29) ended or whatever but at any at any rate you were Suddenly at risk yeah and you know at that time they had stopped calling me out and uh I kind of began to get a little concerned and this is when I had the flight schedule and brought um a few of my friends out at the time including my wife and you know showed him what I was doing at night and they all saw that and in fact you know we got away with it the first night and we got a little a little greedy and went a couple other times and we finally got caught and and you know they what how many of
(1:09:10) you got caught in what happened I think it was four of us and they we were standing there you know on out out close to Area 51 in the absolute Black Desert where you couldn't see your hand in front of your face now we had been staying there about half an hour and uh my friend Gene and I were sitting there joking about uh well maybe we should just take the base by force and you know just saying ridiculous things like that yeah how little did we know that the security guys had snuck up on us and they were no more than six feet
(1:09:48) from our noses listening to you say things like that right and they had no idea what's going on so we're sitting there talking and edit the out of nowhere sniper not a snipers go by night vision scope falls on the ground we see this little green light fall down and roll and it came out of nowhere we had no idea anyway the guy had dropped it so you know they walked forward and you know uh made everyone go back up to the up to the road they call on the sheriff and would these have been the walking hook security people as far as I know I
(1:10:22) had taken off into the desert because we had all assumed if I was caught there was a problem well that's a good assumption because these guys could have just wandered out there and been looking at what's going on but if they saw somebody from the inside there so I took well I'm not even going to say that I took off into the desert and um counted how many people were there toward or away from the area away from the area away from the area you know out into the desert and I was trying to get a while there were three or four people

(1:10:51) there and then when we got back up to the road and the sheriff came out from there I think his name was La Moreau who's still around there and um that's when I re-emerged and he said well we've got a discrepancy there's an extra person here well what's his name and he took my license read it into the base and you know he said okay well everybody can go and uh the following day I was called for a debriefing down at Indian Springs Air Force Base which I'd never been to before they didn't uh well that
(1:11:22) sounds very interesting they didn't throw you in jail a lot of people they didn't do anything you know they spent the night in jail a lot of them not the second they heard my name the second that he read the license they said let everybody go and it was the following day when I got called in and Dennis who was the security supervisor at the time uh drove to my house and we went down there in my car and that's when that's when it really hit the fan and you know kind of to make a long story short uh they were
(1:11:49) pissed to say the least and well don't make it too short this is pretty interesting stuff I'd actually like to get some details of that uh you called it a debriefing uh probably it was more like a let's see how far how scared we can get this guy well that's that's exactly uh what it was all right then hold on to that other is indeed uh just over the mountain from me a place called Indian Springs and there is an Air Force Base there and that's where they called you Bob right uh summoned you said you uh would you
(1:12:25) get one of the calls you know it's now noon you will be you'll be up here at some certain time or what this was a little different this dentist called me who was my security supervisor at the time called me personally and uh came to my house which was very unusual oh and then we both drove down in the same car uh to Indian Springs which is an auxiliary air force base in this little town which is you know the base is essentially shut down but um I guess some of it you know remains operational um in any case that's where they took me
(1:13:03) uh-huh and and that's when they started the debriefing um the first thing they brought up was of course that you know tremendous breach and security and uh they were they wanted to know everybody that I had told anything to uh why I went ahead and did it and you know I was pretty straightforward with them but they tried to be as intimidating as possible and and uh were you threatened all right oh very much so yeah and so was my wife's life so I became very concerned about that um dude actually do you actually care to
(1:13:44) tell us what they said to you I mean did they say you know you'll end up a lump in the desert like so many others or you know you know there was a lot of fear present at the time and I just I don't remember verbatim you know what tagline they used but it it did get my attention um and this is when they brought up the the transcripts of my wife's affair on the phone oh that they told you yeah so I found out from them at that moment yeah at that moment one was something they had to slap in my face gee whiz I wonder why they picked
(1:14:21) that moment to tell you well who knows but uh anyway that's that's how the separation between us really came about it was because of that because of you know bringing my friends out there to see what was going on and you know all the yeah so that's that's really what set everything in motion a lot of stories have flown around about what happened Bob after that for example um you know we have the mutual friend of John Lear who now by the way doesn't talk about any of this anymore doesn't
(1:15:02) want any publicity you can't blame him he's lost some jobs he's back working uh he's doing fine and he just doesn't want to talk about this anymore and I don't blame him do you no John's uh I think John's Rave now is about the the dump up there at Yucca Mountain about the nuke waste dump it yeah sure you know that's the one thing I agree with and John with John Lair is uh you know I know everyone in Las Vegas doesn't want it there but if you're going to put it anywhere in the
(1:15:32) country why not put it where you've already exploded a hundred atomic bombs it's already a wasteland you know at that part of the test site so well you're right that's a big controversy anyway listen um there was a big controversy about something called Element 115 which was um said to be some kind of fuel an element we don't have now on Earth that was uh the the fuel or the what what can you do well I guess you could call it a fuel it's what what made the reactor operate um and it's a super heavy element something
(1:16:14) that we've theorized can exist um you know do people think back about you know high school or college chemistry uh you recall that as the elements get heavier you know once you pass uranium um they decay and some Decay very fast as the

elements get uh very heavy their past lives become extremely short sometimes microseconds so they're just around they exist just for a blink of an eye well it's been theorized and has been some time ago that there are islands of stability somewhere higher up in the Periodic
(1:16:55) Chart there are places where groups of elements would again become stable and this occurs but theoretically was to occur in the 114 115 area and again an island of stability right where these elements are relatively stable and again there is supposed to be another island of stability somewhere up in the 200s but these are unattainable things and no one says that nature has ever produced them except it might be a moment but you know when you talked about element 150 years ago what so many years ago um since then interestingly uh We've
(1:17:34) progressed to The Impossible in other words since you actually talked about it they've been discovering elements moving up uh right on up the chart oh they've they're getting close yeah they're getting very close close and then the and the half-lives are getting longer yeah I know people back then huhad at this but now they're not hauling so hard anymore because we're getting pretty close right and I'm sure eventually they'll synthesize it somehow they use uh instead of bombarding it
(1:18:01) with neutrons now they use this new Fusion technique where they fuse the nuclei of uh two other elements together which is kind of a an odd way to do it but it's got um I think the heavy ion the lab for heavy ion research in darmstadt Germany has pioneered most of the new uh heavy elements and you know mark my words they're going to be the guys that synthesize 115.
(1:18:26) a bob there was um there was talk that you spirited uh some Element 115 out of S4 is that true where'd you hear that all right oh I got friends too you know do you do you want no you wanna do you want to send a comment about it you don't want to comment on that no I don't want to comment about that but it's you know that would be a good sledgehammer yeah uh all right well we'll just uh we'll we'll leave that one alone I guess uh you think do you do you think that since the time that and and you know what we
(1:19:13) didn't cover we missed it you described the one craft but at one point while you were there you saw a total of what would you say Minecraft and um I recall that was the day uh Barry and I were working in the lab and Dennis came in and he said come on out there's a test flight so there was a flight scheduled and they were allowing me to see it and we went from the lab out into the first Hangar which was the only one I ever saw open and as I went out there the craft was already outside the hangar and sitting on the ground I
(1:19:47) don't know if they rolled it out it flew out or whatever but as I was walking through the empty hanger I looked to the right and they're a big bait or is in between the hangers and they were all open and I could see all the craft lined up so they had an outright collection of these things anyway the um the craft was outside and there was a guy sitting near the door uh with an what I surmised was an ordinary VHF radio and this is something that to this day really bothers me because it should be if this is a gravity propelled craft
(1:20:26) which is bending and distorting all forms of electromagnetic radiation around it and and whatnot it should be impossible to communicate with the thing the radio shooter radio it should have been trash yeah it ran but maybe it wasn't maybe it just looked that way to me and it was something more advanced but anyway he was apparently in communication with somebody in the craft so I know it wasn't being flown remotely and uh anyway that was the first time I got to see and the only time uh all the crafts inside the hangar did you ever
(1:21:01) get to see the inside of any of the craft yeah just the one the one I claimed the term the sport model because it uh in compared person to the other crafts it was really sleek and thin and looked like a sporty version can you describe the inside I mean what did it seem as though uh it was designed for say a human or something close to a human well it's hard to say it was designed designed for something small uh because certainly uh five and a half or six foot person is hunched over in all but the very center of the craft it's it's not it's
(1:21:41) an uncomfortable setup it's extremely Barren uh there are three seats in there three yeah and there is um uh it's it's all one color there is there are no Aesthetics anywhere and the as far as the placement of everything it there are no there are no sharp Corners anywhere imagine taking a seed uh well the amplifiers look like tables or boxes just to give you a simple figure idea but it was as if the inside of the craft was all molded with these parts out of wax in other words an aircraft we have uh rivets we have uh
(1:22:28) everything flowed together as if it was made out of wax and heated and

then cooled so there were no sharp Corners everything just kind of Blended together like the entire thing was injection molded there was no visible seam or right angle anywhere and everything was just a dull pewter's a little dark but a dull aluminum color so it's a just being in the place it looked very unearthly if I could use that term you can sure it was very unusual because in any place you've ever been in anything you've ever looked
(1:23:02) at there are varying colors shapes and sharp corners and everything was rounded and everything was monochromatic it was just one color what about apparent controls for control of the craft there were none there were none there were none that's really interesting there are no buttons lights are you know Navigator position or anything of that sort of the two places I was allowed to look at in the craft now obviously whoever piloted the craft was on the central level the level immediately below it there's a
(1:23:41) small access hatch with a collapsible honeycomb access way and I stuck the upper part of my body in their kind of upside down so and I was I was told to do that so I can see the placement of the gravity emitters and how they're hung and how they move oh yes and so that was that was the bottom level underneath that was just the skin of The Craft now above that I was not allowed to venture there was a small area above it and on this particular craft the hump on the top or the Dome on that saucer whatever you
(1:24:19) want to call it right it's it's not round it's kind of flat on the top there were these black portals I believe there were four if I remember correctly and there weren't Windows they were from what I survived as they were some sort of of planar sensor so the craft could get its orientation in space or wherever it was where uh it could you know these would detect positions of stars or something like that so it can get a fix on its orientation and you know where it is where it's going and that sort of thing now that's my guess
(1:24:51) sure no idea but you you surmise that there probably was an area of some control that you didn't get to see well either for that or there is a different type of control yeah that has no obvious you know buttons or knobs or or anything well I know now even in our fighter jets uh they're beginning to get to the point where uh they put on helmets and they can actually think commands I mean we're doing that here on Earth yeah it's a it's not of the realm of possibility that that the craft would
(1:25:26) operate that way how we interfaced to it I would love to know because if in fact it did work that way uh using an alien creature's mind who in the world came up with the interface and what would you have to go by so there's so much information I would have loved to have known to complete the picture for me but you would surmise from what you did see that these crafts were probably made for creatures that would be on average much smaller than humans they would have to be they would have to be almost close to
(1:25:59) half our size to comfortably fit in there huh now you never ever saw any alien beings now were there between you and your buddy or anybody else that you ever talk to up at S4 were there any discussions of beings I mean it would be how would there not be discussion of uh who there was about who piloted the craft and they called them the kids that was the term they coined the kids the kids and that's probably because of their size or or who knows what but uh that's it oh that's pretty interesting though they called them the kids and it
(1:26:44) and actually everything looked like it was uh I I set up for a child so maybe that's maybe that's where it came from so far since you have left which is a lot of years now do you think uh well for example when you were there how much progress had actually been made in either duplicating or beginning to get a handle on how these generators operated and and the beginnings of duplication or trying to duplicate what they were doing well I don't think they got very far you know I use this analogy I probably the last time I was on your
(1:27:26) show and you know if you took an ordinary modern day motorcycle and just transported it back in time to the 1800s to the Wagon Train days and just left it out front and the morning everybody woke up and discovered it there with the keys in it now they can poke around and prod with it and play with it you know and eventually they're gonna figure out how to start it just out of sheer luck and it's going to start and it's going to run and they'll be proficient at driving it as long as they keep playing with it
(1:27:56) and when it runs out of gas after crashing quite a few times oh yeah but they'll pick it up and they're pretty tough and you know go on and when it runs out of gas it'll never work again it'll sit there yeah and however when it comes to

duplicating it if they wanted to make one they couldn't even make the plastic fender on the thing because that material is just amazing to them right I mean you know that's a polypropylene or something like that they just look at it and go wow it's solid but it pens and it
(1:28:23) melts and you know they couldn't even make a fender or a turn signal on a thing much less the engine or the oh forget about the working part but this is exactly where we're at we got a really cool toy and we've played around with it enough to where we know how it works and we can make it move around but when the fuel turns out or something else happens to the craft that's it then you've just got an inert piece of stuff that you never figured out right I don't think they're ever gonna duplicate in our lifetimes anyway
(1:28:54) what's there um you know they may use it it may get some other information off of it now again I'm going on thoughts that are 12 years old so they could have made some tremendous strides since I was gone and uh I was certainly not privy to all the information but that's the impression that I was left with all right hold tight Bob all right once again here's Bob Lazar Bob an obvious question and one coming from Madison Wisconsin on my computer is uh were there any signs on any of the craft of obvious
(1:29:32) damage not on the craft that I worked on at all and you know everybody's wanted to know well how did we get them sure and uh you know that's information I wasn't privy to I would love to know too was this uh you know you hear so many stories in UFO lore about uh an alleged exchange of Technology you know did this actually occur um and I've heard people say well you know we know there are crash retrievals we have inside information and you can't tell me that somebody came from 30 light years and nine different Advanced craft
(1:30:09) and they all crashed it just it's not possible so you know I could I could certainly see the Roswell crash occurring but uh I just don't believe that flying saucers come here from a tremendous difference and they just miscalculate the weather conditions and they wind up crashing all over the place it doesn't make any sense I hear you what about uh did you ever learn anything of the um of the material that the craft were made of in other words could you take a blowtorch and uh cut could you uh could
(1:30:43) you damage Dent or otherwise Bend spindle or mutilate the uh material the craft was made of at all I don't know again that was compartmentalized that's the Metallurgy guys that got to play with that the only contact I ever had was going in the craft and then the the first day walking by it I stuck my hand out and slid it along the craft and and I just felt cold so I assume it's metal um but it certainly could have been an advanced ceramic or some other unknown material but it kind of felt like metal
(1:31:17) though yeah it was metal has that you know cold feeling to it the surface didn't feel exceptionally smooth it was a aluminum is the only thing that comes to mind just uh you know unfinished aluminum but I doubt it was actually that but um do you think there was there any sense of weight uh in other words did you ever have an opportunity to see anybody attempting to lift or move any of these craft uh getting an idea of the kind of weight they were trying to move uh no I didn't the only thing the only thing that caught my eye in
(1:31:52) relation to weight was above the craft in the hangar there was one of those suspension cranes with a hook on it and it rated it 10 tons because they had that in big bold lettering on the side so that makes me think well if they in fact use that to move the craft it weighs less than 10 pounds that's about as far as I can I can go on that but uh I've heard people make comments that you know actually they only weigh a few pounds but I I don't think that could possibly be true number one is you know at different times
(1:32:28) moving into the craft you're sitting on the extreme edge of it and it would certainly Teeter plus the amount of equipment they had moved into the craft lights and whatnot uh for investigation of it it makes me think it's something of some pretty sizable weight it's it's not uh you know it's certainly not a flyweight piece of material uh Bob you know a lot of the interesting news stories I get uh about world affairs and maybe Wars between India and Pakistan all the rest of it they come from the
(1:33:00) United Kingdom which I think is embarrassing that it annoys me that I've got to get to news I can't get here from the UK your movie is going to be made in the United them are you going to have any input at all uh during the the production of this movie are you they're going to fly over no no I imagine they would I imagine I would be put in a position I was technical consultant at the very least um you

know if they wanted to progress yeah accurate truthful fashion uh believe that Bruce did go over that
(1:33:38) already so um you know I'll at least be in that sort of position Bob uh you have a list of names uh which you've revealed tonight of the other people that were there uh you're speaking right now I'm certain to many of those names and they're listening to you right now uh what would you say to them um at this point I mean you're you're out in the public story has been hanging out there now for a lot of years and now it's going to be even more public with a movie what do you say to the other people that were up
(1:34:12) there given a chance which you have right now to say something to them but you know that's changed over the years about the only thing I would like to say to him is contact me in some way you would think maybe by now some of them would have gone through a thought process that would bring them to the point where they'd be ready to be in contact with you and maybe others yeah and there's obviously a reason they haven't because it has been 12 years and uh you know there is and they haven't and you're still alive you wonder about
(1:34:48) that um not really because the the way things progressed it would it would have been really detrimental to the program and to them if all of a sudden I disappeared and probably the only reason for that was that uh John lear's suggestion and insistence to go into George Knapp at the time yes George Knapp is a is a Las Vegas um he's an investigative journalist investigative journalist that's right a big time one here in Las Vegas he's done a number of UFOs specials over the years and you went to John and John said go
(1:35:22) public go go to Georgina well at the time I I think there was a few days there where I hid at John's house I remember those tensions got got pretty high so I just looked for a place I could stay other than my house because I had no idea what was going on and the decision was made to go do that and in fact George broke in more or less it was at the top of the five o'clock news in Las Vegas and uh I went on and silhouette and said what was going on and uh you know certainly if anything would have happened to me from that point on it
(1:35:56) would have cast everything in stone and said hey you know this guy said so and so and you know it looks like it was true if he was just in that case what would you bother killing him well they didn't erase you but they kind of erased uh part of your employment histories and as much uh information as they could about your history with them right oh absolutely absolutely in fact uh Bob exler was one of the guys that did uh the research and I think he was a NASA systems specialist and now um well I don't know about now but then you
(1:36:34) know it was pretty heavy into UFO investigation and he had some contacts down at the IRS so I let him have all the information my W-2 form from there you know with Naval intelligence and social security number and you know he went after everything and from the IRS he got uh notified that information re regarding my social security number is classified that uh the numbers the employer designation numbers on my W-2 form uh were for I forgot what bizarre government agency but they were valid and uh I mean he did
(1:37:17) bring up a lot of good information and it ran into a lot of block walls that were completely inaccessible even your history of Los Alamos was somewhat erased although I'm remembering that you can came away or somebody came away with your name on an employment list or a phone list from Los Alamos yeah that was the only thing that they couldn't have deleted was the old printed phone list and you know that's one of the things on top of that what proved to be a uh a big plus too is remember again the jet car
(1:37:52) article and in the front page of that newspaper in the first few paragraphs now this is a small town in Los Alamos everybody knows everybody's business they say Bob Lazar a physicist working at the Los Alamos Maison physics facility this is the Los Alamos newspaper so you know you can't go back in time and get rid of that paper so I had that I had my name in the internal lab phone book directory so you know they were they were stuck with that before they had denied it for years he never lived here he never
(1:38:24) worked here you know it's just a big lie and you know they did reach back and erase as much as they were able they just didn't get it all yeah George Knapp is the only guy at the time that I not that I trusted but also had you know the ability to do this and I flew with him back to Los Alamos and went back to where I worked and to the people I worked with and you know the areas I got them into in the lab and uh you know he did a lot of footwork look I I've had uh I've had a lot of dealings with George over the years and I've come

(1:38:56) to trust him yeah he's a he's a very trustworthy guy he certainly is all right very quickly just a couple questions uh what's west of the Rockies you're on the air with Bob Lazar anything real quick is that me that's you oh okay uh I was wearing hi Mr Lazar uh do you feel that we had any technology or do have technology to go to the Moon I don't feel that we did well uh you you mean you think we never really went to the moon is that what you're saying oh yes you know a lot of people have been
(1:39:24) saying this to me just in the past couple weeks there's a good friend of mine John ferrat who's kind of a big wig in Hollywood and you know he absolutely and this is a real knowledgeable guy and apparently there was some show on Fox where they aired uh all the old Apollo films and oh yeah analyze them and I never saw this but it seems to have convinced him that we never went to the moon and I don't know I've spoken to Edgar Mitchell was the sixth man on the moon and it sure seems like he went
(1:39:53) there I don't know but but I I don't know I I really don't know you know Ed Mitchell made an interesting comment to me I did I've done many interviews with Ed and uh one question that seemed to really stump him was uh Ed do you remember what was it like walking around on the moon and he said you know it's really strange uh I just don't remember that many details tale of the whole thing he said I obviously remember it but there are some details strangely are missing and he did make that comment uh so I mean it's it's
(1:40:28) possible to have faked the whole thing but who knows we know that the shuttle goes up there because you can look up in the sky and see it Go by you certainly can uh so why is it that much more difficult to go to the moon it's not that far away uh first time caller line you're on there with Bob Lazar hello what are you doing okay sir where are you North Hollywood California okay yes uh hi Bob hi there still driving to Corvette yeah yeah all right anyway um are you familiar with the Lockheed facility in Burbank
(1:41:05) the Skunk Works uh no not skunk course talk about on the premises of the airport where the Janet flights took off in Burbank yeah Burbank California you you worked in the 80s what time do you work at UH groom light facility what time the time is varied no sorry I mean the year that was in 88-89 okay so um what I'll give you a name there's a guy who worked out I don't know if he worked in your division by the last name of Hayes do you know him uh all right well let's hold it there um do you do you want to disclose whether
(1:41:40) the name Hayes is on your list there is an a maze on the list on the list really yeah there is now I don't know if there's a billion hazes in the world but there's a haze on them really okay okay I think there's also a Jones too yeah I know but there there is a haze what are the odds right uh Wild Card line you're on there with Bob Lazar hello yes sir where are you please uh hearing from Nevada from oh and listening to uh can i k l y e 95.
(1:42:22) 1 in Pahrump Nevada yes sir yes sir uh Mr Lazar I'm a big fan of yours and I was wondering uh how you feel about how the government's disavowed knowledge of you and disrespected your your your your work and everything well I'm needless to say not too thrilled about it there isn't much I can do but uh I mean we there will never be a common ground between us uh you know as far as I'm concerned all ties are broken and all promises are broken too and you know that's one of the reasons I'm on the air you want to treat me like that well
(1:42:52) guess what here's what you get yeah if you uh if if they came back to you then they said you know with all the water that's going onto the bridge uh Bob uh we we've made a lot of progress we'd like to take you up there and show you how much we've done How Far We've Come impossible as this is uh if if they came to you with that and said uh however uh they're going to be a million conditions and uh more Security checks and blah blah blah would you be able to turn that down would you tell
(1:43:27) them to go fly a kite I would certainly love to do that but in view of what's gone on I I can't possibly trust them you know it's a completely remote isolated area and once you're there they could really do anything is to say hey you're not going home and and you wouldn't go home you'd just be uh not even a lump in the desert but far below who knows I mean maybe that's all fantasy but uh you know I just I I cannot trust them and I would absolutely love to get back into the technology I mean
(1:44:02) it was it was the greatest scientific experience I've ever had you know working with it and I'd love to see what else they've done and you know love to lend a hand and and become part of the project again but I can't you know I'd say the

chances of them coming to you like that are zero anyway just interesting question these are the Rockies you're on the air with Bob Lazar hello Bob yeah uh you fascinate me by saying what part of the universe this thing came from where did it come from did you say how can you say
(1:44:33) that with that Fitness with being definite assuring it's in your voice and was your job to reproduce this Fuel and this fuel called 115 and how far did they ever fly this thing or did they tell you all right well first of all uh the the assuredness in his voice uh came from the fact that they told him that's where it came from correct Bob right I I did not determine this myself and and again this is just in a written satellite briefing of the project so whether or not that's true or not you know I cannot stand up to that fact but
(1:45:07) it it is possible because the other things that I read in the briefings that I did get hands-on experience with are accurate and true so I don't have any reason to disbelieve it but because I don't know it for a fact it just kind of sits in that special place in my mind where it possibly might not be true but again you know why why throw a lie in there if we're trying to get all this work done and find out what the basis is of this thing the origin of it may have something to do with the operation of it
(1:45:40) so I don't think they would have taken the opportunity to lie about it there so I just I kind of believe that was true now knowing what you know about the drive systems you said you referred I think or earlier to the some of the Belgian sightings uh consider all the UFO sightings and uh I'm sure you've seen a million pictures and moving video now of UFOs and all the rest of it you think the Belgian sightings uh were perhaps uh accurate with what you know about the drive systems have you seen any other
(1:46:14) film or stills of UFOs that McCoy to you absolutely because once I started looking into it now I don't research this stuff anymore and I get a lot of people asking me UFO questions and actually believe it or not it doesn't interest me I liked being involved in the project but I don't you know look into UFO stories or research this stuff but when I did um when I said the craft operate in two modes the Omicron and Delta configuration when it's transitioning from Omicron to Delta the way the craft
(1:46:47) flies through in space is Billy first not flying horizontal like you see in a science fiction movie and as the craft leaves the ground in Omicron mode they perform a roll maneuver where the craft raises and you know eventually you see it at a 45 degree angle and then it becomes straight up and down 180 degrees right the amplifiers come up to power they focus on a point and the craft flies belly first at the Target and you see a lot of UFO photographs here and there with crafts ascending in the sky at a 45 degree angle but flying up or or sitting
(1:47:26) at odd angles in the sky and at least from what I can guess from the photographs if they in fact are genuine it looks like the crafter transitioning from one mode to another and so you've seen quite a few of those probably seen three or four of those three or four yeah so the majority of UFO photos are by you pretty much dismissed but every now and then one hits you and you say hey hey look at that yeah if it has something that clicks somewhere but you know these days if boy you just take a picture into Adobe Photoshop and you
(1:48:00) know you can make anything I do know uh Bob I can't thank you enough for coming on tonight with regard to your movie Blue Book hey do you have any idea what the title might be no idea the only thing they talked about are the people that might play

Talking Bob Lazar with Jeremy Corbell - Spacing Out! - YouTube
https://www.youtube.com/watch?v=TjWbKoZn4vQ

Transcript:
(00:01) [Music] [Music] readings everyone and welcome to spacing out I'm Jason McClellan and I'm marina Ellsbury thanks so much for joining us later in the show we're gonna be joined by our friend Jeremy Korbel to talk about his new movies on bob lazar and skinwalker ranch but first we've got our drinks in hand so let's jump into some of the strange stories that have made headlines recently we believe that all news good or bad is better when paired with a good beverage so Maureen what are

you drinking today
(01:01) I'm so lame I was busy so I'm just drinking a the same way and I was drinking while talking with Jeremy Cabernet nothing wrong with that hey you know what you like and easy is good I understand that I'm lazy too I had grand plans to make some fancy cocktail and I guess I kind of did I've got a hot toddy so you know yeah it felt like a warm beverage evening so with the hot toddy so there we go Cheers actually Cheers I'm quite envious actually investigative reporter George Knapp with CBS affiliate
(01:39) klas in Las Vegas recently sat down with Lewis Elizondo to learn more about the UFO program Elizondo led at the Pentagon this program known as the advanced aerial threat identification program reportedly ran between 2007 and 2012 but it wasn't publicly acknowledged until the Pentagon announced it in December 2017 although the program officially ended in 2012 Elizondo says the program continues operating to this day but he grew frustrated by the Pentagon's excessive secrecy regarding the UFO program so he
(02:12) resigned in 2017 before resigning Elizondo helped declassify some UFO videos that were recorded by military pilots these videos were presented to the world by Elizondo and the newly established to the Stars Academy of Arts and Science but many have doubted the authenticity of the videos questioned the pilots observation skills and even offered other explanations for the videos George Knapp asked Elizondo to clarify the provenance of these videos the department defense made the decision to release them through the Department
(02:45) of Defense adopts her process approved the release for exactly the reason why the request was made so it was completely on the up-and-up Elizondo also commented on why he feels the military witness testimony is valid and why they don't think these objects recorded were something mundane like IR glare it frustrates me because people say well that's just our glare that's ir fudge you know that's an atmospheric condition a bug of the windshield I said look I'm a sphere conditions you can't out lock a radar
(03:13) onto so I'm sorry it's not atmospheric it's unlikely we'll ever know everything or even a decent percentage of what the Pentagon's UFO study researched and/or learned but more UFO videos will reportedly be released to the public and we're sure to learn more details about the Pentagon's a chip program this year most likely specifically related to research conducted by the contractor used by the Pentagon Bigelow Aerospace advanced Space Studies confirmation of the Pentagon's EO folk program was
(03:44) revealed in a New York Times article that was published on December 15 2017 and one of the authors of this article was investigative journalist Leslie Kane Kane wrote the book UFOs generals pilots and government officials go on the record in 2010 and although this best-selling book has been the basis for TV specials in the past it's reportedly inspiring a movie on January 22nd Hollywood site deadline.
(04:11) com published an exclusive story revealing that director lace a house drum and producer Laura Bickford have teamed up to make a movie based on Kane's UFO book deadline.com explains the film tells the story of Kane's journey while reporting on unexplained aerial phenomena and will recreate some of these real events as they actually happened and although it's obviously not covered in Cain's book the film will reportedly include recent developments like the revelation of the Pentagon's UFO study no release date has
(04:44) been announced as of yet but we'll be sure to bring you updates on this we absolutely must mention the successful launch of SpaceX is massive Falcon Heavy rocket on Tuesday February 6 private space company SpaceX performed the test flight of its Falcon Heavy rocket the most powerful operational rocket in the world this monster rocket is composed of three of SpaceX's Falcon nine engine course giving Falcon Heavy a total of 27 engines following launch the two sad cores returned to Earth and successfully
(05:16) landed in unison at Cape Canaveral Air Force Station in Florida the center core wasn't so lucky the center core attempted to land on SpaceX's autonomous drone ship in the Atlantic Ocean as planned but according to SpaceX CEO Elon Musk the center core ran out of propellant which prevented it from slowing down enough to stick a landing the core reportedly smacked into the water at 300 miles per hour but musk and SpaceX are thrilled with the results of this demonstration mission and on top of that they had a little fun now
(05:49) typically payloads are a steel or concrete in these demonstration missions but not so in this one instead of steel or concrete they launched a midnight cherry Tesla Roadster into space the company thought it would be cool to send a red car to

the Red Planet Falcon Heavy second-stage tried to place the Roadster in an earth Mars elliptical orbit around the Sun but the Rockets final engine bird was too powerful causing it to overshoot the desired placement his new trajectory will place the Roadster just shy of the
(06:22) asteroid belt a press release issued by SpaceX following the launch stated it's important to remember that this mission is a test flight even if we do not complete all of the experimental milestones that are being attempted during this test we will still be gathering critical data throughout the mission ultimately a successful demonstration mission will be measured by the quality of information we can gather to improve the launch vehicle for our existing and future customers to more Falcon Heavy missions are expected
(06:51) to fly in 2018 and according to musk the company is hoping to fly crewed missions by the end of the year our strange story today we're revisiting a story we covered on this show all the way back in 2012 remember the Baltic Sea anomaly that oddly shaped object resting at the bottom of the Baltic Sea that was discovered by ocean X team in 2011 this is the one that all the media outlets kept saying resembled the Millennium Falcon well researchers from Stockholm University think they've identified what it is
(07:23) if you don't remember hearing about the Baltic Sea anomaly or if you just need a refresher the object at the bottom of the Baltic Sea was detected on sonar in June in 2011 by treasure-hunting company ocean x team and based on these initial sonar images the media and members of ocean X team fueled speculation that the object could be a crashed UFO resting on the seafloor but according to the UK media outlet Daily Express the scientists who think they've identified the object think it's something far less
(07:54) exciting than a UFO the recent research led scientists to develop the hypothesis that the Baltic Sea anomaly is nothing more than a glacial deposit The Daily Express explains that much of the Baltic Sea was carved out by moving glaciers during the Ice Age and the researchers believe the anomaly is leftovers from that process but despite these findings the ocean X team stands by its assertion that the Baltic Sea anomaly is something far more mysterious the team reiterates the unusual observations it's made
(08:25) during its own investigations like straight edges on the object and both shipboard and underwater equipment failures when the team was in close proximity to the object so as the mystery of the Baltic Sea anomaly been conclusively solved hmm probably not I I'm glad they're there pointing out you know these anomalies that they experienced because that is something that should be investigated further and I think they've tried to do some of that but that's not really explained away by glacial deposits no and I think for
(09:02) somebody who has put so much effort into investigating it like the ocean X team has it's frustrating when somebody thinks they they've dispelled it right away so I understand them standing by their assertions and and pointing out these you know thinks they've found in their own investigations yeah because we see that a lot in UFO investigations too like actual UFOs not to say that the Baltic Sea anomaly is not a crashed UFO I don't think it is but hey anything's possible but let me be cool if it was
(09:34) just like an old prop from Star Wars that would be you know something that they tried to like hide somewhere and they forgot they hid it Chewie stole it for the and crashed it that that sounds like a realistic possibility there but you know this is something we see with with UFOs and you know going back to the UFO videos that were released from the Pentagon's study well they weren't from the Pentagon study but from military pilots that to the Stars Academy helped release through proper channels got plenty of researchers out there
(10:14) commenting on these videos and pointing out why they think they're fake or why they're nothing you know interesting to look at something mundane but a lot of people don't look at the full picture they don't listen to the pilots description they don't listen to how this thing behaved in the sky you know and just talking about and this isn't something we necessarily covered when we presented the story here but talking about you know the photo that was shown during the actual presentation talking
(10:45) about the tick-tack UFO and how that photo was proven to be you know some hoax or a balloon you know a long time ago and that had nothing to do with the actual tic-tac video so people dismissed the video as being a fake because that incorrect photo was used to promote the video yeah and that's always unfortunate but you know mistakes happen with that and and and this is gonna be one of those things

where we don't see the real effects I mean there there are so many aspects to this and these were studied
(11:20) for a while and can't be explained and I think you're right on emphasizing that you know pilots know what to look for and if it's something strange you know in their eyes they can't identify well it's worth looking into and so that is a strange video and what it is I'm not saying it's extraterrestrial space craft at this point we don't know right what this is right and you know there will be more more information coming out about those videos more research being done and more videos you know it's going to
(11:54) be an exciting year there's going to be a lot coming out from that organization so I know we talked about it you know it's just like people wanting the next next Star Wars to come out they want all the information now but psy we binge watch stuff on Netflix you know that's right you know we we have no patience we want everything right now as soon as we get a get a teaser of it a little bit of taste we want it all right now but I don't know guys I have no idea what's coming down the pike but I think lots of
(12:23) things are that will be of interest to us all so let's have a little patience and enjoy it when it comes or it [__] about it when it comes like usual yeah yeah not us but people can do that if they want but when it comes the time will be right yeah so stay tuned guys on that but now it's time for our interview with filmmaker Jeremy Korbel Jeremy we have you back on the show this is crazy I was trying to count and I have no idea how many times you've been on spacing out but I think you've been on spacing
(12:59) on something like five times now because we've done several different segments with you and little brief interviews here and there run-ins at events conferences so you've had many many many segments on spacing out over the years so welcome back to the show brother thanks man breaking news every time I say extraordinary we have to drink [Music] Cheers uh you have a website right what's your website extraordinary beliefs calm there you go all right brother well we have to jump into all sorts of exciting things because as always you're
(13:38) up to you a whole lot of [__] so number one is we're counting these down let's jump into patient 17 patient 17 is something a topic a film of yours we've talked about before but big news about that is that [__] is on Netflix now right that [__] is an epic it's extraordinary you know what I just watched it re watched on Netflix oh you watch it on Netflix that's clears I hope you get some residuals off of that stuff I put in my watch [__] it does propel it forward of the algorithm so watch it so thank you rate
(14:16) it give it a thumbs up and rate it oh five stars for sure thanks man that was a fun journey weird thing never thought I'd make a movie about that was very very difficult for me to decide to do it but it ended up being a very fascinating journey well for anybody who might not have heard us talk about patient 17 before give us a brief overview of what patient 17 is sure so doctor Roger Leir was the guy that was known for allegedly taking out alleged implants from aliens out of out of humans and I was something that was
(14:51) off of my radar it was outside the scope of my interest knowledge or even believability but he asked me to document his 17th surgery and I thought well I got to see a guy cut in two might as well do it went and did it and it was meeting patient 17 that really made me want to focus on this as a feature film because patient 17 was not the kind of person that I imagined would you know be having this experience very down-to-earth guy soft-spoken and just a really interesting down-to-earth guy and so I ended up making this film and in
(15:28) the process of making the film dr. Leir passed away and all the research everything just stopped it was a dead halt and I'm sitting there with now a friend of my patient 17 and we're like what the [__] was in his body you know and he remains the largest skeptic to this whole story he knows he had an abductive experiences like he that's not a debate to him it was hard for him to resolve that within himself within his church within his family but did this have anything to do with it this object and so I wanted to get it scientifically
(16:01) analyzed and prove it was a Tonka truck but to my absolute surprise the the one set of results that we got back the the well two sets ice topic analysis and the broad spectrum elemental analysis proved beyond a shadow of a doubt that this object was unique and in fact the results indicated that the zinc 64 was non-terrestrial by a huge margin by over 1.
(16:29) 2% at minimum so I was thrown into this crazy world now of having to figure out I paid for the test got it done and and figure out is there anything to this and

the only way were ever gonna know is if we can get multiple tests on the same object and I don't want to give away the film but there were a lot of difficulties in getting those types of analysis so that's the film it's about an alleged alien implant removal surgery the last of dr.
(16:55) Roger Leir who is kind of famous in this field of ufology and to this day I'm still interested to find out exactly what was in this man's leg and I think we're gonna get some answers soon so those been developments have there there have been you know that yeah were you were you a little bit of a spoiler but were you able to track down Steve yeah finally I think the power of film is that it presents a really compelling argument for you know people to stop hiding so I think that at that point I was able to be back in communication
(17:29) with him and say okay look if you're really for the truth whatever it is let's find out so allegedly I now have access back to the sample so I can continue doing tests extraordinary and that's great I want to UM one big thing for me and it always has been I've been in situations where you've had to test elements also that that might possibly be from another planet-- is using like reputable labs that are not totally tied to the UFO phenomenon I know that happens a lot where you have doctors and
(18:06) or people who you realized oh they're members of MUFON and they're really pushing for this alien abduction angle and from what I know from you from previous years prior is that you guys have been using these reputable labs that these people aren't you know abduction well besides you know the Steve and the general people these are our real labs that are testing the elements and coming up with unusual anomalous things is that your route that you're gonna go again is using these outside labs yeah and in fact that's really
(18:47) important and I don't think I explained it necessarily in the film I made sure it was a blind test the lab had no idea what they were being given it was it was literally just an object and then they give us the results the funny part occurred when I called the laboratory because what happened is the results are show anomalous I found the one individual on this planet who is like a extraterrestrials Inc 64 specialists this guy wrote a paper back for his you know thesis paper he's now a medical doctor he looks at the results
(19:22) he says this is impossible that here's the ways the tests can be flawed let me explain it to you but really I think the lab is lying to you somebody's lying to you so I called the lab and I said look I paid a lot of money for this I want you to look at the results and they stood by the results but when he saw the the problem with his ink he said to me look that's not my problem that's your problem I don't know what you have I'm giving you an accurate triple washed you know zinc 60 for
(19:54) analysis and you have to deal with it so yeah it's very important that we continue down that process of blind tests with multiple labs because every machine is calibrated differently so their margin of error is different but even with the margin of error the standard relative deviation of this sample we are still off the charts for zinc 64 being non-terrestrial so unless somebody decided to fake non-terrestrial ality with the sample somehow you know it is truly anomalous so far so yeah I to answer your question yes we're gonna
(20:29) use reputable blind testing perfect and I think that's so important for for anybody in this field is you know nobody's gonna analyze and you know really look at your work if it is has that real level of bias so I appreciate that and I just want to say straight off the bat thank you because otherwise what are we doing right what are we doing I mean and the the issue you'll see in the film I mean spoiler alert but the the idea here is in the film I'm I have no idea who these people are and I start going through
(21:06) this journey there's a moment in the film you hear my utter shock and awe because I realized one of the individuals really drank the kool-aid you know somebody's supposed to be totally separate as you know scientific process I had no idea but they were a patient themselves you know with an alleged implant so you know look this is what we run into people that want to self validate their world theory and try to manipulate the data for that and that's the first thing I said to dr.
(21:34) Leir is I'll film it but if you are lying or deceiving the public in any way I'm gonna out you so are you sure you want me to film it so that this is a problem even within the film cuz look everybody wants to believe right everybody wants to you know to know that we're part of something greater that you know this is not all that there is that these things that we're seeing millions of people are seeing that they're engaging us on a meaningful level but the real thing is can we prove it and
(22:06) and so everybody has little ways of trying to find that out maybe this is

one little way it's a fun film and you do a good job of starting it to being a beginning of the journey and going as far as you've gone to this point and it's exciting to hear that there's more to come there is more yeah because you're left a documentary you can't control it man you got certain level and that was it and I'm not gonna make something up I'm not gonna lie I'm not going to sensationalize something that's
(22:32) already sensational well I'm glad you put it out when you did you know you could have kept holding off yeah so you had some sort of maybe finish to the story if they're ever going with something like this but you know it's continuing and that's exciting so you've had the film available for quite a while and it's been been available on demand but exciting thing it's now on Netflix so you know I think more people have fewer excuses to not see it so check out patience 17 and give it a nice review on
(23:02) Netflix that would be very kind all right let's jump into skinwalker cuz skinwalker ranch is something that Maureen and I love very much so you've been talking about skinwalker ranch for a while now something that you're diving into pretty deep and you've got your hands on some pretty exciting [__] so tell us what you've got cooking with skinwalker ranch yeah well this is a fascinating story so it actually relates to all the recent announcement heard there's a lot of confusion about those
(23:34) announcements and I've tried to clarify those as much as I can but essentially skinwalker ranch is a you know 480 acre ranch in Utah that is known to be the most heavily scientifically studied paranormal hotspot in history for lack of a better term it is a place of high activity of absolute strangeness a place where the world is thin to the point where you know we all know there was a billionaire named Robert Bigelow and he's been very involved in the UFO topic he initiated a group called knids the National Institute of Discovery Science
(24:06) and they studied the ranch scientifically for many years we out of the recent releases everybody has come to understand that at one point Bigelow partnered with the DIA the Defense Intelligence Agency which is an intelligence agency within the Department of Defense in the Pentagon it is the premier Intelligence Agency for national defense so essentially what we know now is that there was a joint program it was something you know there was a that was going on but it was that everybody was restricted by MDAs and
(24:36) also by the DEA a contract so it was a problem to let this out public but he said but what happened is that partnership yielded a lot of scientific study when you get a government agency coming in and saying we realize that this is something we need to understand gives a little bit of credibility to what's going on there and indeed it should have credibility so I've been there a number of times now I can kind of freely talk about it it is a place where George Knapp really he wrote the book on it with dr. Colin Kelleher you
(25:06) know who was head of mids which was that scientific group so this ranch has been studied for a long time but understand it's the entire Uintah Basin it's a hot spot it's not just the ranch the ranch is just the place that was most actively studied because it was contained controlled living laboratory and it was done both by private industry but also now we know by government agency so what's interesting about it and why I decided to make a film on it now is because one I have very special access to it and have for a while and
(25:39) that's because of my mentor George I mean he's been doing this story for so long and I come across these archives and archives of footage and documents from when these studies were going on on site at the time real time with the investigators the footage is there it's ridiculous and so just as best I could pride that information from him and that data and that footage so in my film you will see something it can never be repeated again it has never seen the light of day and this footage will play
(26:12) a role within my film and then it will be up to the viewer to judge the merit of those investigations but historically now we can look at it through a completely different prism the 22 million dollars that was just released and announced through the New York Times in Politico this 22 million dollar black budget funded program specifically occurred because of skinwalker ranch that was the entire genesis the AAT IP that program the new project Bluebook as people say because 1969 we stopped studying UFOs apparently well that's not
(26:51) true not only that but the advanced a aerospace threat identification program or whatever the : of these days it's been last it's it started a long time ago and it continues to this day it actually never ended and it's a it's part of a

dia program so this story is huge and its current day so what I'm gonna try to do is make a film that sheds light on the ranch the history of the ranch what actually occurred there what we did learn scientifically and why our government was so interested in it
(27:26) and that will be the basis of the film and you'll be seeing footage that George really wanted put out a long time ago but he was just restricted and so now maybe we can get some of that out I can't wait because obviously I've said a million times on camera and wherever else anywhere that skinwalker has always been my white whale and the hunt for skinwalker was or is probably one of my absolute favorite non-fiction paranormal books ever and like you said it's a full region it's not just the ranch so I
(28:04) can't wait to see what comes out from this because I'm totally envious I'm I would love to just pitch a tent in that area and stay for weeks and see what happens are you working with the the new owners at all we I have a good relationship with the new owners and so I don't know you know exactly how to answer that but basically the the studies do continue there's work that is continuing I think the biggest breakthrough is after all these years the yuta nation it looked it's a sovereign nation so it's like a
(28:40) country within a country in order to film there and take footage off that has never been allowed ever but I think because of George's and dr. Kelleher's book we have a great relationship now with the tribal elders and and and even the the police force the the tribal police force there so those stories are being conveyed to us current day we've been recording and documenting the the local stories and and evidence of what's going on and they allowed us permits for the first time in history to camp more
(29:18) emu would not like it it was pretty freaky deaky but to kono I'd love it yeah yeah no you know I looked I felt I had zero negative experience any of the times I've been there however when you talk with people who have lived in that community for 30 plus years and have experienced physical issues from engaging the phenomena which is actually well documented the the physical issues of close proximity to you ApS and that kind of thing but it's I mean witnesses break into tears it's a relief to finally be able to talk to
(29:55) somebody about it it's heavy [__] to put it in any other way I don't know how it is heavy [__] it's not a joke for the for the people that live there it is fascinating the question is what can we learn from it and how does it propel us forward and that's really what I'm interested in I'll tell the story but what I'm really looking for is you know some sort of advancement in our understanding and it's a tall order and I don't know if we're gonna get there but at least people will be exposed to
(30:27) more data and that will be important because we can make better judgments if we know more about it that's huge and I'm so excited for that you have a separate website for that for your where people can follow your progress on that and contribute to what is that website hunt the skinwalker calm okay and I have a rough timeline when we'll start seeing something from you on that yeah I have a deadline now you know two films in 2018 and they have certain release periods that they're looking they're shooting
(31:07) for so I'm under the gun there's gonna be a big kind of announcement in one of the trade magazines like variety or something like that where were they going to talk about these films I believe my due date is April second or third yeah so it's down doing a lot of work now that that's out for you Wow yeah thank you but it gives a runway of a couple months because we do need to educate public to the point of you know Matt everybody's heard of skinwalker ranch your fans and your audience and
(31:38) your listeners are tuned into this stuff and they listen to the New York Times and political articles but generally people need to be educated a little bit before so there'll be a couple months runway to start advertising I guess or letting people know you know this comes coming out yeah that's very cool well you know you mentioned your mentor George Knapp that's a perfect segue to start talking about mr.
(32:05) Bob Lazar and that is another incredible topic an incredible person that is a subject of your work and you've recently been posting some photos and some audio clips with Bob so tell us about your bob lazar project well look it's a dream come true I mean if you know from our past conversations the whole reason why I got interested in this field to begin with was hearing George on the radio with Bob Lazar and hearing him describe the propulsion systems so over the years I've always been available to Bob you know to do this you know and he's a friend but he's
(32:43) been reluctant to stir the pot any further because it has caused so much

hell in his life and it's really hard to convey that to people you have to understand it from a personal standpoint nothing good has ever come - Bob from the UFO experience for from what he said it's it's really apparent if you spend time with him so I am very excited that he is entrusting me the only thing he said you know would the film the only restriction is don't make [__] up right so he wants to tell the truth he wants
(33:23) to say it as it happened he wants to clarify it and to say this is what happened to me take it or leave it if you don't believe it pass it on and be gone I mean that's his attitude but with twisting and prodding you know I kind of got him you know to the point where he is he seemed pissed enough about how people have completely lied about what he said completely twisted his words that he wants to lay it down one last time thirty years later now I will say that in this experience I'm not coming at this like oh yeah I
(33:59) believe it no problem I'm digging in and Wow have I found some things that have not been public yet that I think will really influence the debate on whether Bob Lazar is telling the Dermott so I hope to put this in the film so yeah this is what this story is about if anybody doesn't know Bob Lazar is probably the reason you know the word area 51 it was George Knapp bringing Bob Lazar on the news really basically to say Bob's skin because if his story is true he was in a lot of trouble at the time and that story will be told in
(34:37) intricate detail and there will be new information that's coming out oh that's so exciting dude yeah I don't know I'm I'm really jazzed about that one and you know I love Bob's attitude too I mean there's just something so refreshing hearing people who have an incredible story to tell but aren't the type of person who is all about preaching to you or forcing you to believe something he's like like Bob Bigelow you know who said I don't give a damn if you believe me or
(35:11) not this exact sentiment that he's portraying is you know what here's my story this is what I know you can believe it or not I don't care but I think that's a very very key point is like you know we've all met Bob and he's so down to earth that you kind of come off saying oh [__] maybe there is something to what he's saying or or if he is totally full of [__] then he's doing a really good job of not caring that he's lying you know it's those kind of attitudes that make you really think well you know
(35:46) maybe there is something in a story and I believe this person oh not believe but necessarily like I want to analyze this more because this person is projecting like a possible real thing that that happened and they have nothing to gain they have everything to lose yeah I think that's great and now he's got a cool Snowbird else I saw that picture yesterday yeah artists online who it was it was David Bowie Nikola Tesla Bob Lazar in the middle I disagree I must like oh my god it broke me got that poured and he's like yeah airbrushed I'm
(36:21) like give it to me so I bought it from him gave it to Bob sent a photo of Bob whole minute and the I flipped this [__] it was amazing but Laureen I think a very important point you know you want to analyze Bob you know first of all he's doing this for us not not for himself this is abundantly clear he he doesn't want people to have blind faith in his story he wants people to analyze it to use critical thinking and enough things if he puts his story forward and they line up then it's up to you to decide he
(36:55) doesn't care the ultimately the result if you believe him or not he's just trying to tell you a story a story that happened to him exactly like he experienced it but he wants people to think critically now I am pushing him for evidence because the deal is in order for people to think critically we have to give them as much information as we can to prove or disprove what's going on so that's what's been really exciting is uncovering some things that have been hidden for 30 years and then being able
(37:24) to bring those forward to people so that there's a lot of intricacies to his story I mean one of which is that you know at one point you know he may or may not have acquired some material some physical evidence from you know his experiences and if you've read a story he said that and so that's been a topic of hot debate is was that just something he said to try to defend himself or is that real I I will tell you without trying to sensationalize it but you know my mom is my greatest critic with all my
(37:59) film work you know she's like oh you're into some crazy [__] you know and uh I get back from a recent filming with Bob and man do we wish I had stayed an extra day because the moment I got back he was raided by the FBI at his office so we thought that this window of 30 years nobody cares about his story anymore but it

appears that that is not the case and so there's so many twists and turns this is such a bizarre strange story and note no charges were filed Bob did nothing wrong he's the most honest sincere
(38:38) genuine like gentle person that I've met you know the guy is a good guy but there seems to be interest in these claims that he made 20 year 25 years ago he stopped talking about that a long time ago you know but that is part of his story so when we're looking at this now through the lens of 30 years we have the ability to see somebody who said one thing in 1989 and then this will come out just before 2019 and we'll be able to see that comparison of who that person is and if you get to know Bob then you will get to know which I hope
(39:16) to give you through the movie then you'll be able to base your assessment on his character and his and the details of his story rather than fabricated lies and people faking to be him which happens all the time so here's a random question for you are you working at all with our buddy mr.
(39:37) Tom DeLonge on this Oh on with Bob yeah no no I'm not at all um Bob allowed Tom to do the basic story The Autobiography right uh but you know knowing knowing Bob I mean you know he didn't write it you know so he's got a check it sure but you know and I hope that does come out that but that is what you've heard you know that story right and it's and it's important we want it out on paper but ultimately there's more to the story and that's what a documentary hopefully can tell no but I mean we all know Tom Tom's a good guys
(40:14) done some great stuff I'm really I think people are not giving him enough credit I mean he did some great things bringing everybody together to form this symposium of people with lofty goals but what have they done well they have absolutely certainly got a few videos Declassified put them out to the public so that is huge so we should all be grateful for for what tom has done yeah I agree yeah this is what I love about you Jeremy and not like give you accolades to many or anything but I love you I love your saying no but I love it
(40:48) because you're a trueform investigative journalist that you dig and you get the stuff and you don't take no for an answer you know you get to the down dirty details and I think that's so incredibly important there's not enough people who are doing that we do have a couple in the field but not a lot and so I think it's it's such a great thing to have somebody like you who you're so curious also that you're like hey man I don't know if this is true or not but I'm gonna find out
(41:19) and I'm gonna make sure the public knows and we're gonna see all this unclassified or like you know secret stuff that has never been seen before and it's honestly a real treat for the rest of us to be like he's done all the groundwork and now he's given us all this awesome material so thank you for that yeah no it's great look if we anything we do if we can move the needle forward that's the reason to do something it makes for some very awkward moments when you know you're trying to
(41:45) get to the bottom of something and it's socially awkward but ultimately we're all here for the same thing this is a fascinating subject the truth to it is altering it's altering to our everyday existence to our understanding we make jokes about it like you know Jason you're talking about doing a you know a movie and you know about the laugh factor and that has been it been an issue for a while cuz look this is a funny subject too we have to have humor about it I mean we investigate UFOs that's ridiculous
(42:17) it's a it's utterly ridiculous but we do it because it is fascinating if we can get closer to the truth in any way if we can do anything to move the needle for it that's the whole reason to do anything is to get public understanding because it is a big story it is the biggest story and I think we're all at a point now where we realize there's truth to it but what is that truth and that's what we're trying to define all of us right yeah absolutely you know I I echo what Maureen said I mean I think it is your
(42:48) your curiosity that makes you such an effective storyteller because you're not necessarily steering a story in any particular direction like so many people do you don't have this this this hidden agenda or a motive you are a curious person and you want to find those detail you want to find the truth and that really comes through and your storytelling so yeah you know we always tend to you know kiss your ass a little bit too much I think but it's it's from the heart brother so I appreciate it man
(43:21) look you know it's a nice opposition to the one star negative reviews about my movie so I'm sorry so those are mine all [Music] right well we talked about your movies won't talk anymore about them because I know you're stressed enough of thinking about your movies so let's talk about lectures I know I know you've got you

occasionally lecture and you've got one coming up in your backyard contact in the desert this summer right and you'll be there again yeah yeah and you know wouldn't calm lectures man I present
(43:55) whatever it is that that I've kind of gotten into over that year and and I'm really seeking understanding and advice from people when I do this presentations because you know look if the if the United States Intelligence Agency can send people to these events then you know there's something to it so whenever I present I'm just trying to get information and kind of share it's like a Sharon you know show and tell I will be a contact I am also very excited I will be at the Utah UFO event which is a
(44:25) very small event that has gone for a few years and last year there was a guy trying to pretend he had like some hidden tape from Bob Lazar and he was his like one go-to guy with a secret tape and it was just the Lazar tape so I shut I helped shut that down you know just stop the the ridiculousness of what was going on but I'll be presenting there so I'm really excited for that and then the other one I know if you guys been to it but man I'm excited the it's the one in Oregon McMinnville and when
(44:58) is that I have to look at my calendar can I do that I don't know look it up I know it's this summer but you know organs not that crazy but drive for me I'll come down and see you man oh it's gonna be so yeah I might be like you I've never I've never gone to McMinnville but I've always kind of like Roswell yeah yeah it's like from Roswell festival Oregon like it's very like hard Talent I haven't written down Commandments I don't know no no it's the town yeah oh
(45:26) there's a town okay so that I'm going there and it says May 17th through May 20th oh so that's gonna be totally exciting so yeah I'm only doing a few because I got to work I got to make these damn films but I think these are ones that the audience is really participatory so contacting does it you tell UFO fest and the you know McMinnville one those are gonna make really interesting and also I can show films at each of them so for me that's exciting you know really exciting cool so what do you think about contact I
(46:02) mean I know you're speaking there you can't really talk bad about it but it's gonna be oh yeah totally different event this year right because they essentially took it out of the desert no it's still deep in the desert trust me where it's being done is it's at a casino right I I don't really know it looks beautiful oh yeah it looks beautiful yes but it's not like hippy fest in the desert you know so I don't know I'm not so big everything anyway my people should watch their feet man I don't know so the
(46:32) change is interesting man I really think from a presentation standpoint let's hope that it still has that community vibe Yeah right where everybody gets to kind of share that that you know really was a unique space but I think that the people that are coming and I think the fact that it is that kind of a resort kind of thing let's see how it goes now I'm excited because a better place to project my film so to me it's no big deal but it's always the people who cares really like I could be an
(47:06) attentive skinwalker as long as I'm with the right people it's fun me you say that like it's a bad thing I mean that you're up and right there I mean that's the pinnacle and now intented skin while my roommate wasn't so good you know he was like a grand man no just kidding well you know it's um I don't know skinwalkers an interesting story you guys you know the thing that freaked me out mo you know because I don't really scare too easy I got this weird thing where I feel I'm invincible but uh there was a
(47:38) law enforcement agent who came over and he was kind of listening and checking the permits and whatnot and he pulled me aside showed me this astounding cell phone video I mean just wild and I said can I have that he's like nope and then he goes look I know you're here and you're hunting this thing goes but it will hunt you back I have seen this happen I have seen it hurt people and he gave me this long warning and he was saying it for the cameras and he wasn't saying it to like just freak me out you
(48:15) know he was genuinely concerned about my well-being that was the freakiest thing because I realized that within that culture it is as real as at the rocks on the ground you know you got a camera right he said no no okay all the good stuff I don't get on camera you know people tell me all the good stuff I don't get on camera but you know that's telling stuff man but but yeah I think I think real quickly you bring up a super important part and for because we didn't go too deeply into what skinwalker is for anybody doesn't know

(48:51) you know it's this epicenter where all this activity is happening whether it's UFOs Bigfoot giant wolves and other things but skinwalker and skinwalkers and in the legends and stories are terrifying in you know I Jason lives in Arizona still and I lived there for 13 years I've heard stories from countless individuals who have claimed to seen skinwalkers and sometimes this is being in the middle of nowhere in the desert at night and all the sudden seen a skinwalker creature like in between running as fast as your
(49:27) car it's moving and jumping and tearing holes in your roof or whatever and it's a real terrifying thing so this is beyond the idea of are they're friendly grey aliens or are they you know bad or whatever else it's scary not sure what it is like skinwalkers are supposed to be evil creatures that are human half not in and so it is a terrifying thing and what he gave you a warning is is totally accurate that anybody going on a hunt for skinwalker should be totally aware of this be careful and this is the same
(50:07) thing with the kind of demon thing be careful what you're getting yourself into right there's evidence yeah there's physical evidence of something you know non-human you know mutilating cattle evaporating dogs into a goo I mean the mo it's like you took every wild conceptual idea of the parallel and put it into like a bag and shook it up and dumped it out on the ground that's what you got here but that the people that were truly and have been truly affected by this military people scientists that
(50:40) have had direct engagement with what we call the phenomena because there's no better way to explain it it includes UFOs it can be very devastating emotionally and psychologically now they all tell me there's still time for me to really even be scared shitless you know so I haven't had that experience yet I'm very at peace I mean look living in Pioneer 10 I can walk out to the Joshua trees under the moonlight and it's just absolutely nothing around me I would probably be terrified if I experienced
(51:13) that but I but I haven't so what I'm trying to focus in on is the personal interpersonal experiences the stories people have to tell but also looking if there's evidence and there's proof for any of this which in fact there is I mean it's antidote to alerts on the side but there's physical you know reactions that have occurred there at the ranch and outside of the ranch so yeah it's a deep story these are deep waters and all I can do is my best to present what I hear and what I learn and then let
(51:45) everybody else make up their mind I'm not gonna be able to prove definitively to anybody anything it's gonna be up to you to use your brain you know as anybody should so yeah it's it's pretty freaky you know well stay safe [Laughter] yeah good awesome well buddy we are excited as we always already leave us wanting more and we are super excited about all these projects so wish you tons of luck I know you're under the gun but good luck and again people can check out extraordinary beliefs calm correct yeah that's the
(52:22) website where you can get to everything from there and you know thanks again for having me on I mean I you know I love your show I love you guys and just to be able to share this information it's like a pressure valve you know it's it's really neat to be able to talk with you guys about this and look with everything that I'm doing the anything I'm trying to bring forward I'm trying to move the needle forward I'm not gonna be able to give everybody everything they want and the timeframe they want but I'm doing
(52:49) the best that I can with the tools that I have and I think that if everybody does that whatever it is that they can do to contribute and be a instead of just a consumer to be a participant that's the goal we need more critical thinkers in this field and we need them working on stuff because this is an interesting fascinating field so whatever people do if you can contribute that's the goal get everybody moving because this this is something that we are so close in a way to understanding [__] so hopefully we can we can get
(53:23) there soon yeah and that's a menace the most challenging thing for the people who are consumers or the people sitting sitting and waiting for that information to come forward patience is usually very very difficult and you know we've observed that certainly with all of the to the stars stuff and you know any other active developments especially in this UFO field you know people get really jazzed which they should I mean it's cool and exciting when new things are happening actively happening right now that could
(53:53) potentially be huge and we want the information now you know we want it all right now but [__] takes time you know and patience is so difficult but urge

people all the time just wait you gotta wait it'll come yeah you guys are really good about that I mean you know you don't want to be too excitable there a lot of you know false promises and a lot of things that don't quite you know pan out but within that there's always really important things that we're gonna miss if we're too excitable about it so
(54:24) yeah everybody just have patience and more importantly participate that's what everybody should be doing to try to get to you know a little bit closer to the truth on all this as to why it was extraordinary if you're excited about Jeremy's film projects we recently hosted an AMA with him on Facebook live where he answered questions related to his upcoming films specifically the bob lazar film so look for that on Facebook or on the rogue planet YouTube channel that's all for this episode of spacing
(55:01) out let us know if you enjoyed today's show by liking the episode on YouTube and leaving your comments in this section below you can also download our UFO podcast unknown on Apple podcast or listen at broke Planet TV slash unknown speaking the rogue planet Facebook group you can interact with us this is where we post stuff related to our shows like spacing out and unknown in the best place to ask us questions and join in on these cool AMAs right and visit our website rogue planet TV for all the latest UFO related news and other
(55:39) strange content and follow us on twitter at rope line at HQ our email address is contact at rogue planet TV but if you'd like to send us letters gifts or anything else by mail you can do that too just send it to rogue planet at 1934 East Camelback Road number 120 phoenix arizona 85004 thanks again for joining us today I'm Maureen Elsberry and I'm Jason McClellan we will see you in the future [Music]

Best Documentary 2017 25 Years Later: Bob Lazar, the man of Area 51 - Documentary - YouTube
https://www.youtube.com/watch?v=_oU_eHB1I_A

Transcript:
(00:00) most secretive places on the planet but that anonymity vanished forever because of what happened 25 years ago controversial electronics whiz told a fantastic tale during a TV interview the story still reverberates today the i-team's gorge that played a part in what became an international sensation he's here with an update setting stage Dave you might not know this but 25 years ago young anchorwoman named Paula Francis and I were prepping for the five o'clock news when we learned that our scheduled live
(00:30) interview had canceled we placed a call to aviator John Lear to ask if he key and a friend of his to fill the spot a guy who reportedly worked out near area 51 and had seen flying saucers out there it sounded outrageous at the time to that interview with Bob Lazar turned area 51 upside down we coaxed a reluctant Lazar into returning to Las Vegas to talk about it I don't know sometimes I really do regret it we get it and almost I almost feel like apologizing to him saying that you know I'm sorry I let things out can I have my
(01:02) job back 25 years after he was forever transformed and to Bob the UFO guy Bob Lazar says he regrets ever talking about flying saucers or a secret base in the Nevada desert or any of the things that made his name known all over the world there isn't a day I don't get emails and you know I try and get this across to him look I don't even want to talk about it anymore you know well I don't believe the story great pass it around you know I really don't want you to because it makes life difficult for me a quarter
(01:33) century ago not many people outside of Nevada had ever heard of area 51 the mysterious base 100 miles north of Las Vegas a place the government said didn't exist it was the location of choice for all manner of black projects spy planes that were kept secret from the public and that's my driveway that's Bob that's Jeanne huff and Bob's wife Tracy and Chris and we're just waiting there for five o'clock to roll around former CIA pilot John Lear remembers the day that area 51 became a household name
(02:07) this is home video he shot as a klas news truck prepared to broadcast a live interview from Lear's home Lazar was understandably nervous yeah he was nervous because he was putting it all out on the line there and Erie was going to you know

reveal all this secret that he'd signed you know that he was going to never tell anybody it's not only a crime against the American people in the interview bazaars face was hidden and he used a pseudonym Dennis which was the first name of his boss out in the desert well there's several uh actually
(02:42) nine flying thatha's are claimed he worked intermittently at a location called s4 south of groom lake the main facility of area 51 he said the hangars had been built into the side of a mountain disguised as desert and inside were a set of nine flying saucers months later he revealed his identity to the world and said the technology he'd worked on was from somewhere else that it was being taken apart to figure out how it worked the reason that they're round and have no sharp edges is to contain the
(03:13) high voltage when you get yourself in position the information exploded like a bomb and in the quarter century since then the world has beaten a path the area 51's door every major news organization in the world has written stories the base has inspired documentaries and TV dramas dozens of books have been written fiction and nonfiction hundreds of news articles many of them critical of Lazar and skeptical about his background his tale launched a thousand product lines every trinket you can imagine along with
(03:46) assorted businesses a triple-a baseball team and the world's only extra-terrestrial highway running right past the entrance to groom Lake when President Obama recently made a point of publicly acknowledging area 51 what's really going on at area 51 and former President Bill Clinton told Jimmy Kimmel he'd looked into those stories about space alien so first I had people go look at the records on area 51 to make sure there was no alien down there even the Kardashians have made a trek out into the desert
(04:15) security guards look like how that that you know that story moved throughout the internet so quickly and not just the internet but but news in itself like was in the first 48 hours after the broadcast it was in Japan back in Las Vegas for a visit Lazar recalls why he came forward in the first place he had traveled did the s4 base only a handful of times but began to get scared I began to get worried in that why they've given me all this classified information they're not calling me anymore they won't take my phone calls and the
(04:50) meantime apparently they're deciding what to do with me right if you look at it now for a variety of personal reasons Lazar couldn't keep the story to himself he shared his tale with John Lear and Jean Huff they and a few others made tracks out to the outskirts of s4 because Lazar said he'd learned when the test flights of the saucer would take place three weeks in a row a glowing object appeared over the mountain right it's good look at it now and just a few minutes ago we saw one of the government
(05:20) extraterrestrial UFOs a time when Bob said there would be a test there was a strange light jumping around in the sky above the location where he said it would be at the time and date he said it would be you know here the craft took off when I said it was taking off from past the mountain range which was Papoose Lake s4 south of area 51 you know in a restricted area so it's not like anyone was out there with a model plane or anything and you know flew around at incredible maneuvers and impressed everybody to the point where
(05:51) we got scared and got behind a car fearing the thing was going to explode but really how do you explain it right right now Lazar has more than his share of critics including the pooh-bahs of the UFO community who think he made it up and he has holes in his background that have yet to be filled but to date no one has yet been able to explain how he knew those test flights would take place out there tonight at 11 we tagged along as Lazar takes a tour of the area 51 museum exhibit that his story inspired over the next few days we'll be
(06:22) adding material to our website including the original series that we broadcast and some extended excerpts from this most recent interview remember that Dez backed off those original claims no no tells the same story right now there you go I saw a clip of our interview and Amsterdam in 1997 never does it shock a great job done a great job now at your exchange at 11:00 with Paula Francis and Dave Courvoisier the news of Southern Nevada is now it's been 25 years to the day since a live interview with a shadowy guy named Dennis changed
(07:00) everything for America's most secret military base Dennis turned out to be a Las Vegas named Bob Lazar who claimed to work at a secret facility built into a mountainside just south of area 51 story started a UFO stampede that continues to this day Lazar has tried to put flying saucer stories behind him and has been discredited in the eyes of some critics but it is a story that simply won't go away

we coaxed Lazar into talking about the last quarter-century of UFO craziness the i-team's George Knapp has the story
(07:33) what better way to unwind after a long day than a glass of groom Lake red wine from the alien maybe spend a few minutes staring at the paintings you picked up at the area51 Art Show while perhaps listening to the Bob Lazar music video a story that Bob Lazar told 25 years ago this week has gone around the world many times over inspiring books and TV shows and movies who knew that Indiana Jones warehouse is an area 51 that sound you hear me engaging five will be waiting for it you're too nice another repository of
(08:10) area 51 lore is the exhibit at the atomic testing museum while in town recently for our interview Lazar took the tour I guess I have to get a picture of that it was a little surreal watching Bob Lazar as he saw tape of the first interviews he ever gave about his time working at s4 later as we plowed through boxes of paperwork about his claims Lazar reiterated his preference that people don't believe his story look I am NOT out there giving UFO lectures producing tape sighs this is not a business of mine I am trying to
(08:46) run a scientific business and if I'm the UFO guy it makes it really difficult it's to my benefit that people don't believe the story these days Lazar and his wife operate a scientific supply firm in Michigan he's received media coverage because of the odd stuff he sells online but not everyone has made the connection to area 51 and the Stampede he started back in 1989 when he told of working at s4 south of area 51 where he saw flying saucers so advanced they had to be from somewhere else this
(09:21) is a model of the reactor he says was able to generate its own gravitational field powered by what he called element 115 Mary turned on the reactor which was a flat plate and half of a basketball essentially on it just a hemisphere and once it was activated you could not touch the sphere you put your put your hand on it and just like the light poles of a magnet the exact same type of force he had a little golf ball and you know we dropped it on it and you know it never hit the sphere and fell off and then you know we threw it at it it
(09:58) rebounded and knocked the ceiling out of place but that was a at that alone is something amazing look that can change everything we know today the story exploded among UFO researchers and just as quickly led to questions and denouncements the i-team confirmed Lazar had previously worked at Los Alamos National Lab but we also reported his claimed education credentials could not be proven UFO experts including physicist Stan Freedman and also dug into his background say here's a bright guy I did a lot of checking on him I
(10:34) find a lot of things didn't check out that doesn't mean I disagree with everything he ever said or that he was a liar all the time it means that I can't buy the story as presented what all he did out there I don't know it Lazar says there's no end to the questions and even if he could prove he worked at s4 someone would say he must have been the janitor so he generally avoids the topic altogether oh you just you want some of the fame but the fame you know there's no big dump truck dropping money off at
(11:06) my house every Thursday night there's no I'm not out for any fame I really have better things to do generally people have to twist my arm to come out and do things like that as you know you're the arm twister those who were around him at the time the story broke or took the trips into the desert to see the craft fly above s4 say you really had to be there there's a MUFON that calls me every once in a while and he says we don't still believe that guy do you and I say I lived it it the whole two years
(11:39) it was fantastic was one of the greatest times of my life he would go through the trouble to make up a story the light of people and then perpetuate that light bob has no idea who won the Super Bowl the World Series last year do you I mean he's busy doing scientific stuff but in the Bible's our world he would waste his time perpetrating a lie on anyone look I know what happened it's true there's no doubt period Lazare was known to have unconventional interests and a spotty financial record so why would a top secret program let
(12:15) him in one theory is that maybe someone predicted he would spill the beans and was chosen because they wanted the UFO story to be planted Lazar told us he can't rule that out entirely we're putting together a special area 51 section on our website and we'll be adding material to it over the next few days including extended excerpts with the most recent interview and by the way the area 51 exhibit is having a grand reopening this Saturday that alone is something amazing look that can change everything we know today just having a

(12:50) machine to produce artificial gravity because look look at what that does we know gravity space and time are all tied together there are your shields like on Star Trek that you know deflect micrometeorites there is your protection from radiation without heavy shielding there is something that with an intense enough focused field you can actually bend space and there is something that can actually alter the flow of time I mean that's the missing piece of pie they actually freeze a candle flame yeah now that's when it was connected to the
(13:23) gravity amplifiers where they could focus it and that was they froze a candle yeah they had a they had a candle lit out to set it up for you again there's a large in the craft itself there are three long pipes I'd say well I don't know about what's that three or four feet in diameter maybe five feet long anyway they dangle the three of them at the bottom of the craft these produce gravitational waves and they can focus them to a point or spread them apart wow you called the wave guys yeah yeah
(14:03) they're part of the power source control mechanism and the wave well the wave guide is what I actually call the inner link between them but that that's the gravitational engine they had one of those devices out along with the subsystem that connects it so they can produce the power from the reactor it runs the gravity amplifier and they can focus and change the gravity beam that comes out of it they took they were speaking of Barry took a candle put it close to the mouth of it let it a normal flickering candle flame and then
(14:43) activated the reactor the gravity wave came out as expected and the candle flame remained luminous and stopped moving and yeah because look if it's going to freeze it the proton should stop being emitted if it's going to you know change the characteristics look how can the combustion continue to take place without the convection inside the flame because actually the reason a flame is elongated is not not really because it heat it's because of gravity because gravity pulls down and you know convection moves flames upward it's like
(15:24) in a zero-gravity environment flame is a ball obviously there's nothing to pull things around but anyway if look if you negate the gravity around it why is it still pointy how can it still be making light and why doesn't it move well I mean heat from what Barry said it's not just gravity but it's also time locked you've distorted that ya they essentially froze it a piece of time they're not you know what do you say I mean you're it's empirical evidence you're looking at it it's not it's not a
(15:56) it doesn't make sense that you could see it and look it the stuff I saw there is the most unbelievable literally because it it defied what what we knew as physics and at least I thought it did and maybe what we knew was a little incorrect and just needed viewing from a different angle they finally did synthesize element 115 that had the properties that I that I stated not what it wasn't stable yeah it wasn't stable now each element has isotopes for instance you know let's talk about hydrogen we're all familiar with
(16:41) hydrogen hydrogen has three isotopes they're all hydrogen there's hydrogen protium was be the technical name deuterium and tritium well tritium is a radioactive hydrogen deuterium is another stable isotope of hydrogen and regular protium ordinary hydrogen is the hydrogen we all know they're all hydrogen they have different amounts of neutrons in them they all have one proton which makes them hydrogen now this is a true for all elements you can have the amount of protons in them determines what element it is so element
(17:21) 115 has a hundred and fifteen protons in it its element 115 now depending on the number of neutrons it has it will still be element 115 but it can be any number of isotopes of it that's 115 undoubtedly how is you know many isotopes of it we've synthesized 115 we made one isotope we have a radioactive one now they just need to continue on working with it I mean they made just a few atoms but we'll see what other isotopes they come up with one of them or more is going to be stable and it will have the exact
(17:55) properties that I said or could we make it or does it have to be natural as you speculate about that well it's natural it'd be difficult to find it I do not think you can make that synthetically it's just it takes too much time mean to make it one ounce of it or even a gram would take a tremendous amount of time because not all the interactions are successful I mean you can bang particles together all day long and one may get stuck and then you've got an atom and how do you contain you know this single
(18:26) atom so how do we get 500 pounds of it where'd that come from well at it had to either be synthesized by the extraterrestrials that bought it in the first place

or you know maybe there was a location where they came from where look this was a naturally occurring material we know that all the material in the universe essentially all the atoms of all elements came from hydrogen I mean all you really need is it is just atoms of hydrogen to make anything once they start collecting together large quantities of them
(18:59) gravity just begins to push them together under their own weight as long as you haven't enough hydrogen that'll continue until they finally crush down and ignite and produce a fusion reaction and that starts a star once the star is burning it begins to produce helium by fusing so now you have another new element well this continues on until the star burns out begins to collapse and when you know large enough stars finally do they crush down Purdue's supernovas and then produce a whole host of every
(19:32) element on the periodic chart far beyond what were the numbers were used to beyond 115 and you know maybe some of these misfits where all the gold all the uranium every element you have ever come from including every cell in your body has come from supernovas that's the factory that makes elements so if there was a location somewhere else that had bigger stars multiple stars that burped out more heavy elements then you know our local system did maybe this is common and you can find stable 115 like we mined for gold on you know on our
(20:07) planets or uranium it just depends if they were lucky enough to have exotic materials like that I find that easier to believe than somebody built a machine to manufacture such a difficult material it's because they're like a Rorschach test aha they made 115 he was right it really does exist somebody doesn't want to believe it says 115 doesn't behave anything like Bob Lazar said it's sitting around in a pile of 500 pounds or something right I mean it's sort of like that what is right you have to I mean you
(20:36) just have to start accumulating what do you believe it or not and I personally again I prefer you don't believe it um you know just begin accumulating the facts that you can you know you can verify and and really be careful but that drives them crazy I mean those need to answer this now I need an answer how much how many times you get that you know in a week still after all I get and there isn't a day I don't get emails and you know I try and get this across to them look I don't even want to talk
(21:09) about it anymore you know well I don't believe the story great pass it around you know I really don't want you to because it makes life difficult for me I'm trying to do serious research I'm you know I've got contact with governments and other companies for R&D work and aside from you know other scientific interests and I want this divorced look if I went and did everything I can to prove my story and reached a tipping point for where people like Stanton Friedman and you know people along those lines said you know
(21:44) what this is beginning to look factual do you know how that would annihilate me that would destroy my business it would make it impossible for me to operate and you know I'd have a continuous flow of questions annoying people and sure offers to do things that I am not the least bit interested in which is how it was four years yeah it was four years yeah look I could have jumped on all that stuff I could have you know at area 51 sports drinks and I could have been giving look how many lectures at one point I had what's
(22:19) that talk show hosts that go what's the guy's name which one wrong fenders until old guys has been Larry King Larry King yeah yeah I mean I had an open invitation at one time for that show to come on as the you know Aldo everybody you know I turned down everything until I blew off movie scripts I blew off all kinds of stuff because they couldn't stick to facts is there a part of you though that there's got to be party is somewhere in there even though it would be counterproductive has got to be party
(22:54) of the wishes on dammit I know what happened it's true no look I know what happened is true there's no doubt period there's there's no delusion and there are some things I can say that that will bolter the case and I'm not going to it's going to stay that way I do regret at this point bringing anything forward look at the time I'm in my early 20s oh wait you know what this is a crime against the American people this is just BS and everybody deserves to know what's going on you know and 25
(23:31) years goes by you get a little older and your priorities change and you know what they told me is this is a security matter and really what's the public going to do without this you know reactionary they are it's there's a bunch of different reasons this is being kept quiet nothing that they bother telling me but the bottom

line is they're right the bulk of the people are complete morons and I'm sorry maybe they are right

Bob Lazar Interview (2009) - YouTube
https://www.youtube.com/watch?v=sayBcyK5hfI

Transcript:
(00:00) joining me now is the president of united nuclear that's a company that sells all sorts of scientific equipment and materials online the owner is a guy best known for other things though specifically area 51 and ufos but for now we're going to talk hydrogen bob lazar good to have you back on the program well how you doing george how the heck are you doing how's life how's it going in general it's it's pretty good it's pretty good it was uh quite a change moving from new mexico to michigan you know i was
(00:30) born out on the east coast and uh you know i've lived in the southwest the majority of my life and um you know moving back to michigan where there's actually moisture in the air and uh you know wide temperature swings and being reintroduced to mosquitoes i mean it's uh it's quite a change you're just gonna love your first michigan uh winter coming up here i'd imagine aren't you well i actually was here through part of a winner last year but uh you know numbers like 10 below are kind of scary
(01:03) to me but um you know it's the dark dreary winners that uh they keep talking about here so we'll see i'm sure i can take it at least for a while but uh i had a prayer for the long haul so it's uh well explained to a lot of the the viewers our listeners had sent in emails to me before the show they wanted to know why you picked michigan why and why not uh the big city in michigan if you're going to go up there and develop a hydrogen system what was the the deal on that well boy that's got to be the number one
(01:33) question that people ask me um well it was really uh uh mainly it was a family thing um uh joy's son chris and his wife emily had a uh baby recently making me uh a grandfather so which is a unique experience in itself to me but uh you know the new little guy sullivan uh lives out right in mid michigan right outside uh lansing so um you know as far as moving the business that needed to be done anyway we were bursting at the themes and we needed to expand uh you know get away just from our uh sales of scientific materials and
(02:22) equipment uh to getting back into doing contract work for the government and military and then also adding on a third division uh you know the hydrogen fuel system development so one of the reasons was michigan of course has plenty of unemployed auto workers some of them extremely talented and some of them you know desperately in need of a job and certainly we thought you know once we get this thing up and going and we start needing uh large amounts of people we already have a pretty well trained workforce so that
(03:00) coupled with you know the desire to see the new little guy uh needing more space and just kind of wanting to get away from the dry southwest we'll get into the hydro we'll get into the hydrogen uh technology in a moment but you know last time we talked to you you had a suite set up there in new mexico you had like five acres of land it was picturesque and beautiful you'd built this facility in the back of your house with this 30 foot long particle accelerator as part of your system and i remember when you were on the show the
(03:35) last time uh you had just had some trouble with government folks who showed up your house one day with uzis and and were very angry with you for what you were selling over the internet right well or so that was what they claimed the problem was do you think it was related to hydrogen you know who knows you know it's uh it just it's hard to say but um you know still um the thing that they said they came down for essentially was we were selling um various combinations of chemicals and supplies that could potentially be used to make
(04:15) exploding fireworks that sort of thing or explosives in general um they never did take any of that material the only material they actually physically took from us was um and still to this day it remains missing were the original plans for the hydrogen fuel system which is you know always been a thorn in my side but um you know still it was it was a long court battle and um you know essentially we came out i wouldn't say we came out ahead but uh things didn't go as badly as uh we first

thought well you
(04:53) didn't go to prison didn't go to prison and didn't get hit with the 30 000 fine which they had um you know originally intended on hitting us with let's talk about the hydrogen system describe it for the listeners how it works and what its potential would be well the hydrogen you know certainly running a car on hydrogen is nothing new it's been done [Music] you know by several companies many individuals and it runs basically like uh you know running a car in any flammable gas propane natural gas
(05:26) whatever the only difference about excuse me hydrogen is that um hydrogen burns much much faster it has a extremely high flame front velocity it almost detonates as uh opposed to burning evenly like you know propane or natural gas does storing hydrogen is really the trick because it's a gas and being a gas to store it takes up a lot of volume and you can store it in one of three ways you can store it as a gas in compressed tanks which means uh compressed gas and you know heavy tanks like you would a welding setup for instance which takes a
(06:11) heavy tank usually thick high pressure sometimes extremely high if you want to get any quantity of gas in there and to me although there are some tanks now that have been developed that are somewhat bulletproof but still you have the possibility of uh you know major auto collision compressed gas at that pressure spewing out igniting you know potential safety hazard the other way is liquefying it where you get a much higher density but now you're dealing with cryogenic liquid extremely cold and you still have all the problems of
(06:55) a collision these require even more specialized tanks dewar tanks essentially thermos bottles if you will on a large scale and that again in a collision you have a now you have a cryogenic liquid pouring all over the place and you know potential explosions whatever the third and uh most interesting way is storing it inside a metal hydride and metal hydrides are at least ours is a it's a granular material it's a solid and it's filled in a tank and what it does it absorbs the hydrogen gas like a sponge absorbs water
(07:38) once it's absorbed the hydrogen it becomes chemically locked onto it in other words if you have the tank full of the hydride material and it's completely charged with hydrogen i can take that tank and cut through it with a buzz saw or shoot it with incendiary bullets and all it will do is smolder like a cigarette so it's a very safe way to store hydrogen the only drawback is with most hydrides there is a limited amount of charge and discharge cycles just like a rechargeable battery for instance after a while you have
(08:25) decreased capacity and you know other problems also they're very sensitive to impure hydrogen some can't be exposed to the air and on top of that they're very expensive material the hydride that i've developed has an extremely high amount of charge and discharge cycle in fact over a period of about seven years from virtually daily use we've only lost 12 percent capacity in storage which is phenomenal another benefit of storing it in a hydride is that the density of the hydrogen is actually greater than that
(09:17) as if you had a cryogenic setup or a liquid hydrogen so it's really the ultimate way to store hydrogen and once you can store hydrogen safely in a car um the rest of it's pretty easy you had told me before last time i saw you in new mexico anyway that your cars were running then on hydrogen are they still running on hydrogen well they're not right now and that's not because they can't it's just because a practical considerations are taking apart the uh uh tanks and equipment from there uh
(09:55) getting ready to go into production and duplicate everything but um there's one vehicle left a little toyota celica that's the only vehicle we have that runs in hydrogen right now but at one time we had a corvette mitsubishi suv what else did we have running on hydrogen basically you're saying though that i mean the use of hydrogen as a gas to run cars that's no big deal that's been proven you've proven that your cars ran for a couple years on it other people have proven it as well what you bring to
(10:29) the table is this hydride storage system well that and also the the gas handling system in the way the way it works um how would i describe that it's not just the hydride but also the way the hydrogen is handled and burnt and how this system interfaces with the existing vehicle hey bob we're going to take our first break here with you and we're going to come back and talk about why this is not on the market what the impediments are to it we're talking with bob lazar here on coast to coast stay with us everyone
(11:08) thanks for being with us tonight everyone think you're going to have a good

time this evening if you notice that song tom petty uh it was from 1989 in fact all the songs we're going to play tonight jason bowers our engineer and i picked up some good ones from that year sort of to go along with the anniversary theme of tonight's show i mentioned to jason before we went on the air that hack 1989 i was barely a teenager you know i'm kidding of course and and i mentioned to him he must have been old
(11:33) back then uh i imagine him wearing uh john travolta type white disco suits and angel flight pants and asked him to send me some photos and sure enough um they're too embarrassing to show uh ladies and gentlemen i i i do have uh one that i sent to tim benall we might post it later unless uh jason wants to uh pay me off anyway we're talking with bob lazar about his unique hydrogen hydride system and the promise that it holds to revolutionize transportation in this country and in the world and when we come back we'll
(12:05) get into the idea of why it is not on the market now what's the big hang up stay with us here on coast to coast am welcome back to coast to coast i'm george knapp we're chatting with bob lazar president of united nuclear about his unique hydrogen fuel system bob is this uh yours and yours alone or other people have developed a similar thing well this particular system is is mine uh that i designed and actually been working on for quite a while the um original concept was actually back in the 70s when i started playing with
(12:38) hydrides but it really didn't start serious development i'd say until about about seven years ago or so pretty good for a guy who's not really a scientist right yeah i haven't heard that in a while by the way these one o'clock in the morning shows are really a killer for somebody that goes to sleep at nine o'clock i mean the coffee's beginning to kick in now so i think a little more well we appreciate you staying up but i'll only make you do this every three or four years or so okay that's fine
(13:14) well describe for me uh the big picture let's say you could get this thing going you could get it to the market what does it do how does it transform our transportation industry uh ultimate basketball how the system works the system comes with an at-home hydrogen generator this device is about the size of a dishwasher and sits in your garage what powers it is depending on your location it is powered by either solar panels or a wind turbine electric wind turbine and you kind of have your choice depending there again what works best for your
(13:52) location you know where you are in the u.s the system takes the electricity from the solar panels or wind turbine uses that to break down water and produce hydrogen and oxygen nothing new this hydrogen generator is very efficient and produces hydrogen at a fairly modest rate what it does is all day long the generator remains in the garage or wherever you put it in your house produces hydrogen and just stores it now when you come home after a day of driving you're not going to use the car anymore open the garage door put the car in
(14:39) connect it to the generator it takes the hydrogen it's produced all during the day and slowly begins to compress it into the metal hydride now it can't be done fast you can't fill this particular type of hydride or really any hydride that i know of very quickly and while the hydride is being filled it produces heat which has to be removed and that's part of our unique system these tanks we call smart tanks have a way of dissipating the heat produced inside and also there's an electronic modern monitoring
(15:19) system in the tanks that provides data to the computer of hydrogen quantity pressure temperatures all kinds of other parameters the tanks in a car typically will get you about 325 to 400 miles on a fill now 90 probably more like 95 percent of the people in the united states don't drive that much in a single day so typically if you're only driving say 100 miles or less you always have a surplus of hydrogen so you're basically just topping off the tanks every day the tanks don't have to come out of the car to refill it you just
(16:04) connect a hose to it there's a little fitting on the back where your gas cap would normally be and the car at any time can still run on gasoline in other words if you wanted to take a cross-country trip you can start off on hydrogen when the hydrogen runs out the car will fairly seamlessly switch back to gasoline and continue on so it really takes care of the driving your normal day-to-day going to work um you know 95 of the driving it would be great in a delivery truck situation and we have a couple companies that are
(16:48) really interested in you know trying the system out on a large commercial scale but basically that's that's how the system works there's a couple problems that have to be ironed out they're more legal concerns not technological problems

for instance hydrogen is an odorless colorless flammable gas and if there is a leak it's a difficult thing to detect where if you had a natural gas or propane like because of the odors that are put into them that's pretty obvious but with hydrogen you can't put an odorant in it
(17:31) or the hydride well the hydrate just won't let you do that it won't store it'll poison it and become non-functional so we have to rely on electronic detectors for any potential leaks however there's never more than about a liter of hydrogen in the system at any given time so um you know there's a couple little problems that we have to make it you know essentially street legal but as far as the actual operation of the system uh its efficiency its reliability that's all been ironed out quite a while ago
(18:10) but this is a game changer you're not talking about as the oil companies and auto companies are talking about yeah we're going to have a hydrogen system where you drive your car to the hydrogen gas station you're talking about people making their own at home where they don't need the gas station anymore and i would think that the principal um obstacle to you getting this on is more political and economic i i can't imagine that the oil companies uh are real crazy about this idea no i can't imagine they're crazy about
(18:39) it either and of the larger companies i see interested and producing hydrogen vehicle prototypes again they're doing exactly what you said they're just they're trying to switch from a gasoline economy to a hydrogen economy well to me you're missing the whole point of hydrogen the reason hydrogen is so great aside from the environmental factors that the only exhaust in burning it is water vapor steam essentially and maybe you know a drop of oxides of nitrogen but that's really negligible but it's essentially completely clean
(19:16) burning and actually adds moisture to the atmosphere the the great thing about hydrogen is it's so easy to make all you do is pass electric current through water there's other ways to produce it and of varying levels of efficiency but if it's that easy to make it it's ridiculous to buy it and with our system essentially you buy you buy the entire kit the home generator the conversion kit for the car and that's the last time you ever buy fuel and if you sell your car the kit's completely removable
(20:00) you pop it out of your car pop it into the new vehicle so i believe it's a great system i'm obviously a big fan of it i have quite a big list of people waiting for the kits to become available and it's now it's just a matter of production i would think that the uh the oil companies would send hit men uh to take care of this or worse they would send teams of lawyers to tie it up forever because it basically puts them out of business i mean the potential for economic disruption i guess from their perspective it would be tremendous
(20:39) well you know you hear all kinds of stories like that and i always poo poo the government conspiracy guys and you know and until little things start happening i had somebody from uh a government agency and the reason i don't want to say who it is is i i don't want to start a fight right now you don't want to antagonize them so they come knocking on the door again yeah well they already did and their comment was verbatim you know where you were speaking about the hydrogen car and looking at it his exact words which
(21:19) really shocked me was now you really don't think you're going to be allowed to get this on the road do you now it really took me back because i thought we were past that and you know what why would a government agency have anything to well boy i could just ramble on here i'm not going to well you don't want to get yourself antagonize boy you know you guys have to see this benefits you too it really it really does but i i don't know where it's gonna go from here i'm gonna do everything i
(21:57) physically can it's taken longer than expected uh we're expanding our business and i'm trying to incorporate all three of our businesses into one building and really the only reason it's taken so long i really thought these would be rolling off the production line already was it's basically my fault i generally insist on doing everything myself and are a little bit of a control monster when it comes to things like this and we've had a lot of people interested in investing in it and you know helping us out financially in
(22:36) different ways and you know there are so many hydrogen scams out there now and so many ridiculous claims you see all over the internet that um you know i wanted to be completely self-finance this which i knew was going to take longer and that's what our scientific sales division uh has basically funded this from the beginning and once we start producing some of the generators initially and then some

of the kits profits from those will increase production of things of this sort well we've had a lot of complaints
(23:10) from potential customers already that things are going too slow you know if we would have taken investors on we could have got that gotten us going sooner and you know they probably are right in fact obviously they're right but uh it's just really me being hard-headed and wanting to do this without any assistance is really what the delay is well i mean and that knock on the door though and not to belabor the point or try to get you in trouble but it seemed that that knock on the door is a problem you're
(23:40) going to have to face again i mean the implication is yeah the implication is this if i have to spend you know all our finances fighting this in court it we're not going anywhere and this is exactly what happened last time it brought us to a dead stop because you can tie things up in court forever and i i just don't want this to happen so i'm just trying to move ahead as fast as possible and get the systems out and if we you know run into legal problems we'll just deal with them one at a time but
(24:18) you know boy is anybody actively trying to stop this i'm i'm beginning to think that's what i should expect well the implication that these government guys came and said to the effect you really think you're going to get this on is that they are there at the behest of somebody else i mean big oil or big industry or a big auto or something like that and the suggestion that or the even the implication that government agents would be their working for them against the public will i mean that's uh
(24:50) and against the public interest that's pretty scary and i don't know if you want to go into that or not i guess not yeah like i said right now nothing has happened and we're just getting ready to move into a new location to start the production of these so yeah i i don't want to antagonize them certainly i'll still start screaming the you know if if they go on the attack but right now maybe it was just a guy saying something off the cuff me you know coming up with his own personal comment and maybe it
(25:28) was a warning of you know horrific legal battles yet to come but there is no reason that this system should not be made available or i shouldn't be allowed to sell this it's safer than gasoline it you know certainly friendly to the environment and it's something once you feel that freedom that it's like being off the power grid you know once you make your own fuel and you're essentially doing it at close to zero cost it's a completely green system it's a great feeling of freedom and you know i think it's going to be an
(26:11) extremely popular system tell me this uh i think you told me the last time we talked that the government of michigan the state there had indicated that it would support this in some way have they been helpful they have the state this state has been just more than helpful and even the town that we're in when we first moved here they did everything they could to make everything go smoothly they even got the local colleges to interview and hire people for us the uh we're invited to lunch with the governor and
(26:48) have had several meetings down at city hall i spoke with the mayor recently who's doing everything in his power he's behind us a hundred percent trying to get us into this new larger buildings so we can you know jump on this as quickly as possible so we yeah talk about assistance they are they are the most helpful uh local government i've i've ever come across and this is certainly in contrast to new mexico which seemed to do everything in their power to fort anything we were doing well i would think that if you know
(27:31) given the power of the auto industry in michigan and the political power that if uh if the state and the local governments are helping you that maybe the auto industry itself is not necessarily opposed to the idea i mean i i guess it doesn't matter to them what fuel uh works as long as it keeps them in business maybe so and you know hopefully that's that's true anything else you want to say to the listeners on this topic about how they can help you in this regard help you get it on i don't know how they could help at this
(28:06) point but i mean public support has to account for something on this yeah it it does you know i mean there's no place to you know do a letter writing campaign or anything like that it it really just remains to be seen how things are going to go if we're just going to be allowed to operate like any other business or you know we're going to be hit with a sledgehammer every time we try and move forward it's going to happen soon so we'll see exactly how things progress but right now it's just a matter of

(28:42) financially being able to get into a new larger location and and get things moving on you know on a limited budget but uh i know it's like i said it's something we should have been we should have already been in production and had things moving but i'm pretty sure that uh somewhere in january and february we'll start firing up some of the uh new prototypes and hopefully have at least the generators uh going into production in you know the very near future and that will be followed very shortly by the
(29:22) car kits and certainly in the future there's also uh as your hydrogen generator produces surplus hydrogen home generators for backup electrical power and you can run everything from your oh your gas stove to heating and cooling units on it so there's a lot of a lot of potential down the road aside from uh automotive applications so i'm pretty excited about it and well awesome if you uh if you run into some trouble you have an open invitation to come back to the program and scream to high heaven if you
(29:59) want and we'll see if that helps i want to ask one other question before we go to the break and shift gears uh the last time we talked you had had a really interesting episode because of something you were selling over uh we don't have time for that i want to get into the polonium thing and then we'll bring on john lear and gene huff stay with us everyone we shift gears into the subject of area 51 after this break here on coast to coast am i'm going to ask one more question of our guest bob lazar non-ufo related then
(30:30) we will take our break get that out of the way and bring on our other guests gene huff and john lear bob the last time we had you on it was uh not that long after you had an encounter with the government there in new mexico about something you were selling online and and the reason it became uh national news is because this particular element was used apparently to kill a russian spy and uh so national news network start asking questions about uh the element i think it's polonium and lo and behold they find this guy in new
(31:01) mexico who's selling it right yeah they i guess not knowing very much about polonium 210 which was the isotope that was used they went and googled it and if you i i don't know if it's still the case but i bet it is if you google polonium 210 united nuclear comes up and probably our sales page with it right on there we sell a wide variety of radioactive isotopes polonium-210 being one of them and not knowing much about it so they pretty much just came to us and said what's what's the deal and how could you
(31:37) possibly be selling this and we're really flipping out over the whole concept but it uh as it turns out the quantities that we sell and are permitted to sell are so small you'd have to spend 30 or 40 000 and take a year of your time trying to mine little invisible specks of the isotope out of the plastic disc that they're in and you know collect them all and you couldn't even buy that quantity from us nor could you physically remove the material to poison somebody with so what they were concerned about was pretty much
(32:20) impossible and it's legal to sell the material it just is one of those things that sounds scarier than it is but i can see somebody saying why the heck is this guy selling polonium in any quantity along with all the other potentially dangerous stuff that you sell well everything's potentially dangerous if you go to a grocery store everything from drano to clorox is you know potentially fatalists ingested but you know science chemistry even physics all have materials associated with it that are you know potentially dangerous from high
(32:58) voltage generators toxic chemicals and things of that sort and united nuclear has really done as much as it can to bring back science and if you remember when we were kids everybody used to have chemistry set you know they said it in the 1960s in households that had children almost 60 percent of them had chemistry sets in them now if you see somebody with beakers and flasks you can almost be assured that he's going to be cooking meth or something along those lines so it's it's really taken taken a turn
(33:44) and what we're trying to do is is bring it back the other way is reintroduce science kind of bring the fun back into it so we're you know trying to get our hands on all this neat science equipment that's pretty much been lost and has dropped out of american culture and we've done a pretty good pretty good job of it and you had said that it was like the government had declared war on chemistry or something by trying to take all this stuff uh off the market uh especially buying it over the internet or online
(34:18) uh that they didn't want people to have these capabilities for themselves no we were actually told that i i can't remember exactly what agency uh said that

because so many have come and paid a visit to us but they said it you know if we could we'd like to get uh chemistry and scientific supplies we're talking about you know and any chemicals beaters flash that sort of thing out of the hands of the general public because it's simply too dangerous for them and statements like that just really tweaked me you know everything
(34:57) you take for granted these days from the dvd players the uh circuits that run your car to your home computer all of the guys that developed this were those little science nerds that sat at home and tinkered with things and guys like you pretty much though i fit the mold but they all have common backgrounds and you can't it's it's stuff like this that stimulates their minds when they're young and it's it's just how science grows and you you can't take the stuff away from them it's only dangerous
(35:40) if you allow it to be that way you know certainly there are some things that are more dangerous than others but you can't you can't just ban it all like the state of texas did they kept uh busting mess labs and again ignorance seems to lead the way they kept seeing these beakers and flasks that every place they went to so they just assumed well this glassware seems to be prevalent all the time we need to ban it well you can cook meth in mayonnaise jars but chemistry requires special glassware sometimes so
(36:20) they went ahead and just banned the sale of certain types of glassware well moves like that are ridiculous and you see that more and more often and we're just trying to do whatever we can to reverse that you know certainly if there are specific chemicals or things you need to control to stop producing you know dangerous narcotics of course do that but really pay attention to what you're doing you know each time you create a new law and ban something you take away your freedom and that can have some really
(36:57) far-reaching effects well put we're going to take our break now when we come back we jump into the area 51 story 20th anniversary of the ufo's best evidence expose and we'll be joined by john lear and gene huff stay with us here on coast to coast am welcome back all right we're getting right into the story of area 51 20 years ago this week it sort of all came spilling out in a program we produced called ufos the best evidence uh the three amigos are here the three guys who played a central role in that story
(37:27) coming to light uh john leer who's been a guest on the program many times gene huff who's a a friend of bob's and mine and has been here as well and of course bob lazar john i want to start with you the question is actually for all three about it but i want you to start it um you know we get a lot of uh even this many years later a lot of people who write in and say it's a bunch of malarkey it's baloney you guys are disinformation agents you're making this stuff up it's a scam i wonder if you uh
(37:53) take the time and if it's worth the effort to try and convince people that it is real after all this time well you know what i what i say is that uh bob took us out there at nine o'clock on wednesday march 22nd 90 uh 1989 and he told us before exactly what time it was going to come up a day before so we go out there and we watch this thing come up and fly around and go down and i saw it through my celestron 8 telescope so i saw it uh the question now is well maybe he was just a cook well if he was just a cook then that
(38:38) means that all they do is you know they all their secret information goes to the cooks out there and gene you've sort of been the the window to the world for bob in in many respects answering questions when he doesn't want to answer them is it worth it to try and make the argument anymore you know for a long time we i think we've just decided to sit back and let things unfold as they will and and uh george thanks to you you uh courtesy copy me a lot of the emails to get sent to you and john i i know bob's aware of this i
(39:14) emailed it to him but john this this former uh senior lockheed senior engineer boyd bushman at lockheed martin i guess has come out saying that you know the government does have alien technology and you know what it's being tested for and used for again another grand old gentleman a wonderful guy to watch in an interview and and as not to divulge any government information that he was privy to under you know under his uh secrecy agreement when they when he was interviewed and asked what type of technology he was talking
(39:48) about he referred them to the lazar tape with then he said that's all i'll say so i think it's interesting that this tape bob and i and a few others essentially made you know on a shoestring 20 years ago is what a a senior lockheed engineer who is now at the end of his run in life and retiring and deciding to

divulge information without breaking a secrecy agreement bob lazar's information is what he gives to the reporters so i think that speaks for itself bob i know what your answer is to this uh i'm just wondering at what point
(40:20) did well i'll put it this way people have accused you of being a charlatan and a huckster and you're in this for the attention or the fame or the money uh the money that came with it and uh what they don't remember is uh 20 years ago this week as i'm editing this stuff and getting ready to put it on the air and reveal to the world who you are you were in the edit bay trying to grab the tape and and uh had a last minute um feeling that you really didn't want to go through with it sort of a reluctant
(40:47) huckster that's true first of all i gotta say hi to john lear because i i just haven't talked to him in a long time and uh i probably should give you a call once in a while john sorry i don't yeah it's 18 months two weeks but who's counting and i do have to say one thing i mean generally i give john a lot of crap because i think he's crazy at certain times but um uh once again and this has happened before uh on a particular topic i think years and years ago john had mentioned aside from
(41:26) his claims that there have been extra flights to the moon and people are out there all the time that there was water on the moon and i remember you know laughing and i'm going down that's just ridiculous and shut up and it's just another lyranism or something along those lines but here it is 2009 and they've confirmed that there's water on the moon so i'll say it publicly john you were right george you know i i hate to say how how how how sane john has become in recent months and years but a few weeks ago when i found out
(42:02) nasa was going to bomb the moon to check for moisture content i made the call to john leard and said okay now john why are they really bombing the moon i mean what an opportunity for a conspiracy story and all john said is my back hurts from my operation a year ago and i think they're just checking for moisture content though i was never so let down the pro searching for a john leer conspiracy in my life i don't think the world is ready for a saint john lear so let's just leave it at that but i'll
(42:29) answer the question well do you get you get hassled about it bob still people stop you and ask you about it and they say yeah well where's your school records and why didn't you prove this well you know i'm i am so tired of so first of all i i don't chase the topic i don't pay attention to it i um you know for the people that think is that this is some kind of hoax or whatever you know the only thing i can say is number one you know it's it's an incredible story and if you don't believe it
(43:04) it's good for you because quite frankly if the tables returned i couldn't believe it either i mean you have to take things with a scientific approach and be a skeptic as possible i can't present enough evidence again if the tables were turned to satisfy my needs to say yeah that absolutely happened to this guy and it's just not physically possible i can't take people there as i've said before i didn't come out with much evidence and there's you know considerable amount of disinformation that have been splashed
(43:39) around concerning my name and you know events things i've done whatnot so it's it's a hard uphill battle so again all i can point out too is number one events did occur exactly as i say number two if you if you think i did it for attention you obviously don't know me because i do everything i can to stay away from i'm not out doing ufo talk shows well this of course is one but you know it maybe once every three years i'll do it if i'm bugged enough only because we're friends but i'm not
(44:18) on the ufo circuit i don't uh you know attend these conventions or sell things so on and so forth um i really just want to be left alone to do my work so as far as being in the public spotlight i hate that if you think it makes money again you don't know much about it there's really no money to be made if anything it is real difficult to overcome the stigma being the ufo guy we do government contract work and consultation for many companies and it's you know it's a difficult thing to have that hanging over your head aren't you
(45:00) that guy that thinks that they're an alien somewhere yeah that's that's me you know and they have second thoughts about us developing a product for them but uh so if anything i would say it's had an overall negative effect so the there's really no motive to do this i certainly have better things to do with my time and i have such limited time as it is like i said i don't i don't even want to be involved with the topic although i feel extremely privileged that i was at that time and in some respects
(45:36) miss it before bob turns the entire universe off of ufology yeah i'd like to

interject that with the advent of bob lazar you know the world has turned 20 years ago i didn't hear the vatican commenting on life elsewhere and i think everybody in the country we saw the ap story was on the front page of the review journal here in town about the vatican uh you know calling a gathering of world scientists together to examine the possibility of extraterrestrial life and see how it fits into their perception of
(46:07) god's children uh i don't think that was happening 20 years ago 20 years ago certainly uh edgar mitchell the sex man on the moon you know phd in astronautics uh you know was not on the record at least as as saying that he had any knowledge after investigate doing his own investigation which included coming here to las vegas and speaking directly with bob lazar i was there at that meeting now edgar mitchell is on the record i think there's even a a video clip of him at the beginning of the moving you know the
(46:40) movie the fourth kind on abductions that came out this past week there's a clip of edgar mitchell and here here is a a a a brilliant man and a scientist a nasa astronaut six man on the moon saying that he has seen sufficient evidence to his satisfaction that you know there has been life from elsewhere that is that has visited earth and the u.
(47:00) s government's covering head up so a lot of this started as egotistical as it sounds with you was the best evidence with the bob lazar story 20 years ago so whether bob look up clearly bob hasn't been actively involved in and putting this worth and bringing it to the limelight but the world is turning and it began with him uh bob back to you for a second uh you know i remember there was a point that where you reached that you sort of gave up on trying to convince people that it was real uh you know of course there were questions about your
(47:31) background your schooling your employment record and we'll cover some of that ground over the next couple of hours but at some point you just said well what's the point um i'm never going to convince people who don't want to believe it uh because you can't even take them out there and show them the craft or beings or anything like that there's always going to be another question right right and but again i i i don't pursue that i don't try and convince anybody of anything i really
(47:58) just let it be uh as far as people asking me questions you know they i i get those constantly and there's a point i do have to make i'm not involved with them but on facebook and myspace and these other social networking things there are to my surprise a countless number of bob lazar impersonators and i go on these sites and click on these bottles our links there's pictures of me and there are people that are fielding questions as if they're me it's it's mind-boggling but i really do have to say if anybody
(48:42) is going on these sites and asking questions and getting answers it's not me i'm never on those sites and the only place you could ever contact me would be at unitednuclear.com and you know i have limited time to answer emails but i do get i do get ufo questions here and there and you know kind of throw them on the side and over time do answer them but really be very skeptical of uh anybody that says that they've contacted me or i've responded to emails on any of these uh social networking sites because it's
(49:25) it's not me one of them i think is the guy's name is ufo badass or something and there's even sites that uh claim that uh my wife put up this site and that's why it takes a little time to get answered i mean all of this is complete bunk i'm not on those impersonators like elvis impersonators john we need to take a break we're going to come back and jump into this with you and how your life has changed because of this story coming out and speaking with our guests jean huff john lear bob lazar
(49:58) don't go away this is coast to coast am we're talking about an anniversary uh this week uh when bob lazar first revealed himself to the world in a program that we produced here he's our guest along with john lear and gene huff and there's another name that plays into this in a big way and that is edward teller known as the father of the hydrogen bomb he was sort of there at the beginning of this area 51 story when we come back we'll jump right into that don't go away this is coast to coast am
(50:26) welcome back to coast to coast my guests john lear gene huff bob lazar um this past week it was a really great ufo conference here in town the crash retrieval conference and one of the papers that was presented was about edward teller and it had to do with some ufo documents uh supposedly about teller's knowledge of the program the paper basically debunked the papers as being frauds but i wanted to know john you're sort of the student of ufology where you think teller uh what role he plays in the overall ufo picture

(50:58) well i didn't know uh that he was involved at all at all until bob called him that day and asked to re-enter the scientific community and i didn't have any suggestions bob that is where your involvement really starts you're at los alamos and you see this guy sitting around tell that story yeah at the time i was working at los alamos in the maison physics division and [Music] i saw in the lab paper that edward tiller was giving a talk on i don't know some thermal nuclear weapon sdi wasn't it what was that wasn't it on
(51:43) the sdi oh yeah i think it was gene remembers more of this stuff than i do and it's my life that's my position that's why he's here so uh i really had a great opportunity i wanted to get in there and spoke to my supervisor he said yeah go ahead and it was down at the you know little lecture hall and coincidentally that day i had recently moved to los alamos and that day they did a front page article on uh honda civic that i built that had a jet engine in it and they had a front page picture of me in the car
(52:26) and i went a little early to try and get a good seat and to my surprise there was nobody around and ed teller is sitting outside on this little half brick wall and he's reading the local paper on the front page and i thought oh this is perfect i can you know go over introduce myself so i i did and you know we talked briefly about the um the jet car and how it worked and you know why i made it so on and so forth and i can't remember really what else we got into but we're just talking about uh science and topics in general
(53:11) that you know what where i really wanted to uh get to in los alamos is high energy propulsion you know weapons something along those lines and fast forwarding to many years later when i wanted to get back into science i left los alamos to start my own company and then kind of drifted away doing various off-the-wall things and really wanted to get back into it living out in nevada now and with the nuclear test site up there and at that time it was still running doing underground testing i started sending out resumes to
(53:55) you know everybody uh back to los alamos again seeing if i could get into um some of the weapon development or testing and also to livermore to edward teller and in that letter i referenced our meeting and discussion uh in los alamos and some time went by and to my surprise ed teller responded and it was from that initial meeting is what really sets everything in motion he's the guy that recommended the well i can't remember if that was the first or second time but it was certainly his recommendat his recommendation and direction that got me
(54:39) into that job at s4 well people have a hard time believing that uh heck you got to be making it up what was edward teller have to do with ufos and then after those programs aired here of course there was a lot of interest in your story and some folks from a tabloid tv show tracked down edward teller gene pick up the story from there you remember what that interview entailed well they they asked him if he knew what propulsion systems he was aware of as far as interstellar travel and he went through the normal one's fission and
(55:10) infusion and they began to ask him about gravity propulsion and antimatter and he said he just cut them off abruptly but look these things are not interesting if you even though they were filming him he didn't know it he said if you ask me about these things on camera i'll refuse to answer he was really a curmudgeon in his later years and uh and they also asked him if he knew bob lazar and they said well if we ask you if you know bibles are could you answer this he and answer us and he said look uh so they said
(55:40) do you know a person named bob lazar and he immediately said no i don't believe i've ever heard the name now this was roughly an 85 year old man if i asked you if you knew joe blow you'd have to say well where would i know him from or what what period of my life you know give me some direction he immediately said no i don't believe i've ever heard the name and lazar is actually a pretty common name but uh anyway it was curious that how he instantly uh said he had never heard the name and that he didn't know bibles are but then
(56:10) he said if they asked that on camera he would sit silent because he didn't believe it was interesting to anyone so well that's odd yeah yeah it's bad behavior john lear is uh you know you uh intimated to me i think in late 88 or early 89 that you knew a guy uh that worked out at area 51 and he knew something about flying saucers and you sort of teased me with it that was right after i believe you first met bob or maybe had gone out to see the test flight have you ever had doubts about his story though you know what the
(56:43) questions are you know what the weaknesses in the story are and we'll cover some of those but did you have to wonder at some point is this guy pulling my chain

no never never even gave it a thought because i was there from the beginning i mean i was there from when gene and uh and bob came over to my house to uh bob was gonna measure it uh to uh to make an appraisal and the guy that was holding the other tape of the the other side of the tape measure was bob's r and the deal was that uh jane would do the appraisal if i would
(57:20) give him all my a copy of all my ufo stuff and as we saw as we sat talking about it bob was just rolling his eyes he couldn't be you know have expressed his disgust more than than he did i mean he's just he said this is ridiculous i had the highest clearance you can get at los alamos if this were true i would have known about it from the very beginning there and then in the next four months uh we told him four things that uh or three things that nobody could have known of that unless they were at los alamos and
(58:10) we told that to bob he checked it out he found they were all three true and then that's when he made his decision to re-enter the scientific community and try and get a job up at area 51. by the way george back on edward teller when i remember when when teller called bob bob verify if this is true i think he told you that he was no longer active and he was just working in a chief consultant capacity correct yeah so teller never claimed to be actively involved in the program in any capacity well he he now he did say he was no longer involved
(58:50) and right consulting so obviously if he was no longer involved at one time he was yeah right that certainly implies he was doing something but what his actual function was well that bill would have made his word count for something you know what i mean as far as referring someone to the program he obviously carried a lot of weight yeah and you know you would expect him hey george can i ask john a question this this boy uh bushman the the guy the lockheed engineer uh he also said in this interview that uh he was aware that area 51 was moving to
(59:26) tuella utah did you ever hear that up dueller or tuella no no anyway i just thought you would be the guy to ask but but you would you you did say that you thought area 51 had been moved somewhere right yeah i mean that area but we know area 51 still there and functioning but not in its previous capacity probably itself the new there's two of them there's one south of uh wendover and there's one uh in the middle of the test site between uh sandia and or it's uh between groom lake and tonopah called zandia
(1:00:00) well i know of one thing that's a tooele it's a giant plant where they used to burn uh biological and chemical weapons and the reason i know that is because i got taken into custody one time when we were working on a story there and they didn't like the fact that we had cameras so they hauled us in to see who we were and what we were up to uh so it's not without its government facilities and secure facilities it's uh it's right in the middle of utah it's i think south of uh south of salt lake city i'm sorry i'm
(1:00:27) i'm pretty bad with geography but it's right in that general area it's near dugway i know because we were working on a story about dugway at the same time um uh let's go back to uh you know the obvious questions bob that have been raised many times people tend to forget uh that they were addressed in the very first report that aired about you you know a lot of folks cite stan friedman and say look stan friedman proved you're a fraud he looked for your academic records and he couldn't find him and i
(1:00:54) applaud stan for at least doing the legwork and trying to track down the story because a lot of other people have just proclaimed it's false without doing any of the work but uh people forget that that was revealed in the very first story that you couldn't verify parts of your background in particular about the education and this is you know i came to you you know this is it apparently like you said people they they hear fragments of the story and then just fill in the blanks themselves but this that i'm the one that came to you with this
(1:01:29) information saying you know i have seen systematically portions of my background evaporating everything from birth certificates uh you know uh school records and work records and i'm beginning to get concerned that the next thing it's going to evaporate is going to be me and i say i know this sounds like something out of mission impossible or you know a ridiculous television show but this stuff is in fact happening and you know this is this was one of the reasons why i decided to come forward because i was
(1:02:07) genuinely concerned about my life at that time and certainly john and gene the two people that were around at that time you know you really can't get a feel of the situation unless you were really there and around and had a taste of what was going on but it was this was really a frightening time and the day that we were out

in front of john's house and did the news link that i was petrified that day i really didn't know if it was safe to go home at all and the only reason i went ahead and said anything on the
(1:02:46) air really was just to protect my life at that time certainly i felt it wasn't fair that this was all being kept a secret but um it was much more of a selfish reason if it wasn't for that uh you know i probably would never have said anything it certainly hasn't been worth the repercussions but george could we re-examine that that stanton friedman allegation also and first of all i don't want to take anything away from stan friedman he was out there chasing freedom in freedom of information act government documents and
(1:03:21) taking the high road i mean he's a grand old gentleman and i don't dislike him however how that story unfolds is stanton heard all of these things about bob lazar and bob said yes i worked at los alamos and of course you know that he worked for kirk meyer who was a subcontractor at los alamos but he said i worked at los alamos well stanton friedman heard bob lazar worked for los alamos so he called a friend of his and said hey do you have any record of bob lazar working for for los alamos you know and the guy looks and no there's no
(1:03:53) bubbles are working for los alamos so stan friedman puts out a news release bob lazar never worked at work for los alamos well bob never said he worked for los alamos he said he worked at los alamos and then once we straightened stanton freeman out of that he goes okay and now he wants the next thing served to him on a silver platter so but the fact that he just made a call and said did bobblez work for for los alamos the guy said no and then he doesn't take it any further makes me wonder about some other
(1:04:20) investigations stan friedman did if that was investigation it wasn't very thorough investigation well he did some other stuff i mean he checked with mit and caltech and he got the same results that we got no records that bob was there and bob you and i have had this conversation in person and uh you know what i've i've expressed to you that i always thought that was the weakest part of your story uh primarily because i just i could see you being a whiz and in science classes at mit caltech but i couldn't see you ever sitting through
(1:04:49) the other kinds of classes you'd have to take english lit or something like that to get a degree you know i just can go ahead well and i just couldn't see it and then the corollary to that that people raise all the time well why can't you tell us who your professors are where's the classmates why don't you show us somebody that you were in school with well first of all somebody i was in school with you matt somebody i was in school with when ufo's the best evidence came that guy uh flew up from
(1:05:20) i don't even remember where he lived at that time but if you recall you met somebody immediately like yeah we interviewed him at a desert blast event and uh no jim tower desert blast i think he came to well you've met somebody else at desert blast but the one that came up um you know specifically for that reason from the east coast i think is living out on long island uh came up and you know introduced himself and he didn't know what all the fuss was about but uh you know verified i was you know there for at least some amount
(1:05:55) of time george you sent me the email from the with the excerpts from the uh the scientist from the department of energy up at rocky flats in colorado who said he remembered seeing and meeting bob lazar he remembered his sense of humor he remembered when bob worked at los alamos so people okay let's say bob never he never even went to elementary school he's just a bright guy you never went to school at all the fact is you have met and interviewed and gotten information from numerous people throughout the years who saw bob at los
(1:06:26) alamos he bob got you into los alamos and and you spoke to people who worked with him there and then complete strangers contact you go oh by the way uh you know i'm a i'm a scientist for the doe and i remember bob lazar so i mean even if bob never went to school he worked as a scientist at los alamos so you know i i don't know how you how you correlate that if you think bob didn't go to school i don't know how you think he worked as a scientist at los alamos well that's what i've always said is
(1:06:54) that for me the the central uh issue or a fact might have been his employment there and los alamos uh gave me the runaround over a couple of years saying that they'd never heard of him there's no record and of course we had the the front page headline that identified bob as as working there as a physicist we had the entry in the phone book um kirk meyer confirmed to me that they had hired him to work there or so eventually we got a paper trail that he was in fact there and it

just figures that if he
(1:07:22) worked there in a scientific technical capacity that he had to go to school somewhere they don't just hire people off the street but proving it is another matter well the the main question people ask really is about is about los alamos or oremy actually being at area 51 or s4 that i mean i i think the people that are skeptical of the whole thing or people that are skeptical up to a certain point to go okay well you did this maybe you did work at los alamos but there's no way you were at area 51 there's no way
(1:07:58) you were up at the test site well you know in secure areas it's really difficult to prove that you know aside from having uh a buddy who you would have worked with uh you know what can if you worked up at the test site if you worked and you know all of that stuff there is uh relatively classified you need at least q clearance uh just to be on the site you know how could you prove it what would you what would you do it's really it's it's really an impossible situation to well let me say here a year and a half ago i
(1:08:37) had my 60s 65th birthday and i had about 25-30 people and they were people from the test site that i knew there i flew up at the test site uh i flew for department of energy the b-26 the ov-10 and um what else did they have around hey john i'm gonna ask you to hold that thought that music tells us we need to take a break we'll pick it up when we come back after the break with bob lazar gene huff and john lear stay with us on coast to coast a.
(1:09:12) m thanks for being with us everyone tonight uh more sort of in the thick of things right now with my guests bob lazar gene huff and john lear we're going to take this break and get it out of the way and when we come back i want to get into one of the most mysterious weirdest parts of this entire scenario and it's something called element 115.
(1:09:31) don't go away this is coast to coast am welcome back everyone john lear before the break you were about to tell us a story about uh a gathering for your 65th birthday happy belated birthday by the way why don't you pick up the story george we must have missed our invitations of that party huh yeah yeah okay go ahead you know well there were several reasons for that first of all you know there's uh half the guys here were eg and g i used to uh i worked for three years up there in 1989 her 88 to 81 flying the ov-10 and the b-26 and you know one of the jobs i had was
(1:10:13) before they'd set off and under new underground new blast i'd fly the perimeter of the test site at different altitudes and give them the winds so they know which way they were going anyway i met a lot of guys and a lot of those guys were at the birthday party so unbeknownst to me uh bob lazar shows up i mean it was unbelievable i was shocked beyond uh beyond belief but bob comes in and after everybody has a few drink uh drinks bob starts telling a few stories and you could see all these guys you know were not in their heads and and uh
(1:10:54) yeah that's the way it happened and uh and the reason i tell that is because you said you never met anybody that uh that would admit that but uh if you had your camera at my birthday party uh it would have been a different story well i'll have it there for the next one i said i'll have it there for the next one you just have to let me know and make sure it's okay with those guys who show up okay we'll do that uh bob let's uh we need to recap a little bit about the science of what you just discovered out
(1:11:26) there what you were exposed to give us a thumbnail sketch of how these things supposed supposedly worked i'm saying that because i want to lead up to the discussion of element 115 okay the way the craft operates is essentially to the vehicle it has an antimatter reactor this reactor is very small by a reactor standard it says something on the order of you know takes about i would say about two feet square it looks like half a basketball sitting on a plate it produces a tremendous amount of electrical energy almost as a byproduct
(1:12:14) its primary function is to produce gravitational waves and the craft is actually propelled by distorting gravity in front of it and around it it's a fantastic mode of propulsion and fantastic technology being somebody that you know is fascinated with uh you know exotic propulsion high energy systems things along these lines this was really something i i couldn't even grasp it was literally something that bordered bordered on being magic it was really the most shocking thing i've ever seen in my life just watching components of this operate
(1:13:03) but to make a long story short i was shown how each component operates in the craft and then how they perform together essentially there's a reactor in the middle of the craft that uses an exotic fuel a super heavy element this reactor as i

said produces a gravitational wave and a huge amount of electrical power this gravitational wave is transmitted in a conduit very similar to the way a tuned conduit very similar to the way microwaves are transmitted and the wave goes through a waveguide and around the inner hull of the ship
(1:13:52) it's kind of difficult to describe exactly how the wave is split and applied around the craft but it essentially envelops the craft in a gravitational distortion the actual propulsion is provided by three large i don't know what you would really call them they're cylindrical objects inside the bottom of the craft there are amplifiers above them that amplify this gravitational wave and each of these emitters is hung on a large movable arm essentially the craft powers itself up produces the gravitational distortion
(1:14:40) and these emitters focus and move an intense focal point of the gravitational wave and can either lift the craft off the ground or create a distortion alongside the craft and have it move into it or really do a variety of other things that make it extremely versatile and there's essentially two modes of operation of how the craft can propel itself i believe they're called delta and omicron configuration almost configuration is where the craft is essentially lifted just using a single emitter a single gravity amplifier if you will and the other two
(1:15:34) emitters are focused out in front of the craft creating a small distortion in space time essentially and the best way to describe it is you know the old bowling ball analogy if you set a bowling ball in the center of a mattress and then two feet away take your foot your fist and push it into the mattress the bowling ball will roll to it and it's essentially how the craft operates in this configuration it creates a little distortion in front of it and the craft moves forward that way for high speed travel or interstellar travel the craft
(1:16:15) faces its belly towards the target and three of the amplifiers come online they're focused at a target in extreme distance and they run i can't remember the cycle time on how these things are pulsed one sixteenth of a millisecond do you are you just 16 minutes do you really remember that 16 milliseconds and it's omicron not i mean it's omega not omicron anyway the uh these three amplifiers are focused on a point of extreme distance there's a tremendous amount of gravitational distortion and the craft traverses
(1:17:05) you know very great distances in this way and it does this multiple times to essentially making small jumps [Music] you know to travel very very great distances that would be impossible using any other form of propulsion but all in all the craft is really an incredibly uh amazing piece of equipment well bob those those small jumps are small in terms of light years but in terms of miles in a straight line they're gigantic jumps aren't they yeah that's that's true well you guys when i say small yeah
(1:17:45) we're talking astronomical terms okay you've told this story over the years and of course you've had a range of different reactions from scientific types a lot of folks who will say uh this is a bunch of baloney this is not how science works uh we don't know much about gravity but we're pretty sure it's not this and thank you i mean i i i would have to agree that's exactly what i thought going into it too but sorry and then over the years though you've had other people come forward
(1:18:10) scientists who said that that really makes sense gene you've sort of been the the guy who's dealt with those types over the years how would you describe the overall reaction from the scientific community and do you have support uh for bob's explanation of the technology well i think the ironic thing is that when bob comes out and he says on camera to your camera or whomever uh this this is not even connected to known earth physics for all practical purposes it's magic this technology does not exist
(1:18:45) then he explains it they hear it and they go that's crazy this technology does not exist they say the exact same thing bob said and then blame him as the reason for it i mean he you know he has the same attitude towards they do nevertheless you can say it doesn't exist all you want but it's there and he saw it work and function and uh as far as support coming forward i mean just like the you know this guy from lockheed martin uh i mean ben rich back who was the head of the skunk works for lockheed back in 1993
(1:19:16) when he was giving a speech at wright patterson air force base said that the air force just gave us a contract to take e.t back home now what does that mean how does a guy who's in charge of the lockheed skunk works in charge of all the black project research and development at area 51 make a comment that they got a contract to take an alien back home back in 1993 so i think as those people come out you know no one there is no perfect witness no one can change the world uh remember

when corso came out and um
(1:19:50) does your is your audience familiar with who course so sure yeah and and all these guys usually guys get at the end of their life and they decide they're not going to go to their grave with what they know and i presume this boyd bushman is the same way by the way john i just uh emailed you that link to that boyd bushman video and uh anyway uh they come out and support it but i mean no one's going to change the world but no one can come out and uh and you know with the evidence land a disc on the white house lawn like everybody demands
(1:20:19) but uh as these as these men who like dr edgar mitchell you know astronaut like this boyd bushman like corso has these ex-military officers and scientists with you know security clearance who worked on all the black projects astronauts as more of the these people collectively come out and say yes there's et technology and the government is hiding it uh you know they always come back the bibles are that's support for bible rock in fact i'd love to ask bob i mean it's funny he goes on the record he knows
(1:20:52) what is true and everyone always expects bob to be thankful because another complete stranger came forward and said oh by the way you're not a scumbag and a liar like everybody's been saying you were i mean you know i don't know how they expect bob to react he never suspected that he wasn't telling the truth so i think we appreciate the additional support more than he does that's true uh on on the question of element 115 and we'll get into a description of it in a second but sort of in the same vein
(1:21:21) the reaction from the scientific community as you guys are being lambasted by all kinds of people and critics coming out of the woodwork especially about the element 115 part of the story or including that at least there were contacts from some pretty high level folks in europe asking for information about how to make this stuff or how it operated right yeah that was uh boy that happened quite a while ago but i i don't recall exactly some heavy ion lab in germany in darmstadt germany and well aren't i mean weren't those the guys that first
(1:22:01) synthesized one of the isotopes of it i mean am i remembering this correctly yeah i think so i think they did 116 and maybe 118 but of course you know 115 didn't exist at the time you made the statement right it does now it's been made in small particles but again uh it it doesn't uh you know it doesn't conform to the description that you gave the stuff that they made it only lasted a microsecond something of that sort well and you should expect that i mean if you if you look at any element everything
(1:22:37) has isotopes to it essentially you know you look at hydrogen them all basic of all elements there's protium which is the hydrogen we're all familiar with there's deuterium which is still hydrogen but it's hydrogen with an extra neutron and there's tritium again it's hydrogen but it has two extra neutrons they're all hydrogen they're all element ones but they're all completely different and hydrogen's a completely stable element uh tritium is not it's radioactive it's
(1:23:17) half-life is you know about 12 and a half years and any minutes photons that's why it's used for all the night vision uh watches and scopes and sites and everything well it emits beta particles but you know that's not hearing about what we see but the um uh well the point being that the stuff that you saw up there was stable and heavy and there was like 500 pounds of it it's much different tremendous amount of it and it was a completely stable element for what i was told i detected no radiation emission from it i detected no
(1:23:55) neutron emission bob i remember that i remember that uh you know individual pieces of 115 that were kept in those clamshell type devices and correct me if i'm wrong but it wasn't it wasn't it it didn't have to be kept under neutron bombardment at rest for whatever reason yeah it was always it always had what they uh called was active shielding and i think that's you know we can get into that later but right now i mean i just wanted to go cover the isotope question okay that you know any given element can have
(1:24:35) stable and unstable isotopes and like i said with the most common thing hydrogen 115 god knows how many isotopes it has but there is a stable configuration of it you know there that is what the craft was powered by now they synthesized a i don't really recall what it was but they synthesized one of the isotopes of 115 and it was radioactive and i believe disintegrated in you know however many milliseconds or fractions of a millisecond i really don't recall but if they just continue their work and i'm
(1:25:15) sure they will it's just a matter of time they will as long as they're getting funding to do this they'll eventually wind up with an isotope of 115 that is

completely stable well you had said you had said in the beginning bob you didn't think they could ever make it like that here it had to be a naturally occurring element i was very shocked that they were able to do it i believe they used a nucleus fusion technique i think one of it was a calcium and something else i really don't recall what it was but they
(1:25:46) they used a very novel method now they're only making you know a couple atoms of it right so it's not like they'll be able to detect any properties of it but they'll certainly be able to detect uh you know a stable element and it's just a matter of time if they they keep plugging away they'll you know run and discover you know a wide variety or as many isotopes as the element has and like i said one of them at least one of them is going to be stable the last time that gene and john were here we talked about a cloud
(1:26:20) chamber experiment that took place at your house and it was very primitive sort of a thing it was videotaped we had a chunk of that videotape and i think we included it in in a report that we aired at one point i can't find the original but what was the point of that experiment what did it show this is back when we actually had a small sample of it and what we were doing was to show that this unusual element had some never-before-seen properties that it actually had an intense gravitational wave around it something you don't see at all except
(1:27:04) with large quantities of mass but we took inside a cloud chamber took radioactive particles and fired them past the piece of 115 and watch them deviate off their normal course we were planning on doing a lot more with the element but we ran into some trouble the whole story there about it being uh removed from our possession well of course there are stories about how you got it the first place the assumption being you must have stolen it from up at s4 right right and that's not true well i don't even want to get into how
(1:27:50) came up bob don't you think it's a little misleading when when they see some of these reports saying that they've made some element 115 and you explained to me how how they detected these things and sometimes these particles are flying by filters and they detect them i mean they are hell and gone from having a quantity that they could hold in their hand oh no i mean i don't think people even understand how little there is and how quickly it decays when they hear a report like that so you might want to expand on that a little
(1:28:22) bit i mean they're really just slamming uh atoms together and watching this collision this is all happening happening in tiny fractions of a second uh smashing nuclei of atoms together and watching particles ricochet or get launched out of this collision and high speed detectors just picking up the particles as they fly by that's all they're ever going to do that's all they'll ever be able to do well we need to take a break here the question i probably shouldn't ask is what happened to that sample of
(1:28:58) 115. you guys think about how you want to answer that when we come back we'll get into it stay with us everyone on coast to coast am talking with bob lazar jean huff john lear about area 51 element 115 there was a piece of it that they had for a while curious about where that went also curious and what we'll get into when we come back is uh the physics uh the technology what happened to it if it was 20 years ago and they were working on it then where is it now stay with us on coast to coast we're talking with bob lazar jean huff
(1:29:28) and john lear about area 51 before the break we got into the issue of element 115 you guys had a chunk of it for a while gene i'll rely on you to give the diplomatic answer if you had it where is it i think it was stolen and i'd like to start the rumor that john lear has it right i know there's a guy that doing a lot of bob lazar research named ken yackel down in southern california who's just shaking his head right now because he likes answers on the same subject but i think it was stolen it's probably
(1:29:57) about the most honest thing i want to say but they uh the bottom line is there's still a piece of it missing and i think that's about all that i'm gonna say but you can imagine people saying well if you had that there's the proof you bring it out you show it to the world there's the proof that you're telling the truth and did that ever occur to you to do that but if you brought it out would that mean that it was the fuel for flying saucers that were brought here by aliens that make it this capable
(1:30:29) interstellar travel or would it just be a unique piece of really heavy metal well uh you know we thought about all this stuff 20 years ago yeah well that was part part of it was you know certainly we had to do uh we wanted to do some of the testing ourselves and you know release knowledge that we had a piece of it and

you know where do you send it how can you hear about all kinds of things like this just disappearing and you know what would you do with a piece of element 115.
(1:31:05) who would you get arrested for espionage if you're caught with it yeah so we didn't really get a chance to do much with it because it was shortly after we had it that it was removed from our possession you know the technology you described they were working on it 20 years ago they made some progress not enough for you which is one of the reasons you said you came forward with this information but do you imagine that they have perfected it now to the point where they can use it in a practical way no i don't think so it
(1:31:40) it is never going to move forward fast enough and it was you know very aggravating back then when something is is run strictly by the military or whatever faction of the government controls it uh you don't have that scientific that open free discussion that exchange of ideas if they would have employed that from the beginning we would have really made leaps and bounds but if you keep everything in just a small tight-knit group of you know under two dozen people you you're the progress you're gonna make is
(1:32:16) so slow it's so frustrating the system we had there that i told you about the buddy system where it's just you work in groups of two you can only communicate with the person your buddy the person you're set up with and there's really minimal crosstalk between the different topics and different groups and it it's so stifling even today it pisses me off to think about it just the the technology the wonders you have at your fingertips there you just can't keep this quiet the way it is you must release
(1:32:56) this out to the scientific community and i know it has all kinds of weapon potential i know it has i'm sure there's a hundred different reasons why they're not they're not releasing it none of which i think are that valid but you know certainly expand the amount of people that you're exposing this information to if you want to get anywhere with it because it it it's really unlimited power and maybe that's maybe that's the the main reason george here's a quote uh from uh ben rich again he was the former
(1:33:33) head of the lockheed skunk works you know the sr-71 the uh stealth bomber the self-fighter this was the headband of all the black projects that everyone you know always accuses the government of hiding out at area 51. back in the early 90s he said this this is a quote we already have the means to travel among the stars but these technologies are locked up in black projects and it would take an act of god to ever get them out to benefit humanity anything you can imagine we already know how to do that's a direct quote of ben rich well
(1:34:07) i'd have to agree with that well uh you know you look you look back on that period and what they could have done with the technology and and the description you gave bob of the small teams and the lack of expertise that that leads to one of the criticisms of your story is that they say yeah you're a smart guy you may know this and that about electronics and physics but you're not a phd you're not the cream of the crop right back then and i mean no disrespect so why would they bring you into it you
(1:34:37) know why would they bring you into that program that's my question you can't answer my questions with the same question that's the first thing i mentioned to you if you recall you know it makes no sense why are they picking me for this job certainly this isn't my specialty i mean there must be some other qualities they're looking at um who knows what they are but no of course there are people a thousand times more knowledgeable on this and maybe it's just not outright knowledge they're
(1:35:09) looking for maybe they're looking for someone and you know come out of left field with some new fresh ideas because they weren't making any progress anywhere but yeah this is this is the exact thing that i put out there but george bob is a comprehensive problem solver and he's exhibited that in his previous jobs he was a widower at the time he was hired a lot of reasons to use a guy like that i mean can you take the head of the physics department at mit who has a wife and kids and a job and goes to work every day and suddenly
(1:35:44) remove him and fly him out to nevada and fly him out to the area 51 and back to las vegas every day and keep that quiet i mean if you took all the top minds from all the universities would they stay quiet i mean they'd be noticed as being missing they'd be noticed as as being removed from their normal life i think they have to take guys like bob uh they're the only ones who who aren't missed in their day-to-day life well it feeds into the scenario that's been discussed many times over the years
(1:36:11) that this is all disinformation uh you know it's occurred to me that bob

they may have chosen you because you're a savvy guy and a smart guy and you might have contributed something to the program but also because they may have figured you might have talked about it or they figure if you did talk about it that you you would be easily uh dismissed or um you know character assassination whatever which is a lot of what happened well yeah that's true like i've always said i'm an easy guy yeah are
(1:36:42) certainly a candidate for character assassination but it's possible that was true of everybody else at s42 we don't know i mean clearly the the lead guys from caltech the lead guys from mit the lead guys from everywhere are not working at s4 you know so how do we know what the credentials or what the situation was of the other people that worked there maybe that is part of the the idea there's just to keep a lower profile but you know if in fact that's it uh that that has some terrible effects
(1:37:15) on the program well they they run the story they they release it to a gullible reporter like me i i bite on it and they they sort of run it up the flagpole and then discredit you and uh they're just sort of gauging public reaction to what would happen if uh if they release this which is why a lot of people say it's all disinformation they're trying to deflect attention from something else out there john you're this is sort of your area of expertise what do you think about that scenario well let's see the uh the bell jar
(1:37:46) experiment that'll settle everything meaning uh the videotape the videotape but i mean the idea of disinformation they you you've been characterized as sort of this bengali of this whole thing you must have set it up talk bob and gene into going along with the story well explain the lessons we're such easy guys to talk into things aren't we jeff [Laughter] i mean explain that for the sake of the listeners though why that's funny well i mean you know john and bob have been arguing at odds about a million
(1:38:23) different boys over the years you know john didn't even know bob until i took him over there and introduced to him one day i mean john was already on your a local interview show here on the record telling us all about richard nixon and jackie gleason and all of the stuff you know before bob lavar was around that john was out there on a limb i mean john used bob to back back him up it wasn't the other way around are people implying that this that i guess i missed the point here that like john and i fabricated this this
(1:39:01) story for is that yeah that's come up once or twice over the years is that what you're talking about now yeah but the larger disinfo scenario is that uh that maybe you were duped that you were shown this stuff that they created this whole thing that they wanted you to spill the beans and sort of a psychological operation or maybe to divert attention i mean you've heard that scenario discussed oh wait divert attention from what and free reign to analyze it tinker with it and so exactly what and i certainly convinced myself i knew
(1:39:39) what i was dealing with so what could be more shocking than that yeah what dastardly thing are they hiding that they decided to put a giant ufo story out there for and how and again they they they gave him this ammo they implanted this story in his head with mind control and then what did they throw up in the air on the wednesday night when he took us out there to see this yeah that that how about an aerial becomes completely ridiculous when you look about when they took you in when they took him down to the st louis
(1:40:09) substation and registered his guns when he was in the program when the russians were in town running around trying to bribe people what about there are other comical stories that never really hit the mainstream and bob correct me if i'm wrong but weren't you supposed to actually like give a little seminar seminar to some other guys out at engng or something and you overslept and didn't go give the class oh yeah boy that was a disaster but yeah there's you know in a in a radio show it's impossible to cover
(1:40:40) all of the little fine points of you know of what happened why you know claims of along those lines are just are beyond ridiculous well how about i asked him at the time when we first when i was first shown some of the ct material and you know certainly seeing the the breath the size of the base and the amount of equipment they had and how do you guys keep this secret and that's the first thing they told me which i've mentioned before i said it's the easiest thing in the world to keep secret it's nothing like any of our
(1:41:17) other black projects because nobody believes this stuff is true it's a piece of cake and and it is true people have a built-in of prejudice essentially that you know flying saucers aliens this is all the stuff of science fiction and you

know for the most part that's just the way people believe it's it's very difficult that's how i was in the program i mean to me this was all silliness everything i heard from john lear and you know these reports on tv of people being abducted and uh this was
(1:41:54) total silliness to me although i still have a problem with a lot of it i'm probably the biggest ufo skeptic there is but when it comes down to you know are there actual et craft here on earth it it really is true well the explanation i give about the disinformation scenario is if if they were in fact trying to divert attention from something else going out there some legitimate national security program and they just wanted to mess with people's minds it had to backfire on them because the result of your story the ufo story
(1:42:28) at s4 i mean tens of thousands of people checked out there every news organization in the world has been there congressional investigators have been there they got a lot more scrutiny than i think they ever wanted no matter what it is that they're working on out there well they had bus tours out there didn't they yeah let's like i said that those scenarios don't make any sense at all so it couldn't i mean that's that that's not even a reasonable a reasonable guess but george look at
(1:42:54) the people that have come forward to you that that you've never even gone public with people that have told you things that they don't want released until after their death what about this uh uh boyd bushman what about edgar mitchell what about you know there are other people who have you know you know well edgar mitchell at least had a conversation in person with bob lazar but this boy bushman he has no idea he's never spoken to bible but there are people coming out confirming this stuff now if this was all a mind control game
(1:43:23) and a disinformation act played on bob lazar why is why why are the uh you know former senior uh uh engineers from uh the lockheed skunk works and and astronauts and all these people coming forward saying they've seen evidence of their satisfaction that this is real if all this was just a hoax on bob lazar what are all these guys big dummies that just believe bibles are they they've seen corroborating evidence elsewhere from other than bob lazar one other topic i want to touch on before we go to the break and then open
(1:43:57) up the phone lines is polygraph tests this has come up again there's a character online who writes about it based on things he's i don't know uh he got he channeled information or something he knows the truth about it and he writes about uh all the polygraph tests you flunked all of them uh you want to walk through this scenario i know that it took a took a while to convince you to go ahead and get these tests somebody said i flunked though yeah there's a guy quite you've never felt that's not true
(1:44:27) yeah i know it's not true and i've told the guys and this this particular chat group it's not true and went through the scenario and it doesn't matter people who were not there at the test didn't see the results didn't talk to the polygraph examiners are sure that you flunked them well of course people can make up what they want but you know we're trying to deal with reality here the um i i don't remember the guy's name the the only time there was inconclusive results was the initial polygraph the
(1:44:57) guy who said you're going to be my ticket oh to the geraldo show or something like that and uh i think he was more concerned about becoming a star from this than doing a polygraph test when and you even and paid for these uh polygraph tests and you got um what was that guy's name that x-cop but the first guy was his name was ron slay was a pretty perfunctory test but actually he had said that the results were inconclusive he ran it twice he thought you might have been deceptive in the first one but he said afterward in
(1:45:37) an interview that you were really scared and that seemed to affect the test results the second guy and he recommended we do a second one his name was terry tavernetti a former police officer who is now still a corporate security officer with a major gaming corporation he performs polygraphs as part of his his job every day and he said in unequivocal terms that you passed and he he broke the test up into four areas uh he put you through it twice and you passed uh right no question about it but then it was then some of terry
(1:46:11) tavernetti's uh i think associates someone else took a look at it and their opinion was that they saw a couple of areas that they thought where they might have been inconclusive but inconclusive was the worst that ever happened he never failed a polygraph at all yeah that's true so i mean how could somebody come out of left field at not not being there not knowing these guys and saying and come up with statements like that this is the craziness that i get exposed to all the time people

hear portions of the story
(1:46:45) and weave together uh the remaining remainder and it it turns into the most ridiculous story something that i'm not even familiar with but um yeah it's guys like this these uh nuts that it's why i try and distance myself from this topic completely george should polygraph be subjective i mean i mean can two people read a polygraph differently well i guess slight nuances but a terry tavernetti said you passed he gave it to a second polygrapher who agreed with that estimation he gave it to a third who agreed but said well maybe you're
(1:47:23) maybe you're telling stuff that you heard from somebody else and he'd like to see another test but nobody said that you flunked of all the people that looked at it nobody said you flunked um we got a couple i thought the first guy actually that ron play i thought bob had passed one and one was inconclusive i didn't right that's what george said yeah um i'm trying to remember i thought he it was you know it doesn't matter at this point the overall result was inconclusive well we got a couple of
(1:47:49) minutes left before the break and we open up the phone lines bob uh i guess uh safe to say that you would not do the same you would not play it the same way no boy you know a lot of times gone by and like i said i i really feel privileged and to have been part of the project and obviously it fascinates me uh you know somebody this deep into science where it's you know part of my life to be on beyond the cutting edge is uh really something and uh but the way this all went down and the way it was digested by uh
(1:48:26) you know the people in general i don't think i would ever say anything again and uh because the effects on your personal life yeah because of the effects on my personal life and and just it was really eye-opening the way you know people receive information like this and that you know uh how hostile they'll be because they just don't want to believe something and um you know and of the tremendous amount of disinformation and um you know attacks associated with it you know why in the world would i ever
(1:49:03) do that again all right we have another hour left with bob lazar jean huff john lear uh stay with us we'll be opening up the phone lines here on coast to coast a.m celebrating sort of the are marking the 20th anniversary of the bob lazar story area 51 s4 flying saucers in government hangers also joined by john lear and gene huff i know a lot of you have questions for this trio and we'll get right to the phone as soon as we come back on coast to coast am welcome back we're in the final hour with bob lazar jean huff john lear we're
(1:49:34) opening the phones in just a moment bob you had said earlier there are a lot of lazar imposters out there on websites and facebook and things of that sort a couple of the listeners had written in saying they they were curious about a site they found that had artwork and uh drawings and things of that sort uh whether that you were related to that in any way no is that could that be john ferret's old site uh well that's bob lazar.
(1:50:02) com now that yeah i'm not talking about that site that's john furrett a friend of mine and he essentially put all the i don't know what the status is but he put essentially the bulk of my story online and drew all the graphics concerning the reactor technical aspects uh measurements that sort of thing everything that i knew at the time now that's uh yeah a separate website that i wasn't involved in but certainly knew about these other ones i'm talking about the social network groups you know the
(1:50:42) myspace facebook that type of thing none of those have anything to do with me okay going to the phones east of the rockies hello uh east of the rockies fred in florida are you there okay how about west of the rockies what were you going to say i was going to say that it's important to clarify that what they just heard is that bob lazar isn't even involved with bob lazar.
(1:51:10) com much less than the other website so that was pretty interesting right statement actually okay go ahead west of the rockies double o seven and a half in southern cal are you there well hello everybody hi how you doing i'm doing better than ever this is my birthday 55 days happy birthday well thanks i wanted to tell a true story in 2001 i was up in the mountain above palm springs to call it idle wild up there and one night i was setting out couldn't sleep i sat down on a chair in front of my house up there and a lot of cloud and fog moved in fast
(1:51:52) and mysteriously that night and something made me look up at the exact second this big old perfectly round flying saucer came in and with the lights turned off i could uh see it plainly because it came in low enough and they turned the lights on when they went over my head and a pulsated white light was like a wheel

going around it inside of it around the edge of it probably the propulsion system i don't know if that would have been magnetic rail thing or whatever it was it's got to be a lot more advanced
(1:52:28) what they got in area 51 i don't know how much back engineering they've done over there but anyway after they went over my head they turned the lights off and i heard it land and a little bit later all the lights in idlewild blinked on and off a couple of times and a little bit later this strange lady says her name was tomorrow comes down the road gets a cigarette from me and as she's leaving turns and says i'll see you tomorrow now from what i've learned from the people from the ship since then
(1:53:02) i think they're in the process of doing a round up to take a load up to their planet but who's to say this whole planet isn't nothing more than uh space aliens living on this planet that they originally seated uh who's to say that isn't true you know what it might be and so the question is could that possibly be true and and basically message is a if you're if you can do good consistently instead of doing bad then you're a candidate for rescue i'd like to know everybody's thoughts on all this
(1:53:38) and thanks about i'll hang up now yeah okay john you want to tackle that one is john awake is it am i saying sorry sorry john it's pretty late for you did did you hear that that question yeah just give me the the uh the base of what it was well i think he uh he saw a ufo incident and uh had an encounter with somebody who was a strange lady and his suggestion was maybe we were uh we're seated here that aliens seeded the the planet yes that's possible and the way you get out of here is uh egg is to exercise integrity
(1:54:22) without envy and without greed okay maybe i'll bring it back to you bob and all the material that you read uh leading up to your introduction to the program did you see anything about uh intent of the visitors or what they want i mean it's my intent as the visitors or what they want i don't think it was ever made clear what their intent was um you know is there information that i saw that you know might imply that uh they had something to do with putting people here well possibly i mean that's my personal belief i think in
(1:55:08) to some extent people were seated in uh you know if you want to call it that uh by another civilization but um you know it's meaning genetically altered right yeah yeah you read something about genetic alterations that took place throughout human history right right so i don't know is that seating i guess in some respect it is but um well the you know they were doing us the favor more or less wasn't that your perspective i mean there was more in it for us than for them apparently that's certainly true
(1:55:47) uh wildcard line ed in allentown pennsylvania good morning ed good morning george fantastic show as per usual uh and happy anniversary 28 years i am very much a fan of bob lazar and john and gene's work and i wish that you guys would make the first show available on coast to coast like the interview show that you did on tv as well as art's first show i think it was in 1990 i believe that bob lazar was interviewed on coast to coast well that was a long time ago i i can't believe it's been 20 years
(1:56:24) myself yeah it's bizarre uh i have a question a couple questions and a brief comment and oh my god where to start um it's quite a privilege and a pleasure to speak to you bob um good luck with your new endeavor with the uh car inserts or whatever the hydrogen the hydrogel my mom worked for air products for 30 years and my dad at each picnic would talk to the president of air products and say that he had plans for a hydrogen car when he was fighting in world war ii in brazil really with the american soldiers yeah
(1:57:01) he would tell the president of air products every summer at the company picnic why don't you build a hydrogen car you wouldn't have to import any more oil and you know and they said yeah yeah yeah and then like last year they announced that air products is now trying to make their version of a hydrogen car oh no kidding now i hadn't heard that yeah air products one of the biggest suppliers of gas as industrial gases in the world and for nasa anyway um the other question is when are you going to make your autobiography
(1:57:34) and if so you could possibly fund even more hydrogen car works and the other question is if you were offered to work again for los alamos and or somewhere in area 51 like if they called you up and said okay we're sorry we want you back would you go and i have another comment if i could please after that question well the comment is a joke it was 20 years ago that joan rivers said in one of her concerts that she's in her comedy concerts she said you know why a ufo never lands

in a jewish lawn you know poking fun at herself and my
(1:58:15) own religion she said because they would turn it over to see who manufactured it see if they can get in on it thanks ann that's kind of the truth because they always want to build stuff and my family indeed was involved in manufacturing for years and it's like a triple entendre joke but yeah anyway that's that's my questions and good luck god be with you and all of you and more power to us all and hopefully the the future will be one of peace and no oil and lots of hydrogen cars everywhere not polluting the earth i'm all for that
(1:58:51) thanks and uh so bob uh the central question there i is pretty interesting would you work for him again they said hey all is forgiven come back to s4 we need your help on these saucers you know you won't believe how often i think about this um and that that's a that's really a tough question because first of all i'd apologize to them because they were right just keep your mouth closed you know and that's the only way to stay here is to go with the flow and you know i am so sorry i made that move
(1:59:28) but getting back to the question uh yeah unfortunately my life has gotten a lot more complicated i mean i have several businesses and all that and moved you know and wife and michigan however if we can put all that stuff on hold or if i was just single again without attachments to other businesses and all that would i go back yeah in a heartbeat i really would bob i need to ask a question you spoke before about uh one of the problems with hydrogen cars is detecting the leakage because there's no odorants involved with the hydrogen
(2:00:08) and of course as you know they they pretty much proved that the reason the hindenburg lit up like it did was because of the aluminum doping on the skin not the hydrogen itself how explosive is hydrogen you said well if a a cubic foot of hydrogen leaked out i mean does it catch on fire that easily how dangerous is it how explosive is hydrogen well a cubic foot isn't really that that dangerous it burned in air and yeah you know it it does have a wide range of flammability but um but you know when it right the more the
(2:00:43) more the real problem here is is overcoming the the stigma of hydrogen when you mention hydrogen to people they're only going to think of two things the hindenburg or a hydrogen you know thermal nuclear bomb and both of them are bad news so it's it's tough overcoming that the actual dangers are are very minimal and a gasoline car by far is is the bomb that you're driving not a hydrogen car i want to go back to sort of the implication of ed's question there and your interesting answer that you would
(2:01:15) actually think about uh going back and wish you had stayed in the program could you imagine or have you thought it out about where it would be now what your role would be if you'd stayed in it how far the research would have progressed well if things would have gone a lot smoother and and i you know we wouldn't had the security problems that popped up and you know if things remained under control um is it possible that we would have made more progress i i don't know like who knows how many people before me uh tried to
(2:01:51) make the identical progress that i was trying to do i focused on what i was primarily interested in and you know what our group was directed to do but i certainly don't see uh why i would have made a giant difference you know basically what i'm saying in this amount of time we'd probably be about the same place they are now i don't i don't think i had any special abilities or you know or any uh i can't think of a word to say but um well you know what we're just guessing i mean maybe they made a breakthrough
(2:02:36) maybe that the statement out of uh the guy from lockheed is more telling than we know that they have figured it out it's possible but i have no reason to think that i could have been a major contributor you know any more than any other person there so uh that's hard to say but then ben rich says you know who used to run the lockheed concord said that it's locked up in black project and it would take an act of god for it to ever be used for any public purpose so what they're saying that indicates me
(2:03:05) they're probably talking about they're going to keep it for weapons and military you know defense are offense purposes whatever but it it's never going to you know be disclosed and given to the public for any benefit it's a crime but i if they're not going to let the people know about it i sure want to know you know i just uh have a craving to you know to get back into where i was and i know that's impossible but i do think about it all the time it's kind of like uh you know that that annoying
(2:03:39) feeling you had what if yeah exactly it's a what if that never goes away

and i really don't know how to describe it but it bothers me a lot because there are times i said well no i'd never go back this is ridiculous and but really as time goes on and now i'm over 50.
(2:03:58) uh you know you start thinking different and boy i if things were as they were back then i would jump right back into it nowadays with like i said the way my life is it'd be impossible do you think if you had stayed quiet and not gone public uh you know you know they yanked your clearance and you were temporarily out of the program if you would just shut up and well then you were all racing that was me right but i'm just saying if you had done as you were told and stayed quiet and not gone public do you think they would have rehired you would they have
(2:04:29) called you back after a layoff yeah i don't know i don't know we're gonna go to blair in sedona arizona on the wild card line good morning blair thank you george hey mr lazar speaking of gravity uh propulsion george had a gentleman by the name of shannon on his october 25th show who said frequency patterns hold the planets in place not gravity and frequency patterns of what well there you go i guess you got to define exactly what he means there i mean maybe it's the frequency patterns of a gravitational wave
(2:05:04) i mean you have to yeah have to be a frequency of some energy and maybe that's you know what he's referring to that it's not it it's not a static wave that it's an active and and he would be right it's uh you know if he's talking about frequency of gravitational waves i guess that's just a correct statement would you be able to speculate on a post-government disclosure society and what specifically and how will the current suppressed technologies of unlimited power enhance american life those leaps and bounds you
(2:05:35) were talking about so the effects of letting it all out yeah well and how would that change our lives directly a lot of that would depend on exactly how far they were able to take this because if they can't if they really can't duplicate it then it's useless to everybody and if it just remains that the craft or components of other crafts they have are the only working pieces of that technology and it can't be made to work with earth technology it's there's no use at all it just is a novelty however if they were able
(2:06:19) to surpass that and and able to duplicate some of the technology some of the ideas or even you know some of the basic concepts uh using earth materials sure there could be it could be a a world-changing event there could be sources of energy that are limitless but again using you know using alien materials requires us a source for those alien materials and i don't know of any earth materials that could be substituted or that perform like the ones we were looking at so i i don't see where where the project really would have
(2:07:04) proceeded but um you know i didn't know everything about it i just knew the small amount of information that they dealt out to my group and i'm sure i don't have anything close to a big picture so you'd have to think that if they if they had the stuff they spent all these years trying to figure it out and they they were just stumped that they'd just bury it somewhere they wouldn't talk about it they wouldn't let it out they wouldn't want any of our adversaries to know about its potential
(2:07:33) because somebody else they'd never do that they i mean they tinker with it forever they'd never just bury it and throw it away because just just on the you know outside hope that you know a new young upstart comes in somewhere has some neat idea and now finally they have access to all this power and technology they're never going to throw it on the back side it's too it's their prized possession you know they're they're never just going to throw in a box and do you know one of the raiders of the lost ark thing and
(2:08:02) some giant not to mention that those who brought it here were supposed to come back another time so they would probably at least keep it and hope that happened gentlemen we're taking another break we'll come back with our guest bob lazar gene huff and john lehrer if he's still with us there stay with us we'll go to more of your calls after these breaks and messages on coast to coast am we are joined tonight by a couple of ufo maniacs bob lazar gene huff john leer talking about area 51 and in in a way
(2:08:31) it's a story that launched a thousand businesses a posters and ashtrays and t-shirts and even bob lazar christmas ornaments books tours video games uh bars named area 51 bands named area 51 there's a there's a band named element 115 in case bob lazar has never heard of that one a lot of people have made a lot of money on the story uh bob lazar and jean huff and john lear not being among them uh however a lot of interest continues when we come back we'll go back to the phones get to as many of your questions as we

(2:09:06) can here on coast to coast am welcome back we're in the home stretch with uh bob lazar john lear gene huff going to east of the rockies glenn in texas good morning glenn uh good morning gentlemen i'd just like to say this is a a wonderful experience and what a forum art created i have a question for mr lazar if i may a quick question for mr lear go for it uh mr lazar did the crafted f4 have any landing gear and if so uh what kind of configuration it may help with the speculation on the specific use or general use
(2:09:56) and uh mr lear yeah i grew up here in harlingen texas with the caf and it's the ride in a souped-up a-26 a body numbing experience or something even so you just don't want to get out of thank you and help listen on the air john why don't you start first okay what was his question he was talking about a ride in an a26 if it was a body numbing experience oh uh [Music] i don't know i had a lot of time in the airplane but it was not a body numbing experience so you're not a big fan of that plane oh yeah it's great family airplane yeah
(2:10:44) i loved it uh you know in 1968 i was the first guy i heard so to fly in the reno air races and actually placed fifth they had a one p-51 in the b-26 okay five when john was in that race bob you're part of that question uh did the craft have any landing gear no not that i was aware of any time i saw the craft it was on at the belly or lifted off the ground but i didn't see any landing gear and i did get to look in the lower portion of the craft the only thing that's down there are the gravity emitters uh you know the amplifiers if you will
(2:11:33) uh there's no room anywhere for any kind of landing gear so i imagine they're always counting on the craft uh lifting itself off the ground and or sitting on its belly but there's nothing that stands it off bob was the was there um the the the i don't know what i'm trying to the bottom of the craft where the when it would turn up on its side and they'd focus the gravity empires on a point did you were you taught that you sensed that you know is the bottom of that open there's something open is it made of
(2:12:09) something else or is it all all the same continuous uh now the very bottom of it's flat under the amplifiers there but no it's not open yeah it's solid okay do it same same as the rest of the skin of the craft i i don't know it appeared the same but okay the material was different all right keeping with glenn's question when they're in the hangars these things you saw nine different craft in the hangars were they suspended with uh like ropes or uh cables or something sitting on their belly with the exception of the one that
(2:12:42) was tilted up that has a hole in it that i you know mentioned looks like a projectile had been fired through it okay west of the rockies mark in san diego good morning mark hi uh by the way my favorite three guests i'd like to ask each of them uh how this has affected them on a religious level like if they were raised a catholic and they have this have any effect on their religious beliefs as in like afterlife or a supreme being gene why don't we start with you on that absolutely i mean the difference between
(2:13:14) bob and i is that he is interested in the technology and the hardware and of course you know he from what i've heard him say on this show tonight he's changing now that he's over 50 but my the impetus for me and the whole thing were the basic questions of man uh who are we where'd we come from where are we going to life after death god the things that none of us are exempt from and if these grey aliens are whomever brought these craft here had any commentary on any of that i would like to know what they had to say so yeah
(2:13:42) i've it's uh i've given a great deal of thought to that and bob did not used to think about it at all i don't know if he does now or not but it completely changed my life by the way uh edgar mitchell as the astronaut also uh he said that when he was on the moon looking back at the earth it was tough to see where heaven was and it kind of changed him philosophically also it was a it was a life-changing experience standing on the surface of the moon and looking back at the earth so i guess all
(2:14:08) of us have different times in our life that make us examine our mortality and and uh try and grasp whatever we can to get answers but yeah the material bob brought forward with uh certainly changed my life and and changed me a lot philosophically and bob do you think of it in a spiritual or philosophical way any differences no i mean i'm not the most spiritual person you know i'm ready to um you know i really uh if anything i'm anti-religion i think organized religion is uh probably the worst thing that's ever
(2:14:43) happened to civilization but i'm sorry that's who i believe creates all the wars and i don't even want to get into it but you can be spiritual and you know

not be involved in mainstream religion you know it is there a god you know who knows the answer to these questions but um you know did it did it affect me no because i really didn't have any religious beliefs uh you know i believe there is some order to the universe i i don't think when you die that's it although you know science-wise it tells me
(2:15:23) that you know that uh that's all that happens is life and death and but um you know you just have those other feelings inside you that have no no basis or or facts to follow but um i really wasn't religious before that and after being exposed to it uh it really didn't change anything or my belief you know john john lear uh did you know not only the area 51 revelations but the larger ufo picture change your philosophy of life or change the way you look at the universe or eternity after that changed everything because now i know
(2:16:03) exactly what's going on and how it works wow so you're going to write another you're going to write a religious text and let us all know probably not it's uh there are very few that that really know this or that would understand it or that would care and are you optimistic in general oh yeah wow well that that's that's something first time caller pj santa maria california hi pj hey good morning guys it is a pleasure talking to all of you guys and uh question is for john lear this morning and john i'm curious with the
(2:16:42) lunar water findings as of the last couple of days and i understand that having followed all three of you guys there for the last decade or so and you know researching on what you've talked about with structures on the moon and obviously a lot of features that would have to be man-made or made somewhere on there what do you think with what nasa is doing do you think they're slowly starting to disseminate information about things up there is it is it a new finding to them that there is water there or do you
(2:17:09) think they knew this from from a long time ago they probably knew there was some long time ago because they had a lot of pictures on the uh on both the near side and far side there's cities waters lakes rivers uh anything you want the other day we managed to catch a spectacular picture where uh the holograph of endymion which is a crater at the top of the moon about one o'clock somehow the holograph or whatever hides it uh went away for just a few minutes and a friend of mine had a telescope aimed right at it and was able to uh to draw
(2:17:51) what is really an endymion it was uh it was a fascinating experience and he came to las vegas and we went over it and we drew it many many times until we got it exactly right what was there it was a city with uh with buildings and towers and uh uh and it's hidden by uh holographic nature well that sounds so crazy to me i can't even relate to you john is back yeah so much for the saint john no i we're we're poking fun john but uh you're saying that there's all this stuff up there that's covered by holographic
(2:18:33) technology of some sort oh yeah the whole dye the whole darn place is covered just to keep it secret from us uh yeah you know pretty much to keep it secret from us we're gonna go to the uh wild card line chess in new york city good morning chess hi george uh it's a pleasure to speak with you and and i'm an avid follower of you and all your guests and thanks i i had a couple of questions for bob um bob i was wondering i know it's been a while but i i was wondering if you could speak to any sort of uh
(2:19:07) description or detail as it relates to the skin of any of these crafts uh that was my first question my second question was uh is there anything of sort of an innocuous nature something odd or bizarre that you could remember about any sort of compartments or maybe support facilities for some of these occupants or pilots of the craft i didn't have any knowledge of anything along those lines um as far as the you know occupants of the craft or um you know anything to do with biology well he's talking about compartments
(2:19:50) inside the craft i mean you did get a look inside there right the furniture inside yeah maybe i misunderstood the question right um yeah compartments inside the craft i did get to inspect uh everything in the craft with the exception of the very upper level which i believe was just navigation and their version of electronics but it didn't look like there was anything but open space uh there were three seats for the occupants of the craft but there were no individual rooms compartments or or what have you like we we might have on one of our
(2:20:31) uh you know any form of transportation there's nothing like a bathroom or a smaller area everything is just each level is completely open in itself so i wouldn't call anything a compartment anywhere the other part of that question he asked about was the skin uh did it have skin or is it metallic well it's i called it

metal and again uh each each part of uh the research done is uh you know as it gets late my brain begins to run right out of words but you know it's all very compartmentalized and the people that dealt with the
(2:21:11) metallurgy were a completely different group of people i had no knowledge of it the only light i can shine on it is the one time i walked across the craft and just slid my hand along it it was cold and that's the only reason i said it it felt like metal um it was you know cooler than the ambient air uh could it have been some exotic ceramic or something probably so i'm sure it wasn't just an alloy of aluminum or anything along those lines but um that's that's about all i know about it it was a pewter gray in color as was
(2:21:52) everything on the inside and outside of the craft so that's that's about all i can say as far as what the material was chess thanks for the call we're going to go to jim in chicago good morning jim yes george yes can you hear me yes i can okay i got a problem with my phone here anyway i like your style because i'm also a bottom line guy i have a question for mr lazar i want to know about the alien bodies has he seen them and in his opinion are they biological are they semi biological or perhaps interdimensional
(2:22:32) i haven't personally seen an alien i i did see a photograph of a creature uh was that creature in the craft or you know a pilot of the craft i you know i was just given some information a brief overview of other other portions of research being done but again i had no direct information about any of the biological aspects of well you thought vivisection didn't wait yeah but like i said this is i was given briefings that well as you know portions of reports on many of the other areas but i had no specific information
(2:23:15) on how that creature that i saw or the images of the creature if that had anything in fact to do with the craft you see what i'm saying but you did the the pictures that you did see the vivisection or autopsy like photos showed organs yeah a central organ as opposed to uh and i think that's what the comments were underneath it that uh from their estimation that's that i think i gave the description as if it uh if you uh had taken all our organs and allowed them all to grow together it was one single organ in the
(2:23:53) body that they had uh cut in a t-shaped fashion looking at the different chambers and whatnot in there and uh i think it's this this organ looking thing uh was apparently performing many functions uh so again it appeared to be biological to you and yeah so i yeah exactly it didn't appear to be an interdimensional being or but yeah i again i don't know can an interdimensional being be the uh appear to be biological so i that's all i can say well didn't you get a glimpse of something in a lab coat
(2:24:33) yeah oh boy people make a big deal about that thing well yeah and right police oh i mean no i don't think that was an alien now just a short uh person with a big gray head or no i didn't say anything about a big grid i'm just uh the other side of the coin is that they were could have been playing mind games so they had two scientists and lab coats stand next to a facsimile of a kid a grey alien even well i mean you know a lot was going on at that time because i saw again this was their you know baxter to me and they were
(2:25:08) playing with something or looking at something that size maybe they were making up a little mannequin or something to see how it would fit inside the craft but i had no indication that that thing was alive or what was going on so i i can never say that that but neither did they know you would be walking down the hall to go to the bathroom and look that window yeah but i wouldn't try and read too much into that that would be too much speculation okay gonna try to take one more call got to be a quick one gary in hot springs
(2:25:35) arkansas quick question well more of a statement okay in 1966 i was the youngest person working for an electronics company who delivered projects to the jet propulsion laboratory which is now nasa and normally i was kept out of the loop as to what they did but this one particular time i walked through a door that i wasn't supposed to and they're on the easel by an illustrator who was incredible by the name of glenn hawk was the space shuttle 1966 it did not fly till 1981.
(2:26:18) so this suppression of information has been going on for eon well point well taken and i think bob and and john and gene are sort of examples of what our knowledge is is of suppression of this kind of technology uh any closing comments uh from from our guests bob anything you want the listeners to know about what's next for you or or what this strange journey has been like well the strange journey has really been something uh certainly has taken my life in directions i never thought it would uh i do constantly get uh

(2:26:57) people that are you know really wanting to ask me questions even people doing research and uh looking for actually even a couple in a couple instances some research labs that are looking at advanced propulsion and just looking for some possible insight and i apologize for not getting back to everybody but if you do want to contact me just be patient and the only place is our website

Bob Lazar: Area 51 and Flying Saucers, An Interview with Investigative Filmmaker, Jeremy Corbell - YouTube
https://www.youtube.com/watch?v=fyA0eVO2KNM

Transcript:
(00:01) the following program deals with a controversial subject the theories expressed are not the only possible interpretation viewers are invited to make a judgement based on all available information [Music] your your eye and we're back to another edition west of the Rockies sound Frank thank you guys for sticking around I know it's late but man oh man we have a very exciting show lined up for everyone tonight to my left I have Genevieve Genevieve how are you doing on this fine Sunday evening I'm doing very well I'm looking
(00:57) forward to this interview so of course I'm doing well how are you I'm really excited this topic I'll be honest I've been fascinated with it since I was a kid and I can't believe that we finally have a documentary out there that really puts all the info really together in a nice neat little package and it was great for me to kind of revisit the story but honestly before I keep rambling on because as you can tell I'm really excited and I can't wait to dive into this I'm gonna throw it to
(01:26) you so that you can intro tonight's guest tonight and we'll be interviewing Jeremy Kenyan lochia Cobell and he is indeed a man of many talents born in 1977 here in Los Angeles California he's best known as a contemporary artist as well as an investigative filmmaker though he also boasts a career in martial arts being a black belt in jujitsu Covell attended the University of California Santa Cruz graduating with a degree in quantum studies his film career has seen him make a number of experimental and documentary films over
(02:00) the years in 2015 he launched his investigative film series titled extraordinary beliefs by jeremy Kenyon Nokia Cobell the series is a multi project film endeavor with an artful approach to complex topics and investigations Cobell explodes the extraordinary beliefs of enigmatic people deep within the aerospace military conspiracy extraterrestrial and underworld communities topics include advanced nanotechnology non-lethal weaponry offworld technologies space travel and extraterrestrial contacts this research has taken him into the worlds of
(02:35) nanotechnology aerospace exploration exotic propulsion UFOs the mystery of skinwalker ranch and what he calls the phenomenon he has documented the surgical removal of alleged offworld alien implants and with access to NASA he has filmed the analysis of anomalous metamaterials alleged to be a physical evidence of extraterrestrial nanotechnology from UFO landing sites Korbel has obtained deathbed confessions from former CIA and government intelligence officials who claimed to expose the truth about the UFO reality and its cover corbels films
(03:09) reveal how ideas helped by credible individuals can alter the way we experience reality and help us to reconsider the fabric of our own beliefs on tonight's show we'll be focusing on his 2018 documentary Bob Lazar area 51 and flying saucers with that I would like to warmly welcome Jeremy Cobell onto west of the Rockies Jeremy can you hear us okay yeah Jenna be frank thanks for having me on hey it's a pleasure we're really excited that you can make it and join us tonight because as I said this story though the Bob Lazar story
(03:43) has been one of the ones that has stuck around and bob has been a bit of a hermit in regards to this aspect of his life so I'm really excited that you're here with us and there we can dive into this incredible incredible story yeah historian the imagination of the world back in 1989 and it hasn't slowed down and he's been hard to get to talk about it you know the UFO topic has done nothing good for his life and he did come forward in the film and it's quite spectacular so I feel really honored to
(04:16) be able to tell the story that I always wanted to tell as a child and that is really a great way to start this interview because as you mentioned this happened 30 years ago it's unbelievable I remember being a kid watching this stuff on TV and

I can't believe amazing myself I know I can't believe has been 30 years where does your story with Bob Lazar begin probably like everybody else's story with Bob Lazar you're a young kid or at the time I was a young kid and I heard this guy come on the
(04:46) radio and talk about a propulsion system this is what really interested me it wasn't a reactionary system it was a field propulsion system a gravity wave amplification system so this idea of a craft traversing time-space where you don't have to worry about the amount of time right that it takes to get somewhere that blew my mind that really excited me and I was just thirteen at the time but that's how my story would Bob really start it was like everybody else hearing him tell this exceptionally wild story the reporter the
(05:22) investigative journalist who broke this story was none other than George Knapp and he's very well known and in these circles how did you connect with George so George is now and has been for for many years a mentor to me in journalism we've worked together on a number of projects as you can tell by kind of my films and what I've been doing and really how I connected with George was I had been talking with everybody about the bob lazar story I had been filming people that were on the peripheral to
(05:57) this whole story I kind of knew a lot of the people involved at that point and I just went for it and started calling his news station and hounding him I mean I'm sure it was a little bit crazy but I just kept going for him and us and so finally one day I get a call from his producer and he's like look I'm gonna give you five minutes I'm gonna get you on the phone but you got to know exactly what you want and then next thing I know click there's George so the pressure was on and I told him look very sincerely
(06:27) I've been following this story I'm very serious about it I'm making you know my first films right now and I would like to know how it went down from his perspective and he took this long pause and he says okay here we go and he just launches into this lungs you know story and just kind of gave me the whole briefing and and you know it grew from there and if the George is wet on and on and on but even he challenged me you'll see in my film he challenges me to try to get bob lazar on film to try to get him on camera because just
(06:59) people couldn't do it I'm not note how did you really get someone like bob lazar to talk about this topic after so many years and not wanting to well jennababe I have a very charming personality to begin and additionally I think I'm just very persistent and lucky I had kind of let it be known that I was interested to talk to him and you know he's not he was not interested George Knapp was the only one over the 25 years before I met Bob George Knapp see only one that could get him to come forward for five minutes at a time to
(07:35) update you know give a little update on his story and then I had a chance encounter I was actually filming with another gentleman named John Lear who's kind of known as the godfather of conspiracy he's got some wild you know conspiracies right and at that time Bob ended up coming over to visit and say hi and seen him and you know a long time and when he came over I was talking with him and I said look Bob I grew up hearing your story is there any way I could turn the camera on I I just think people need a few minutes just just an
(08:06) update and that that was that that was about five years ago and he let me and so I was able to kind of give to the public in freeform you know a new three minutes of direct testimony from Bob Lazar and I think he began to see what I was about the way I handled that and over time we know we became friendly and I told him look I'm here if you ever want to tell the story otherwise and I think I convinced him of this I said otherwise the way your story has been twisted and disemboweled and mutilated by the the
(08:43) public and and by people inserting their own fiction into what it is you said that's gonna live on that's the future that's gonna be your legacy unless you come forward and tell your story again because thirty years later we know more now than we did then and I think over time he kind of got annoyed at the way people were you know lying about what he said and and he wanted to at least set the record straight to the best degree that we could and and I think that's what did it you know one of the things that struck
(09:15) me about Bob Lazar watching your documentary was that he seems to be not really gifted with this this understanding of science what stood out about him when you met him in person right I think that's really the aha moment for people it's funny George used to say this he goes you got a know Bob in order to understand his story the moment you meet Bob his story becomes plausible and I never really understood what George was what he meant by that you know you know one of the

biggest critics or critiques of Bob's story is
(09:52) that he can't prove his education I mean that's a whole rabbit hole if you go down it you know he can't prove there's what george's tried for 30 years i've tried we can't prove his education so the the problem there is with or without a formal education you have this exceptionally intelligent obviously and clearly honest in his nature an honest person and i started to understand that because i got to know his family his friends everybody around him it you know people that are liars or con men the
(10:28) closer you get to their inner circle the more people have that have been burned i mean that's just the nature of it i found the exact opposite with Lazar just today I got off the phone with somebody that worked with Bob Lazar at Fairchild industries this is way this is like 1982 this is way before he was Bob the UFO guy before he worked out at area 51 before he's even in Nevada and this guy called me today just to tell me I saw your movie I want to tell you I don't know about Bob's claims but I worked
(11:01) with him he was honest he was straightforward and he was exceptionally gifted he said that the the thing about Bob a lot of people talk about stuff Bob actually doesn't and he remembered and recalled to me how Bob would bring his jet cars like actual cars with these incredible jets built into them and how sophisticated it wasn't this guy's an engineer who worked for the government you know for the last 70 something years old now he worked you know for the government for decades in scientific capacity and he's like I
(11:33) don't know the details of Bob's story that he's telling now but I can tell you as a character Bob Lazar was a fascinating individual he was scientifically minded he could do things that none of us could do back then and so I find testimony like that really compelling very interesting about the character of Bob Lazar one of the things that also I found interesting in the documentary was that when the question was supposed to to Bob about you know why did he think that he was an picked to work in area 51 he said that he
(12:08) thought that perhaps they needed somebody they could think outside the box and I think that also gives you an insight into the type of I mean I know that he's a humble guy he probably wouldn't agree with me using the word genius but I mean compared to me and the rest of the mere mortals in the world he is you know like a genius when it comes to science him and what he does I once asked him you know how did you know so his very first vehicle he ever got his mom told me this story you know he got his first car and he's a young kid by
(12:39) the next morning he had almost gutted the car of all the things that were not necessary in quotes right so it would it would go faster somehow this guy and I asked him how did you know how to do this as a kid how did you know to completely disassemble a car change the carburetor all this stuff had he ever worked on cars he doesn't know I hadn't I don't know it just made sense to me so when you say something is someone's like a genius yeah I mean I guess that's a good definition the guy just has these
(13:06) abilities that come from the way that his mind works and but let's slow down a second just for your audience who might not know who Bob Lazar is let me just give you the you know 30-second version so people understand who we're talking about in 1989 a man came forward on camera on klas news with a reporter a young reporter at the time named George Knapp and he came forward in silhouette you couldn't see his face and he went under a false name under the name Dennis which was actually the name of his boss
(13:40) a tarah51 her actually at site four at Erica and he came on the news and he says he didn't say his name but he says I'm coming forward because I'm worried about my well-being and the well-being of my family I have been working at a sub base of area 51 called site four and at that base I was tasked with attempting to reverse engineer or back engineer alien propulsion an alien spacecraft a saucer a flying saucer UFO there was not from here and I was tasked at trying to back engineer these systems and for a lot of
(14:19) reasons you know the the job is kind of gone sideways and I'm coming forward to try to get it all out in one moment so that I can protect myself and so that I can just say it all at one time so that was the first we ever heard about this idea of this back-engineering at area 51 of alien spacecraft and then nine months later George Knapp convinced him to show his face tell his name and that's and the rest is history that that story went global it went worldwide the reason you know about area 51 and the
(14:55) reason it's a household name and the reason you associate these flying

saucers these classic discs with area 51 that's because of Bob Lazar and from there area 51 has become a meme and has gone all around the world from shot glasses to beef jerky to baseball team's to post car sights that Nevada symbol I mean it's amazing all of that happened because of Bob Lazar in 1989 going on the news with George Knapp and that's history and linking that to the discussion regarding his credibility it
(15:28) was mentioned in the documentary that the evidence that he's telling the truth outweighs the evidence that he's not and you know you talk about their having been no news articles or TV reports about a lot of the things that he mentions and such as s4 correct so that was a statement by me in the movie because that has been my experience I have looked into this story probably more than almost any other individual on the planet and what I have found is that the evidence supporting Bob Lazar claims outweighs the evidence against it there
(16:05) are things that Bob knew that just they strike you how did he know how did he know if he never worked there how did he know if he didn't work on these alien spacecrafts so there's a number of things that can go through the list on on what those things are but I think overall the statement is important that from my perspective what I've learned from Bob is that I can't discount what he's saying I have to listen to it none of his friends people that knew him before he was Bob the UFO guy nobody has ever come forward
(16:35) to contradict what he's saying in fact it's the opposite everybody had lived through it with him at that time when he was afraid for his life when he was working out at the base and they support what he's saying so it's it's a personal choice so you know both of you and your audience you need to decide for yourself reality you need to decide for yourself is Bob Lazar worthy of your trust and I hope that my movie gives you insight into his character because that's what's been missing for these last thirty years
(17:07) everybody knows the basics of the story although there are new things that I discovered and uncovered in my film but what you really get is you get an insight into the daily life of an individual with an extraordinary claim and the idea is that you can look at it and decide for yourself if he's worthy of your trust and this is what I love about the documentary as we were talking about just now it's you do get to see that other side of Bob Lazar he purposely stayed outside of the of the spotlight when it comes to the the whole
(17:41) UFO thing and I know that for a lot of the researchers out there they kind of saw that as a bit suspicious I guess they would expect somebody to talk about this at every opportunity however I can totally understand his worry and his concern but let me address something or give you a chance to address something if we could one of the critics of Bob his story has been a physicist Stanton Friedman and I remember we we bumped into Stanton at a UFO conference out in Joshua Tree a few years back and we were just talking
(18:17) about random things and the subject of Bob Lazar came up and I asked him you know like what his stake was on that and he was pretty hung up on the lack of records as far as like school records and things like that after watching your documentary Genevieve and I were discussing it and Genevieve brought up a point that perhaps and going down this kind of conspiracy rabbit hole perhaps when Bob and anybody else that was employed at area 51 when they began working there is it possible that maybe the government has some type of like
(18:52) reassurance or security thing maybe they deleted his records I mean what is the theory behind the lack of a paper trail for bald right so this has always been there's a couple things I want to address I mean first of all you've got you know Stan Freeman you know who's not a PhD physicist by the way he's not a PhD and you know he's he's been on this you know circuit touring doing UFO lectures and that kind of thing you know Bob works in scientific capacity every day I've seen him he works at he is a
(19:25) scientist some of the damage that that Stan did because look he only went an inch deep he tried to reconfirm some of the stuff that George Knapp already confirmed back in 1989 you know Stan kind of has applied he I call him the Duke of the double-standard you know he kind of applied the the the you know a different model of looking at the Lazar story then he does even his own research and that's very deceptive that's like something you know that the UFO debunkers a past would do like fill class or something like that so I
(19:55) honestly it's it's a it's a real shame I've seen Stan try to do things like turn Richard Dolan into like you better have the right opinion on Lazar was one of the first things he ever said to Dolan and Dolan told me that story well it's it's

it's really like he has a personal vendetta like he doesn't want any other like physics Mart businesses around his living I don't know but what he did was kind of change the conversation and and create these kind of memes and these ideas that you
(20:26) know oh bob lazar is not a physicist you know he is that he must have been a janitor or something he's the one that started these things it's so sad because in the UFO field you know we should apply the same standards to everything I'm not saying believe Bob Lazar but I'm certainly not creating false memes about him so that's really disappointing but you know let's let's look at this story a little bit so we can't prove everything about Bob Lazar we never have been george has not been able to however
(20:57) remember this when George Knapp in the very first report you know he said we can't prove his educational background however Bob Lazar claims that he was a physicist at Los Alamos right so this is something now Los Alamos denied that he ever worked there so that George is like wow maybe this guy's lying and he started digging deeper well guess what Bob Lazar took George Knapp into Los Alamos George Knapp also interviewed other employees at Los Alamos I have interviewed other employees at Los Alamos who worked with Bob Lazar Bob the
(21:36) physicist at Los Alamos so here we are 30 years later we're still arguing about the things some things we just can't prove about Bob but some things like the denial by Los Alamos which is important I can explain why but did he ever worked there well he did work there he was a physicist I have a physicist it was in security briefings that went on the record telling knowing Bob Lazar name is dr.
(22:02) Robert Crangle and you can hear that interview on my website so my point is this you've got an institution everything with Lazar is weird right like everything so you've got you've got this institution where he worked up for a long time I have footage of him in my documentary going around Los Alamos at the particle accelerator the maze on facility you don't just get access to this place so you've already got one institution lying that he was never a part of it right now can they erase all of his school records and can the government die
(22:33) I doubt it I don't know I I don't understand that part of the story but I don't know that it's the most critical part so my answer to you is I don't know if the government can erase everything i that just doesn't seem reasonable to me okay but we can prove that Bob Lazar worked at Los Alamos as a physicist that has been proved every way from Sunday if he worked at Los Alamos as a physicist to get that job he had to have some credentials he had to even if he didn't I mean I you know that's the thing is it
(23:11) plausible that being a physicist at Los Alamos that he could get picked up just like he said he did could he get picked up by you know Nellis which is area 51's for to work on these projects because he's an out-of-the-box thinker yeah he could and in fact he knew things about the base at that time which he couldn't have known unless he was there right and we're gonna get into a bit of that in a few I want to just to check and was it there that his name was found in was it the telephone directory
(23:45) yeah George Knapp found that so they're tellin George you know sorry we never we don't have any record of him and Bob says well look I know my lab phone number he said I can tell you the number there's people there I'll probably pick up the know me right and then they found this phone book and there's Bob Lazar Robert Lazar in the phone book with the number that he had said and then of course he took George Knapp to Los Alamos and you know took him all around the maze on particle axilla T and I have
(24:15) footage of it in the film you see these little b-roll shots of that from me from 1980 something you know so 1989 or something like that so yeah so there's many things like that genevi ve that just he was there he worked there let's move on to area 51 is my attitude you know because we've proven it every way from Sunday now right and just through I'd like an extra layer of reassurance that that happen I if I remember correctly in the documentary you also mentioned that II appears in the los alamos newspaper they
(24:47) mention him as working at los alamos if I remember correctly yeah yeah Bob Lazar the physicist so that's mr. English I've talked with him he was the journalist from the Los Alamos monitor so what was really interesting was Bob Lazar was on the front cover of the Los Alamos monitor as you know Robert Lazar the physicist at Los Alamos and it's right there in black and white so we've got that article it's just really you know happenstance that he happened to be featured in that magazine because of his
(25:17) one of his jet cars so I actually talked with the journalist and he says

yeah I remember that well Bob yeah the physicist he worked there so I did a story on him and he said interestingly enough Edie tellers that the godfather of the atomic bomb were there the hydrogen bomb or whatever it was you know and Teller very famous physicist he was there the next day giving a lecture and how this journalist remembered that is because he also interviewed Edie teller now on the day a teller came to give his lecture there's Bob Lazar with
(25:49) his jet car on the front page of the Los Alamos monitor the the actual local newspaper there so that is how bob was able to approach Edie teller and he says hey that's me you're reading about and they had a long conversation and that's how ad teller remembered him when bob was looking for employment back in the scientific field and this is how Bob's story goes that Edie teller was the one that says you know go to EG&G was the name of the subcontractor and they might have a job for you I'll let
(26:17) them know that you're coming so from Bob's perspective if you just follow his story yeah it adds up yeah absolutely and I think lastly to kind of just wrap up because I know I know a lot of people have doubts but let's just to end perhaps this section where we're discussing his credibility one of the things they also came up in the documentary and it was a bit of a porky situation that he got himself into that landed him in court and in court they asked them I believe the line of questioning led
(26:57) to his education and in court which is under oath you're you're in front of a judge he repeated the same story of his education and I like what George Knapp said in the documentary that if he was lying that was the time to come clean correct yeah he was looking at jail time so let me explain that so people don't misunderstand it you know the Bob Lazar is one of these guys he lived a wild life he easily somebody you could discredit if you wanted to at one time he was affiliated with a brothel there were legal brothels
(27:33) and illegal brothels and he was affiliated with the elite illegal brothel and you know set up a computer system and set up security cameras and that kind of thing for it so George not found out about and actually told the cops George Knapp said hey you know I talked to Bob he's getting out of it you know don't bust them you know George is like trying to like you know he's thinking how is such an idiot what is he doing you know so he but you know what's so funny is so at the time the police and the the local authorities they were
(28:06) kind of for lack of a better term in bed with the madam you know they were using her for intelligence and that kind of thing so the only person nobody else even got a parking ticket but Bob Lazar got hit with this like archaic you know charge of pandering so there is defending himself that's real jail time you know so he doesn't just tell his story in court there's a whole discovery process they have prosecutors they look deeply into his past and yeah he tells him the story of where he worked now
(28:36) they're trying to validate that and they can't so at that time congressman Bilbray I'm a good thing about get a congressman to call up this super secret base that doesn't even exist official called area 51 right and he's trying to get information on employment of Bob Lazar so so Bob can show them that he's you know that that's where he worked and even the judge himself said I have never run into anything like this obviously it's hard to get information about Bob lazarre's employment because
(29:09) the they didn't say we never heard of Bob Lazar or he's lying they said to congressman Bilbray you don't have a need-to-know which is a weird thing to say if he never worked there so that's that's that home you know thing where people like the character assassinate him look he openly admits he was involved with a brothel back then probably not a great choice but he was and what we learned from that is that even with a congressman trying to connect with the base to find out if they get records he
(29:40) was said you don't have a need-to-know I found that really interesting yeah no absolutely I never well at least I don't recall hearing about this hiccup he had with the law and it is very strange as you point out that he was kind of singled out a bit considering you know we all know the law Singh Nevada and people get down over there if you will now let's move on to area 51 because obviously this is the meat and potatoes of the story correct me if I'm wrong I mean in anybody in the chat room
(30:12) wherever I believe the first time we heard of area 51 was a photograph by a Soviet spy either satellite or a plane in like the 50s and one of the things that was very strange about this was just this huge runway it was just a ridiculous and I remember the first time I saw that thing it really blew my mind and obviously then

hearing about Bob Lazar story and I will say this even or think around 2009 I'll say 2010 2011 when Google Earth was you know kind of a little bit more popular one of the first things I did was type area 51 and on
(30:57) Google Earth they even had the s4 part of it labeled you know so it's crazy how it's become common knowledge but back when Bob came out this thing you know it was still a very obscure a subject to talk about yeah there was there was no so look it went by a number of different names the Box watertown all sorts of stuff so the only way know about area 51 is you know if you lived in Nevada there were always rumors and whispers about the secret base because they'd always fly you know or drive from Las Vegas but as far as
(31:30) popular culture no I mean look Obama was the first president to ever say era if if you want to actually call it that it took a long time for it to be acknowledged it was not in popular culture you know although you know there are people obviously that we're working there and if you live in Nevada you kind of know about it but it for it to become so famous and so popular yeah that was because of Bob Lazar now sight for look he was the it was never in any books it was never written about any publications no one had ever
(32:02) heard about it that is fact his sight for was never acknowledged in 1989 right after Bob came forward as George Knapp was putting him through the wringer getting people who worked at area 51 to sit down with him and grill him what do you see when you get off the flight you know what what color are the buildings what's directly to your left he passed all those tests everybody that the George Knapp four people that George Knapp brought forward who he knew worked there as a journalist write in secret sat him down and was like tell me if
(32:34) this guy's lying all of them believe that Bob Lazar had landed and had been there now Bob Lazar worked south of area 51 at that Papoose dry lakebed at a place he called site for now George Knapp knew the head of public relations for the base back in 1989 it was a different era so George called them up and said do you have a site for and they said yeah we actually have multiple site fors are there secret projects being done there yes can you tell me anything more about it no so it was admitted that site four was an actual place back then
(33:12) but bob was the first one to talk about it now I also have personal confirmation in a multitude of ways about site four but that was Bob Bob brought it forward first that's how we know about it now another thing that I found really interesting back in the day and maybe you watch this show as well because we're gonna contemporaries I can tell one of my favorite shows would follow the x-files every Friday night on the Fox lineup and it was a show called sightings hosted by Tim white and that's where I really got
(33:45) familiar with Bob Lazar and I remember one of the stories that they did on Bob was that he would take out people to this little lookout point on Wednesday nights and they could see this strange light manoeuvring in the sky in the wee hours of the morning and I remember thinking that was like quite fascinating and I remember a few months later maybe in the next year there was like an update to the story that apparently the Weber you know runs that base they extended the perimeter to encompass that Hill so people couldn't get AB you into
(34:24) this and the thing is how could he know that these deaths were happening on this night at this time if he wasn't there right this is one of those things where you got to say how did he know so let me be very specific about this because people get part of the story and you're gonna be amazed it's actually much more than that so at the time when Bob Lazar stopped getting calls to come out and work on these extraterrestrial spacecraft right on these on this gravity wave propulsion system that used element 115 as a fuel source when he
(34:58) stopped getting calls the reason he stopped getting calls because he authorized the the base and the people he was working for to monitor his phone lines it was part of the protocol as he's going through these security clearances to get what he needed they found out because he couldn't even tell his wife at the time Bob couldn't you know what he was doing other than he's working at a you know out of the base or something like that they found out she was having an affair and so they basically saw Bob Lazar as a security
(35:29) risk part of the thing about getting security clearances you have to have a stable home life he certainly didn't have a stable home life at that point he you know so in a kind of maybe an attempt to prove to his friends he says it's one thing to tell your friends you're working on alien spacecraft but to show them is another thing so he on three wednesdays in a row took different groups of people to this vantage point this location not just over area 51 17 miles south of area 51 at a

place called Papoose Lake so by the
(36:04) way nobody really knows about every 51 now we're talking about a tiny little area south of groom like south of area 51 and he says Wednesday night 8:30 the I know the flight schedule the the craft that I was working on is gonna pop up and sure enough in each of these times a craft comes up they actually got it on video camera but it's like 1980s video camera so it's like Thai crepe but if it's all black and like but the people that were there I've talked to almost all of them they're not all friends
(36:36) anymore and they don't talk anymore some of them but the one thing they do all agree on is when they went out with Bob right when he said right where he said which is this really remote place an object a craft that looked exactly like a flying saucer came up and made maneuvers like they had never seen before how did he know how did he know that something like that was gonna be flying that that really boggles the mind it really does and one of the things they also threw me for a loop watching the documentary and watching Bob explain
(37:12) this process he was involved with back-engineering a seemingly alien craft it's funny the the ufology circles and and just you know the the the scene it has become and I don't mean that necessarily in a bad way I feel like we become a little bit arrogant as far as we think we have it figure it out to a degree how these things work and what they do were they from you can ask different people you get different answers however one of the things that I found really interesting was when bob was describing how how the craft flies and
(37:49) we can get into the the propulsion system in a bit but the one characteristic that I did not expect to hear about the way these craft fly is that apparently they fly belly first the underside of the craft you know and we see movies where you hear or we watch even like videos of people they have captured strange things and we are kind of convinced that UFOs fly you know like saucers had skipping through water as most people describe them it was interesting to hear the way Bob described it and if you could kind
(38:25) of go into that a little bit because that that was really fascinating sure so that's partially correct so let me give you the details on it which is that there were two power modes that bob lazar witnessed in in how the the gravity wave amplifiers I guess for lack of a better word propelled the craft so there there was a configuration in the low power mode where it can lift off the ground and it can kind of lift up using the Earth's gravity and pushing away from it that's where one of the gravity
(38:59) wave amplifiers is facing down so it kind of looks like if you've ever you know kind of talked to people who've seen these things sometimes they say it looks like it's floating on water that kind of thing that's when the belly's facing down and these craft lifts up and then kind of maneuver in little ways but in the high power mode that's when that the craft will turn its belly towards wherever it needs to go in time-space essentially and all three gravity wave amplifiers will then focus in on a
(39:28) single point and it snaps into place I mean that's the nature of this distortion effect with gravity if if we believe you know what bob lazar saying so there's two modes of travel one with a single gravity wave amplifier facing straight down and that's when you're within the proximity of another massive gravitational body like the earth and then the other is for more of I guess you'd say like interstellar travel and that's what it turns its belly towards that the destination it's going to the
(39:57) whole craft is enveloped if everything is as advertised its enveloped with a gravity field so the occupant inside never experiences a differential between you know they're you know inertia or momentum thing like that it's truly fascinating something that was said to me by a designer and aerospace designer he says I don't know this is recent you know he says I don't know about Bob's claims I don't have any knowledge for or against he says but when I heard Bob explained how the gravity wave amplification
(40:33) system works and how the entire craft is used in that system as a aerospace designer I have to say it is the most genius explanation that I have ever heard of a spacecraft and how it works so he's not saying for or against if he believes Bob's story he's just saying he's got to be a freaking genius to be able to figure out you know a story like how this works you know unless he's just telling the truth just like how he was told they operate and I believe we got a question in the chat yeah oh I wanted to make a quick
(41:09) point you know regarding the very first way of maneuvering you know it

reminds me of the various pieces of evidence that you see floating around and documentaries and on the Internet we're kind of that cigar shaped flying saucer or you know UFO is depicted and I think that's much more common right so the the misconception about these vehicles that you know that the military the Defense Intelligence Agency calls them a a V's anomalous aerial vehicles when they're doing public relations it's
(41:46) a eighties anomalous aerial threats Hillary Clinton you know went on Jimmy Kimmel and said oh no it's not UFOs anymore it's you ApS so there's all these different acronyms basically what they're all saying our vehicle is of unknown origin with capabilities far beyond our technology that's what a tip advanced aerospace threat identification program that was out through the New York Times in December of 2017 that program was studying these advanced vehicles and trying to understand how they operate because whoever understands
(42:20) that they have a warfare advantage so the misnomer is that craft about known origin let's calm UFOs for now that they're either cigar-shaped or they're saucer-shaped in fact there are all sorts of shapes that they're the design apparently is not uniform for these people are seeing for thousands of years since the beginning of recorded human history all sorts of vehicles that seemed to traverse time and space in a way the traditional propulsion as we know it now can never do and that is something we can't get around the
(43:00) phenomenon is real our own government has told you now that it is real and it is up to us to try to understand and pick through the junk information out there and to come to a greater understanding of the universe and also our place within that universe and I think that's what you know we get from this when people say I believe in UFOs well I hate that the belief has nothing to do with it that that perspective is challenged by an informational reality we have the information it is there to say that we believe something you know
(43:38) that's you know that that is an incorrect way to look at this phenomenon not that you said that I'm just that's often what people say is do you believe in UFOs it's either true or it's not true and the social consensus needs to catch up because we have the information now it has been given to us it is there this stuff is real and this is a question that we've got in the chat unlike me and username' anti-crisis asking you know if those are really has all this information and it's true then
(44:22) why isn't he dead eventually well yeah let Jeremy answer actually yeah go ahead you're right so that that's kind of like okay first of all I don't know is it true is it not true so that you have to decide that if Bob really saw this stuff what information does he have I mean all he has is he told you you know what it is that he was working on why isn't he dead I mean he said it all if they wanted to kill him they would have killed him you know immediately I think it's either that there were factions that wanted
(44:54) this information out and he was used as a patsy to get this information out to the public or it's exactly you know as advertised and he was under threat but made the decision to come forward to come public say it all at one time on the news with George Knapp and then what else can they be afraid of he's already said the story if they kill him now maybe they validate his story if they respond to him in any way they validate his story so maybe he said it all got it out there and then the best thing for
(45:32) everybody else to do is just look the other direction cuz it's too crazy to believe anyway most people are not gonna believe it and like he himself said um you know he went public with this information for insurances sake life insurance essentially yeah yeah he did I mean whether your audience believes that or not I know Bob and I know everybody involved and it was real he was terrified they were being followed their phones were tapped George naps phone was tapped they were visited at the news station by
(46:05) naval intelligence this stuff is real other sources came forward to confirm Bob's story six people came forward to George now through his phone line at the news station and every single one of them was visited and threatened with their life not to talk to George Knapp and to this day they won't do that so yeah I mean that's an indicator that somebody doesn't want this story out and somebody believes Bob in the government right and you know what we're gonna take our top of the hour break a little
(46:40) earlier just because our next set of questions I don't want to interrupt them by taking a break is we're gonna get into some more heavy stuff here including your documentary kicks off with Bob Lazar getting raided by the FBI and again oh

yeah yeah so I mean you can argue there well wise he's still alive I mean we're we're glad he's fine he's okay but you know that doesn't mean that he's not dealing with some very very serious issues well yeah I mean the the Antichrist as he called himself asked a
(47:14) good question right but you know I think the answer to that is well if you look at his story and you consider it for a minute you can understand that he came forward and said everything to save his own skin and maybe it maybe it worked right right and and just before we go to break one of the cool things here in the documentary that I found and I really hope you framed this or you put it somewhere really cool was the sketch that Bob Lazar did of the sports model as he referred to the craft that he worked on and I wanted to get into that
(47:51) craft when we come back from the break but one of the interesting thing is when you know for the folks out there they have an iPhone is that the UFO emoji looks strikingly similar to the Bob Lazar sketch and it just goes to show how much influence his account has had in our culture in general I was gonna say popular culture but Jesus I mean I've seen people that don't even believe in UFOs the UFO emoji yeah that's it that's actually a great point I mean look you've got things like you know the
(48:25) x-files were in the newer version they said the craft operates off of a fuel source called element 115 that's directly from Bob Lazar right so yeah it's popular culture but also just general culture everybody knows what if you asked anybody on the street in any country independent of age you ask them to draw a flying saucer they're gonna be able to draw a flying saucer everybody knows what we're talking about right Jeremy if you'd be so conscious down the line we're just gonna take a quick break
(48:53) up hang on you're gonna be well there are a few people who will still be in the chat and maybe during that time they'll be able to look up other information about you the documentary so could you briefly tell us your various social media handles and where they can find out more about you and the documentary sure thanks Genevieve so I'm very easy to find probably too easy to find my name is Jeremy Korbel and every social media handle is just my name my website is called extraordinary beliefs calm butt
(49:24) and then I'll have all my movies that I've done but this new one is called Bob Lazar area51 and flying saucers it's on iTunes Amazon Vimeo and you can just kind of take a look at the trailers or something like that yeah and I you know I love sincere questions because this is to me one of the most interesting topics I've ever covered absolutely Jeremy yes hang on the line for us and we're gonna be back in just a few minutes to talk some more about this incredible story that you managed to put on film it's that cool
(49:57) great of course thanks guys so we're gonna like I said take a break I'm gonna play a couple of songs here you know every time we get into certain topics there is a song that I just find quite apropos so we're gonna go out with a little Leonard Cohen with a song that's one of my favorites never mind west of the Rockies is coming right back in just a few minutes Genevieve is here Jeremy's here I'm here and you guys don't like me and tune in and if you're catching the podcast version of this
(50:28) show stick around we're gonna be right back we're free [Music] open your your eye [Laughter] and we're back to the second hour of west of the Rockies on Frank I hope everybody's having a great time as always I'm engineer Frank on Twitter west of the Rockies on Facebook don't forget to follow the show on Twitter at wot R and then the word of radio that's the website as well W here radio calm and the YouTube channel you type in that on YouTube or just put youtube.
(51:27) com forward slash WT out radio and you're there click the bell to subscribe all the little buttons they got on there to stay up to date with everything that we're doing as always I'm joined by Genevieve Genevieve you a hate on Twitter if you don't know how to spell that I don't blame you I have a tough time myself so but you can find her on our web site and you can catch her here doing her very own show there are two flavors music fun facts jokes and a whole lot more on the independent dot F n real quick I just want to send a quick
(51:59) shout out to some people in the chat Enochs and Tomcat thank you for the hellos they got relayed to me and I get I blushed I'm being honest so thank you for that big shout out as well to mateo artery Sparrow Castiel I hope I'm saying that right spoons j-dub and LS Alice oh and one more the ruler there's no one cooler than the ruler I never met that person but I'm sure they're really nice and a little bit back announcing here we just heard some sound garden pretty news from their album

down on the upside probably
(52:38) one of my all-time favorite albums and it was it was really cool to see that you got a Grammy Chris Cornell got a Grammy and rest in peace man I remember when I got the little Twitter notification that he passed away and boy that I'm not exaggerating I was holding back some tears man Soundgarden was there for me in some tough times so yeah rest in peace Chris and before that we heard some Leonard Cohen song never mind I first heard that track I've always liked Leonard Cohen but I first heard that track as the intro to
(53:16) the first season of true detective which I think was far superior than the others if I may say so myself I know you know TV right that's the general consensus it seems let me bring back our guest jeremy Korbel so they he can tell us one more time if you'd be so kind where can people find him on social media and where can people watch this amazing documentary on Bob Lazar Jeremy can you tell us that info sure so I have a YouTube that gives a lot of kind of fresh videos its YouTube / Jeremy Korbel all of my social media is just my left
(53:56) my first and last name Jeremy Korbel my website is extraordinary beliefs calm and you can see all my films on iTunes but this one we're talking about bob lazar area 51 and flying saucers you can see on also Amazon on Vimeo one of my films is on Netflix might one of my first films called patience 17 about alleged alien implant removal surgeries really wild topic but yeah you can find it's really easy to find all my films and to watch it however you want by the way you mentioned true detective season 1 being the best I agree with you and my
(54:30) friend he was a jujitsu student of mine his name is Kerry he's the director and I'm really proud of him I mean he did an amazing job with that first true detective very inspiring as a filmmaker it's really cool to see one of my jujitsu students doing something so cool so I just want to say I guess you can say that he kicks ass Oh big time big time I'm here all week folks anyway speaking I mean one of the things that you know when I started looking into your work one of the things I notice is
(55:02) that you tackle some of the most perplexing topics out there you mentioned possible alien implants but one of the ones that I found really interesting when I when I watched it was your documentary on the skinwalker ranch and I had read George Snaps book on it which up to the time your documentary came out was the most comprehensive source of information on this mysterious ranch but you managed to get in there and get some footage and stuff can you tell us really briefly about that because it's another fascinating thing and I know that's a
(55:39) whole other show that we could do on that but just briefly tell us a little bit about what it was like filming that yes it really is there something really going on there like what's up with a skinwalker yeah well the Defense Intelligence Agency which is the Intelligence Agency for the Pentagon absolutely believe something's going on at skinwalker ranch because they funded a twenty-two million dollar study with taxpayer money which focused a lot on the ranch and the things that have been observed there and
(56:12) it's not just UFOs it's also creatures you know there's distortions of time space it is a really bizarre story so yeah I was able because of George Knapp and the work that he had done for two decades being the only journalist allowed during active investigations by both Robert Bigelow who's a billionaire who's known for I guess of inflatables put him on the International Space Station you know he was George was allowed to document with film a lot of the investigations what was going on but
(56:48) he was never allowed to release that footage so I pastor George over and over come on man we got to get this out to the world and there was never an opening but then the ranch was sold to another individual and that opportunity that moment really opened the door to go back into George Knapp's archives to pull out that footage we were authorized to do so able to tell that story through the visual medium of film because as you said before was there was just a book they weren't even allowed to put a single photograph in that book so my
(57:22) film was the first time ever that people got to see footage from actual investigations at skinwalker ranch which is a ranch up in Utah it's an area of land in northeastern Utah that is known for the paranormal for for better for lack of a better term from UFOs as I said two creatures two balls of light to time-space distortions all sorts of weird stuff I mean look it stretches my own imagination but there were phd-level scientists that worked for years trying to understand the phenomenon as they call it whatever that is this phenomenon
(58:01) that includes UFOs and as I said famously the Defense Intelligence Agency

was you know kind of it was exposed there was a program called a tip advanced aerospace threat identification program and that was too reactionary style to study these these UF UFOs however the the mother program was called us app and that that's the the acronym and AUSA had a much bigger agenda than just UFOs it was you know they studied wormholes and as I said like times based sources very strange so on this ranch all this stuff was
(58:41) occurring now for the first time ever in my film you get to see modern-day footage from the third major investigation that's going on right now and you get to see the ranch there's an interview with the new owner now I had to shield his identity because he wanted to make sure that he keeps his identity private because he didn't want to he's a businessman and he's he's known and it would be better if you know he could keep these things separate and I totally respect that but yeah in this
(59:15) film you get to actually see on skinwalker edge and you get to see all this historic footage it was so fun to make and I've been to the ranch a number of times and look it's harder to get on the ranch than it is area 51 less people have ever been at skinwalker ranch so I felt really honored to be able to go there on multiple occasions you know spend nights there and really try to see for myself what this is all about and I I did not have a paranormal experience I did not see anything that I can definitively say is truly unexplained
(59:47) but but many scientists that you know government scientists were Aaron and did experience these things one of one of whom helped co-author the book with George Knapp of the same title hunt for this for the skinwalker and it's his name is dr. colum Kelleher and it's just it's just astounding it's astounding what has been documented and recorded on that ranch however we still don't know what is driving what they call the phenomenon Wow yeah no it looks like that that will remain a mystery for a little longer it
(1:00:22) seems I hope one day we get closer to the truth absolutely and I think we're gonna die back into the bob lazar story and Genevieve I'll let you kick this one off well going back to what we were talking about just before the break though Bob Lazar is very fortunately still alive I think we can safely say that he does not exactly lead a private completely unmonitored life could you tell us a bit about what happened regarding the FBI raids sure and it was a multi-agency raid we still don't know we know the FBI
(1:00:58) was involved in the recent raid but there were other agencies and we've been trying to get information on this because it was a very dramatic experience that I actually for the first time in my life got to kind of experience the the negative side of this so I'm out there and I'm filming with Bob and we decide to have I'll say like a private conversation we we left his house went further out on to his property and I actually was recording because I I wanted to have even encrypted I wanted to have this part of the story
(1:01:36) documented and he agreed and so we kind of went out and we started filming and how this was never intended to be in the movie because I didn't know we're you know he was gonna have an FBI raid in the middle of the movie but this is never supposed to be part of the movie is just something we were recording and gonna encrypt and it's just you know kind of like an insurance it's just something to keep so that somebody has it documented and right before we kind of get into some of the kind more sensitive parts and look I'll be
(1:02:07) straightforward with you I we went on Larry King and Bob was straightforward he told Larry King they were he believes they were looking for the fuel for some element 115 because famously back you know in the early 90s Bob revealed or claimed that he got a piece of this fuel source this stable form of element 115 that he says he worked with out of the the facility now he got it out of he says he got out of Los Alamos not area 51 because it was being machined in Los Alamos for use at area 51 and they machined it and they told the machinist
(1:02:42) that it was an exotic armor right they wouldn't tell him exactly what it is like an extraterrestrial material you know right so that that's the claim so to understand maybe what we were talking about you know how to deal with you know some sensitive topics about element 115 so I asked him at that moment I said do you have your cell phone on you I felt like I was being paranoid and I was being ridiculous and we both agreed well better safe than sorry you know take the phone we don't we want this to be a private
(1:03:10) conversation not that nothing illegal just a private conversation so I ditched the phones you know a couple hundred meters away came back finished the interview again it was never at none of it was supposed to be in the movie and then

I left and the moment I left I mean agency after agency about 25 forensic agents descended upon his place of business in this tiny sleepy little town in Michigan and went through his business and property sectioning it off in meter cube and they mirrored his computer they just their excuse was they
(1:03:47) were looking for paperwork now I know a lot of people that work in that field as a federal investigator and they have all told me if you're looking for paperwork you call somebody you send one person over there this was over the top now whatever however you want to look at it whatever you want to believe about it I'm not asking you to believe anything I'm just saying he was raided it is my understanding that they repeated back to Bob the specific conversation that we had before we ditched the phones so this is the first
(1:04:23) time in my life when I feel a private conversation was intercepted and you know that that's infuriating it's something that's very abstract until you yourself experience it and I felt bad for Bob I mean he's a good guy and he's his life was turned literally upside down I mean they they turned his place upside down so that happened and after that happened I I decided to touch upon that because it would be public record so I decided to touch upon that in the film and let you hear from Bob's
(1:04:55) perspective what that raid was about and what happened to him I wanted people to know during the filming what happened to him so I put that in the film let him describe that raid and put a little section showing that we were having this conversation and that that conversation was somehow related most likely to the raid now this is not the first time Bob Lazar has been raided by agencies this also happened to him in New Mexico and it's always very strange I mean usually when you get a federal raid and you get
(1:05:30) a judge to sign off you have probable cause and somebody's going to jail I mean they don't take these things lightly right nothing right nothing would bomb so you know the the claim is simply there was a raid if you look into it a little bit more I say there's great evidence that they were looking for something and specifically it is my understanding that they were looking to see if his claim of having some element 115 was valid and let's talk about this element 115 because as you mentioned he
(1:06:04) first put this out there in one of his interviews and when he first came out and I remember in either 2015 or 2016 when it was confirmed that this element 115 was actually real and I believe now it goes by the name of Moscow beum and named after I believe a Russia and Moscow where they managed to synthesized this thing however one of the things that I found interesting is that he explains that this is the fuel that produces its own gravitational energy in he describes how there is a certain method to process this element
(1:06:51) 115 and it involves you know turning it into a certain shape from a cylinder to like a cone and then you have to do certain things I know I'm reaching but it almost sounds like some type of magic ritual that you got to do to this thing because otherwise it won't work what can you tell me about element 115 and the role that it plays into the propulsion system that Lazar had to take apart so we have to kind of try to understand it with with the information that we have so the machining of it I took more than
(1:07:27) like a ritual or something I took it as as that they're they're machining it so that there's very specific surface areas that are exposed or connected and that kind of thing I'm not a machinist but I've had a number of machinist contact me after you know I came forward with this film saying oh I think I can explain to you why why they would machine the element this way but let's back up a little bit because the people that are critical of the Lazar story which is fine they're often critical
(1:07:53) about incorrect information so I want to make sure you have the the correct information Bob Lazar was not the first person ever talk about element 115 you know it was always theorized that on the periodic chart that there are these super-heavy elements but that they weren't fabricated here and that it would you know we figured one day we'd be able to you know through slamming neutrons you know basically create some of these super-heavy elements and and we we have been we have been able to so element 115 for atoms of it what was
(1:08:30) fabricated and again this is like a crapshoot I'm not sure how to exactly explain it but it's like you know smashing you know hitting golf balls into cars and hoping that you know it you know it in the right way and you know you're in these particle accelerators and it's not an exact science anymore you can't just like I'm gonna make element 115 there's an element of chance to it now the element 115 the

four atoms that were created in our particle accelerators which you know it is worthy to say that
(1:08:59) Bob always said we're gonna be able to fabricate at some point element 115 in an unstable way and he was right we were able to so the element 115 that was created in laboratories it has a half-life of 220 milliseconds so it's before you can even register it it's basically gone this is a far cry from what he said he was working on which was a stable he had a piece of 223 grams of this stuff right so a substantial amount and in fact he was told our government or this or whoever he was working for had 500 pounds of it which is ridiculous
(1:09:34) I mean that's a crazy statement like how could we get that we can't fabricate that even with extensive new technologies you know ten thousand years in advance you probably can't make this stuff but here's the deal he said that there was a stable form not now if you look at different elements like gold right Gold has a lot of different versions I think there's 40 different versions I google it I'm not sure but this is correct but I think there's 40 different versions of it all of which except one
(1:10:06) are unstable so the gold we know has the isotopes the neutrons to make the gold we know stable like you can hold it in your hand it has always been theorized that in these super-heavy elements like element 115 that you cannot rule out a stable form we just haven't found it yet so Bob Lazar said somehow they had a stable form of this element 115 now now why is that important well first of all if Bob thinks it was brought here as as cargo he thinks it was naturally occurring and harvested if he was told everything that was correct by an
(1:10:43) extraterrestrial civilization and that's the fuel source and somehow we have some of it he doesn't know how we got it but we have some of it now how it works in in the craft in the machine is this element 115 win machined in this very specific way which is the first time you ever hear about it how it was machined in my film there's a lot of things that are brand-new in my film if people don't know that they haven't been looking close enough so the 115 is machine and the way it was described to
(1:11:15) Bob so his best understanding is that the this stable form with the with the right eye stop a combination to be stable this element 115 that it almost produces more gravity like the gravity extends out beyond the mass itself so they could then harvest the wave because yes gravity is a wave we have now found that out that was also proven after Bob Lazar said gravity was a wave that is now scientific fact so this gravity wave was it harvested from the element 115 and then through waveguides you know made by extraterrestrials basically could extend
(1:11:55) this gravity wave and produce this effect right this gravitational effect so that's how element 115 ties into this spaceship the spacecraft right that Bob Lazar says he worked on it's an incredible story far beyond the technology we have now but the biggest criticism people say is well element 115 is not stable so Bob Lazar is lying well hold up it is theorized that there is a stable version we cannot discount it any super-heavy element physicist that you talk with knows this and anybody that says otherwise is incorrect or they're
(1:12:34) trying to dissuade you from from understanding this because that I have done a lot of research on this not I've talked like nine different people who are in this field and they all tell me you cannot discount a stable form of element 115 now that doesn't mean I can prove Balthazar's statements it's just saying we can't discount it did did that answer your question kind of yeah yeah no absolutely it's just one of the key parts of the Bob Lazar story yes this element 115 so I really appreciate you
(1:13:02) taking the time to really walk us through it because I've seen so many people try to invalidate of story based on well the little that we know or we knew at the time about element 115 so I think that was a great explanation you gave us there now one of the other things that was really interesting about the Bob Lazar story was how he describes the inside of the craft one of the things that stood out to me when he was talking about it was when he starts describing the height of the chairs inside the the UFO which were
(1:13:37) not to the proportions of a normal sized adult human if you will can you tell us a little bit about that really interestingly enough so there's Bob he's one of the most skeptical people you'll ever meet I mean that's what's interesting about him if he can't see it touch it and you know with his own hands he doesn't take it on face value so they told him you're gonna be working on this you know machine and it's really cool basically and you know he walks by the first time I ever saw it he walks by the this disk

(1:14:08) this flying saucer and he runs his hand along it and he thinks to himself look at this everybody who thought about you know UFOs from other worlds he's like what idiots they're ours and in his mind he's like we have the flying saucers he has a natural thought he saw it right but it was when he got into the laboratory and he started to kind of be shown a little bit more about the craft and how it worked that he realized we this is not our technology they're asking me to reverse-engineer it and it
(1:14:42) started to dawn on him that that this craft did the system that this technology was not from here and the in fact there's a physics unknown physics that they were using in these facilities to understanding there's being held back from humanity but but even that didn't prove it to him it was that moment you asked about when he walked into a craft he he got on one occasion he was allowed to go into the craft to look down in the lower levels and look at the way that the gravity amplifiers were situated in
(1:15:13) the spaceship and he goes in and the moment he steps at I said well how did that feel and he said ominous you felt like you shouldn't be in there everything is the same pewter gray there's not a single edge like a sharp corner anywhere and he says then the biggest thing was I look at the seats and they were like half human size you wouldn't build something like that it was like claustrophobic for a full-grown human and and that really dawned on him holy cow you know this was not made for us to operate this was made for smaller
(1:15:53) beings to operate and that was this real powerful moment that he remembers vividly in it dawned on him what he was actually working on it became real you know there's been a lot of speculation as far as where did we get this technology I know we would be speculating here but do you have any thoughts I mean some people have said that these are saucers from the Roswell crash these were captured these were given to us in the alien treaty with Eisenhower I'm sure you're familiar with all of these possibilities do you lean
(1:16:32) on any of these yeah I'm the worst at speculate I'm a documentary filmmaker I document what other people think I have no idea I can't even begin to provide any evidence or proof or even ideas on all of those things you just said could be but I will tell you one thing and this is new this is something that for the first time ever I I really pressed Bob and got him to kind of speculate and he says look I don't know he goes I I was I read briefings he read a whole bunch of wild briefings that said these
(1:17:06) were craft from the Zeta Reticuli star system you know that these these greys they actually call them the kids that was the term for the aliens you know no one ever said aliens at the base they always called them the kids and he thought that was hilarious but what he said for the first time speculating he said to me I got the impression he's like I can't tell you exactly how or why just because it you know there's no one's cific thing but he was led to believe that these nine extraterrestrial
(1:17:40) vehicles these nine craft that he saw although he only worked on one and touched one that they were from some sort of archeological situation some sort of archaeological dig like like they had like we had had them for a really long time and had made very little progress on understanding how they operate Wow you just literally blew my mind with that holy cow that is something else yes the thought that these could be I mean you know one would assume right that when he was working on them they were probably you know maybe a few decades
(1:18:18) old but the possibility that these could be even older than that and that technologically advanced boy do you just give me a lot to think about tonight meet me to that that blew my mind I had never even dawned on me and I you know I'm not sure exactly what it was that was said to him or how it was conveyed but he just got the impression that they had been working on these for a long time and that they hadn't made a lot of progress in that these were maybe even ancient unbelievable incredible stuff incredible stuff let's
(1:18:54) talk about this hand scanner which was also a really cool thing that you found and this is something that he had reference but there was no way to corroborate there was no Google back 10 or anything like that to try and find a picture of this thing but you found one and I remember watching how the look on his face when you handed him this this photograph and it was the look you give something you haven't seen in a very long time that you were very familiar with as equally of when I find like maybe like a childhood toy and all my
(1:19:28) junk oh yeah I forgot about this thing can you tell us a little bit about what's the story behind this hand scanner and why was it such a critical piece in

the puzzle of Bob Lazar yeah that was a really exciting moment and you see it exactly like I experienced it you know what I try to do in my documentary is and why I'm often in my documentaries is because I want you to kind of follow me on my journey of discovery so this was one of those things that that we could never have had access to thirty years
(1:20:00) ago when the story first broke in fact bob has been mocked and laughed at you know for saying this but he always said that one of the kind of prototype biometric kind of access devices that were used at s4 he said it was it was a like a hand scanner that you would put your hand on this up kind of like a plate and it had these little spikes that were sticking up the rods that were sticking up and that this bright light would come down from the top and that it would measure the bones in your hand and that everybody's got kind of unique
(1:20:39) structure to their bones and that was one of the ways that you would access and get your security card out I mean it just sounds like science fiction he even would laugh when he would talk about it because it sounds so ridiculous back especially back in 1989 but you know this was something he said and everybody said oh that's crazy and you know Bob always got laughed at about it like what are you talking about this sounds like science fiction well because of the lens of 30 years information is is coming out
(1:21:09) so it turns out a friend of mine was kind of tipped off and given some photographs that showed these hand scanners that did exactly what Bob Lazar said they did and look exactly like Bob Lazar described them and that these were used at area 52 which is the Tonopah test range in the stealth program so not everybody used them the mechanics and this sort of thing but actually there were people that use this for identification so I got the images and I thought well Bob's always talked about him let's see what he says that I I told
(1:21:44) them that I had some photos and in the movie you see me show it to him and yeah he's like a kid in a candy store he feels vindicated it's it's why he's the bat see that's it I never thought I'd see one of those again I mean it was really for him this exciting moment this tiny little vindication because you know knowing that these were used at the Nellis base you know knowing that they were used on the complex they weren't that good by the way they discontinued them shortly after 1989 they were really
(1:22:14) like actually bad biometric sensors but they were used in these ultra top-secret programs like the stealth program for certain individuals so it then goes to reason how did he know about this technology now what's funny is if you go and you watch like Close Encounters you know how sometimes the military they'll consult for a film there's this glimpse when you see a guy walk through a door and he puts his hand under something and a light goes off that was it it's called the identity map so it
(1:22:45) was already kind of hidden like an easter egg in popular culture but in no way does that mean that Bob knew that it was being used you know at the base without no I mean how would somebody know that unless they were there people argued was somebody told him okay sure somebody told him but you could say that about Bob's whole story for him it was this great moment this little vindication and you're right when you see Bob react to this that was a genuine reaction so he knew and that's the first time you hear
(1:23:17) about this first time you see the photos is in my film there's a lot of firsts people will watch it and they they're thinking they're not seeing anything new are you kidding me how element 115 was machined the hand scanner I found the guy after 30 years and got on the phone with him that did the security clearance for Bob Lazar nobody knew that before Bob always said there was a guy named Mike Thigpen you know George Knapp you know was able to track the guy down but it was never able to get him on the phone I talked to him I
(1:23:47) talked him at length on multiple occasions so there's all these new things in the film in the hand scanner was a really cool one yeah I think people need to remember that these seemingly small tip bits of validation have a huge impact on the story as a whole yeah Jennifer you I mean it's like it's a death by a thousand cuts like you can say I don't believe Bob okay that's fine you don't need to believe him he doesn't even want you to believe him really it's easier for his life if you don't believe
(1:24:17) him but he feels that he has a duty to tell the story right and to tell it straight and for you to use your mind and decide for yourself but these little things that occur you cannot dismiss them you can try to tear apart the laws our story about his education you can try to tear apart his character you can just say

it's too fanciful and I don't want to believe it but you can't deny these little tiny things that start adding up obviously Bob's life has been quite the roller coaster since he came out thirty
(1:24:51) years ago talking about this stuff now that your documentaries out how is bob lazar doing it I would imagine he's still under surveillance he still has to take certain precautions or does he leave his life freely and and try not to worry about those things totally freely I mean you know it's so it's like this paradox we had we even joked about it that nobody's gonna be listening nobody cares what he said thirty years ago we thought we were past that it really shocked us when this you know raid happened on his business which
(1:25:24) again there's nothing you know there's nothing happened you know he's not charged with anything right you know nothing happened so he lives a very fun life in the sense that he's got his business is called United nuclear united nuclear calm as the website it's got all these I mean it's like Willy Wonka of science it's the coolest website you get to you just check it out it's very very cool so on a daily basis he gets to do what he loves and he gets to work with you know in science and technology and
(1:25:53) get school contracts and has this kind of online store for all this mad scientist stuff you know he's got a great wife and a great life he's got a great home he's got all these animals and horses and you know he just has a great life that he was worried and I was worried that by stirring this all back up and writing that the wrongs and straightening out the record that he would be under scrutiny in ways that were not good for his well-being but to the to this moment that that hasn't happened people have responded
(1:26:26) with positivity whether you believe his story or not people are fascinated by his story it has gone like a whirlwind around the world I mean Fox News picked it up we went on Larry King there you know even the New York Times did a little blurb about it you know the movie has recaptured the imagination of the public and and everybody looking at this whether they believe him or not it's a fascinating story about a fascinating person but yeah he lives a very calm relatively normal life and just likes to spend time with friends and family and
(1:27:02) in a small circle you know I'm happy to hear that he has managed to retain some kind of normal lifestyle because I can't imagine what it's like and knowing in the back of your head that you're constantly watched so I think I think they were surveilling because I think we were rehashing the story we were bringing it up again we were specifically talking about element 115 I don't think it's like this constant thing where he is being looked at he told his story 30 years ago we're retelling it now with some new
(1:27:32) information and some new evidence but yeah I don't think there's any element of that cloak-and-dagger and spies neither of us feel that way I've only been helped people call me every day you know trying to tell me parts to the story that I don't know I've never had anybody call me and say don't do this movie or anything negative like that it's it's all been positive so yeah i'm i'm happy to say everything is is is pretty good now the other thing that's interesting is you know he does not like
(1:27:58) public appearances i mean people have been really mean to him you know they've tried to they've said horrible things about him that aren't true man if people did that i wouldn't want to be in public settings talking about ufos either he's never gone on UFO circus never done anything like that but in my in the world premiere of the film which was in los angeles over 1600 people completely filled out the theater and i brought him on stage to do a Q&A and you know he doesn't like this stuff he's doing it
(1:28:28) because i begged them to do it right he went on american because i begged him to do it i was like i want people to know about my movie bob please but he actually had i think he had a pretty good time i mean you know he got people ask questions through Twitter and we got to answer some of them so I've kind of I pushed him a little bit I got him he's gonna do another Q&A with me live in Oregon after we screened the film so he's not going on lecture circuits he's not gonna talk about it that way but he's agreed to another Q&A
(1:28:54) a public Q&A with me in Oregon at the McMinnville McMenamin z-- UFO festival and I'm excited about that cuz it's kind of like Bob coming out of his shell and sharing a little bit more information as long as people are kind to him he'll tell you his story do you think that the reason for this changes people's attitude to the topic of UFOs and extraterrestrials do you see that playing into why maybe it's a little easier for Bob to come out and talk I do I do see they raked

them across the
(1:29:25) coals I mean the UFO people and the debunkers and everybody you know thirty years ago but I think now there's some vindication because look he said our government has a program to study UFOs and back then you're like all right sure man you know that BS well we now know that the government does have a program to study UFOs we know about one of them however I know for a fact there are multiple and I think that those programs will be named later but we know about one now so I think that climate is very
(1:29:55) different interestingly enough at this event in Oregon I also got a friend of mine named commander David flavor he's the fighter pilot that engaged the tick-tack UFO off of the coast of California the very famous case that the New York Times talked about although I broke that story twice before the New York Times did in December of 2017 because I knew commander favor prior to that well he's coming as well so for the first time we've got commander favor and Bob Lazar and they're both gonna be at
(1:30:26) this event and I'm gonna be interviewing commander favor now the craft commander flavor saw also appeared to be a gravitational craft so what a cool conversation that's gonna be where you got a fighter pilot who saw a gravitational UFO and then Bob Lazar who says he worked on one I cannot wait oh my god that's out I'm gonna have to get a plane ticket or something because that sounds like I should think Genevieve I believe you got one question but let me let me just get this question before we let Jeremy go because I'm
(1:31:00) always looking at weird things and whatnots and I caught something in your documentary I don't know if you did this knowingly or not but you snuck in towards the end footage from a Betty Boop cartoon and I know this cartoon very well and the title of this and you can find it on YouTube I believe there's something like a remaster HD version but it's called bimbos initiation and I remember being made aware of this short part tune of a few years ago when I started doing the show and we were talking about secret societies and
(1:31:34) whatnot and there's this whole little mystery surrounding this black-and-white cartoon whether it has to do with somebody that knew about secret societies or not did you include that just because of that little fun fact or was that just something that you thought would be a cool little thing to sneak in there every frame of my movie sometimes single frames of my movie was thought out and was intentional in my movie there are dozens and dozens of Easter eggs of things that I figure over time people are gonna figure out there's even
(1:32:11) more code at one point inside my film so I just made it you know as I'm making a film I wanted to layer it so people would watch it over and over and try to find these things that will give them more information it's not because I can't just say it all but it's also because when you're using the art form of film as a medium to capture the imagination of people right you want it to be something that people want to watch again they want to discover they want to look into it they want to explore it because the more they can
(1:32:41) kind of understand the content the better grasp they're gonna have of the story so a blanket statement is in my film every frame is intentional and there's a lot of things hidden in there for discovery so people can kind of like choose-your-own-adventure and learn about it that cartoon itself the only you know implication for me and it's so funny you picked up on that no but asked me about that it wasn't about these other you know conspiracies for me it was because in that cartoon you see this impossible thing you see this guy
(1:33:17) being that this character being chased and tormented and run after and stabbed and bitten at and burned and this and and this character just keeps running running running trying to get ahead of all these things which are tormenting him and that is very similar to how I see what has happened to Bob Lazar is anywhere he turns you know he's poked bitten stabbed you know that that is the life that he had to lead you know and until now I think now I think things are for once in his life to some degree at peace wow thanks for answering that
(1:33:52) question genevi ve well assuming that your film series extraordinary beliefs by Jeremy Canyon look your Cobell assuming that's still ongoing what do we have to maybe look forward to in the future yeah well that is the umbrella term for my film work is called extraordinary beliefs and it's covered everything from nanotechnology to these this something called the space drive which is this aerospace propulsion system all the way through to UFOs alleged alien implants can walk a ranch what's next well I have
(1:34:31) a lot of films that are practically done I just I'm deciding what is best

to engage with public consciousness so I knew that skinwalker ranch was really important to put out at that time with George Knapp because of the changeover of ownership and I knew the Lazar story is important because of the thirty-year kind of anniversary coming up next I'm very very interested in this character named net I call him nano man he's a nano physicist that has done some incredible work so I'll be doing dealing
(1:35:04) with that there's there's a number of things that I don't think I'm gonna say right here right now but yeah there will be exciting content coming your way on a regular basis very great no it's exciting and we look forward to it and please yeah keep us updated with everything you're working on because like I said you tackle some of the most mysterious perplexing topics that I know a lot of people want to know more about and that I know we covered a lot of ground here tonight upon your documentary but I
(1:35:35) still will say that we didn't do it justice people really really need to go watch this on their own and as you said make up their own minds so if you don't mind telling the folks at home one more time where they can watch this Bob Lazar documentary that it's totally mind-blowing awesome so yeah my website is extraordinary beliefs calm how they recommend people go to you know my Twitter Instagram even my youtube at Jeremy Korbel that's is really great content that you get all the time and then if you can see this film bob lazar
(1:36:08) area 51 in flying saucers on itunes amazon zimmi oh and there will be a number of other platforms it's coming out on so yeah get ready this film will really I like to say weaponize your curiosity it will get you so curious that you will have to start researching for yourself and trying to find out the truth the biggest success I think of this film is cinematically I'm very happy with this film I admire film I admire cinema I admire how it captures people's imagination and with the animation and the music you
(1:36:45) know and all of this stuff combined I think the film is a really beautiful way to engage a very complex topic of a man named Bob Lazar so watch it enjoy it you do help me out I'm an independent filmmaker so when you buy it on like iTunes you get all the bonus material you buy time Demio you get over two and a half hours of bonus material you know do that you know support the film enjoy it and be ready for your curiosity to be weaponized yeah absolutely and set out to Mickey Rourke well you got to do some
(1:37:14) voiceover that was super cool now he has such a signature voice it just it really added to the to the atmospheric of the of the whole film so that was really cool Jeremy what can I say this has been a blast and and we hope to have you back in the future and you know talk about your other films and anything else you're working on because man you got you got your finger on the pulse I can tell and that is super awesome hey thanks so much both of you for for having me on your show you have a new fan so I'll be able
(1:37:44) to listen to your show from now on so yeah Frank and Genevieve thank you and yeah continue what you're doing and I'm sure there's a lot more to come awesome thank you so much thanks Jeremy enjoy the rest of your evening you too take care that was Jeremy Korbel who made this amazing documentary bob lazar area 51 and flying saucers definitely go check it out like I said I know we talked a lot about it but when you watch this stuff when you watch him I think that's that was what I really was looking forward to I I wanted to see
(1:38:17) him I wanted to see his expression I wanted to see the look in his eyes I wanted to hear his boys to really understand bob lazar and I really got to give props to Jeremy because you really captured who Bob Lazar is yeah no absolutely and I knows there are a few people at least from what I've read online that you know they say that this documentary didn't reveal that much new evidence and that it mainly went over the story as it is and there are a few bits of new information but like we just said and discussed it's it's more about
(1:38:53) you know the man behind the story and it's that that kind of adds to the credibility of what he said in the past and it has a whole different layer and I mentioned to it and that spot is also you know what makes it so important and I also learned that Bob Lazar is quite a cool dude yep have a beer with or two or five I don't know but yeah definitely check it out Bob Lazar air 51 and flying saucers Jeremy Korbel was our guest tonight and man I have to say the one thing they got me tonight was when we
(1:39:33) were kind of speculating a bit he mentioned the Bob Lazar though that these craft could be potentially ancient I mean that really did it for me anyways boss if you missed any part of this show don't worry you'll find out on our YouTube

channel youtube.com forward slash wot our radio will also post on our website wot our radio calm and yeah check it out check out some of the other cool stuff we have on there as always some engineer Frank on Twitter west of the Rockies on Facebook follow the show on twitter @ wot on radio and a review
(1:40:05) way that Genevieve you way on Twitter and you can catch her here doing her very own showing a lot of flavors music fun facts jokes and a whole lot more Genevieve thank you for joining me thank you and thank you to all the folks at home they were tuning in tonight I hope they had just as much of a good time as we did the interaction questions and I know I didn't get to mention everything that was said in a chat but we got a couple of good questions yeah no I think we did and I'm gonna send us all to bed with a
(1:40:35) little bit of tool because that's great bedtime music ain't it yeah and I think they're coming up with a new album soon so get stoked for that yeah here we go guys take care be safe god bless don't know anything too crazy we want to see you back next week till then bye bye bye west of the Rockies with Frank the engineer on the independent FM Los Angeles

George Knapp Interview Bob Lazar 5 October 2014 - YouTube
https://www.youtube.com/watch?v=b2vEMpH_wfA

Transcript:
(00:26) hi i'm robert from exopolitics germany with frederick from mexico politics denmark and we're sitting here with george knapp a man who actually wrote ufo history and who's actually a part of you for history himself you created part of ufo history welcome george thank you you're making me sound old well i'm making you the trying to put you in that historical context that you that you actually came up with area 51 you're responsible for setting that term into the world it's not a heavy burden
(00:58) don't you feel a little yeah well it goes it varies between whether i should be blamed for it or accept or be prideful of it i i think it's a little bit of both you know i think probably the the people out there wish that it had never happened the people who run the base because we've created so many problems for them since those stories first aired in 1989 25 years ago tens of thousands of people have gone out to the base to see whatever it is that's flying around out there every news organization in the world has sent
(01:28) cameras and crews government investigators have gone there it shined a light on government secrecy black projects that had never been made possible before there are those who say maybe the government created these stories that they leaked them to me and i did their bidding because they wanted to focus the focus to be something away from what they really do out there and on ufos which is ridiculous and to those folks i say anyone who had that plan in mind really screwed up because as a result of the ufo stories you know
(02:03) so much attention has been shined on area 51 i'm proud of it i i am i'm proud of it recently you talked to bob lazar again 25 years after uh the main his main story broke out how how how how did that come about again i mean how he's been very reluctant to stepping forward how how did that well you know i think i'm probably the only person in the world the only interviewer who can get bob to do that he's sort of shied away from it he's like to he'd like to leave that chapter of his life behind
(02:33) and because of the friendship that we've developed over the years it's harder for him to ignore me so i pestered him about it for quite some time and finally talked him into doing an interview for the 25th anniversary figured if there ever there was going to be a time when he should sit down and talk about it in a contemplative sort of way to think back on what has happened over a quarter century it would be now and bob is sort of of the same mind as i am is that it he's amazed that 25 years later people are
(03:00) still talking about this you know i think we both knew that it was going to change his life when he when he came forward with this information but had no idea it would it would change the world i mean that it would still be a topic of discussion a quarter century later bob lazar is the one who who supposedly worked at area 51 with extraterrestrial craft recovered from the us government trying to

rebuild their technologies and what made you think that his story is true in the beginning well first is that just the way it sounds bob
(03:34) has a certain amount of credibility i mean he just he doesn't try to uh exaggerate he keeps it i mean it's a fantastic story any way you look at it but uh his story has stayed the same it stayed consistent over the years he never added extra stuff to it that was number one number two is i became convinced that there really was an effort to discredit him to remove some of his records to pretend that he never worked in places where i know he worked i mean we we can go into the details about it but it was pretty clear
(04:01) to me that someone was messing with his reputation and thirdly is that if it had only been bob telling this story about things that have been going on at s4 and area 51 chances are we would not have moved forward with the project but the fact is that more than two dozen people have come forward with bits and pieces of the same information people who have worked at area 51 in the 50s 60s 70s and 80s who have told me pretty much the same thing people who have seen saucer-shaped craft out there in hangars saucer-shaped
(04:31) craft flying in the desert being transported people who say that what goes on out there is trying to figure out how this technology works so that we construct it reconstruct it with earth materials instead of building something that we came up with the idea for where is the technology from exactly where do they have it from where did they recover it i don't think anybody knows i mean i'm not sure even the people who run that program know bob said that he had read these briefing documents that suggested it was from
(05:04) another planet a planetary system uh zeta reticuli but the fact is he he he is suspicious of these reports he thinks that maybe they were telling him something just just to simplify it as opposed to um giving him the actual truth i i'm not quite sure anyone knows where they came from and in on some levels it does not make sense because as he described the craft these weren't shot down these weren't craft that we had shot out of the sky and they're all crumpled up he said they were the ones he saw the minecraft were in
(05:35) as far as he could tell working order they looked solid they weren't in tatters i think there was one of the craft that he said there was a great big hole shot through the middle almost as if they did an experiment to see if art artillery could could blow a hole in these things but the sport model which he saw fly was in perfect working condition it seems like someone just kind of gave them to us who that someone is we don't really know could it could it be that it actually that pablo star was used to to plant actively a story into
(06:06) the public imagination about this i mean that's also a theory is that a possibility and i've talked to bob about that many times over the years in the beginning it was probably kind of sensitive because you know he's got his life on the line his life is in danger at some point and he doesn't like to accept the idea that he was used as a pawn over the years he's opened up to that possibility and we both agree it's possible at some level but as i said to you before if the plan was let's use bob as a pawn
(06:35) to distract attention from something else that's going on at area 51 then that plan is a miserable failure because as a result of bob telling the story about the saucers all those people came from all over the world they're still going on out there so if you wanted to fly a secret test aircraft of some sort it's hard to do it because so much attention is focused every single day there are people out there with cameras and binoculars looking in the sky to see what's going on because of bob's story
(07:03) every news organization in the world has been out there asking questions congressional investigators saying hey what's going on out here how are you spending our money uh you know this is a lot of unwanted attention and i can tell you they're not happy about it because they've told me you know we we used to be followed around these guys would follow us around go to bars and restaurants they'd they'd follow all of us who were involved in in telling that story and a few of those guys years
(07:28) later after they got out of uh working for that those contractors told us that that was their job i would run into them in bars and they told me i was following you around you know they were they were checking us out putting us under under scrutiny and that also is another topic that's a sore spot with us but you know if the plan was to distract attention away from something else out there it was a terrible terrible failure bob accepts the idea that maybe he was used to some extent and i have too that maybe someone some faction inside
(08:02) the government inside the navy wanted to see let's run it up the flagpole

and see if the public freaks out if they knew that we had alien technology from somewhere else how would the public react and they picked a guy who could be discredited later i mean you look at him he's not the first person you would think would be picked into the most secret program in the world he's a smart guy and he and he thinks unconventionally so in one sense he might be very qualified to come in with a fresh point of view
(08:32) because as bob said the technology had been out there for a while and they weren't making progress at all he came in and he gave him a fresh view and helped him gain a better understanding of what they had but he was not the top guy he didn't have a phd he never claimed that so why was he chosen well i think he might have been chosen because he's a guy who could be discredited earlier you let him tell that story and then you pull the rug out from under him you know because he look you look at him you know his his house
(08:59) he would fly a pirate flag over his house uh he raced jet cars have these gigantic jet cars in his in his front yard he liked hookers prostitutes uh he liked machine guns he's a very unconventional guy someone who you got to figure i wouldn't give him a security clearance because he you know you never know when he's going to go off the deep end do something crazy he's rebellious by nature he doesn't like authority doesn't like taking orders so you think he was given the security clearance in the first place because he
(09:27) was like that i do i do think in that sense he might have been the most qualified person in the world for that job he's smart he's technically capable he knows science but he's a guy who could be destroyed in the in an instant if you needed to pull the rug out from under it okay could you summarize for us biggest revelations coming from bob lazar bob lazar says he was hired to work into this program that was under the auspices of the u.
(09:54) s navy and he worked at a facility called s4 south of area 51 and groomed lake and that this facility was built in the side of a mountain that there was a series of hangars nine different hangers built into the side of this mountain designed to look like desert in each one of these hangars was a saucer-like craft a craft that was from somewhere else bob said that he was primarily working on the propulsion system which he said was an anti-gravity propulsion system the fuel is something called element 115 a heavy element at the time that he told that story in 1989
(10:27) it did not exist it has since been synthesized in much smaller pieces bob described it as a stable and heavy um and what we have synthesized now does not match that description but he thinks that maybe someday we might be able to get it he thinks the fuel came from a binary star system where it was a natural abundance so he said he saw one of these craft being tested uh he did a number of experiments on the anti-gravity reactor that were pretty much amazing this thing could create its own gravitational field and he says the
(10:59) way that the aliens could get to earth they create their own gravitational field and this gravity allows them to bend space and time and instead of it propelling them forward say they're on their planet and they want to get to earth instead of propelling them toward earth it would in effect pull earth toward them it would bend space and time turn it off and it goes back to normal and you would be on earth but no time had gone by bob said that he read these briefing documents during the time he was out there that
(11:30) described it had alien autopsy photos it had information about human beings that aliens were interested in our souls and possibly harvesting our souls there was information that they had uh they they had been a part of humanity for for centuries that they had helped uh engineer the human race that there had been biomechanical engineering going on there that they sort of had created us as a special species very disturbing information about um religious figures the nature of religion uh so it's quite a it's quite a pile to
(12:05) chew on uh yesterday you touched upon a guy named ben rich who made a famous quote could you tell us a little bit about this and also the defense contractors might they have a fancy technology ben rich who's the engineer and head of the skunk works which is the uh the secret arm of lockheed that has designed all the black projects all the the best secret airplanes in the world the u2 the sr-71 the a12 stealth technology lockheed's did all all that stuff and ben rich was overseeing all those projects if anyone
(12:40) outside of the u.s government itself any private contractor knew about recovered alien disks it would be been rich that would be where it is for a number of years ben would share little bits and pieces of information with his friends in

the aviation community who also happen to be interested in ufos and some of those were guys that i got to know so he would give them tantalizing little bits of information they would ask him what do you think about ufos and he has in writing said before in letters that i got copies of i believe in ufos i
(13:12) believe in two kinds of ufos i believe in unfunded opportunities meaning black projects that have not yet been put into the budget and he believes in flying saucers from other other places on the day that the stealth plane was unveiled to the world at nellis air force base i was there i was one of the the media people who was invited to go along for that event and ben rich was standing out on the tarmac at nellis and i was able to interview him and i asked him mr rich we've heard these stories that maybe alien technology was incorporated
(13:46) into stealth and he he stopped and he kind of chuckled and smiled and he thought about it for a second he said no no just good old american technology but the fact is he's given other hints since then that maybe that's not the full story that maybe we got some help along the way he made a statement at least as reported to a group at ucla an engineering audience in which he said we now have the capability to take e.
(14:13) t home we have the ability to travel to the stars right now it's not something we have to dream up if you can dream it up we can already do it can we verify that statement well uh you know it's been reported multiple times by people by news media who were supposedly present it has been told to me by people who are in the audience that that's what he said whether or not the audio there's a recording of it i'm not quite sure but i think when you take together all the other things that ben rich has said over the years
(14:42) that in fact that is what he said there was a guy a friend of mine named jim goodall who wrote a book about stealth technology he's an aviation whiz he's a friend of john lears and he was one of the guys that would go out with lear and a group called the interceptors to area 51 to look in the sky to see whatever was flying around secret planes whatever and they got onto the ufo story jim goodall was with ben rich days before he died in the hospital and they talked about ufo interest and he confirmed yes in fact we do have that
(15:13) technology but he said it's so deep black it's so far inside the black budget it will never see the light of day that makes sense so what are the implications i mean does it really mean that star trek is real that some you know uh hidden factions of the military of the government are already flying among around among the stars at the universe meeting other civilizations i don't know that they're they're i would take it that far i i do think that i think there's a strong possibility we do have a secret space program and that
(15:47) we are flying at least among the stars or to other planets within our own uh solar system that it's a kind of program that is so far more advanced than what we see space shuttles iss that kind of stuff that it goes far beyond that there there are several indications that there really is a space program like that not the least of which is what what ben ben richard said i i don't think that there's any star trek we've got a cosmic federation that's meeting with other alien beings or something like
(16:15) that but but i don't really know i i just don't think it goes that far there's another whistle a supposed whistleblower named colonel philip corso i think you also met him who has a similar story i was the first i was the first journalist ufo journalist to interview colonel corso a friend of mine a colleague had been working with him about prisoners of war colonel corso had made dramatic seemingly unsupported statements in the past on other topics and had been proven to be true he said that we americans had
(16:49) left behind a number of prisoners of war in both world war ii and korea and then in the vietnam conflict and that was very controversial what he said it but as history has shown us he was right well a friend of mine who was working on the story about prisoners of war was talking to colonel corso and and heard this story about the ufo information he shared it with me i met with corso now the rest of the world knows his story but back then i had a deal i was going to write his book it didn't work out that way someone
(17:19) someone else intervened but corso had said that he was stationed at the pentagon he was in a special office that dealt with foreign technology that would figure out ways to stuff that we'd acquired from russians or other places advanced technology figure out a way to get it into the private sector have them duplicate that technology and then filter it out into places where it can be used and he said that there was a drawer there was a drawer of technology from a recovered flying

saucer an alien disc that we didn't quite know how to
(17:50) deal with it but eventually he said that it was his job to hand it out to bell labs and other big think tanks and they figured out how to use it how to duplicate it uh fiber optics technology he says night vision goggles a number of other things were given a boost along the way by this stuff that was recovered from a flying saucer and it's a fantastic story a lot of people don't believe it but the fact is philip corso was in that job he really did work for a general who was in that position that if there had
(18:20) been recovered material that's where it would have gone um whether or not we're ever going to be able to verify it for sure i guess we probably need to find the material itself to satisfy everyone's curiosity but philip corso had said that he had some extraordinary experiences in his life separate from his job at the pentagon that he had encounters with aliens and that um basically the story uh it coincides to a large degree with the story told by bob lazar yeah i was about to ask that do you think he's credible
(18:52) yeah i do i mean you know he he really i think the problem is that as he grew older maybe some of the stories and experiences in his life got grander with the passage of time just a matter of ego but i think he was telling the truth i i think philip corso was telling the truth as he knew it there's a guy named bob bigelow can you tell us a little about him about him what his what's his role in all this bob bigelow is a great man in my estimation but he's somebody who is a an enigma in the ufo field people
(19:25) assume the worst about it he's a wealthy businessman in las vegas i think probably at one point he was worth about two billion dollars and he's had a lifelong interest in ufos because his family he and his family had seen them at a young when he was a young boy so as he became wealthy and successful he wanted to put a lot of his resources into ufo research and he has bob bigelow has spent more money on ufo research than any person in the history of the world and he's done it quietly for the most part over the years he would dish
(19:55) out grants to researchers people like linda howe stanton friedman and others hoping that his money would provide the kind of financial support that ufo researchers do not get he's given a lot of money to ufo organizations mufon and kufos i think he put a million dollars on the table at one point hoping that the three major american groups would get together that they would figure out a good way to spend the money and maybe get some answers about ufos which did not happen because of that bob was dissatisfied with how those
(20:27) organizations were doing their work he created his own and was called nids the national institute for discovery science and he put together a world-class science advisory board consisting of people who had been top-notch scientists who some of whom had worked for the cia and other government agencies or the military who had an interest in ufos while they were working for the military and who tried to get answers while they were in the inside but could not and in addition to those kind of people he put together people like jacques valet john
(21:00) alexander a lot of others had been on the periphery of these subject matters but academics with impeccable credentials that's a science advisory board the the second part of dids was a component that was a rapid recovery team if you have a ufo crash if you have a a series of uh sightings if you have a series of cattle mutilations they would be able to jump on a plane take a bunch of equipment and go there to the scene to investigate boots on the ground it was a tremendous uh opportunity to gather solid information about ufo cases
(21:34) and incidents and and for a long time it worked for seven eight nine years it worked and he collected a great deal of information he also bought databases from uh other researchers put it all together hoping to compile it to get to get some ultimate answers did they get answers did they draw some conclusions or i don't think so the the problems it's sort of the same problems that apply to ufology and scientists in general applied to them there's no place that they could publish the work you know there's no place there's no science
(22:06) journal that would accept uh papers about these topics even though they were written by qualified people so ultimately i don't think so and it's generated the result is it's generated so much controversy and speculation what are these guys up to they're trying to corner the market on ufo technology they're trying to build their own flying saucers and take over the world i've heard so many ridiculous stories about bigelow that he's uh in the mafia that he sells drugs that he has the bigelow
(22:34) tea company that he works for the cia all kinds of stuff because he was

always reluctant to give interviews until he did an interview with me a couple years ago about his space program he'd never been on television and there was a reason for that it's nothing mysterious is that he's a wealthy man he wanted to be able to go out and have dinner with his wife and not be pestered by people who wanted to borrow money from him or worry about his grandchildren being kidnapped for ransom things of that sort
(23:00) so he didn't want to go on camera that changed when he went in to develop his own space program but you know you you know what it's like the ufo field and the kinds of rampant rumors and speculation that takes place so all kinds of stories have been told about bob about the people who work with him when in fact all they wanted to do was the same stuff we want to do which is get information and get answers and i think he's been pilloried unfairly i do think he's a great man what he's doing now in the in the area of uh
(23:30) creating space habitat habitat is going to change the world what is uh what is it all about bob came up with an idea about 15 years ago to take over a nasa program called expandable space habitat inflatable uh spacecraft uh nasa had to had done some work on it and then abandoned it like they do with so many projects and bob said i like that idea he bought the the patent rights to it hired his own team of experts and and developed it further he has basically launched his own space program in las vegas bob bigelow reports
(24:03) to one person one person is his boss and that's his wife and he went to her about 15 years ago and he said honey i want to i want to build my own space program i want to go to the stars i want to be on the cutting edge of privatization of space commercial development of space he wanted to commit 500 million dollars of his own money to it and that's what he's done and in in the last 12 years it's an amazing development i mean he has two spacecraft up there in this guy right now he built them built his own plant hired
(24:36) his own team designed these things and then hired the russians to launch these craft up there he had a timetable of sending up bigger and bigger inflatable craft over the years until he gets to a really big one but it went so well those first two craft that he decided to skip the interim steps and go right to a big one bob bigelow next year will begin putting together his own space station and it will be larger than the iss his inflatable habitats are stronger and safer and will provide more space in space and once he has it up there in
(25:13) place he'll lease it out or even sell it to foreign governments to our government to corporations so we can do business up there and i think once private enterprise gets a foothold in space it changes everything there will be bases on the moon there will be bases on mars once the profit motive kicks in and it's not governments just putting footing the bill for this uh it it's going to be an amazing transformation and it'll happen fast and it will be an incredible return of investment making even more so because
(25:45) he's he's spent about 400 million dollars so far he got one government contract that was with nasa for 17 million dollars and they paid him to put one of his basically is to build a closet on the iss and to launch it up there so they have uh storage space on the iss as a result of that successful uh deal which was made public about a year ago bob now finds himself at the center of the future of the space program nasa has made him sort of the clearing house for all other projects and contractors so if boeing
(26:21) wants to talk to nasa about putting something private in space they have to go through bob it's an amazing spot to be in it's yeah it's an amazing position to be in it's a heck of a business move on his part because whatever happens in the development of space now is going to have to go through bob bigelow and it drives people crazy oh my gosh that ufo cover-up guy he's in charge of he's now in charge of space what else is he up to it's like you know at skinwalker ranch people had written that bob bigelow has
(26:48) recovered a flying disc he's got secret technology he will rule the world yeah but i mean is it really only due to his uh you know uh development of an iss closet that puts him into such a powerful powerful position well i mean yeah i think that is i mean he saw an opportunity that no one else had uh realized and he had the resources to go after it and there aren't many people in the world that can write a check for 350 400 million dollars and bob did or if they could so you look at somebody like boeing boeing still exists
(27:22) on the last on the old paradigm that give me a billion dollars and i'll build something and maybe it'll work and maybe it won't the our space program the american space program is is ridiculous it's done nothing for years we don't even

have a way to get to the iss we spent 100 billion dollars building it we don't have a way to get there anymore the space shuttle is shut down we have to rely on the russians who to pay them exorbitant rates to get to our own space station it's still less
(27:51) expensive than the american space shuttle starts yeah i you know nasa is a jobs program it makes mostly consists of job security you you put money in they start a program up it goes for a couple of years and then they cancel it they've done it over and over again it it is shameful and it needs private enterprise to go ahead and take take the next step because the government model does not work and bob bigelow finds himself at the cusp of uh of a brave new era of space exploration and development you're a journalist just to talk about
(28:25) the journalistic view of this you've been based in in las vegas most of your career and it's been a i guess a very very special special place for you to be because they'll be able to there's some it's an exotic place a lot of things and lots of stories going on and you've been able to cover some of these more these exotic stories in that particular place but how would you describe your career with this topic how what's been the reaction of your your colleagues when you've gone into this field it's
(28:54) been a mixed bag i mean in general because i was successful i was fairly well thought of in my profession at klas and i'd been there for 10 years before i jumped into this i think i'm able to get away with things that otherwise would not have been possible and i don't think it would be it's be hard for anybody else in in the usa to duplicate it because most reporters are in the into the business you get a new assignment every day go cover the city council meeting there's a bank robbery go do that i had
(29:23) a special niche i was able to cover stories that interested me my boss gave me that opportunity so when the ufo thing came up and area 51 is in our backyard they said go for it and they trusted me to do a good job and i've tried to approach this topic as exotic as it is like i would approach any other story you know to verify information to find credible sources of information to uh you know to back it up to get supporting materials and so because i've tried to do it that way they've given me a great deal of
(29:56) latitude it has driven my colleagues though crazy as i was saying in a presentation recently um my journalism colleagues don't like it they don't like it that it's it's so popular with the public that there's so much public interest so they belittle it they make wise cracks they poke fun at it a lot of that has been aimed at me i don't mind i'm not thin skinned it comes with the territory in my hometown i have a high profile public position so i'm fine with it but what bothers me is
(30:26) that so many people would in the journalism field would dismiss this topic outright without doing any work on it they don't do the groundwork if you were to tell me i don't believe ufos are real it's a bunch of nonsense because you've done the research you've read the books that's one thing but to say to dismiss it with the wave of your hand having done no work whatsoever that's another it goes contrary to everything that journalism is supposed to stand for we're supposed to investigate the unexplained
(30:56) not to explain the uninvestigated many years ago you stumbled across the so-called majestic 12 documents have you thoroughly investigated them as well not really i mean i've done some work on them and i've relied on people like stanton friedman i i think it's still in my gray basket mj 12 documents i tend to think that they were probably created by a government intelligence agency can you tell us about what's written in those documents mj-12 documents suggest that there was a secret organization majestic 12 that was
(31:26) put together as sort of a clearinghouse for all information about ufos crash saucers alien visitations things of that sort uh that there would be this one group that would report to the president kept keep things very hush-hush and all compartmentalized so that it didn't get out and upset the public um the makeup of mj 12 is has always been a source of some mystery uh who was on the board we we've got some guesses about who they were when the mj-12 documents appeared in somebody's mailbox they sort of laid
(31:58) it out they identified who the members of mj-12 were what the purpose was these documents suggested that we had recovered discs that there had been ongoing communications with aliens very controversial stuff a guy named stanton friedman nuclear physicist has sort of taken the lead in investigating these documents and trying to verify them he believes that they are true that they are accurate because

they revealed certain things about individuals who are named as members of mj-12 they revealed things about those people who that had never
(32:32) been made public before and that in fact have been confirmed if you were to ask me i'd i'd say that probably 90 percent of ufologists american ufologists believe that those documents are not legitimate in this sense and why um there's a variety of problems with it uh you know both in in format and dates in references to things that are in the documents that were were not uh public information back then what may not have even been known uh terms like ebe you know that those are are mentioned in the mj-12 documents i haven't read them
(33:10) in a while the the how i think the the primary problem with them is how they were acquired that they showed up in the mailbox of a couple of researchers those researchers have since admitted at least one of them admitted that they made up a bunch of stuff that they worked for the air force office of special investigations and that they um they had manufactured material and fed it to ufo researchers just to see how it would spread even though it was false information um so why do you think a government agency would would spread this kind of
(33:44) information uh well one reason would be to see how it spreads to figure out how quickly you know how how things spread this is pre-internet uh when it when it spread out to see who would believe it and who wouldn't and who works with whom and i think was an exercise in intelligence it would be to see for example it might have been created to distract the russians whoever did this stuff is really good at it i mean they have so much information in there and it is so close to the real thing that whoever manufactured them
(34:16) they really knew their stuff which is why a lot of people suspect it was created as a distraction for the russians make the russians think that we've got recovered flying saucers make them worry about it because the russians have said that and then they've done the same thing now that we're talking about the russians you also undiscovered or you you ca you got hold of uh former kgb documents what do the russians know about this this is an interesting chapter in our in my life and i i did it came out of the
(34:45) nowhere uh in 1992 i left klaus tv i worked for a company called altamira communications and this company had its own tv studio and the idea was i would leave television to produce my own stuff i had proposed to this company that we produce a series of ufo documentaries that the research would become self-supporting that we would cover it in ways that no one had ever covered it before so we traveled the world and collected information we went to england and chased crop circles we went all over the united states dealing with cattle
(35:15) mutilations i interviewed all of the best ufo authorities in the world and collected all this data and along the way we're wondering about russia because i read an article in the new york times about lee harvey oswald's kgb file and the kgb had opened this file up and what it revealed about oswald i don't even remember what it was but i remember thinking oh my gosh if somebody could access their file about oswald what do they have about ufos if they are like the united states they've had their own ufo studies
(35:48) clearly they see these things in the sky the same as we do no one had ever got that information we always had a hint or a hope that maybe the files existed but i thought to myself well there's a window of opportunity because of glasnost perestroika maybe we could get into russia and learn more from the russians about what the americans know than we would ever learn from the americans themselves and in fact that's what we did i met a physicist named dr nicolai capranov who was in the united states he was touring
(36:19) american think tanks and nuclear facilities giving lectures on disarmament nuclear disarmament nikolai had been a national security adviser to the russian parliament he was also a national security adviser to boris yeltsin and because of that he traveled in some really interesting circles at the end of his tour he ended up in las vegas and the united states congressman jim bilbray said you ought to meet this guy he might know something about ufos because bill bryan knew that we were working on a project so i went out for
(36:50) beers with dr capranov hey let's what do you know about ufos ah i don't know anything never heard you never hear anybody talking about it nah not really not the kgb or anything a couple more beers you know i did i did have a friend of mine in kgb who said something about ufo studies and then as we sit there a little longer you know what there's a guy at the ministry of defense who knows something about this i said nikolai would you be interested in working for us we set you up give you a stipend you

(37:16) go back to russia and work for us and he was happy to do it because he had no idea what else he would be doing with his life so for next eight months parts of 92 into 93 nikolai met with russians who were in high positions of authority my instruction to him was this very simple i don't want anyone who has ever talked to the media about ufos before i don't want to have anybody who's ever come forward with this i want you to find people who are in a position to know who have never talked about it and that's what he did
(37:49) and the the key person that he found i mean in the spring of 93 we went to moscow to meet the people that he had set up for us the key finding was a guy named colonel borisokolov colonel sakalov was from a long distinguished military family he was a highly decorated guy and he was in charge of an office within the russian ministry of defense that handled foreign technology and he was the head of what is the most extraordinary ufo study in the history of the world the biggest ufo study in history will never be duplicated the order went
(38:26) out uh let me back up there had been an incident and petro zavodsk and the russian government was concerned about it a ufo incident what the heck happened here so they started a study and colonel sokolov was in charge of it the order went out to every military unit in the vast soviet military empire every ufo sighting every ball of light every anomalous aircraft anything weird it has to be fully investigated and that information all goes to one central place and the place it ended up was on sokolov's desk tens of thousands of
(39:01) cases were reported over the years all of them reported by military witnesses officers and above and were meticulously documented witness statements photographs drawings it all went to sokolov and it was an amazing treasure trove he had never spoken about it before when i found him he's living in a in a tiny little apartment on a government pension and i asked him about it and he was very open and the stories he told me were absolutely fantastic and with his help we were able to acquire several hundred pages of this material what did he tell
(39:36) you what did they know what did they said as with united states he could colonel sokolov confirmed all of the things that we have always suspected about the american government he told us they're true that uh that ufos have been visiting the planet for a long time that they are from somewhere else that this technology can fly circles around anything that exists the russians knew that these craft are not americans he said you americans know that the craft are not russians that they come from somewhere else and he
(40:07) said it's a very simple reason why they did this study is that your stealth technology you were so far ahead of us in stealth we knew that ufos could do things that our aircraft could not if we could duplicate that technology we would be superior to you and stealth so the russians had a very practical reason for doing this study and he said 90 of these cases could probably be explained which is similar to what we ufologists know about it you know 90 of them can be explained it's the other 10 that are interesting and those cases
(40:38) were very dramatic he said there had been more than 40 incidents where russian warplanes encountered ufos they were ordered to chase them that these ufos appeared in restricted airspace the russian warplanes would chase them mostly the ufos had disappeared they just vanished so they performed some maneuver sail right out of space in an instant and nothing could be done there were three instances where russian warplanes the standing order was to start firing on ufos he said there are three instances where we fired on them
(41:08) and in two of those cases our pilots were shot down and killed so after those two pilots were killed they changed the order leave ufos alone because in in the words of russian defense minister they said ufos seem to have their capability retaliatory capability beyond anything we have leave them alone and all the pilots were happy to go along with that order sokkalov said he showed me photographs of russian warplanes that had hit struck ufos the wings had been damaged he said that they had transferred a lot of their files to
(41:42) their russian academy of sciences to try to figure out how these things worked he introduced me to the head of the russia's star wars program this guy had on his desk he had a a desk sized laser weapon he called it the weapon of the aliens that they had developed from something related to this research he told me that this scientist dr andropov had never spoken publicly about it he had never used his real name because he'd been living in one of these soviet cities that wasn't found on any map working on really secret stuff and
(42:14) he said that the russians had built satellites up there specifically to look for ufos and he said the american government had i forget what the number is but we

had satellite systems specifically designed to look for ufos coming in and out of the atmosphere he said you guys have been seeing these since the 40s and 50s or whenever you put up the first satellites and so he again was another guy who was confirming a lot of what we know what we suspect about the us government was real they showed me uh then i then i got to
(42:45) met a third guy who is an active officer uh he was a an intelligence officer who was running this the study of ufos after colonel sokolov ended i met him i mean it was a scene right out of hollywood movie i met him in an alleyway and he's got a trench coat on carrying a briefcase full of ufo secrets which we were able to obtain he told me about a study called thread 3 an ongoing ufo study and it seemed to have it collected ufo information from all over the world mj-12 documents things that documentaries and reports about area 51
(43:22) the russians had this massive collection process putting it all together and they analyze it and reach the conclusions that there are visitors from outer space they interact with us on a regular basis as far as we know they're not a direct threat however there are cases where they have demonstrated their abilities if they wanted to threaten us they could this goes back to colonel sokolov something that he had told me about an incident in the ukraine at an icbm base it was one of the most dramatic cases that his office investigated it was in
(43:54) 1982 ufos appeared over this russian base they were seen for a period of four hours there were dozens of officers majors captains and above who gave witness statements there was one gigantic craft and then there were a lot of smaller craft these things were dancing around over the base they would merge together and split apart performing new maneuvers that we couldn't do and then after about four hours the mission control center for this russian icbm base it was taken over the control panel lit up someone something entered the launch
(44:31) codes to these missiles the guys are going crazy they're trying to turn it off pull the plug stop it and they couldn't the missiles were enabled they're ready to launch it would have been the beginning of world war three and then poof in an instant the ufos went away the mission control panel went back to normal and the russians were really perplexed in the days right immediately colonel sokolov gets the report he sends a team to investigate they couldn't find anything wrong with the control panel it
(45:01) had never happened before it never happened since they concluded and they even wrote it in a report that the ufos were demonstrating uh they were making a point these may be your most powerful weapon systems but they don't impress us we can control them anytime we want they were pretty upset by it so let's start to wrap it up from all of the things that you've investigated throughout the years what is your opinion on the visitors what do they want who are they why are they here sadly i don't think we're any closer at
(45:33) all to answering any of the big questions we have a lot more information we have a lot more cases we think we have a better understanding of it but the fact is we have no idea how to answer any of the big questions we don't know where they're from we don't know if they're from other planets or from other dimensions or they're time travelers we don't know we don't know what their interest is in us we've got some ideas about what they're interested in but ultimately we have no
(46:00) idea where they're from why they're here what their long-term intentions are and for it's 60 years now since the modern ufo era began and we're no closer at all to answering the big questions the fact is that the true architects of the secrecy is not just our government or your government it's the visitors they are the ones that could make the demonstration they could land on the white house law if they wanted to they don't instead they give us these tiny glimpses of other realities as if they
(46:32) are leading us along preparing us slowly over time to to realize that the nature of reality itself is far different from what we suspect uh i i don't know that we're going to have any answers in my lifetime they don't seem to have any interest in making it clear to us in an instant what's going on and it's sad it's a it's unsettling to some degree to think that i'm spending i've spent 25 30 years chasing this some people like stan friedman have spent longer and we are no closer to answering
(47:04) it and i don't know that we're ever going to get it thank you very much george nat for coming to copenhagen and joining us here flying all the way from the u.s oh it's terrific thank you i'd like to stay longer i i hope i get the chance to come back and we both do hope that you will find the answer someday absolutely let us know absolutely thank you very much

George Knapp Interviews Bob Lazar, Gene Huff, and John Lear (2009) - YouTube
https://www.youtube.com/watch?v=Q2izJPeUsVY

Transcript:
(00:01) I'm going to ask one more question of Our Guest Bob Lazar a non-ufo related then we will take our break get that out of the way and bring on our other guests Gene huff and John Lear Bob uh the last time we had you on it was uh not that long after you had an encounter with the government there in New Mexico about something you were selling online and and the reason it became uh national news is because this particular element was used apparently to kill a Russian spy and uh so national news networks start asking questions about the element
(00:33) I think it's polonium and uh lo and behold they find this guy in New Mexico who's selling it right yeah they I guess not knowing very much about polonium 210 which was the isotope that was used they went and Googled it and if you I I don't know if it's still the case but I bet it is if you Google polonium 210 United nuclear comes up and probably our sales page with it right on there we sell a wide variety of radioactive isotopes polonium-210 being one of them and not knowing much about it so they
(01:10) pretty much just came to us and said what what's the deal and how could you possibly be selling this and we're really flipping out over the whole concept but it uh as it turns out the quantities that we sell and are permitted to sell are so small you would have to spend 30 or 40 000 and take a year of your time trying to mine a little invisible specs of a isotope out of the plastic disc that they're in and you know collect them all and you couldn't even buy that quantity from us nor could you physically remove the
(01:51) material uh to poison somebody with so what they were concerned about was pretty much impossible and it's legal to sell the material it's just it's one of those things that sounds scarier than it is but I can see somebody saying why the heck is this guy selling polonium in any quantity along with all the other potentially dangerous stuff that you sell well everything's potentially dangerous if you go to a grocery store or everything from Drano to cloroxes you know potentially fatalists ingested but
(02:23) you know science chemistry even physics all have materials associated with it that are you know potentially dangerous from high voltage generators toxic chemicals and things of that sort and United nuclear has really done as much as it can to bring back science and if you remember it when we were kids everybody used to have chemistry theft you know they said it in the 1960s uh in households that had children almost 60 percent of them had chemistry sets in them now if you see somebody with beakers and flasks you can almost
(03:09) be assured that he's going to be cooking meth or something along those lines so it's it's really taken taken a turn and what we're trying to do is is bring it back the other way is reintroduce science kind of bring the fun back into it so we're you know trying to get our hands on all this neat science equipment that's pretty much been lost and has dropped out of American culture and uh we've done a pretty good pretty good job of it and you had said that it was like the government had declared war on chemistry
(03:47) or something by trying to take all this stuff uh off the market uh especially buying it over the Internet or online uh that they didn't want people to have these capabilities for themselves no we were actually told that I I can't remember exactly what agency uh said that because so many have come and paid a visit to us but they said you know if we could we'd like to get uh chemistry and scientific supplies we're talking about you know and any chemicals ether's flasks that sort of thing out of the hands of the
(04:24) general public because it's simply too dangerous for them and statements like that just really tweaked me you know everything you take for granted these days from the DVD players the uh circuits that run your car to your home computer all of the guys that developed the where those little science nerds that sat at home and tinkered with things and guys like you pretty much so I fit the mold but they all have common background and you can't it's it's stuff like this that stimulates their minds when they're
(05:05) young and it's it's just how science grows and you you can't take this stuff

away from them it's only dangerous if you allow it to be that way um you know certainly there are some things that are more dangerous than others but you can't you can't just ban it all like the state of Texas did they kept uh busting meth labs and again ignorance seems to lead the way they kept seeing these beakers and flasks at every place they went to so they just assumed well this glassware seems to be prevalent all the time we need to ban it
(05:46) well you can cook meth and mayonnaise jars but chemistry requires special glassware sometimes so they went ahead and just banned the sale of certain types of glassware or moves like that are ridiculous and you see that more and more often and we're just trying to do whatever we can to reverse that you know certainly if there are specific chemicals or things you need to control to stop producing you know dangerous narcotics of course do that but really pay attention to what you're doing you know each time you create a
(06:27) new law and ban something you take away of freedom and that can have some really far-reaching effect well put we're going to take our break now when we come back we jump into the area 51 story 20th anniversary of the UFO's best evidence Expose and we'll be joined by John Lear and Gene Huff stay with us here on Coast to Coast AM welcome back all right we're getting right into the story of Area 51 20 years ago this week it sort of all came spilling out in a program we produced called UFOs the best evidence uh The
(06:59) Three Amigos are here the three guys who played a central role in that story coming to light uh John Lear uh who's been a guest on the program many times Gene Huff who's a a friend of Bob's and mine and has been here as well and of course Bob Lazar John I want to start with you the question is actually for all three about it but I want you to start it uh you know we get a lot of uh even this many years later a lot of people who write in and say it's a bunch of malarkey it's baloney you guys are
(07:25) disinformation agents you're making this stuff up it's a scam I wonder if you uh take the time and if it's worth the effort to try and convince people that it is real after all this time well you know when I when I say is that uh Bob took us out there at nine o'clock on Wednesday March 22nd 90 uh 1989 and he told us before exactly what time it was going to come up a day before so we go out there and we watch this thing come up and fly around and go down and uh I saw it through my Celestron 8 telescope so I saw it and uh
(08:08) the question now is well maybe he was just a cook well if he was just a cook then that means that all they do is you know they all there's Egret information goes to the cooks out there and Gene you've sort of been the the window to the world for Bob in in many respects answering questions when he doesn't want to answer them is it worth it uh to try and make the argument anymore you know uh for a long time we I think we've just decided to sit back and let things unfold as they will and and uh George thanks to you you uh courtesy
(08:45) copied me a lot of the emails to get sent to you and uh John I I know Bob's aware of this I emailed it to him but John this this uh former uh senior Lockheed senior engineer Boyd Bushman at Lockheed Martin I guess has come out saying that you know the government does have alien technology and you know what it's being tested for and used for again another Grand Old Gentleman a wonderful guy to watch in an interview and and as not to divulge any government information that he was privy to under you know under his uh secrecy agreement
(09:19) when they when he was interviewed and asked what type of Technology he was talking about he referred them to the Lazar tape with then he said that's all I'll say so I think it's interesting that this tape Bob and I and a few others essentially made you know on a shoestring 20 years ago is what a a senior Lockheed engineer who's now at the end of his run in life and retiring and deciding to divulge information without breaking his secrecy agreement Bob lazar's information is what he gives to the reporters so I
(09:50) think that speaks for himself Bob I know what your answer is to this uh I'm just wondering at what point did well I'll put it this way people have accused you of being a shark then in a huckster and you're in this for the attention or the fame or the money uh the money that came with it and uh what they don't remember is a 20 years ago this week as I'm editing this stuff getting ready to put it on the air and reveal to the world who you are you were in the edit Bay trying to grab the tape and and uh had a
(10:18) last minute um feeling that you really didn't want to go through with it sort of a reluctant huckster that's true first of all I gotta say hi to John layer because I I just haven't talked to him in a long time and uh I probably should give

you a call once in a while John sorry I don't yeah it's 18 months two uh weeks yeah but who's coming and I do have to say one thing I mean generally I give John a lot of crap because I think he's crazy at certain times but um uh once again and this has happened
(10:53) before uh on a particular topic I think years and years ago John had mentioned aside from his claims that there have been extra flights to the moon and people are out there all the time that there was water on the moon and I remember you know laughing and I'm going down that's just ridiculous and shut up and it's just another lyricism or something along those lines but here it is 2009 and they've confirmed that there's water on the moon so I'll say it publicly John you were right Georgia you know I I hate to say how how
(11:33) how seen John has become in recent months and years but a few weeks ago when I found out NASA was going to bomb the moon to check for moisture content I made the call to John Laird and said okay now John why are they really bombing the Moon I mean what an opportunity for a conspiracy story and all John said is my back hurts from my operation a year ago and I think they're just checking for moisture content so I was never so let down of searching for a John Lear conspiracy in my life I don't think the world is ready for a Saint
(12:02) John Lear so let's just leave it at that but I'm used to the question well do you get do you get hassled about it Bob still people stop you and ask you about it and they say yeah well where's your school records and why didn't you prove this well you know I'm I am so tired of so first of all I I don't chase the topic I don't pay attention to it I um you know for the people that think is that this is some kind of a hoax or whatever you know the only thing I can say is number one you know it's it's an
(12:36) incredible story and if you don't believe it it's good for you because quite frankly if the table's returned I couldn't believe it either I mean you have to take things with a scientific approach and be as skeptic as possible I can't present enough evidence again if the table's returned to satisfy my needs to say yeah that absolutely happened to this guy and it's just not physically possible I can't take people there as I've said before I didn't come out with much evidence and there's
(13:09) you know considerable amount of disinformation that have been splashed around concerning my name and you know events things I've done and whatnot so it's it's a hard uphill battle so again all I can point out to is number one the events did occur exactly as I say number two if you if you think I did it for attention you obviously don't know me because I do everything I can to stay away from I'm not out doing UFO talk shows well this of course is one but you know it maybe once every three years I'll do it if I'm bugged enough uh
(13:52) only because we're friends but I'm not on the UFO circuit I don't uh you know attend these conventions or sell things so on and so forth um I really just want to be left alone to do my work so as far as being in the public Spotlight I hate that if you think it makes money again you don't know much about it um there's really no money to be made if anything it is real difficult to overcome the stigma being the UFO guy we do government contract work and consultation for many companies and it's
(14:32) you know it's a difficult thing to have that hanging over your head hey aren't you that guy that thinks that they're an alien somewhere yeah that's that's me you know and they have second thoughts about us developing a product for them but uh so if anything I would say it's had an overall negative effect so there there's really no motive to do this I certainly have better things to do with my time and I have such limited time as it is like I said I don't I don't even want to
(15:03) be involved with the topic although I feel extremely privileged that I was at that time and in some respects mess up but before Bob turns the entire universe off of ufology yeah I'd like to interject but with the Advent of Bob Lazar you know the world has turned 20 years ago I didn't hear the Vatican commenting on life elsewhere and I think everybody in the country was probably the AP story it was on the front page of the review journal here in town about the Vatican uh you know calling a gathering of world scientists together
(15:38) to examine the possibility of extraterrestrial life and see how it fits into their perception of God's children uh I don't think that was happening 20 years ago 20 years ago certainly uh Edgar Mitchell the Sixth Man on the Moon you know a PhD in astronautics uh you know was not on the record at least as as saying that he had any knowledge after investigate doing his own investigation which it included coming here to Las Vegas and speaking directly with Bob Lazar I was there at that meeting now Edgar Mitchell is on

(16:10) the record I think there's even a a video clip of him at the beginning of the moving you know the movie The Fourth Kind on abductions that came out this past week There's a clip of Edgar Mitchell and here here is a a a a brilliant man and a scientist a NASA astronaut six men on the moon saying that he has seen sufficient evidence to his satisfaction that you know there has been life from elsewhere that is that has visited Earth and the US government's covering that up so a lot of this started as egotistical as it
(16:40) sounds with UFO is the best evidence of what the Bible is our story 20 years ago so whether Bob look up clearly Bob hasn't been actively involved in in putting this worse and bringing it to the Limelight but the world is turning and it began with him Bob Bob back to you for a second uh you know I remember there was a point that where you reach that you sort of gave up on trying to convince people that it was real uh you know of course there were questions about your background your schooling uh your employment record and
(17:10) we'll cover some of that ground over the next couple of hours but at some point you just said well what's the point um I'm never going to convince people who don't want to believe it because you can't you take them out there and show them the craft or beings or anything like that there's always going to be another question right right and but again I I don't pursue that I don't try and convince anybody of anything I really just let it be as far as people asking me questions you know they I I
(17:40) get those constantly and there's a point I do have to make I'm not involved with them but on Facebook and Myspace and these other social networking things there are so my surprise a countless number of Bob Lazar impersonators and I go on these sites and click on these are links there's pictures of me and there are people that are Fielding questions as if there may it's it's mind-boggling but I really do have to say if anybody is going on the site and asking questions and getting answers it's not me I'm never on those sites and
(18:28) the only place you could ever contact me would be at United nuclear.com and you know I have limited time to answer emails but I do get I do get UFO questions here and there and you know kind of throw them on the side and over time do answer them but really be very skeptical of uh anybody that says that they've contacted me or I responded to emails on any of these uh social networking sites because it's it's not me one of them I think is the guy's name is UFO badass or something and there's even sites that uh claim
(19:09) that my wife put up this site and that's why it takes a little time to get answered I mean all of this is complete Funk I'm not on and short of those things hey it's like your uh Elvis you have Bob impersonators like Elvis impersonators John we need to take a break we're going to come back and jump into this with you and how your life has changed because of this story coming out and speaking with our guest Gene Huff John Lear Bob Lazar don't go away this is Coast to Coast AM we were talking about an anniversary uh
(19:39) this week uh when Bob Lazar first revealed himself to the world and a program that we produced here he's our guest along with John Lear and Gene huff and there's another name that plays into this in a big way and that is Edward Teller known as the father of the hydrogen bomb he was sort of there at the beginning of this area 51 story when we come back we'll jump right into that don't go away this is Coast Stadium welcome back to Coast to Coast my guests John Lear Gene Huff Bob Lazar this past
(20:07) week it was a really great UFO conference here in town the crash retrieval conference and one of the papers that was presented was about Edward Teller and it had to do with some UFO documents uh supposedly about teller's knowledge of the program the paper basically debunked the the papers as being frauds but I wanted to know uh John you're sort of the student of ufology where you think teller what role he plays in the overall UFO picture well I didn't know uh that he was involved in all at all until Bob called him that day
(20:40) and asked uh to re-enter the scientific community and did he have any suggestions Bob that is where your involvement really starts here at Los Alamos and you see this guy sitting around tell that story yeah it's um at the time I was working at Los Alamos and the Maison physics Division and I saw in the lab paper that Edward Teller was giving um a talk on I don't know some thermonuclear weapon FBI wasn't it what was that wasn't it on FBI oh yeah I think it was the gene remembers more of this stuff than I do
(21:24) and it's my life that's my position that's why he's here so uh I really had a great opportunity I wanted to uh get in there and uh spoke to my supervisor he

said yeah go ahead and it was down at the you know little lecture hall and coincidentally that day I had recently moved to Los Alamos and that day they did a front page article on uh Honda Civic that I built that had a jet engine in it and they had a front page picture of me in the car and I went a little early uh to try and get a good seat
(22:09) and to my surprise there was nobody around and Ed teller is sitting outside on this little half uh brick wall and he's reading the local paper on the front page and I thought oh this is perfect I can you know go over introduce myself so I I did and you know we talked briefly about the um the jet car and how it worked and you know why I made it so on and so forth and um I can't remember really what else we got into but we're just talking about uh science and topics in general um that you know what where I really wanted to
(22:52) uh get to in Los Alamos is high energy propulsion you know weapons something along those lines and fast forwarding to many years later when I wanted to get back into uh science I had left Los Alamos to start my own company and then kind of drifted away uh doing various Off the Wall things and really wanted to get back into it living out in Nevada now and with the nuclear test site up there and at that time it was still running doing underground testing I started sending out resumes to you know everybody back to Los Alamos
(23:34) again seeing if I could get into um some of the weapon development or testing and also to Livermore to Edward Teller and in that letter I referenced our meeting and discussion in Los Alamos and some time went by to my surprise Ed teller responded and it was from that initial meeting is what really set everything in motion he's the guy that recommended the well I can't remember if that was the first or second time but it was certainly his recommendation his recommendation and direction that got me into that job at a score
(24:17) well people have a hard time believing that oh heck you got to be making it up what does Edward Teller have to do with UFOs and then after those programs aired here uh of course there was a lot of interest in your story and some folks from a tabloid TV show Tracked Down Edward Teller Gene pick up the story from there you remember what that interview entailed Kenneth he knew what proposed systems he was aware of as far as Interstellar travel and he went through the normal once vision and infusion and they began to ask him about
(24:48) gravity of propulsion in any matter and he said uh he just cut them off a roughly said look these things are not interesting uh if you even though they were filming him he didn't know it he said if you ask me about these things on camera I'll refuse to answer he was really a curmudgeon in his later years and uh and they also asked him if he uh knew Bob Lazar and they said well if we ask you if you know Bob's work and answers and he said look uh so they said uh do you know a person named Bob Lazar
(25:18) and he immediately said no I don't believe I've ever heard the name now this was roughly an 85 year old man if I asked you if you knew Joe Blow you'd have to say well where would I know him from or what what period of my life you know give me some direction he immediately said no I don't believe I've ever heard the name and Lazar is actually a pretty common name but uh anyway it was curious that how he instantly uh said he had never heard the name and that he didn't know bibles are it but then he said if they asked that
(25:47) on camera he would sit silent because he didn't believe it was interesting to anyone so well that's odd yeah yeah it's odd behavior John Lear is uh you know you uh intimated to me I think in late 88 or early 89 that you knew a guy uh that worked out at Area 51 and he knew something about flying saucers and you sort of teased me with it that was right after I believe you first met Bob or maybe had gone out to see the test flight have you ever had doubts about his story though you know what the questions are you know what the
(26:20) weaknesses in the story are and we'll cover some of those but did you have to wonder at some point is this guy pulling my chain no never never even gave it a thought because I was there from the beginning I mean I was there from when Gene and uh and Bob came over to my house to uh Bob was going to measure it uh to uh to make an appraisal and the guy that was holding the other tape of the the other side of the tape measure was Bob's R and the deal was that uh Jane would do the appraisal if I would give him all my a copy of all my UFO
(27:00) stuff and as we saw as we sat talking about it and Bob was just rolling his eyes he couldn't be you know have expressed his disgust more than than he did I mean he was just he said this is ridiculous I had the highest clearance you can get at Los Alamos If This Were true I would have known about it from the very beginning

there and then in the next four months uh we told him four things that uh or three things that um nobody could have known of that unless they were at Allah's Outlaws and we told that to Bob he checked it out he
(27:50) found they were all three true and then that's when he made his decision to re-enter the scientific community and try and get a job up at area 51. by the way George uh back on Edward Teller when I remember when when teller called Bob Bob verify if this is true I think he told you that he was no longer active and he was just working in a chief consultant capacity correct yeah so teller never claimed to be actively involved in the program in any capacity well he yeah he no he did say he was no longer involved right resulting so
(28:28) obviously if he was no longer involved at one time he was yeah right it certainly implies he was doing something but what his actual function was well that still would have made his word comp or something you know what I mean as far as referring someone to the program he obviously carried a lot of weight yeah and you know you would expect him hey George could I ask John a question this this boy uh Bushman the the guy the Lockheed engineer uh he also said in this interview that uh he was aware that area 51 was moving to Tooele Utah
(29:04) did you ever hear that Abdullah or tuella no no anyway I just thought you would be the guy to ask but but you would you you did say that you thought Area 51 had been moved somewhere right yeah I mean we know Area 51 still there and functioning but not in its previous capacity probably it's uh the new there's two of them there's one south of uh Wendover and there's one uh in the middle of the test side between uh Sandia and Herb it's uh between Groom Lake and Tonopah called zandia well I know of one thing that's a Tooele
(29:38) it's a giant plant where they used to burn uh biological and chemical weapons and the reason I know that is because I got taken into custody one time when we were working on a story there and they didn't like the fact that we had cameras so they hauled Us in to see who we were and what we were up to so it's not without its government facilities and secure facilities it's uh it's right in the middle of Utah it's I think South uh south of Salt Lake City I I'm sorry I'm I'm pretty bad with geography but it's
(30:05) right in that general area it's near dugway I know because we were working on a story about dugway at the same time let's go back to uh you know the obvious questions Bob that have been raised many times people tend to forget uh that they were addressed in the very first report that aired about you you know a lot of folks cite Stan Friedman and say look Stan Friedman proved you're a fraud he looked for your academic records and he couldn't find them and I applaud Stan for at least doing the legwork and
(30:33) trying to track down the story because a lot of other people have just proclaimed that's false without doing any of the work but people forget that that was revealed in the very first story that you couldn't verify parts of your background in particular about the education and you know I came to you know this is apparently like you said people they they hear fragments of the story and then just fill in the blanks themselves but this that I'm the one that came to you with this information saying you
(31:06) know I am seeing systematically portions of my background evaporating everything from birth certificate you know school records and work records and I'm beginning to get concerned that the next thing is going to evaporate is going to be me and I I know this sounds like something out of this it's Mission Impossible or you know a ridiculous television show but this stuff is in fact happening and you know this is this was one of the reasons why I decided to come forward because I was genuinely concerned about my life
(31:45) at that time and certainly John and Gene the two people that were around at that time you know you really can't get a feel of the situation unless you were really there and around and had a taste of what was going on but it was this was really a frightening time and the day that we were out in front of John's house and did the news link um that I was petrified that day I really didn't know if it was safe to go home at all and the only reason I went ahead and said anything on the air really was just to protect my life
(32:25) at that time certainly I felt it wasn't fair that this was all being kept a secret but um it was much more of a selfish reason if it wasn't for that uh you know I probably would never have said anything it certainly hasn't been worth the repercussions but George could we re-examine that that Stanton Friedman allegation also and first of all I don't want to take anything away from Stanton Friedman he was out there chasing freedom in Freedom of Information Act government documents and

taking the high road I mean he's a
(32:58) Grand Old Gentleman and I don't dislike him however how that story unfolds is Stanton heard all of these things about Bob Lazar and Bob said yes I worked at Los Alamos and of course you know that he worked for Kirk Meyer who was a subcontractor at Los Alamos but he said I worked at Los Alamos well Stanton Friedman heard Bob Lazar worked for Los Alamos so he called a friend of his and said hey do you have any record of Bob Lazar working for for Los Alamos you know and the guy looks and no there's no bubbles about working for Los Alamos so
(33:31) Stan Friedman puts out a news release Bob Lazar never worked worked for Los Alamos well Bob never said he worked for Los Alamos he said he worked at Los Alamos and then once we straightened Stanton Friedman out of that he goes okay and now he wants the next thing served to among the silver platter so but the fact that he just made a call and said did Bob as I work for for Los Alamos the guy said no and then he doesn't take it any further makes me wonder about some other investigation Stanton Friedman did if that was
(33:59) investigation it wasn't very thorough investigation well he did some other stuff I mean he checked with MIT and Caltech and he got the same results that we got no records that Bob was there and Bob you and I have had this conversation in person and uh you know and I've I've expressed to you that I always thought that was the weakest part of your story uh primarily because I just I could see you being a whiz and in science classes at MIT Caltech but I couldn't see you ever sitting through the other kinds of
(34:26) classes you'd have to take English Lit or something like that to get a degree [Laughter] well you know I just couldn't see it and then the corollary to that that people raise all the time well why can't you tell us who your professors are where's the classmates why don't you show us somebody that you were in school with well first of all somebody I was in school with you met somebody I was in school with when UFO is the best evidence came that guy uh flew up from I don't even remember where
(34:58) he lived at that time but if you recall you met somebody immediately like yeah we interviewed him at a desert blast event and uh desert blast I think he came well you've met somebody else at Desert blast but the one that came up [Music] um you know specifically for that reason from the East Coast I think it was living out on Long Island uh came up and you know introduced himself and he didn't know what all the fuss was about but uh you know verified I was you know there for at least some amount of time and George you sent me the email
(35:34) from the with the excerpt from the uh the scientist for the Department of energy up at Rocky Flats in Colorado who said he remembered seeing and meeting Bob was already remembered his sense of humor he remembered when Bob worked at Los Alamos so people okay let's say Bob never he never even went to elementary school he's just a bright guy he never went to school at all the fact is you have met and interviewed and gotten information from numerous people throughout the years who saw Bob at Los Alamos he Bob got you into Los Alamos
(36:05) and and you've spoken to people who worked with him there and then complete strangers contact you go no by the way uh you know I'm a I'm a scientist for the doe and I remember Bob Lazar so I mean even if Bob never went to school he worked as a scientist at Los Alamos so you know I don't know how you how you correlate that if you think Bob didn't go to school I don't know how you think he worked as a scientist at most development well that's what I've always said is that for me the the central uh
(36:33) issue or a fact might have been his employment there and Los Alamos uh gave me the runaround over a couple of years saying that they'd never heard of him there's no record and of course we had the the front page headline that identified Bob as as working there as a physicist we had the entry in the phone book um Kirk Meyer confirmed to me that they had hired him to work there or So eventually we got a paper trail that he was in fact there and it just figures that if he worked there in a scientific technical capacity that he had to go to
(37:01) school somewhere they don't just hire people off the street but proving it is another matter well the the main question people ask really is about is about Los Alamos or for me actually being at Area 51 or S4 that I mean I I think the people that are skeptical of the whole thing or people that are skeptical up to a certain point to go okay well you did this maybe you did work at Los Alamos but there's no way you were at Area 51 there's no way you were up at the test site well you know in Secure areas it's
(37:38) really difficult to prove that you know aside from having uh a buddy who you

would have worked with uh you know what can if you worked up with the test site if you worked in you know all of that stuff there is uh relatively classified you need at least Q clearance uh just to be on the site you know how could you prove it what would you what would you do it's really it's really an impossible situation to evidence let me say you're about a year and a half ago I had my 60s uh 65th birthday and I had about 25 30
(38:21) people and they were people from the test site that I knew there I flew up at the test site uh I flew for Department of energy the B-26 the ob-10 and what else did they have around hey John I'm gonna ask you to hold that thought that music tells us we need to take a break we'll pick it up when we come back after the break with Bob Lazar Gene huff and John Lear stay with us on Coast to Coast AM thanks for being with us everyone tonight we're sort of in the thick of things right now with my guests Bob
(38:54) Lazar Gene huff and John Lear we're going to take this break and get it out of the way and when we come back I want to get into one of the most mysterious weirdest parts of this entire scenario and it's something called element 115. don't go away this is Coast to Coast AM welcome back everyone John Lear before the break you were about to tell us a story about uh so a gathering for your 65th birthday happy belated birthday by the way why don't you pick up the story George we must have missed our
(39:21) invitations of that party huh yeah yeah okay go ahead well yeah you know well there are several reasons for that first of all you know there's uh half the guys here were EG and G I used to I worked for three years up there in 1989 or 88 to 81 and applying the um ov10 and the uh B-26 and you know one of the jobs I had was uh before they'd set off and under new underground new blast I'd fly the perimeter of the test site at different altitudes and give them the winds so they know which way they were
(40:02) going anyway I met a lot of guys and a lot of those guys were at the birthday party so unbeknownst to me uh Bob Lazar shows up I mean it was unbelievable I was shocked beyond beyond belief but Bob comes in and after everybody has a few drink drinks Bob starts to tell him a few stories and you could see him all these guys you know were not in their heads and and uh yeah that's the way it happened and uh and the reason I tell that is because you said you've never met anybody that that would admit that but if you'd
(40:42) had your camera at my birthday party it would have been a different story well I'll have it there for the next one I said I'll have it there for the next one you just have to let me know and make sure it's okay with those guys who show up okay we'll do that uh Bob Let's uh we need to recap a little bit about the science of what you just discovered out there what you were exposed to uh give us a thumbnail sketch of how these things supposed supposed supposedly worked um I'm saying that because I want to
(41:13) lead up to the discussion of element 115. okay the way the craft operates is centrally to the vehicle it has an antimatter reactor this reactor is very small by a reactor standard it's something on the order of you know takes about I would say about two feet square it looks like half a basketball sitting on a plate yeah produces a tremendous amount of electrical energy almost as a byproduct its primary function is to produce gravitational wave and the craft is actually propelled by distorting gravity in front of it and
(42:05) around it it's a fantastic mode of propulsion and fantastic technology being somebody that I know it's fascinated with you know exotic propulsion High Energy Systems things along these lines this was really something I I couldn't even grasp it was literally something that bordered bordered on being Magic it was really the most shocking thing I'd ever seen in my life just watching components of this operate but to make a long story short I was shown how each component operates in the craft and then how they perform together
(42:52) essentially there's uh reactor in the middle of the craft that uses an exotic fuel a super heavy element this reactor as I said produces a gravitational wave and a huge amount of electrical power this gravitational wave is transmitted and a conduit very similar to the way a tune conduit very similar to the way microwaves are transmitted and Z wave goes through a wave guide and around the inner hull of the ship it's kind of difficult to describe exactly how the wave is split and applied around the craft but it
(43:38) essentially envelops the craft and a gravitational Distortion the actual propulsion is provided by three large I don't know what you would really call them they're cylindrical objects inside the bottom of the craft there are amplifiers

above them that amplify this gravitational wave and each of these emitters is hung on a large movable arm essentially The Craft powers itself up produces the gravitational Distortion and these emitters focus and move an intense focal point of the gravitational wave and can either
(44:29) lift the craft off the ground or create a distortion alongside the craft and have it move into it or really do a variety of other things that make it extremely versatile and there's essentially two modes of operation of how the craft can Propel itself I believe they are called Delta and Omicron configuration configuration is where the craft is essentially lifted just using a single emitter a single gravity amplifier if you will and the other two emitters are focused out in front of the craft creating a a small distortion
(45:18) space time essentially and the best way to describe it is you know the old bowling ball analogy if you set a bowling ball in the center of a a mattress and then two feet away take your foot your fist and push it into the mattress the bowling ball Will Roll to it and it's essentially how the craft operates and this configuration it creates a little Distortion in front of it and the craft moves forward that way for high speed travel or Interstellar travel the craft faces its belly towards the Target and three of the amplifiers come online
(45:59) their focused at a Target an extreme distance and they run I can't remember the cycle time on how these things are pulsed 1 16 to the millisecond s do you are you just 16 minutes do you really remember that 16 milliseconds and it's Omicron not I mean it's Omega not Omicron no it's all macron no I thought my crime I'm Delta anyway the uh these three amplifiers are focused on a point of extreme distance there's a tremendous amount of gravitational Distortion and The Craft traverses you know very great distances in this
(46:45) way and it does this multiple times to essentially making small jumps uh you know to travel very very great distances that would be impossible using any other form of propulsion but all in all the craft is really an incredibly uh amazing piece of equipment well Bob those those small jumps are small in terms of light years but in terms of miles in a straight line they're gigantic counts aren't they yeah that's that's true well you guys when I say small yeah we're talking in astronomical terms okay
(47:25) you've told this story over the years and of course you've had a range of different reactions from scientific types A lot of folks who will say uh this is a bunch of baloney this is not how science works we don't know much about gravity but we're pretty sure it's not this I mean I I I would have to agree that's exactly what I thought going into it too but sorry and then over the years though you've had other people come forward scientists who said that that really makes sense Gene you've sort of been the
(47:52) the guy who's dealt with those types over the years how would you describe uh the overall reaction from the scientific community and do you have support for Bob's explanation of the technology well I think the ironic thing is that when Bob comes out and he says on camera to your camera or whomever uh this this is not even connected to known Earth physics for all practical purposes It's Magic this technology does not exist then he explains if they hear it and they go that's crazy this technology
(48:26) does not exist they say the exact same thing Bob said and then blame him is the reason for it I mean he you know he has the same attitude towards they do nevertheless you can say it doesn't exist all you want but it's there and he saw it work and function and uh as far as the support coming forward I mean just like the you know this guy from Lockheed Martin uh I mean Ken Rich back who was the head of the skunk works for Lockheed back in 1993 when he was giving a speech at Wright-Patterson Air Force Base said that the Air Force just gave
(48:59) us a contract to take E.T back home now what does that mean how does a guy who's in charge of the lockheed's gunk Works in charge of all the Black Project research and development at Area 51 make a comment that they got a contract to take an alien back home back in 1993. so I think as those people come out you know no one there is no perfect witness no one can change the the remember when Corso came out and um does your is your audience familiar with who course yeah sure and and all these guys usually guys get at the end of
(49:35) their life and they decide they're not going to go to their grave with what they know and I presume this Boyd Bushman is the same way by the way John I just uh emailed you that link to that boy Bushman video and uh anyway uh they come out and support it but I mean no one's going to change the world but no one can come out and uh in a you know with the evidence land a disc on the White House lawn like

everybody demands but uh as these as these men who like Dr Edgar Mitchell you know astronaut like this is Boyd Bushman like Corso has
(50:07) these ex-military officers and scientists with you know security clearance who worked on all the black projects astronauts as more of the these people collectively come out and say yes there's ET technology and the government is hiding it uh you know they always come back the bibles are that support for bibles are in fact I'd love to ask Bob I mean it's funny he goes on the record he knows what is true and everyone always expects Bob to be thankful because another complete stranger came forward and said oh by the
(50:37) way you're not a scumbag and a liar like everybody's been saying you were I mean you know I don't know how they expect Bob to react that he never suspected that he wasn't telling the truth so I think we appreciate the additional support more than he does that's true uh on on the question of element 115 and we'll get into a description of it in a second but sort of in the same vein that the reaction from the scientific Community as you guys are being lambasted by all kinds of people and
(51:05) critics coming out of the woodwork especially about the element 115 part of the story or including that at least there were contacts from some pretty high level folks in Europe asking for information about how to make this stuff or how it operated right yeah that was uh boy that happened quite a while ago but I I don't recall exactly some heavy ion lab in Germany lab in in darmstadt Germany and well aren't I mean weren't those the guys that first synthesized one of the Isotopes of it I mean am I remembering this correctly
(51:44) yeah I think so I think they did 116 and maybe 118 but of course you know 115 didn't exist at the time you made the statement right it does now it's been made in a small particles but again uh it it doesn't uh you know it doesn't conform to the uh description that you gave the stuff that they made it only lasted a microsecond something of that sort well and you should expect that I mean if you if you look at any element everything has Isotopes to it essentially um you know you look at hydrogen them
(52:20) all the basic of all elements there's protium which is the hydrogen we're all familiar with there's deuterium which is still hydrogen but it's hydrogen with an extra Neutron and there's tritium again it's hydrogen but it has two extra neutrons they're all hydrogen they're all element ones but they're all completely different and hydrogens are completely stable element uh tritium is not it's Radioactive It's Half-Life is you know about 12 and a half years and hitting with photons
(53:01) that's why it's used for all the night vision watches and Scopes and sites and everything beta particles but you know that's because that's what we've seen But the um uh it well the point being that the stuff that you saw up there was stable and heavy and there was like 500 pounds of it it's much different tremendous amount of it and it was a completely stable element for what I was told I detected no radiation emission from it I detected no Neutron emission Bob I remember I remember that uh
(53:39) you know individual pieces of 115 that were kept in those clamshell type devices and correct me if I'm wrong but wasn't wasn't it it didn't have to be kept under Neutron bombardment at rest for whatever reason yeah it was always it always had what they called was active shielding and I think that's yeah I mean we can get into that later but right now I mean I just wanted to go cover the isotope question okay that um you know any given element can have stable and unstable Isotopes and like I
(54:16) said was the most common thing hydrogen 115 I God knows how many Isotopes it has but there is a stable configuration of it you know there that is what the craft was powered by now they synthesized a I don't really recall what it was but they synthesized one of the Isotopes at 115 and it was radioactive and I believe disintegrated and you know however many milliseconds or fractions of a millisecond I really don't recall but if they just continue their work and I'm sure they will it's just a matter of
(54:55) time they will as long as they're getting funding to do this they'll eventually wind up with an isotopa 115 that is completely stable well you had said you had said in the beginning Bob you didn't think they could ever make it like that here it had to be a naturally occurring element I was very shocked that they were able to do it I believe they used a nucleus Fusion technique I think one of it was a calcium and something else I really don't recall what it was but they they used a very novel method now they're only making you
(55:29) know a couple atoms of it right so it's not like they'll be able to detect

any properties of it but they'll certainly be able to detect uh you know a stable element and it's just a matter of time if they they keep plugging away they'll you know run and discover you know a wide variety or as many Isotopes as the element has and like I said one of them at least one of them is going to be stable the last time the Gene and uh John were here we talked about a cloud chamber experiment that took place at your house
(56:01) and it was very primitive sort of a thing it was videotaped uh we had a chunk of that videotape and I think we included it in in a report that we aired at one point I can't find the original but what was the point of that experiment what did it show this is back when we actually had a small sample of it and what we were doing was to show that this unusual element had some never before seen property that it actually had an intense gravitational wave around it something you don't see at all except with large quantities of mass but
(56:45) we took inside a cloud chamber uh took radioactive particles and fired them past the piece of 115 and watched them deviate off their normal course we were planning on doing a lot more with the element but we ran into some trouble of the whole story there about it being removed from our possession well of course there are stories about how you got it in the first place the Assumption being you must have stolen it from up at S4 right right and that's not true well I don't even want to get into how okay Bob don't you think it's a little
(57:30) misleading when when they see some of these reports saying that they've made some Element 115 and you explained to me how how they detected these things and sometimes these particles are flying by filters and they detect them I mean they are Helen gone from having a quantity that they could hold in their hand I mean I don't think people even understand how little there is and how quickly it decays when they hear a report like that something you might want to expand on that a little bit I mean they're really just slamming
(58:04) uh atoms together and watching this Collision this is all happening happening in tiny fractions of a second uh smashing you know nuclei of atoms together and watching particles Ricochet or get launched out of this collision and high-speed detectors just picking up the particles as they fly by that's all they're ever going to do that's all they'll ever be able to do well we need to take a break here the question I probably shouldn't ask is what happened to that sample of 115 you guys think
(58:37) about how you want to answer that when we come back we'll get into it stay with us everyone on Coast to Coast AM talking with Bob Lazar Gene Huff John Lear about Area 51 Element 115 there was a piece of it that they had for a while curious about where that went also curious in what we'll get into when we come back is uh the physics uh the technology what happened to it if it was 20 years ago and they were working on it then where is it now stay with us on Coast to Coast we're talking with Bob Lazar Gene huff
(59:07) and John Lear about Area 51 before the break we got into the issue of element 115 you guys had a chunk of it for a while Gene I'll rely on you to give the Diplomatic answer if you had it where is it I think it was stolen and I'd like to start the rumor that John Lear has it right now I know there's a guy that doing a lot of Bob Lazar research named Ken yakel down in Southern California who's just shaking his head right now because he likes Panthers on this same subject but I think it was stolen it's
(59:35) probably about the most honest answer I want to say but they uh the bottom line is there's still a piece of it missing and I think that's about all that I'm gonna say but you can imagine people saying well if you had that there's the proof you bring it out you show it to the world there's the proof that you're telling the truth and and did that ever occur to you to do that mean that it was the fuel for flying saucers that were brought here by aliens that make a disc capable Interstellar
(1:00:08) travel or would it just be a unique piece of really heavy metal well uh you know what about all this stuff 20 years ago yeah well this was part part of it was you know certainly we had to do uh we wanted to do some of the testing ourselves and you know release uh knowledge that we had a piece of it and you know where do you send it how can you hear about all kinds of things like this just disappearing and you know what would you do with a piece of element 115.
(1:00:44) who would you get arrested for Espionage if you're caught with it yeah so we didn't really get a chance to do much with it because it was shortly after we had it that it was removed from our possession you know the technology you described they were working on it 20 years ago they made some progress not enough for you

which is one of the reasons you said you came forward with this information but do you imagine that they have perfected it now to the point where they can use it in a practical way no I don't think so if it is never going
(1:01:19) to move forward fast enough and it was you know very aggravating back then when something is is run strictly by the military or whatever faction of the government controls it uh you don't have that scientific that open free discussion that exchange of ideas if they would have employed that from the beginning uh we would have really made Leaps and Bounds but if you keep everything in just a small tight-knit group of you know under two dozen people you're you're the progress you're gonna make is
(1:01:55) so slow it's so frustrating the system we had there that I told you about the buddy system where it's just you work in groups of two you can only communicate with the person your buddy the person you're set up with and there's really minimal crosstalk between the different topics and different groups and it it's so stifling even today it pisses me off to think about it just the technology the Wonders you have at your fingertips there you've just can't keep this quiet the way it is you must
(1:02:34) release this out to the scientific community and I know it has all kinds of weapon potential I know it has I'm sure there's a hundred different reasons why they're not they're not releasing it none of which I think are that valid but you know certainly expand the amount of people that you're exposing this information to if you want to get anywhere with it because it it it's really unlimited power and maybe that maybe that's the the main reason George here's a quote uh from uh Ben Ridge
(1:03:10) again he was the former head of the Lockheed Skunk Works you know the SR-71 the uh stealth bomber the self fighter this was the headband of all the black projects that everyone you know always accuses the government of hiding out of area 51. back in the early 90s he said this this is a quote we already have the means to travel Among the Stars but these Technologies are locked up in Black projects and it would take an act of God to ever get them out to benefit Humanity anything you can imagine we already know
(1:03:41) how to do that's a direct quote of Ben Rich well I'd have to agree with that well you know you look you look back on that period and what they could have done with the technology and and the description you gave Bob of the small teams and the lack of expertise that that leads to one of the criticisms of your story is that they say yeah you're a smart guy and you may know this and that about electronics and physics but you're not a PhD you're not the the cream of the crop back then and I mean
(1:04:12) no disrespect 100 so why would they bring you into it you know why would they bring you into that program that's my question you can answer my questions with the same question that's the first thing I mentioned to you if you recall you know it makes no sense why are they picking me for this job certainly this isn't my specialty I mean there must be some other qualities they're looking at um who knows what they are but no of course there are people a thousand times more knowledgeable on this and maybe
(1:04:45) it's just not outright knowledge they're looking for maybe they were looking for someone and you know come out of left field with some new fresh ideas because they weren't making any progress anywhere but yeah this is this is the exact thing that I put out there but George Bob is a comprehensive Problem Solver and he's exhibited that in his previous job he was a widower at the time he was hired uh a lot of reasons to use a guy like that I mean can you take the uh the head of the physics department at MIT who has a wife and
(1:05:19) kids and a job and goes to work every day and suddenly remove him and fly him out to Nevada and fly him out to the area 51 and back to Las Vegas every day and keep that quiet I mean if you took all the top mines from all the universities would they stay quiet I mean they'd be noticed as being missing they'd be noticed as as being removed from their normal life I think they have to take guys like Bob uh they're the only ones who who aren't missed in their day-to-day life well it feeds into the
(1:05:48) scenario that's been discussed many times over the years that this is all disinformation uh you know it's occurred to me that Bob they may have chosen you because you're a Savvy guy and a smart guy and you might have contributed something to the program but also because they might have figured you might have talked about it or they figure if you did talk about it that you you would be easily uh dismissed or um you know character assassination whatever which is a lot of what happened well

yeah that's true like I've always
(1:06:17) said I'm an easy guy to or certainly a candidate for character assassination but it's possible that was true of everybody else at S4 too we don't know I mean clearly the the lead guys from Caltech the lead guys from MIT the lead guys from everywhere are not working it as for yeah so how do we know what the credentials or what the situation was of the other people that worked there uh maybe that is part of the the idea there is just to keep a lower profile but you know if in fact that's it uh that that has some terrible effects
(1:06:54) on the program well they run the story they they release it to a gullible reporter like me I I bite on it and uh they they sort of run it up the flagpole and then discredit you and uh they're just sort of gauging public reaction to What would happen if uh if they released this which is why a lot of people say ah it's all disinformation they're trying to deflect attention from something else out there John you're this is sort of your area of expertise what do you think about that scenario well let's see the uh the Bell
(1:07:25) jar experiment that'll settle everything meaning uh the videotape the videotape but I mean the idea of disinformation they you you've been characterized as sort of this Bengali of this whole thing you must have set it up talk Bob and jean into go along with the story well explain the left easy guys to talk into things aren't we Jeff yeah I mean explain that for the sake of the listeners though why that's funny well I mean John you know John and Bob have been arguing at odds about a million different boys over the years
(1:08:03) the uh you know John didn't even know Bob until I took him over there and introduced to him one day I mean they John was already on your uh local interview show here on the record telling us all about Richard Dixon and Jackie Gleason and all of the stuff you know before Bob Lovato was around that John was out there on a limb I mean John used Bob the back back him up it wasn't the other way around are people implying that that I I guess I missed the point here that like John and I fabricated this this
(1:08:40) story for is that yeah that's come up once or twice over the years oh is that what you're talking about now yeah with the larger disinfo scenario is that uh that maybe you were duped that you were shown this stuff that they created this whole thing that they wanted you to spill the beans and sort of a psychological operation or maybe to divert attention I mean you've heard that scenario discussed well wait diverted tension from what yeah so yeah that's my main question I was given this material and free reign to analyze it
(1:09:11) Tinker with it and so exactly what and I certainly convinced myself I knew what I was dealing with so what could be more shocking than that than what dastardly thing are they hiding that they decided to put a giant UFO story out there for and how and again they they gave him this ammo they implanted this story in his head with mind control and then what did they throw up in the air on the Wednesday night when he took us out there to see this yeah that scenario becomes completely ridiculous when you look how about when
(1:09:45) they took him and took place when they took him down to the St Louis substation and registered his guns when he was in the program when the Russians were in town running around trying to bribe people what about their other comical stories that never really hit the mainstream and Bob correctly if I'm wrong but weren't you supposed to actually like give a little seminars seminar to some other guys out at Eng or something and you overslept and didn't go give the class oh yeah boy that was a disaster but yeah there's
(1:10:15) you know in a in a radio show it's impossible to cover all of the little fine points of you know of what happened why you know claims of along those lines are just are Beyond ridiculous it's well how about you asked him at the time when we first when I was first shown some of the CT material and you know seeing the the breath the size of the face and the amount of equipment they had and how do you guys keep the secret and that's the first thing they told me uh which I mentioned before I said it's the easiest thing in the world
(1:10:54) to keep secret it's nothing like any other other black projects because nobody believes this stuff is true it's a piece of cake and and it is true people have a built-in of prejudice essentially that you know flying saucers aliens this is all the stuff of Science Fiction and you know for the most part that's just the way people believe it's it's very difficult that's how I was in the program I mean to me this was all silliness everything I heard from John Lear and you know these reports on TV of
(1:11:30) people being abducted and I this was total silliness to me although I

still have a problem with a lot of it I'm probably the biggest UFO skeptic there is but when it comes down to know are there actual ET crafts here on Earth that it really is true well the explanation I give about the disinformation scenario is if if they were in fact trying to divert attention from something else going out there some legitimate National Security program and they just wanted to mess with people's minds it had to backfire on them because
(1:12:04) the result of your story the UFO story at S4 I mean tens of thousands of people trekked out there every news organization in the world has been there Congressional investigators have been there they got a lot more scrutiny than I think they ever wanted no matter what it is that they're working on out there well they had bus tours out there didn't they yeah for a while but let's like I said that those scenarios don't make any sense at all so it couldn't I mean that's that's not even a reasonable
(1:12:31) a reasonable guess but George look at the people that have come forward to you that that you've never even gone public with people that have told you things that they don't want release until after their death what about this uh uh Boyd Bushman what about Edgar Mitchell what about you know there are other people who have you know you know well Edgar Mitchell at least had a conversation in person with Bob Lazar but this boy Bushman he has no idea he's never spoken to Bibles or there are people coming out
(1:12:58) confirming this stuff now if this was all a mind control game and a disinformation act played on Bob Lazar why is why or why are the uh you know former senior uh uh in Engineers from uh the lockheed's gunk works and and astronauts and all these people coming forward saying they've seen evidence of their satisfaction that this is real if all this was just a hoax on Bob Lazar what are all these guys big dummies that just believe Bob those are they they've seen corroborating evidence elsewhere from other than Bob Lazar
(1:13:32) one other topic I want to touch on before we go to the break and then open up the phone lines is polygraph tests this has come up again uh there's a character online who writes about it based on things he's I don't know uh he got he channeled information or something he knows the truth about it and he writes about all the polygraph tests and flunked all of them uh you want to walk through this scenario I know that it took a took a while to convince you to go ahead and get these tests somebody said I flunked though
(1:14:01) yeah there's a guy you know that's not true yeah I know it's not true and I've told the guys in this this particular chat group it's not true and went through the scenario and it doesn't matter people who were not there at the test didn't see the results didn't talk to the polygraph examiners are sure that you flunked them well of course people can make up what they want but you know we're trying to deal with reality here the um I I don't remember the guy's name the
(1:14:32) the only time there was inconclusive results was the initial polygraph the guy who said you're going to be my ticket uh oh to the Geraldo show or something like that and uh I think he was more concerned about becoming a star from this than doing a polygraph test when and you even passed one of those four and and paid for these uh polygraph tests and you got um what was that guy's name that ex-cop there yeah the first guy was his name was Ron slay and that's right it was a pretty perfunctory test but actually he
(1:15:09) uh had said that the results were inconclusive he read it twice he thought you might have been deceptive in the first one but he said afterward in an interview that you were really scared and that seemed to affect the test results the second guy and he recommended we do a second one uh his name was Terry tavernetti a former police officer who is now still a corporate security officer with a major Gaming Corporation he performs polygraphs as part of his his job every day and he said in unequivocal terms that you passed and he he broke the test
(1:15:41) up into four areas uh he put you through it twice and you passed right no question about it but then it was then some of Terry tavernetti's uh I think Associates someone else took a look at it and their opinion was that they saw a couple of areas that they thought were they might have been inconclusive but inconclusive was the worst that ever happened he never failed a polygraph at all yeah that's true so how could somebody come out of left field uh not not being there not knowing these guys not and saying
(1:16:15) and come up with statements like that this is the craziness that I get exposed to all the time people hear portions of the story and weave together uh the remaining remainder and it it turns into the most ridiculous story something that I'm not even familiar with but um yeah it's guys like this these us it's why I try

and distance myself from this topic completely George should polygraph be subjective I mean I mean can two people read a polygraph differently well I guess slight nuances but a Terry
(1:16:55) tavernetti said you passed he gave it to a second polygrapher who agreed with that estimation he gave it to a third who agreed but said well maybe you're maybe you're telling stuff that you heard from somebody else and he'd like to see another test but nobody said that you've flunked of all the people that looked at it nobody said you flunked um I thought the first guy actually I thought Bob had passed one and one was inconclusive I didn't right that's a judge that yeah um I'm trying to remember I thought he
(1:17:22) it was you know it doesn't matter at this point the overall result was inconclusive I well we got a couple of minutes left before the break and we open up the phone lines Bob uh I guess uh safe to say that you would not do the same you would not play it the same way no boy you know a lot of times gone by and like I said I I really feel privileged and to have been part of the project and uh obviously it fascinates me uh you know somebody this deep into science where it's you know part of my life to be on Beyond The Cutting Edge is
(1:17:55) uh really something and uh but the way this all went down and the way it was digested by uh you know the people in general I don't think I would ever say anything again and uh because the effects on your personal life yeah because of the effects on my personal life and and just it was really eye-opening the way you know people receive information like this and that you know uh how Hospital they'll be because they just don't want to believe something and um you know and of the tremendous amount of disinformation and
(1:18:38) um you know attacks associated with it you know why in the world would I ever do that again all right we have another hour left with Bob Lazar Gene Huff John Lear uh stay with us we'll be opening up the phone lines here on Coast to Coast AM celebrating sort of the our marking the 20th anniversary of the Bob Lazar story Area 51 S4 flying saucers in government hangers also joined by John Lear and Gene Huff I know a lot of you have questions for this Trio and we'll get right to the phones as soon as we come
(1:19:09) back on Coast to Coast AM welcome back we're in the final hour with Bob Lazar Gene Huff John Lear uh we're opening the phones in just a moment Bob but you had said earlier there are a lot of Lazar imposters out there on websites and Facebook and things of that sort a couple of the listeners had written in saying they they were curious about a site they found that had artwork and drawings and things of that sort of whether that you were related to that in any way no is that could that be John ferrett's old
(1:19:38) site uh well that's boblazar.com now that yeah I'm not talking about that site that's John ferrat A friend of mine and he essentially put all the I don't know what the status is but he put uh essentially the bulk of my story online and uh Drew all the graphics concerning uh the reactor technical aspects uh measurements that sort of thing everything that I knew at the time now that's uh yeah a separate website that I wasn't involved in but certainly knew about um these other ones I'm talking about
(1:20:21) the social network groups you know the Myspace Facebook that type of thing not those have anything to do with me okay going to the phones east of the Rockies red yeah hello east of the Rockies Fred in Florida are you there okay how about west of the Rockies what were you going to say I was going to say that it's important to clarify that what they just heard is that babazar isn't even involved with Bob lazar.
(1:20:51) com much less than the other website so that was pretty interesting right statement actually okay go ahead west of the Rockies uh double 07 and a half in Southern Cal are you there well hello everybody all right how you doing I'm doing better than ever this is my birthday 55. happy birthday well thanks I wanted to tell a true story in 2001 up in the mouth and one night I was stepping out couldn't sleep but sat down on a chair in front of my house up there and a lot of cloud and fog moved in Fast and seriously that night
(1:21:36) and something made me look up at the exact second this big old perfectly round Flying Saucer came in and with the lights turned off I could see it plainly because it came in low enough and they turned the lights on when they went over my head and it pulsated white light with like a wheel going around it inside of it around the edge of it probably the propulsion system I don't know if that would have been magnetic rail thing or whatever it was it's got to be a lot more advanced but they got married at 51. I don't know how much

(1:22:12) back engineering they've done over there but anyway after they went over my head they turned the lights off and I heard it land and a little bit later all the lights in Idlewild blinked on and off a couple of times and a little bit later this strange lady says her name was tomorrow comes down the road gets a cigarette from me and as she's leaving turns and says I'll see you tomorrow now uh from what I've learned from the people from the ship since then uh I think they're in the process of doing a Roundup to take a
(1:22:47) load up to their Planet but who's to say this whole planet isn't uh nothing more than uh space aliens living on this planet that they originally seated uh who's to say that isn't true you know what it might be and so the question is could that possibly be true and and basically message is a if you're if you can do good consistently instead of doing bad then you're a candidate for Rescue I'd like to know everybody's thoughts and all this and thanks a lot I'll hang up now yeah okay
(1:23:23) John you want to tackle that one is John awake is it am I still awake sorry sorry John it's pretty late for you did uh did you hear that uh that question yeah just give me the the uh the base of what it was well I think he uh he saw a UFO incident and uh had an encounter with somebody who was a strange lady and his suggestion was maybe we were uh we're seated here that aliens seated the the planet yes that's possible and the way you get out of here is uh egg is uh to exercise Integrity without ND and without greed
(1:24:08) okay maybe I'll bring it back to you Bob and all the material that you read uh leading up to your introduction to the program did you see anything about uh intent of the visitors or what they want yeah I mean it's my antenna as the visitors or what they want I don't think it was ever made clear what their intent was um you know is there information that I saw that you know might imply that uh they had something to do with putting people here well possibly I mean that's my personal belief I think in to some
(1:24:49) extent people were seated and uh you know if you want to call it that uh by another civilization but um you know it's meaning genetically altered right yeah yeah you read something about genetic alterations that took place throughout human history right right so I don't know is that seating I guess in some respect it is but um well the you know they were doing us the favor more or less whether that's your perspective I mean there was more in it for us than for them apparently that's certainly true
(1:25:28) a wild card line Ed in Allentown Pennsylvania good morning Ed morning George fantastic show as per usual uh and happy anniversary 20 years I am very much a fan of Bob Lazar and John and Gene's work and I wish that you guys would make the first show available on Coast to Coast like the interview show that you did on TV as well as Arts first you know I think it was in 1990 I believe that Bob Lazar was interviewed on Coast to Coast well that was a long time ago I I can't believe it's been 20 years myself yeah
(1:26:06) it's bizarre uh I have a question a couple questions in a brief comment and oh my God where to start um it's quite a privilege and a pleasure to speak to you Bob well thank you um good luck with your new Endeavor with the car inserts or whatever the hydrogen the hydrogen yeah my mom worked for air products for 30 years and my dad had each picnic would the president of Air Products and say that he had plans for a hydrogen car when he was fighting in World War II in Brazil really the American soldiers yeah
(1:26:42) he would tell the president of the Air Products every summer at the company picnic why don't you build a hydrogen car you wouldn't have to import any more oil and you know and they said yeah yeah yeah and then like last year they announced that Air Products is now trying to make their version of a hydrogen car oh no kidding now I hadn't heard that yeah their products one of the biggest suppliers of gases industrial gases in the world and for NASA anyway um the other question is when are you going to make your autobiography and if
(1:27:16) so you could possibly fund even more hydrogen car work and the other question is uh if you were offered to work again for Los Alamos and or at somewhere in Area 51 like if they called you up and said okay we're sorry we want you back would you go and I have another comment if I could please answer that question well the comment is a joke it was 20 years ago that Joan Rivers said in one of her concerts that she's in her comedy concerts she said you know why a UFO Never Lands in a Jewish lawn herself and my own religion she said
(1:27:58) because they would turn it over to see who manufactured it see if they can get in on it because they won't always want to build stuff and and my family indeed

was involved in manufacturing for years and it's like a triple entender joke but yeah right that's that's my questions and good luck I'll be with you and all of you and more power to us all and hopefully the the future will be one of peace and no oil and lots of hydrogen cars everywhere not polluting the Earth I'm all afraid of that thanks Ed uh so
(1:28:34) Bob uh the central question there is pretty interesting would you work for him again they said hey All Is Forgiven come back to S4 we need your help on these saucers you know you won't believe how often I think about the um and that that's a that's really a tough question because first of all I'd apologize to them because they were right just keep your mouth closed you know and that that's the only way to stay here is to go with the flow and you know I am so sorry I made that move but getting back
(1:29:11) to the question uh yeah unfortunately my life has gotten a lot more complicated I mean I have several businesses and all that and moved you know and wife in Michigan however if we can put all that stuff on hold or if I was just single again without attachments to other businesses and all that would I go back yeah in a heartbeat I really would Bob I need to ask a question you spoke before about uh one of the problems with hydrogen cars is detecting the leakage because there's no odorants involved with the hydrogen and of course
(1:29:51) as you know they they pretty much proved that the reason the Hindenburg lit up like it did was because of the aluminum doping on the skin not the hydrogen itself how explosive is hydrogen you said well if a a cubic foot of hydrogen leaked out I mean does it catch on fire that easily how dangerous is it how explosive is hydrogen well a cubic foot isn't really that that dangerous it burned in our air and yeah you know it it does have a wide range of flammability but um the more the more the real problem here
(1:30:26) is is overcoming the the stigma of hydrogen When you mention hydrogen to people they're only going to think of two things the Hindenburg or a hydrogen you know thermonuclear bomb and both of them are bad news so it's it's tough overcoming that the actual dangers are are very minimal and a gasoline car by far is is the bomb that you're driving not a hydrogen car I want to go back to sort of the implication of Ed's question there and and your interesting answer that you would actually think about uh going back
(1:30:58) and wish you had stayed in the program could you imagine or have you thought it out about where it would be now what your role would be if you'd stayed in it how far the research would have progressed well if things would have gone a lot smoother and and I you know we wouldn't add the security problems that popped up and you know if things remained under control um is it possible that we would have made more progress I don't know like who knows how many people before me uh tried to make The Identical
(1:31:35) progress that I was trying to do I focused on uh what I was primarily interested in and you know what our group was directed to do but I certainly don't see uh why I would have made a giant difference you know I basically what I'm saying in this amount of time we'd probably be about the same place they are now I don't I don't think I had any special abilities or you know uh or any uh I can't think of the word to say but um well you know what we're just guessing I mean maybe they made a
(1:32:17) breakthrough maybe that statement out of uh the guy from Lockheed is more telling than we know that they have figured it out but no it's possible but I have no reason to think that I could have been a major contributor you know any more than any other person there so uh that's hard to say but then Ben Rich says you know who used to run the Lockheed Concord says that it's locked up in Black Project and it would take an act of God for it to ever be used for any public purpose so what there's that indicates
(1:32:46) me they're probably talking about they're going to keep it for weapons and Military you know the defense are offense purposes whatever but it it's never gonna you know be disclosed and given to the public for any benefit it's a crime but I'm if they're not going to let the people know about it I sure want to know you know yeah I just uh have a craving to you know to get back into where I was and I know that's impossible but I do think about it all the time it's kind of like uh
(1:33:18) you know that that annoying feeling you have what if yeah exactly it's a what if that never goes away and I really don't know how to describe it but it bothers me a lot because there are times I said well no I'd never go back this is ridiculous and but really as time goes on and now I'm over 50 uh you know you start thinking different and boy I if things were as they were back then I would jump

right back into it nowadays with the like I said the way my life is it'd be impossible do you think um if
(1:33:51) you had stayed quiet and not gone public uh you know you know the yank your clearance and you were temporarily out of the program if you would just shut up and well that's crazy not with me right but I'm just saying if you had done as you were told and stayed quiet and not gone public do you think they would have rehired you would they have called you back after a layoff yeah I don't know oh we're gonna go to Blair in Sedona Arizona on the Wild Card line good morning Blair Thank You George hey Mr
(1:34:21) Lazar speaking of gravity uh propulsed and George had a gentleman by the name of Shannon on his October 25th show who said frequency patterns hold the planets in place not gravity and frequency patterns of what hmm well there you go I guess you got to Define exactly what he means there I mean maybe it's the frequency patterns of a gravitational wave but I mean you have to yeah have to be a frequency of some energy and maybe that's you know what he's referring to that it's not it's not a static wave that it's an
(1:34:56) active and and he would be right it's uh you know if he's talking about frequency of gravitational waves I guess that's just a correct statement would you be able to speculate on a post-government disclosure society and what specifically and how will the current suppressed Technologies of unlimited power enhance American Life those Leaps and Bounds you were talking about so the effects of letting it all out yeah well and how would that change our lives directly I a lot of that would depend on exactly how far they were able to take
(1:35:31) this because if they can't if they really can't duplicate it then it's useless to everybody and if it just remains that the craft or components of other crafts they have are the only working pieces of that technology and it can't be made to work with Earth Technology it's there's no use at all it just is a novelty however if they were able to surpass that and and able to duplicate some of the technology some of the ideas or even you know some of the basic concepts uh using Earth material
(1:36:12) sure there could be it could be a a world-changing event there could be sources of energy that are Limitless but again using you know using alien materials requires a source for those alien materials and I don't know of any earth materials that could be substituted or that perform like the ones we were looking at so I I don't see where where the project really would have proceeded but um you know I didn't know everything about it I just knew the small amount of information that they dealt out to my group and I'm sure I
(1:36:57) don't have anything close to a big picture so you'd have to think that if they if they had the stuff they spent all these years trying to figure it out and they they were just stumped that they'd just bury it somewhere they wouldn't talk about it they wouldn't let it out they wouldn't want any of our adversaries to know about its potential because somebody else they'd never do that they I mean they Tinker with it forever they'd never just bury it throw it away because just just
(1:37:24) on the you know outside hope that you know a new Young upstart comes in somewhere has some neat idea and now finally they have access to all this power and Technology they're never gonna throw it on the back shot it's too it's their prized possession you know they're they're never just gonna throw in a box and do you know one of the Raiders of the Lost Stars thing and some giant not to mention that those who brought it here were supposed to come back another time so they would probably at least
(1:37:50) keep it and hope that happens gentlemen we're taking another break we'll come back with our guest Bob Lazar Gene huff and John Lehr if he's still with us there uh stay with us we'll go to more of your calls after these breaks and messages on Coast to Coast AM we are joined tonight by a couple of UFO Maniacs Bob Lazar Gene Huff John Lear talking about Area 51 and in a way it's a story that launched a thousand businesses uh posters and ashtrays and t-shirts and uh even Bob Lazar Christmas ornaments books uh tours video games
(1:38:26) bars named Area 51 bands named Area 51 there's a there's a band named Element 115 in case Bob Lazar has never heard of that one a lot of people have made a lot of money on the story uh Bob Lazar and Gene huff and John Lear not being among them uh however a lot of interest continues when we come back we'll go back to the phones get to as many of your questions as we can here on Coast to Coast AM welcome back we're in the home stretch with a Bob Lazar John Lear Gene Huff going to east of the Rockies Glenn in
(1:38:56) Texas good morning Glenn uh good morning gentlemen uh I'd just like to say

this is a a wonderful experience and uh what a forum art created uh I have a question for uh Mr Lazar if I may a quick question for uh Mr Lear go for it uh Mr Lazar did the uh crafted S4 have any landing gear and if so uh what kind of configuration it may help with the speculation on the specific use or general use and uh Mr Lear yeah uh I grew up here in Harlingen Texas with the cas and uh is the ride in a souped up a26 uh a body numbing experience or something
(1:39:56) even so you just don't want to get out of thank you and help listen on the air John why don't you start first okay what was his question he was talking about a ride and an a26 if it was a body numbing experience so uh I don't know I had a lot of time in the airplane but it was not a body numbing experience so you're not a big fan of that plane oh yeah it's great family airplane yeah I loved it uh you know in 1968 I was the first guy ever so to fly in the Reno Air Races and actually placed fifth ahead of
(1:40:35) one of b-51 in the B-26 okay when John was in that race Jordan number five Bob you're part of that question uh did the craft have any landing gear no not that I was aware of anytime I saw the craft it was on at the belly or lifted off the ground but I didn't see any landing gear and I did get to look in the lower portion of the craft the only thing that's down there are the gravity emitters uh in the amplifiers if you will uh there's no room anywhere for any kind of landing gear so I imagine they're always
(1:41:22) counting on the craft uh lifting itself off the ground or sitting on its belly but there's nothing that stands it off Bob was the was there um the the I don't know what I'm trying to the bottom of the craft where the when it would turn up on its side and they'd Focus the gravity Empires on a point did you were you taught did you sense did you know is the bottom of that open does something open is it made of something else or is it all all the same continuous uh at the very bottom of them but it's
(1:41:57) flat under the amplifiers there it's not open yeah it's solid okay but same same as the rest of the skin of the crap I I don't know it appeared the same but I guess the material was different all right keeping with Glenn's question when they're in the hangers these things you saw nine different craft in the hangers were they suspended like ropes or uh cables or something sitting on their belly with the exception of the one that was tilted up that had the uh hole in it that I you know mentioned looks like a
(1:42:27) projectile has been fired through it okay west of the Rockies Mark in San Diego good morning Mark hi uh by the way my favorite three guests I'd like to ask each of them uh how this has affected them on a religious level like if they were raised to Catholic yeah and has this has any effect on their religious beliefs afterlife or a Supreme Being Gene why don't we start with you on that absolutely I mean the difference between Bob and I is that he is interested in the technology and the hardware and of course you know from what I've heard him
(1:43:02) say on this show tonight he's changing now that he's over 50 but my the impetus for me and the whole thing were the basic questions of man uh who are we where do we come from where are we going to life after death God the things that none of us are exempt from and if these gray aliens are whomever brought these craft here had any commentary on any of that I would like to know what they had to say so yeah I've I've it's uh I've given a great deal of thought to that and Bob did not used to think about it
(1:43:29) at all I don't know if he does now or not but it completely changed my life by the way uh Edgar Mitchell the astronaut also uh he said that when he was on the moon looking back at the ears it was tough to see where Heaven Was and it kind of changed him philosophically also it was a it was a life-changing experience standing on the surface of the Moon and looking back at the Earth so I guess all of us have different times in our life that make us examine our mortality and and uh try and grasp whatever we can to get answers but yeah
(1:43:58) the material brought forward with certainly changed my life and and changed me a lot philosophically and Bob do you think of it in a spiritual or philosophical way any differences no I mean I'm not the most spiritual person you know I'm not into um you know I really uh if anything I'm anti-religion I think organized religion is uh probably the worst thing that's ever happened to civilization but I'm sorry that's the way I believe it creates all the wars and I don't even want to get into it but you can be
(1:44:34) spiritual and you know not be involved in mainstream religion you know is there a god you know who knows the answer to these questions but um if you know did it did it affect me no because I really didn't have any religious beliefs uh you

know I believe there is some order to the universe I I don't think when you die that's it although you know science wise that tells me that you know that uh that's all that happens is life and death and but um you know you just have those other feelings inside you that have no no basis or or
(1:45:15) facts to follow but um I really wasn't religious before that and after being exposed to it uh it really didn't change anything or my belief John John Lear uh you know not only the area 51 Revelations but the larger UFO picture changed your philosophy of life or change the way you look at the universe or eternity after that changed everything because now I know exactly what's going on and how it works wow so you're going to write another uh you're going to write a religious text and and let us all know
(1:45:57) really not it's uh there are very few that that really know this or that would understand it or that would care and are you optimistic in general oh yeah wow well that that's that's something first time caller PJ Santa Maria California hi PJ hey good morning guys it is a pleasure talking to all of you guys and uh question is for John Lear this morning and John I'm curious with the lunar water findings as of the last couple of days and I understand that having followed all three of you guys there for the last decade or so and
(1:46:31) you know researching on what you've talked about with structures on the moon and obviously a lot of features that uh would have to be uh man-made or made somewhere on there what do you think with uh what NASA is doing do you think they're slowly starting to disseminate information about things up there is it is it a new finding to them that there is water there or do you think they knew this from from a long time ago they probably knew there was some long time ago because they had a lot of pictures on the uh on both the near side and Far
(1:46:59) Side there's cities Waters Lakes a Rivers uh anything you want the other day we managed to catch a spectacular picture where uh the holograph of Endymion which is a crater at the top of the Moon about one o'clock and somehow the holograph or whatever hides it uh went away for just a few minutes and a friend of mine had a telescope aimed right at it and was able to uh to draw what is really an Endymion it was uh it was a fascinating experience and he came to Las Vegas and we went over it and we drew it many many times until we got it
(1:47:46) exactly right what was there it was a city with uh with buildings and towers and uh uh and it's hidden by a holographic nature boy that sounds so crazy to me I can't even relate to you John is back yeah so much for the Saint John no we're poking fun John but uh you're saying that there's all this stuff up there that's covered by holographic technology of some sort oh yeah the whole die the whole darn place is covered just to keep it secret from us yeah yeah you know pretty much to keep
(1:48:27) it peaked from us we're going to go to the Wild Card line Chez in New York City good morning Chez hi George it's a pleasure to speak with you and and I'm gonna have to follow of you and all your guests and thanks I I had a couple of questions for Bob um Bob I was wondering I know it's been a while but I was wondering if you could speak to any sort of uh description or detail as it relates to the skin of these crafts uh that was my first question my second question was uh is there anything of sort of an innocuous nature something
(1:49:01) odd or bizarre that you could remember about any sort of compartments or uh maybe uh support facilities for some of these occupants or Pilots of The Craft I didn't have any knowledge of anything along those lines um as far as the you know occupants of The Craft or um you know anything to do with Biology well he's talking about compartments inside the craft I mean you did get a look inside there right the furniture inside yeah maybe I misunderstood the question right um yeah compartments inside the craft I did get
(1:49:41) to inspect uh everything in the craft with the exception of the very upper level which I believe was just uh navigation and their version of electronic um but it didn't look like there was anything but open space uh there are three seats for the occupants of The Craft but there were no individual oh rooms compartments or or what have you like we we might have on one of our uh you know any form of transportation there's nothing like a a bathroom or a smaller area everything is just each level is completely open in itself so I
(1:50:23) wouldn't call anything a compartment anywhere the other part of that question he asked about was the skin did it have skin or is just metallic well it's I called it metal and again uh each each part of uh the research done is uh you know as it gets late my brain begins to run a run out of words but um you know it's all very compartmentalized and the people that dealt with the Metallurgy were a

completely different group of people I had no knowledge of it the uh only light I can shine on it is the one
(1:51:01) time I walked across the craft and just slid my hand along it it was cold and that's the only reason I said it it felt like metal um it was you know cooler than the ambient air could it have been some exotic ceramic or something probably so I'm sure it wasn't just an alloy of aluminum or anything along those lines but um that's that's about all I know about it it was a pewter gray in color as was everything on the inside and outside of the graph so that's that's about all I can say as
(1:51:39) far as what the material was cheers thanks for the call we're going to go to Jim in Chicago good morning Jim yeah George yes can you hear me yes I can okay I got a problem with my phone here anyway I like your style because I'm also a bottom line guy I have a question for Mr razar I want to know about the alien bodies has he seen them and in his opinion are they biological are they semi-biological or interdimensional I haven't personally seen an alien I I did see uh photograph of a creature was that creature in the
(1:52:23) craft or you know a pilot of the craft I you know I was just given some information a brief overview of other other portions of research being done but again I had no direct information about any of the biological aspects of well you thought Viva sectioned and Wade yeah but like I said this is I was given briefings that well as you know portions and reports on many of the other areas but I had no specific information on how that creature that I saw or the images of the Creature if that had anything in fact to do with the craft
(1:53:05) you see what I'm saying but you did the the pictures that you did see the vivisection or autopsy-like photos showed organs yeah a central organ as opposed to uh and I think that's what the comments were underneath it that uh from their estimation it's that I think I gave the description as if if you uh had taken all our organs and allowed them all to grow together it was one single organ in the body that they had uh cut in a t-shaped fashion looking at the different chambers and whatnot in there and uh I think it's
(1:53:43) this this organ looking thing uh was apparently performing many functions uh so it appeared to be biological to you yeah so I I yeah exactly it didn't appear to be an interdimensional being or but yeah I again I don't know in an interdimensional being be the uh up here to be biological so I that's all I can say uh well didn't you get a glimpse of something in a lab coat yeah oh boy people make a big deal about that thing well yeah and rightfully so I mean no I don't think that was an alien
(1:54:22) though just a short uh person with a big gray head or no I didn't say anything about a big gray I'm just uh the other side of the coin is that they were could have been playing mind games so they had two scientists and lab coats stand next to a facsimile of a kid a gray alien a lot was going on at that time because I saw again this was there if you know Baxter to me and they were playing with something or looking at something that size maybe they were making up a little mannequin or something to see how it
(1:54:55) would fit inside the craft but I had no indication that that thing was alive or what was going on so I I can never say that that but neither did they know you would be walking down the hall to go to the bathroom and look at that window yeah but I wouldn't try and read too much into that that would be too much speculation okay I'm gonna try to take one more call got to be a quick one Gary in Hot Springs Arkansas quick question well more of a statement okay in 1966 I was the youngest from working for an
(1:55:26) electronics company who delivered projects to the jet propulsion laboratory which is now NASA and normally I was kept out of the loop as to what they did but this one particular time I walked through a door that I wasn't supposed to and there on the easel by an illustrator who was incredible by the name of Glenn Hawk was the Space Shuttle 1966.
(1:55:55) it did not fly till 1981. so this suppression of information has been going on for eons Well Point well taken and I think Bob and and John and Gene are sort of examples of uh of uh what our knowledge is is of suppression of this kind of Technology any closing comments uh from from our guests Bob anything you want the listeners to know about what's next for you or or what this strange Journey has been like well the strange Journey has really been something uh certainly I've taken my life in directions I never
(1:56:34) thought it would I do constantly get uh people that are you know really wanting to ask me questions even people doing research and uh looking for actually

even a couple in a couple instances some research Labs that are looking at Advanced propulsion and just looking for some possible insight and I apologize for not getting back to everybody but if you do want to contact me just you be patient and the only place is uh uh our website is the United nuclear.
(1:57:10) com well sales at United nuclear.com or just go to our our web go to our website and buy some stuff all right Bob Lazar Gene Huff John Lear thanks for staying up late with us it was fascinating next Sunday JFK realm table hope you can join us then I'm George Knapp good night everyone

bob lazar, george knapp, jeremy corbell, detroit panel, april, 13th (13-04-2019) [remastered] - YouTube

Transcript:
(00:00) well [Applause] hi everyone can you hear me okay good thanks for hanging around uh my name is jim shafer i'm the investigations editor at the free press i've never done an alien life investigation although i have interviewed uh a man who swears he saw an alien encounter in western michigan that the government wrote off at swamp gas i don't know if you remember this i interviewed one of the main witnesses for a column right um let me introduce our panel here thank you for uh for hanging around uh in the on the end there we have mr
(00:54) george knapp who is a seasoned investigative journalist and producer at the middle [Applause] next weekend mr jeremy kenyon lockyer [Applause] mr bob lazar needs no introduction for this audience [Applause] um i would like to know who we're talking to first so if you don't mind by applause if you don't mind sharing who believes that there might be something out there besides just the human race [Music] any doubters out there okay there's got to be a few i appreciate your honesty
(01:57) um mr lazar you are extremely well known in this community um yet you've made very few appearances and talks over the years i would just like to ask upfront why why you don't do more i understand you've had some trouble with harassment and things over the years thank you for coming out tonight by the way we really appreciate it can you tell us a little bit a little bit more about why that was that perfect um i'm just really not this isn't about making money selling tapes or anything along those lines it's just the only
(02:43) reason that i allowed jeremy to make this movie was because there was so much disinformation uh spread around the internet i mean there's plenty of people on facebook pretending to be me answering questions there's uh they're imposter oh plenty of them to the point and you know every time you take an inaccuracy off of wikipedia somebody else writes something silly on there and there's just so much false information it's i just wanted to get something down on record that you know was reality but i'm not
(03:16) interested in you know doing a bunch of lectures or running around the country the the tape should do that itself excuse my ignorance but you've never written a book either there is a book i i haven't written a book no but um i have helped a writer get an autobiography together so uh what's going to happen with that in the future remains to be insane exactly so you've never profited off of your story no i think the people that profit off of it are the ones to me or you inherently can't trust so yeah taking money for any of this
(04:04) isn't acceptable i don't make money off the film i don't sell anything the idea is to get the information out it's not to turn us into a business sure um by the way we will try to save time for some audience questions as well i'm not going to be the only one asking for information here just another quick one that i've got to get off the top of my head you talked about insurance is what made you come forward in the first place but also you mentioned the withholding of this technology that you thought
(04:37) could transform the world basically even more so almost than the knowledge that there's another um form of uh life out there the technology struck you um why did you get to that point what was it about your job that you just couldn't keep quiet that is really a long story it wasn't that i just couldn't keep anything quiet and decided to say something there's a whole chain of events that occurred and brought me to that point and that's really too lengthy to get into now okay but that goes to some of the uh
(05:15) harassments and things that uh or yeah treatment on the job the yelling and

things that were referenced right i mean there were threats to your family yeah i mean in a nutshell to maintain a high security clearance you have not just no connections to foreign governments you also have to have a stable home life and at the time i was going back and forth to the secret location uh at groom lake late at night at weird hours whenever they called eddie decided to do some some work out there now i kept with the program i kept
(05:54) things quiet even to my wife well as time went on my wife began to think that i was having an affair and i had given permission to have the phone monitor so my wife began to have an affair and they were the first to know about this so they began to worry that there's going to be some turbulence in this guy's life and we don't know how stable he's gonna be again it's it's a long involved story with that that's what started that that helps that that shed some light on the situation um as a
(06:32) journalist i also have to ask you and i'm sure jeremy and georgia both discuss this with you how many other people worked where you were 22. that's it that's it why are there no other bob lazars where are i didn't i don't know i didn't set a good example coming out so but you know their names i presume oh never ask them to back me up at one time but they never came forward you're the only one no we've really tried to find some of them i mean it's been a long time all right uh jeremy can you explain how you got
(07:13) this man to talk when so many others fail well there's nothing like a good challenge and as you saw in the film that was you know my films are exactly like you see them i'm not making anything up i'm showing you how i experienced through my eyes you saw in the first real scene george that challenged me and says you know look you got to talk with bob sorry i don't know if i'll talk to you basically you got to be the luckiest guy in the world and maybe he'll talk to you so i accepted the challenge
(07:42) and you know then it kind of like just brought us together you know i guess we were in each other's orbits in a way and you know they had had what you know 20 year 25-year relationship at that point so i got to meet bob and he let me turn on the camera which you know was amazing so the world got three more minutes of babazon as a fan of wanting to know the story actually wanting to know the truth that was the cool moment um so you know i got into talking so you have to be patient and you put the camera on your
(08:10) phone for two hours this is not where he's come from he doesn't like doing this he told his story he feels like he's set to reconcile and undermine the god starting with george that 30 years ago but clearly the public wants to know more i think that's why we're here [Applause] the fbi raid is spectacular for your film were you worried that it might derail the film did bob express serious concern that uh what you guys were doing was dredging up things that got him in trouble so many years ago i'm so glad i never have thought the fbi
(09:00) was spectacular for myself i literally i've never thought that my mom thought that she said i was worried about bob i mean like it's so funny you see something on the screen or you hear it your mind say oh i believe that there's people that didn't believe that fbi right happened like literally post more photos of it um no i was terrified for bob george told me something like that was going to happen i felt like i was harder than a friend you know by filming him it sucked whatever happened it upturned bob's like again and don't pin
(09:33) it on me i'm just saying you know it happened and there's a lot to that but no this is a real story this is joy's life this is bob's life this happened and whatever you believe about it sure it's dramatic that's great put an exclamation point on the fact that it happened great because now people can kind of start to see it in the world in the weird world that has surrounded bob in his life and george in his life that's the only way i can say it it's an unfortunate thing and we want to know
(10:10) more about it we're trying to get the warrant for what happened we're trying to understand it more so 2012 for a shot and um you know so it was over all that time and then i'd come out and correspond look to know the truth you've got to spend time to make a movie like this you know i go live with them for six seven days at a time that was awesome i get to see who they are that's what i want to show you that's what i want to show all of you what's who bob is whether you believe him or not that's it's almost
(10:54) irrelevant but it's now you have some information that shows you who he is there's a big story remember george did put his neck on the line as a journalist to tell the story it wasn't because he didn't grill bob and try to find out the truth

he did that and bob passed every polygraph test put him in front of people that worked very effectively he knew everything so bob has been vetted george doesn't care i don't care anymore bob's never cared if people believe that's not why he came forward he's
(11:24) reporting his story to you take it or leave it and as bob will tell you if you don't believe him pass it on it makes his life better but i think george is better to answer that than me because george has been doing this you know when i was not even even i didn't even you know perfect segue just gonna ask george you broke the story 30 years ago um you're still a working journalist you've done many important investigations over the years you won a peabody award of our own award these are the biggest tv journalism
(11:58) awards you can win yet you stake your reputation on an investigative story into ufos why well it was uh we knew going in uh my news director bob snowdle and i after that dennis interview and the phone was ringing off the hook we knew that this touched the pulse of the public in a way really had not occurred to us before we do two things one we know it was risky risky for my reputation because of the wackiness throughout those the fact that it's a tabloid topic uh that it's not taken seriously by mainstream
(12:36) journalists at least impacted it for a long time we know it was risky not only to my reputation but the reputation of the tv station that this could leave a scar and a globe in our face he could leave his car that would affect the public's perception of kls forever but we also know a second thing and that was that it was important that if it turned out to be true it was the biggest story ever my news director bob and i walked out of our first meeting with bob we had a put him through his paces grilled him asking him where he going to
(13:08) school with his experiences and about his credit and everything and we walked out and looked at each other and go this is true this is a tell the story it's the biggest story it changes everything if it's true it changes everything our perception of ourselves our human history the economic aspects that bob talks about in jeremy's film you know where we are on the pecking order our place in the universe our place of the food chain so we knew it was risky but we knew it was important we figured it was worth taking the risk
(13:41) what kind of grief did you uh get from your fellow journalists around here it's never stopped i mean that's you know there's two groups of people that hated it uh the pubas of ufology for whom uh this story it sidetracked them it went around them they are the arbiters of what is truth in the ufo which is hilarious if you think about it because i mean 95 of ufo sightings begin with their misidentifications honest mistakes it's the other five percent they're important but the crazy stories that come out in
(14:12) the ufo world that are arbitrated by certain self-appointed people uh they decide which stories are incredible which ones are not in a world that is basically made up to begin with and they hate it my fellow journalists hated it even more and then hillary i mean the radio djs would they run out of belt department art jokes they would tee off on me in the mornings they'd make up songs and poems and uh the newspaper columnists would had a pretty good time explaining my expense there was three editorial cartoons of the state's largest
(14:45) newspaper me with a butterfly that jason appliance saucer there was another one the marshmallow had chronicles with uh alien hitmen had come to earth to shoot me and then there was a column about i had done a series about alien abductions and it was the headline was kidnapped by aliens and they dubbed me a grand bullet in the church of cosmic proctology and there was another one where the the tv writers said that people were rushing home at night to see my tv stories about ufos not because they cared about aliens but because they
(15:19) wanted to be there when i went old goose loopy on the air that it continues any story i do where i come up against somebody on any issue they remind uh folks that i'm the ufo or i don't care i'm not skinned about it but it occurred to me that the people making those jokes it's a lot easier to joke about it to go out there and do the work to look into bob's background to sit out there in the desert night after night to see flying saucers to dodge the security guards to dig into dusty old records and
(15:48) archives it's hard work it's a lot easier to make fun of i was uh entranced by the documents that you found to uh you know oppose the official lines from the institutions where either went to school or worked i thought that was pretty compelling evidence one other thing that didn't make a film is during that time when bob was in court uh when a congressman that was helping us senator reid by the way

was also helping us and uh congressman bilbray had requested records obama and the fbi actually responded which they they always told me
(16:24) they had nothing on them as all the other agencies did as well i knew they were lying but the fbi told the congressman you don't have a need to know they didn't say there are no records they said you as a member of congress don't have a need to know what we have obama's arm wow um jeremy yes i wanted to say one last thing which is um you know it's so typical when you hear something that's outside of your scope of reality to separate yourself from it immediately and make a judgment say it's true or it's not true well no
(16:55) the honest answer is you don't have enough information to make that decision that's the honest information you don't even have that now it's a matter of faith ultimately but you know belief is not created even more there's belief based on information you have there's correct and belief that you have on information that's incorrect and but you'll believe it the same no matter what so i think a movie like this the hope is that we untangle some of the mess that has been created by other people over
(17:25) all these years and and then it's up to you it's up to you to deal with it bob is just telling his story you know he doesn't need everybody else here supporting him he'll tell you your story his story if you ask him this is a way to reach me this is one way to reach people and i think it succeeded in that way hopefully it was beautiful and it was fun and a little bit funny if you get the bonus materials there's like two and a half hours of bonus materials by the way and if you get that i mean
(17:52) bob shoots me with the laser gun it's funny you know you get to see like actual real life stuff because this is real life this is going on so i just want to say that um you know i guess my thing sitting here is you just watch a film about people that i care about and before just rushing to judgment either yes or no uh take time decide for yourself react um you know otherwise somebody else is going to decide for you speaking of the deleted scenes i was able to see some of them thank you um he didn't actually shoot you right he shot
(18:27) me oh you didn't show me that one okay he's got a laser that'll start your ball on fire um but i also saw a nice clip of you joy um talking about bob for five straight minutes while you were both apparently making either margaritas or else ceviche okay nice um i would just like to know what it's been like you've been married 17 years um what's it been like living with this legend and at the same time pain i guess it's been a challenge but um i don't look at him as a legend [Music] and that's all he's ever been to
(19:18) i had no idea who he was he was just a nice man that was interested in what i had to say and was polite and seemed really genuine and honest so when did you break out the ufo story the people around me the mutual friend introduced us after months of begging us to meet each other and he said oh he's this scientist i don't care what he is but as long as he's a nice woman so we did and it was quite embarrassing his car broken down that day it was hot in vegas you know sweating and it's like i want to know you or not but
(20:02) we just kind of hit it off and kind of gradually so you knew the ufo story before you met him or like i gotta know what he told you i had no idea um michigan when i was younger so i've always thought there was a chance that there was another source out there so to me it was like okay he did this no big deal everybody does something for a living that was kind of what it is why are you two in michigan oh okay great well we're glad you're here who
(21:05) wants to ask some questions from the audience is there a microphone out there anywhere anybody see it you may just have to shower um advantages in terms of yeah um the technology is just so advanced i don't really even know how to give you a reasonable analogy i guess it would be like giving an iphone to a chimpanzee jeremy mentioned earlier today but we can't duplicate anything i mean they're all the components of the crab there's no wiring there's no connections
(22:10) between them you can take half of them out and it still operates it's it really is amazing the way the thing works it's borderline magic now take a iphone back to victoria at times too of course that looks like magic too and they can't even make the plastic case that surrounds it much less understand what all the little tiny chips do inside which just look like pieces of slate to them but that's exactly where we are if we can kind of observe and document how some of the things work and how they've changed if we do certain
(22:44) things but as of when i was in the project you know in the late 80s and early 90s we have a chance of duplicating anything so that that's where it's done i

don't know what happened in the 30 years since then but i don't know there would have to be some monumental discovery of some kind just to move forward at all um april of 88 was when i started march of 89 something like again it had to do with you know they began to question my clearance and then they stopped calling me out there
(23:48) after that i started having agents show up at my house and just park outside and watch and in fact one of the guys that you saw or the friend of mario in the film used to drive around with me and we were followed everywhere and every time we stopped the car would be searched it got to a point where now i became afraid that they gave me all this information and they were beginning to doubt whether or not i was safe with it so i began to be concerned that just might disappear so i took my closest friends and that's when i
(24:27) went out into the desert i had all the test time and things kind of progressed from there and one of the people i knew said look you should probably talk to this guy george knapp and you know that's pretty much how all that started are your friends still right time you have an hour and a half maybe so there are also people that um couldn't be in the film they wanted to like when i found the guy that george you know exposed when bob told him i mean this guy's a security not a single person who's come forward
(25:53) says i was there i'm involved not a single person in fact it's the opposite so is my movie about just trying to prove to me that models can be the truth of them my movie is to weaponize your curiosity so you decide for yourself i could sit here and give you an hour-long lecture and i'll go through the points how did you know about the test flights out of the package later starting mary 51 how did you know there's a site for which george verified right after because the base told him yes there is but i can't
(26:22) tell you anything about his top secret you know how did mom know 100 things i could do that i could probably convince you if that's what you want i don't want that i want you to come to your own conclusions based on your own curiosity so that's a long answer the other people who were out with bob on those tests when he went out and video the videotape the one flight and we showed it on the air and the other people who made each of the three trends out in the desert we did it and they they don't all get along or
(26:57) agree anymore but they agree on one thing which is totally the truth and protect that from the south lion saucers um do you want one give me
(28:03) a picture um first of all you're making the wrong conclusion i when i was working with the project i had no intention of releasing this to the public i had i was absolutely going from the program which at the time i didn't tell my closest friends i didn't tell my wife even where i was going at night so i was playing along in fact when i was given the information and i was really into it in the early days there you feel kind of privileged to say you
(29:07) know what everyone else doesn't need to know i mean we're the guys that get to know and so i was with the program it was only as time went on it began to hurt me and you know when a problem began to arise with my clearance and there began to be a question on whether or not you know i should continue working there that's the only time it began to enter my mind about telling this to anybody um as far as obtaining something from me i'll tell you it's very difficult to get anything in and out of a secure
(29:52) location like that it would be virtually impossible well the movie strongly insinuates at least the element 115 made it down in some fashion you want to address that well the element 115 was was machined off-site in los alamos and you know that's about all said about that jeremy you did not use the uh encrypted interview right that's what we spent through fast forward that was all garbled that was that about that that was that was for us it wasn't even going to go to the film the only that little garbled kind of fast part of
(30:36) the film was because the rave happened and i wanted to show people i needed to show people the impetus for that ring and that was very clear so no that's encrypted information and it's taken care of and that's because it needed to be said you know thank you for you know anyway it isn't clear bob said in 1989 he got a piece of element 115 out of los alamos where they machined it he said he did a cloud chamber test george was one of the many people that were there and saw the test elephant 115 and as bob describes and
(31:12) understands it danny's life they saw that but it was a story to me they told me that and then they told me they filmed it but they can't find the film and it was like they took this digging through his stuff about them to finally find this one

little chunk they did the test he believed it was elephant 115 with the problems he described his friends all saw him have the problems he described it now they're not looking to prove that to anybody that's the one thing i think that was the most sensitive that bob
(31:42) told from the very beginning and i get it wild so all that is documented it's encrypted but you've got to see little pete there because there was a freaking reagan and you needed to know why that was going to be part of the movie and that's the conversation that the agents repeated the next day okay who's got uh just a couple more here guys i know there's a million people on top [Music] [Applause] um [Music] [Music] [Music]
(32:55) from um it's clear that the project was was highly classified but how it was paid for and actually right by what factions of the government is really cloudy by my paychecks of the department of naval intelligence and what would that be doing analyzing flying saucers or is it is it done that way just because that's where there were funds to draw from so i i think that's such a convoluted mess of the change from where the money comes from what i know i just want to say we are living in a world now where in december of 2017
(33:54) through the new york times you were told that our government is currently studying the propulsion systems of uso ufos they're observing it through advanced aerospace threat identification program it's a ufo program that your tax dollars are paying for through the department of defense that is admitted to you it didn't end in 1969 with project movement that was you were lying to me so now we're living in a world where we know the united states government is highly interested in these unknowns from no government
(34:28) here on earth that maybe we look at bob's story differently and the guy who broke most of that information was actually george knapp so we should ask george about that question of black budgets that you have in the modern day world well just in a nutshell you know you have the perception that washington thinks like a sieve and secrets cannot be captured secrets aren't big secrets and this revelation from the new york times december 2017 is an example of there was a program going on for all those here for at least
(35:02) 10 12 years right under our nose billions and millions of dollars to study ufos and it didn't go public until a guy named lou elizondo left the government hooked up with a guy named tom lalong for whatever reason they came forward and met with the new york times and talked them into doing this story and they think that you are trying to get ready to do another story and because of the time to reputation other journalism organizations also covered the issue in the last 14 15 months there've been stories on cnn and
(35:35) multiple stories and interviews on fox and washington post and other major news organizations the media environment has changed and i think it helps to give a sort of a fresh prism to look at the bible's art story because of it one quick question uh in your experience with this was there a unique metallurgy to the structure of the spacecraft something that was different each part of the program is compartmentalized everything works in a what they call a buddy system you really work with one other specialist
(36:19) and what you work on is very specific we didn't work on the metallurgy of the craft there was a separate group that did that we then dealt with the power and propulsion system of the craft there are people that that handled every aspect of it now as far as the metallurgy itself initially i wasn't even allowed to touch the craft the first time he showed it to me i walked by with the guard and slipped my hand on it which i was reprimanded for immediately but it felt cold like metal that's about all i could say but whether
(36:51) it was a type of metal or a ceramic i couldn't tell you we had actually no information on that at all one time i was allowed to look inside and the only reason i was was to see if the placement of the system that i was working on um you know had any importance but there were no fasteners there were no wells there were no right angles anywhere the analogy i've always given as if the craft was carved out of wax and allowed to melt a little bit everything had a radius of curvature on it and you know in the time i couldn't imagine
(37:30) how anything like that could be fabricated but these days with 3d printers i guess there's something along those lines like printing with whatever material that was metal and ceramic and assembling layer by layer but i know so little about the metallurgy of the craft itself young woman it was a little over 50 now i don't know for sure we determine this afterwards but i think about 52.
(38:08) 5 feet but it is the best guess just to be clear you never got the right one

never got to write who got that job i don't know i did get to see it fly once at close-up range but i don't know what was in it all right how are we doing on time anybody know we okay a little bit short okay let's let's hear from my question so the question is whether bob's account has any correlation to skin walker range i'd say no i mean um skinwalkers it's its own bag of tricks it's a it's a disneyland of the
(39:10) paranormal it's every kind of weird paranormal supernatural phenomena you can imagine all in one place and uh including flag saucers it doesn't make any sense and no one who's studied it including us government i have been able to figure it out and i've been going there for 20 some years and i sure as i don't know what it is but thanks for watching it's in utah uh basin utah it's just a really weird place um robert bigelow who a billionaire from las vegas created an organization called bids
(39:43) and in the mid-1990s he bought it he had a team of scientists on there he kept the property for about 20 years and they studied it encountered all kinds of really strange phenomena the phenomena go back at least 250 years as long as humans have lived in that part of the of the west and it continues to this day the u.
(40:02) s government funded a study bigelow created a company that uh i mentioned a moment ago in germany you mentioned about the pentagon's secret study of ufos a mother program called boston was created in 2007 2008 and it continued for almost four years and uh one of its used skinwalker brands as a living lab had government scientists out there and they encountered some really weird stuff scared the hell out of them but they still have no idea what what did all right i promised these guys we wouldn't go too long because there was no bathroom before the panel started so
(40:36) jeremy won't you pick the last question out yeah what you got to say i'm just going to say so there's a george and i made a whole movie called hunt for the skinwalkers one right before this that he rushed me and almost broke me trying to make so that's out there my last question i want to take is uh is from me to bob uh because he loves this one what is the most the absolute most important thing from your life experience that you want this just audience right here to know like what is it we showed a movie
(41:09) what is it you you want people to know just really simply really well it's already been said it's just that at that time in the late 80s that the government was in possession of this technology technology that was off-world technology and they were actively analyzing it and i was part of them that's the most important thing i really want to thank all of you for coming out tonight [Applause] i know it was awkward sometimes and it's uncomfortable sometimes but this is a fascinating subject i love your movie it raises all kinds of
(42:05) questions in my mind you can make your own decisions but thank you all for participating in it and putting it together especially letting us show it here at the pre-film festival so thank you very much you

Transcript:
(00:00) [Music] but suddenly when I became interested in UFOs back in the late 1980s I went crazy I'm a fruit cake I'm a basket case I can't even guess how many times I've been pillared by radio DJs as soon as they run out of belch barf and fart jokes in the morning they get around to me uh the newspapers in my hometown have been even nastier at times i' I've had some friends at the review journal which is a fine newspaper it's the state's largest newspaper uh they've had a lot of fun at my expense over the years I've
(00:40) been the subject of three count them three editorial cartoons uh the first one they showed me with a butterfly net um following a flying saucer uh the other one they had the headline of it was it was it was entitled the marshmallow head Chronicles and it showed a couple of alien Hitman had come to Earth to do me in and they're standing there with their ray guns looking at a couple of gasoline pumps and they're saying yes of course they are Earth men but which one is George Gat um sort of I think poking fun

(01:10) at my spelt frame to say it looks like a gasoline pump um I did a series about alleged alien abductions a couple of years ago and the the RJ took me to task they they labeled me a grand Mulla in the Church of cosmic proctology after know we described some of the procedures the medical procedures that happened during a a uctions um the the the media critic at the RJ he said that people were rushing home at night to see my latest UFO stories um not because they're interested in Aliens but because they wanted to be there when I F finally went
(01:43) bull Goose Looney on the air after the Bob Lazar stories that the title of the article and then the legal trouble he got into he uh the title of one of the columns was little green hookers from Elder space you know so a lot of it's funny I recognize that a lot of it comes with with a territory I accept that what really bothers me is though that not one of the journalists who's who's written about this stuff who poked fun at me who's had a lot of fun at my expense and and made any of the aforementioned Wise Cracks not one has
(02:13) ever attempted to find out if there's anything to it you know I've done several stories about allegations of alien technology being stored and tested up there at Area 51 and everyone got a real hoot out of that and all took a lot of pot shots at me but not one of those people who took those shots bothered to go up to the area themselves to interview any of key witnesses to to check out the documents to sit around in the desert and and see if you can see something flying around out there because it's far easier to to pound out
(02:39) a few Wise Cracks on a typewriter than to to wander around in the in the middle of the night avoiding security guards and mosquitoes and coyotes and things of that sort trying to get to some legitimate information about the story The Assumption for far too long in the mainstream media has been that anyone who's interested in UFOs as a crackpot or a wacko someone in desperate need of professional attention and unfortunately to a large extent that Viewpoint is often correct you know um I'm not talking about you fine folks here but
(03:08) the UFO field as you all know is filled with a lot of strange people um there's a lot of fanatical back fighting nerds and misfits who do their absolute best to give the topic a bad name and give all of us a bad name and without question there is a strong undercurrent of of mentally unbalanced practitioners I think who are drawn to this topic like flies to a pile of something disgusting let me share a story with you there was a lady a couple of years ago after I'd done my first UFO stories about Area 51
(03:39) and she has to see me she has to see me she's calling me every day she's got to see me all right come on down to the station and she shows up wearing this skimpy little Hal the skimpiest possible halter top um for all of her feminine charms to see there she's carrying a baby that turns out as a hybrid baby of course and within the first couple of minutes of me talking to her I know the most intimate details of her sex life because it was while performing a sex act on her front porch that she looked
(04:05) up and saw her first UFO and I'm not making up one word of this the lady said and eventually they beamed her on board the ship after she'd seen him a couple of times beamed her on board the ship and the aliens told her to put on a onepiece bathing suit and when she got it on and I'm not making this up when she got the bathing suit on they told her telepathically that she needed breast [Laughter] implants and this is the one person part of the story I could believe because there was hard physical evidence staring
(04:34) me right in the face I have received letters from a 75-year-old woman who says she has sexual romps with aliens she lives on a ranch near Sacramento she has sexual ROMs with aliens every time her husband leaves the ranch and she sent me this letter with a a drawing of alien genitalia and a little she had a little arrow pointing to it going actual size I have been pestered by a millionaire a transsexual abductee by a guy who claims he's the twin brother of Jesus Christ who says aliens are coming back on a
(05:12) flying saucer and boy are they mad I was bothered by a guy he flew all the way from Australia Jo has to ask me to use my contacts with the aliens at Area 51 to have them stop mentally torturing him and that that was kind of a sad story that that that's a true thing um I've been contacted by a man who says he communicates I can't believe I fell for this he communicates with ETS on a regular basis I go to his house why I don't know but the the device was a he showed me the device it was an old bird
(05:42) bath with a rusted Record Rack and a headlight on top of it I have received all sorts of letters from alleged aliens who say that they're watching me uh I've

got alleged aliens sending me recordings of their songs and and poems that they've written I've had a sorted death threats over the years and warnings from people claiming to be government agents I've been told that I'm a government agent myself uh you know it just never stops um money unfortunately no because you know i' I'd
(06:15) put a little more time into this racket if they did the problem with media coverage of the topic is that most of these other reporters never get beyond that Fringe element they never attend things like this and if they do if they do have attend an event like this they'll make fun of the guy in the UFO beanie or they're zero in on a t-shirt or they'll look at only at the merchandise and paying no attention to the serious folks who are here trying to get some answers about something that they find to be
(06:43) very interesting in their lives I'm going to speak to you tonight a little bit about uh something that I I take seriously and that is the the statements of Colonel Phil Corso but I have to admit that like a lot of my journalism colleagues I I don't spend a lot of time on UFOs anymore I mean I like it I'm interested uh but I don't Mainline the uh muon Journal anymore I I don't go through TV Guide in the beginning of the week and highlight whatever UFO shows there are there are just too many of them these days um I
(07:11) don't collect uh ethologist trading cards if you ever seen any of those I don't uh I don't really return longdistance phone calls from people in Ecuador or whatever who just want me to call back and answer a question about Area 51 I still spend some private time pursuing various topics the difference is I just no longer pursue it on job for KV uh they're a great employer I love them to death and I appreciate that they gave me the chance to do these stories years ago but they're really not all
(07:39) that Keen on the topics anymore once in a while I'll slip one in on them though for example Lloyd Pi who's here and has been a speaker at this conference we were able to do some stuff about the the star child skull uh last year and uh earlier this year actually a couple of months ago um I was able to do some stories about some um cattle mutilations in Northern Nevada they're taking place but the way I slip them in is I don't mention aliens anywhere I'll let people reach their own conclusions but I can't
(08:05) get into mentioning aliens because the folks I work for don't want that anymore the station management is just not enthralled with aliens and I think it it's in large part because of of the nonsense that I've been mentioning uh that surrounds the topic you know I I got a letter uh from pyop the committee for the scientific investigation of claims of the Paranormal you know who those folks are right we all know who they are and what they represent it was a fundraising letter in which they pleaded with me to make a contribution
(08:34) based on this terrible frightening state of the world and this letter that they had received that just shocked them to their to the cockles of their her hearts and the letter said dear pyop I was hoping you could send me facts about aliens I am doing a project on ofo I am a for I am 14 years old and live in Louisville I was convinced that I was a alien when I was a child my family told me I was put in their home by the government and they get paid to keep me my sister says I am part of a big government experiment to see if
(09:06) aliens can be like humans I guess that's why I'm such a Believer then the psychop guy who sends me this letter goes on to and tone how it struck such a cord with those compassionate Souls at that organization and I found myself imagining how what a great powerful infomercial this would be if read by Sally Struthers you know the letter went on to decry the upsurge in such shows as the X Files and sightings and that influential film Buffy the Vampire Slayer and it scoffed at the power of prayer and public
(09:38) officials who rely on astrologers and government research into remote viewing and how these expenditures on things like that endanger Medicare and education services and pyop ended it with they need my money it turns out because they're the lone bulwark against a rising tide of foolishness in the world only they could be so dense to think that the public accepts buff the Vampire Slayer is like the intellectual equivalent of a National Geographic documentary fact is regular people know the difference between a news program
(10:08) and a movie and and and I know no one who praised to the teenage mut Mutant Ninja Turtles I almost wish that pyop was right in a sense I I wish that a a larger segment of the population took the time to think about the U UFO question in the Syria vein but that isn't the case not really and I think the reason for it all around us you know euphology likes to label itself an emerging science it isn't I

mean I don't even think it's close you know I think we want it to be but it's not uh people
(10:37) like you and you and I come to these conferences looking for answers but you don't really get them it kind of reminds me the Jerry Lewis ton you know every year oh send us some more money we're just cure is just around the corner you know and how many times you ever heard from from ethologist folks well we're you know this could be the year the big one you know they roll out the saucers and let us know what the TR truth is every year we gather together we hear the latest from euphology leading lights
(11:05) and it's great and and sometimes we're told an answer is close at hand but it isn't you know the modern UF era has been and been going strong I guess for about 50 years now and I can't think of hardly anything I mean anything that there's Universal agreement on who are they you know where they're from what do they want why are they here those are pretty basic questions you know big ones Central questions and we're no longer no closer to answering them I think than we were decades ago we' got more cases and
(11:33) more sightings and more theories than ever before but no single demonstrable accepted foundation for this emerging science except for the realization that something really is strange going on that we can't exactly explain problem ethologist I mean it's it's a slightly presumptuous and semi-important sounding label which is available for anyone who wants to grab it you don't need a college degree to have it you don't have to pass a test don't don't have to qualify in any way you know we've got a a face on Mars
(12:03) we've got a clever demon named chupacabra running around only seen in Spanish speaking countries we got more Angels than you can shake a stick at we got horny reptilian aliens here to get lucky with our women it's strange all right I don't know what to make all this stuff you know Whitley straber I I think is Whitley straber here at this conference that's too bad because you know um couple of years ago um Whitley decided he'd had enough of you ology he all the backbiting and infighting and he
(12:31) said he wanted no more of it because the tremendous success of his books Whitley took a lot more frontal assaults I think than any of us can imagine on an international scale he had every reason to turn away you know uh it's to our benefit that he's back speaking at conferences like this because he's a he's a A Gifted thinker and writer but I don't think of him as a ethologist you know a thinker and a writer not a euphies he shared some incredible things with folks he's had the courage to share
(12:57) us share them with us we're all better for it but his decision to uh to return do not negate the accuracy of his original CR criticisms which were he said ethologists are the most vicious Petty people in the world uh jacqu valet in my opinion the most important person to ever study this topic um he walked away from it a couple of years ago after years of fruitless warnings about the direction that the field was taking he recently I I guess it was two years ago appeared at a conference and that was encouraging but I think he appeared at
(13:30) the conference mainly to uh to repeat the the warning that that things weren't going real well and that the uh the whole Topic in general needed some direction I I'm certainly not in the league with the guys like valet and streber but I've been called the ethologist which is ridiculous I'm a journalist at best I'm a journalist there's some people who even question that um who a journalist who happens to be interested in reporting on UFOs not much of an excuse but I do plead guilty to attending conferences like this one
(13:58) and share my own own research and to participate in the give and take I enjoy it but I encourage all of you to take everything that you hear here with a great big grain of salt I mean there's a newsletter you ever heard of newsletter called saucer smear kind of funny kind of interesting it Chronicles the various UFO cat fights of the moment that was an issue uh a couple of years ago and mentioned the dispute you know the Roswell folks are always fighting with each other this one was between a guy named Robert Todd who says that he's the
(14:27) guy who says Jesse Marcel was was basically a blowhard who exaggerated his military record uh Marcel's son wrote back and the letter was printed in saucer smear and I will apologize for the language in advance to everyone but um basically it it told this guy Todd was had some non-d disguised Digs at Todd's personal life in the letter from Marcel said in the meantime why don't you get a bottle of booze hide under your mommy's bed and get drunk you're nothing but a wacko so go yourself again I apologize for the

(15:00) language but I only I raised the point to to say boy don't you know how many ethologists want to say that to each other you know I think of Stan fredman and then Kevin Randall and Don Schmidt and then throw in Carl flock and some of the Lesser Roswell luminaries these guys hate each other they hate each other and then you think about Phil class good old Phil class who really has done some terrible things over the years but almost seems to be mellowing and I hate to say it but gosh if you ever read his newsletter it it almost is some of the
(15:34) most sane stuff in the whole darn field and that's a terrible thing to say uh you look at some you look at all the big cases in euphology they're all a mess I don't don't even get me started on Area 51 we' needed a whole other night here about things that have happened with that story that I have personally experienced look at the the case of the Billy Meyer case that was that was the first UFO book I ever had somebody gave it to me back in the 70s I thought wow look at these photos and some of them were amazing the later
(16:02) photos look like junk looked like somebody had made them in their garage the uh response from euphology is well Billy Meyer won't cooperate with us therefore the whole thing is a bunch of junk like just because a $20 bill is counterfeit means all 20s are counterfeit well I don't know you know some of those photos look pretty good to me some of the older photos look really bad uh we have stories about people infiltrating his organization you know and we have uh government certainly there was government interest in his
(16:28) work there's suggestions that he was a just a propheter out to make some money maybe the truth is somewhere in between same thing like with the mj12 papers you know they've been battling over those good old stanf Freedman he still believes in those things and and and uh some of some of the folks who read his books they believe in it as well I think most people do not but I think most people also accept that whoever made those if they're fake they really went through a heck of a lot of trouble they
(16:53) had nuggets of information in the mj12 papers and the new mj12 papers that would seeming ly only known to insiders so who did it do you throw the whole thing out I don't know Gul Breeze those were some great photos weren't they and then they found a model of something in Ed Ed Walter's uh attic I don't believe that for a second you know I I don't believe it for a second but you only have a couple of choices these are real UFO photos or Ed Walters fake the whole thing or the government is playing mind games with us
(17:23) and the whole thing gets messed up crop circles even Colin Andrews and folks like that they admit that 75% of them now are man-made I don't know a single person outside of euphology who thinks that crop circles could be anything more than pranks anymore because the story got out hey Doug and Dave two old drunken barflies made a couple of them therefore they're all fake well that's not true you know it's not true but that's that's how the story gets kicked around because of all the whatever the
(17:49) rigoll the the the alien autopsy that we don't even have to go there you throw out the baby with the bath water in other words and and the reason is because you know the field is is just a mess which brings me to Phil Corso a colonel Corso died in 1998 uh so we won't be hearing any more Revelations from him but before he died he allowed me to videotape lengthy interviews with him about what he had seen and what he knew and some of this video is going to be shown here tonight for the first time first time it's ever been seen other
(18:17) than by [Applause] myself when you make the kind of broad statements that Corso made you can expect expect to take some hits uh especially from ethologists PR to the release of Colonel Corso's book in 1997 the book was called the day after Roswell probably a lot of you are familiar with it but prior to him putting this book out his publisher tried to pump it up a little bit so he sent out this uh this flyer and tried to get a little press interest in the book and and uh he said quote this book is going to blow the lid off Roswell well
(18:50) how do you think the high priest of the Roswell cult rect reacted to that they went nuts this is their Turf who is this guy this interloper so they went nuts I mean it's predictable because that it's sort of an overhyped promotion that that invites rigid scrutiny um so it was certainly equally predictable the knee-jerk negative reaction of the of the Roswell experts experts who can't agree on let's see some of the basics like the date of the crash the location of the crash whether there one crash or
(19:19) two whether bodies or not you know basically everything I first met the colonel Corso in 199 2 A friend of mine a fellow journalist his name is Mark solder

he was working at a TV station in um in Seattle at the time he went on to work for a couple of syndicated news programs American Journal is one of them you might recognize a real good reporter and he was working on a book about PS what had happened to American PS after the Korean War Colonel Corso who as I'll explain a little bit later worked in the Eisen how White House was an
(19:53) intelligence officer and had information about it so he got to know solder solder knew I was interested in in UFOs and in the course of his conversations with the colonel the topic came up he put the three of us got together uh we heard Colonel Corso's incredible story we decided mark would finish his book on PS and I would help Colonel Corso write his book about UFOs um we were convinced that uh that he would easily count as the highest ranking military whistleblower to ever ever come forward on this topic he was
(20:24) going to fly to Las Vegas uh we're going to work out the details on the book and while he was here I wanted to get some videotape of him because I was worried at his Advanced age that we wouldn't have a record of of what he had to say he got an agent uh who went Hollywood on him they changed his they changed his mind our book deal didn't come forward was later a New York Times bestseller it uh but uh but Colonel Coro had asked me to keep quiet about what we discussed and we had had many discussions on the
(20:50) phone I had pages and pages of notes but I I agreed okay fine I'll keep quiet about it you got somebody else to write the book 1996 comes around word of his book starts leaking out before it's published and so I figured there were some folks in Las Vegas at an organization called the National Institute for Discovery Science you've probably heard some deep dark conspiracies about that we'll get to that some other time they said uh can you contact this guy and I said yeah so I did he was glad to hear from me uh we
(21:19) flew a group of us flew to Florida to meet with him there and to interview him uh we later couple of months after that in 1996 flew him to Las Vegas I subsequently was able to interview him of the following year when he was on his book tour so I got hours and hours of material with Colonel Corso right off the bat though before the book was out people started questioning Corso's military background and other parts of his record they didn't do their homework however because that part at least is easily verifiable he had a distinguished
(21:49) military career for those of you who don't know he was an Army draft during World War II worked his way up to be an artillery officer then was tapped for intelligence work he received train tring from Britain's mi9 in 1953 Corso was assigned to the White House staff of Dwight Eisenhower he worked for four years with the National Security Council he was subsequently the commander of the range Battalion at White Sands New Mexico he commanded the first nuclear missile Battalion in Germany and he served as Inspector General of the
(22:18) seventh Army but his most interesting assignment came in 1961 when his longtime friend Lieutenant General Arthur Trudeau selected Corso to head up the army foreign technology division Trudeau and Corso for much of their military careers were virtually Inseparable their relationship made all more close by the incredible secrets that they and only a few others shared while working under General Trudeau Coro says he was given the assignment of evaluating and exploiting pieces of alien material which Corso was told came
(22:51) from a saucer crash in New Mexico among the items he personally handled he says were one a um a computer computer chip a charred computer chip uh two um some sort of a metal with a strength which could not be duplicated by human technology and three he says he saw photographs and reports concerning autopsies performed on alien bodies of Coro was told the autopsies had been conducted at a special facility at Walter Reed hospital corso and Trudeau their procedure was they farmed out some of this material to defense contractors
(23:23) and government Labs allowing the labs to think that the stuff had come from some sort of a crash site perhaps the Russians some sort of a for foreign power Coro says some of our most amazing modern technological achievements were based on that material and I know it's a big story but he says it includes computer technology fiber optics Metals fabrication and many others obviously there are many scientists and technicians out there who worked on those developments who do not welcome Corso's version of modern history here's
(23:52) an excerpt we're going to start this tape now here's an excerpt from a 1997 interview in which Corso discusses the overall program you're saying these items came from somewhere else they came from a flying saucer how do you know that because they were marked in a fouls as coming from New Mexico Roswell yeah Roswell well I

think some came there might be another crash but these were came from New Mexico and Roswell and the general trudo gave me the job of put of working out a program put these things out feed them to industry but
(24:38) there was Provisions feeding it they could have the patents but they had to feed them out back to our us as a Competitive Edge of the army and to the American people and the world if necessary the the number one was the integrated circuit number two in importance was laser cuz I had some laser instruments also then fiber optics came out of this the uh uh Imaging devices or night viewing devices came from this some of the work we did electromagnetism and the icbms and uh came from this imagine the the scientists and technicians and the
(25:16) companies that worked on this stuff are not real happy with with your version of history no I haven't heard anything in fact I've heard from scientists at least a dozen of them since then and they're supported my everything in the book in fact there I even told you I think that I was not interested in seeing UFOs I was all interested what was in those UFOs you know I told him I'm not interested in seeing something fine the air but I like to know what's inside that thing did you physically handle the
(25:39) artifacts from from oh yeah I had them they were in my possession what things did you have what what did you have I had an integrated circuit like size of a quarter I had a bunch of wirs colors were coming out of it I didn't I I mean I don't say wirs I didn't know what they were I don't know if they were wirs or any what or they actually well I didn't know what they were they just were emitting light I had a piece of metal Adams were lined in it so tough paper thing you couldn't break it bend it or
(26:07) anything I had super toasty fibers that was uh they atams were lined in you couldn't burn it you couldn't cut it and later on the nearest thing in this world that we founded that was a spider web there was a spider spins an atomic aligned uh liip you know people say uh military can't keep a secret there's no way a secret like this could be kept we kept a secret one way we had to keep the secret for two reasons one was a climate opinion within our own government as I said the other was within our own government we had enemies
(26:40) who would have been glad to destroy all this on us and and T us as cougs so what we did I got the job of going developing a program which is discussed in the B car's done and through this program we started feeding it out through industry but this was not known not on paper they were not as normal research and development proposals not to name something yeah you didn't put out a report that said there's some alien stuff yeah we put our regular research and development of a who came from somebody's brain and also this was known
(27:12) among a select field mostly combat officers head tohe head it came we we kept this among ourselves cuz otherwise we were certain that they would have destroyed our organization and we had a good organization General tudo pulled it together just a couple years before for they were a destroyed organization and label us as Cs and taken our budget away were you and your group ever able to determine where these things are from why they're here no we were never able to determine although uh one of the remiss things that I missed out
(27:44) on and I say this and I think the greatest gift God ever gave what he created man in His image yet we had the greatest artifact that they gave us was those bodies and we didn't do enough on those that partially I can take the blame I had the money I had the organization I had the people do it and we didn't go far enough autopsies were done on bodies but not enough we didn't do enough how they function how their brain functioned and uh we came to the conclusion even in those days that these were the reason most V saucers have
(28:18) failed is because our conclusion was that this being is part of the guidance system he's part of that saucer where do you suppose that stuff is now those reports those kind of reports I have no idea George when I left the army they I was one of the men that supposed to see that nothing was stolen from the Army I they were in my foul what happened to them I've called some friends recently G some ideas where they might be to try to run them down but I don't know you know how the military operates the burn bag and the
(28:49) and the microfil those days we microfil a lot of stuff when we had I don't I have no idea what happened the number I've been gone almost 40 years years now as I say people criticize me they say well you're cookie I told well I'm in good company General Marshall general Trudeau General MacArthur Von braa Albert Wilbur Smith from I thought I'm a good company that's the company I'd rather be in those those cops those are all people that that knew about this they knew about all this I'd

(29:20) rather be in that company than the ones criticized me you can stop the tape um proving uh Colonel Corso's story is as you might imagine extremely extremely difficult certainly it can be shown that he is who he says he is and he worked where he says he worked with the people that he says he worked with in that sense as I said before I think he is one of the the highest ranking UFO whistleblowers in history however Coro admits that there is no paper trail to prove any of his UFO related research ever took place he told me in 1996 that
(29:53) it was imperative the information be kept close to the V so the operation wasn't discredited or co-opted by others in the Pentagon so very little was put into memo form and you get the sense from talking to him over the years that there was a great deal of distrust between factions within the Pentagon different different uh factions of the military and especially between the Pentagon and the CIA in those days what makes him credible to me though is that he's told incredible stories before and has been proven right by history three
(30:21) times he's testified before Congress on highly sensitive matters matters which were not given much Credence at the time of testimony in 1993 he testified about hundreds of prisoners of War who' been spirited into Russia after the Korean conflict and as it turns out history has proven him to be correct at the time it was a very controversial thing for him to be saying uh and his testimony came out only because certain documents have been Declassified at the time and just to give you a little sense of uh that
(30:49) that he's not somebody I'm I'm making up or that other authors had made up I brought along a news report from uh CBS news on the night that that Colonel Coro testified before Congress if we could roll the tape even 40 years after the fact the reaction of P families came fast and furious today to the disclosure that seemed to confirm the worst hundreds of American PS captured by North Korea were still there when the war ended and left there the US government knew back then but didn't tell until now correspondent
(31:42) Harry Smith has this story Korean veterans and the families of those listed as missing an action have long believed many of their friends and loved ones were still alive in North Korea at the the wars end inexplicably Left Behind after the massive prisoner exchanges newly Declassified documents show they may be right and our own Bo told me that there were wounded sick and wounded Americans not 10 miles from the camp and and none of them Works changed Colonel Philip Corso told a congressional committee today the
(32:20) Eisenhower Administration knew of the missing PS those boys were never exchanged the reason for were they holding them for hostage for bargaining I don't know the reason why they didn't exchange him but they didn't give him to us did not give him to us according to a Czech General who defected and now works for us intelligence the PS may have been moved out of Korea to a fate horrible to contemplate I was personally presented when Americans president of the war were shipped through C Slovakia to Soviet
(32:55) Union they had a a hospital there that were actually experimenting on our prisoners Nazi style Pat dunton's father was a navigator on a b29 his plane was shot down over North Korea today's Revelations about the missing PS did not come as news to her back in the 50 in late 53 and 54 it was in the newspapers that there were 944 uh suspected PWS held back after the exch changes it may be hoping against hope that some of the PS survived some of them were strong boys most of them were they could still be around they're
(33:36) somebody's brothers and they are our citizens and our men and they need to be brought back further investigation May reveal why these men were left behind whatever the answer is it won't be good enough Harry Smith CBS News New York you can stop the tape that was quite a look from Dan there at the end would it that's a typical news guy thing to do that was the 1993 uh per uh appearance before Congress in 1996 he was back before a senate committee uh to testify about something else controversial about a secret War an air
(34:14) war that had been conducted between America and Russia uh during the height of the Cold War in which several our planes were shot down nobody could believe that right off the bat but it turns out sure enough again Corso was right in both of these cases in both of the cases where he appeared before Congress he was thoroughly checked out by the FBI as a matter of course prior to his testimony he's also withstood the scrutiny of my own Congressional sources and some other colleagues who traveled around the country the folks from nids
(34:42) the organization that I meant to you who've talked to uh former colleagues of his fellow officers friends in each case the former colleagues have given Corso a

glowing review uh every one of those who were contacted by the folks I know um confirmed that Coro and general Trudeau were highly secretive they confirmed that they were they were very tight that they confirmed that Corso had discussed UFO information many years before the current versions of Roswell were made public none of these sources said they
(35:13) had firsthand information about the UFO research none of them will admit that they saw the stuff that Corso says he had in his file but none of them found it to be out of the question either uh one man who did a lot of the leg work in verifying Coro background is a guy named John Alexander who himself is a former army colonel an intelligence Colonel uh who also now lives in Las Vegas he does some work with this organization called nids uh John was president at two of the uh the 2996 interviews and the 1997 interview as well he went to District DC
(35:47) Washington DC to scour records and he came back fairly impressed with with what he had found out about Corso one of the things he checked out was this um flap about Senator STM Thurman per if you don't know this Corso's book the day after Roswell had an introduction from Senator Thurman for a time after he after he left a military service right off the bat Corso worked for Senator Thurman in fact he worked at for him during the days of the uh Kennedy assassination investigation which are some pretty interesting times
(36:18) and was going to plan a book on the JFK assassination after he got finished with UFOs he became very close with Thurman he claims that he briefed him many times over years about the UFO matter also claims that he briefed other members of Congress including Senator John Glenn Robert Kennedy and Sam nun well uh sen Senator STM Thurman was asked to write a forward for Colonel coro's book he Praises him as a great American a a true patriot a a wonderful intelligence officer a great human being all the way around well the book comes out about
(36:50) Roswell and strong Thurman staff had a fit because they said we didn't know this is about UFOs this introduction was written written for a different book not for this book and we demand that you take it out of the book so corso and the Publishers agreed they'd take it out all future editions but for the first edition it had to stay anyway John Alexander uh contacted Senator Thurman his staff uh did a little leg work before Phil Corso's book came out so he has a little different perspective on whether the senator knew about it or not
(37:20) and we're going to hear that part of it right now if you roll the tape again this is John Alexander Colonel Alexander um there's some disagreement about whether strong Thurman knew what he was doing when he wrote the forward of that book what what Insight do you have into that when I was back in Washington checking on uh corso and his validity I called St Thurman's office and talked to his administrative assistant and when I mentioned what I was doing the first thing what out of his mouth was you must
(37:54) be interested in UFOs so there was no doubt my mind that they knew that he was writing about UFOs and that was the main area of interest and then subsequently though they uh big hubhub we had no idea yeah well I think politically it hit at a very bad time and so they wanted to distance themselves but I think that was after the fact you did you have the the feeling that that Corso was correct in saying that he had and Thurman the senator had talked about this subject um I'm I'm sure they knew about the topic
(38:26) and at the a knew about the topic and that uh corso and Thurman had talked about the topic Corso had claimed also he had talked to otherin folks I think Robert Kennedy at one point any indication that that was accurate you get any support for that I can't confirm a deny that I just did not have access to those folks okay all right now Switching gears can I still describe you as like you can stop the um the interesting thing for me out of the out of the St Thurman incident is that uh Thurman was willing to say of
(38:59) course I was a fine American he's a was a great Patriot he was a great intelligence officer uh smart guy trustworthy all that stuff as long as he wasn't talking about UFOs you know and it sort of goes back to where we started here you know I can do stories about the mob in Las Vegas and I'm trusted to report that but I report about UFOs I'm not to be trusted and I I think you folks can probably relate to that if you talk to friends and family about your own interest in UFOs how you're looked
(39:27) at differently if you take the topic seriously certainly U Corso started taking some lumps right off the bat because of some of the things that that were writing be even before the book came out as I mentioned one of the Roswell gurus blew off Corso because uh he said well the way I heard it Corso claims to be a

member of mj12 which is absolutely nonsense in fact in the in the interviews that I've got with Corso I asked him whether he thought that an organization like that existed and he said he thought there might have been
(39:55) one he never came into contact with that he never knew it by that name but he said it would make sense for them to have someone like that to control the flow of information it wasn't needed he said in his circle of influence with the Army uh because uh in large part because of the UFO crowd the the debunkers in particular and the UFO crowd that would always fight with each other said they didn't have to put out any disinformation to hide what they had because the UFO folks would do it for themselves some articles uh also noted
(40:26) about Corso that they they said this in deep hush tones that he was a member of a secret society called the shik shini kns of Malta and um and once again ladies and gentlemen I did not make that up the shik shinny kns of Malta pretty Sinister sounding group uh but these were supposedly officers who were deeply suspicious of the CIA to that I say who the hell is it you know there was an issue of saucer smear that also took some shots at Corso he said uh they they they uh scolded him for being in a legal fight with
(41:00) Hollywood agents imagine that ever happening in Hollywood you know what isn't known is that Corso although his book was on the New York Times bestseller list got virtually nothing from it uh he signed a deal he says he he was robbed by the people he signed the contract with uh he had pages of a contract that he was never shown and 80% of the proceeds were supposed to go to a ghost riter I don't know if that's true or not um you know Phil class is also cheed off on on Corso because throughout the book there are errors there are a
(41:31) lot of Errors historical errors things that are things that are easily mispro uh forts that are misnamed things of that sort dates that are wrong and Coro is I mean Phil class is right about that there are a lot of mistakes the only thing is that that when you go through the book and you go through the interviews there's a lot of stuff that's different there's a lot of stuff that Corso told us that somehow changed when it got to the book and I think just the title the day after Roswell uh it it kind of kind of creates some problems
(42:01) because it it presumes and as the Publishers publicity presume presumes that Corso knows a lot about Roswell which he didn't he never claimed to know a lot about Roswell he wasn't even sure the exact place where the uh the crashes were but he uh in the book they accept a whole bunch of stuff about Roswell kind of all throw it in the bag and mix it up together and that's what came out and a lot of that information is what was attacked by um Pro and anti-up olist so he sort of dug himself a hole there in
(42:32) trying to explain the Roswell case in a general sense but since no one can agree on anything about Roswell opened himself up to a lot of trouble the basics of Corso story are now a matter of public record though some unusual encounters what isn't known is some unusual encounters that he says he had personally this first excerpt you're going to see here is about an event that occurred in 1957 while Corso was an officer at White Sands New Mexico he told me there were numerous UFO incidents picked up on radar during
(43:04) those time periods in those days in New Mexico including one that he got to see firsthand and up close if we can roll the tape and this is weird well I picked up the trajectory sometime in the morning what happened with it what happened was this my boys called me and they said we picked up something traveling pretty fast we don't know the speed we don't Lo on but we got a trajectory and it came it came the boys told me and the tape showed this but the thing came this direction it came this direction and
(43:49) fell the trajectory looked like this so I called White Sans and told him uh not a white Li told say I lost an arat did you pick up any trajectory they said yes so they gave me trajectory and it matched this one later on I found out a hen that picked up some same day so when I picked up the trajectory I called my pilot cuz I had a little Airfield up there I had five airplanes and there was a two-seater on those grass office was my private so I called the pilot and we used to take and the boys would go pick up all the things
(44:29) to go in and wet it and roll it and we get like concrete and that was our Airfield so I went out with a pilot and we looked down we saw something shiny the pilot asked me what is it I told make one of the boosters but I knew it wasn't a booster cuz I'd seen boosters from the airplane I used to fly around a lot out there and White Sands knew I flew around out there then I figured I to start bothering me I got a guard on the ground so my command car was no good and I didn't want to take

a Jeep so I called for BL to send me up a command C
(45:05) remember those big command cars and it was perfect for the desert because when I got the command car they send it right up it took about 3 or 4 hours to get there so I told my boys boys I'm leaving I'll be back a couple hours so I took off in the command car I was driving myself and I took my gun water bottle electronic equipment and a compass and I took off and this is the route that I took now I don't know if exactly this far but I passed Trinity site it was south of me when and I caught right
(45:35) cross country in the desert as a big command car I could do that I couldn't do it in the sometimes in the Jeep but there big wheels on that thing and I cut straight across and I had the coordinates I had a pretty good map and when I looked at check the coordinates I got near there I got my B there was nothing there I couldn't see anything where the hell and I kept checking the corner I F this is the right place then this damn thing appeared and right away mind I'm in the desert by myself am I seeing things is this hallucination cuz
(46:11) I'm out here all by myself 110 it was I still remember that day cuz I had a longone one the damn thing appeared then I timed it I had my wrist watch on I think it was I have it in here it just a few minutes and disappeared again right away I started figuring boy I am going a little bit nutty this must be an hallucination CU these things don't happen damn thing appeared it disappeared and appeared again and I figured I'm not going on and I stopped put piece from it about 2 300 yard I'm not going near that damn thing
(46:53) what if it appears over top of me no one know what the hell happened to me so then it disappeared and appeared again so I got enough nerve to go out and I I picked up a rock and throw in there picked up two rocks and Sage Brush and I took off again damn thing appeared when disappear I went back out the The Rock was crushed and the Sage Brush was flatened out I F well the thing has body then maybe I'm not dreaming cuz at that stage I still thought I was seeing thing and I'm telling you I might have been a combat a
(47:25) and had medals but I was a little bit little bit scared what the hell am I up against here what is this being all by yourself too what did I have a lousy pistol 45 I fig that's just a peashooter something like that so the next time it appeared I got enough nerve to gr and put my hand on it it was smooth and cold and there I started to wonder it's 110 out here with the Sun hitting metal thing can't be cool my command car you can already put your your hand on the steering wheel you know want to stay out
(47:58) in that sun a little bit and this thing was cool then I sitting there wondering if I'm hallucinating I better go back and all at once my compass start to spin and the instrument went crazy so I gunned the command car in Reverse took off in reverse the motor died and the thing started to it wasn't vibrated started to Shake something and all of once it went up like this turned on its side and zoom and I figure what the hell did I see am I getting drunk hallucinating or nuts what the hell was this the only
(48:43) thing I had tangible was we picked up the trajectory I called White Sands before told my lost an arat they gave me same trajectory then hman picked it up so and then it crushed The Rock and the saage brush so I figured I'm supposed to be a pretty good Commander I have a good record I better shut my mouth don't you like the guy you can stop the thing stop pick it up right there you like the guy though don't you yeah me too turns out the um turns out the approximate date that he gave uh for this incident uh that was supposedly
(49:29) picked up on radar uh almost identically match and he was operating from 40 Years of memory but it almost identically matched the date of an incident picked up that was reported in one of jock Val's books an incident that occurred in New Mexico and was picked up on Military radar uh Coro had another encounter that's even more ex strange more strange and this didn't make it into his book nor did that one I think because the Publishers were worried that it would U destroy his credibility unlike all the
(49:55) rest of the junk that that they packed into it uh that was untrue the real stories that he wanted to tell and I know because I've got the original manuscript and because we've got it on tape uh didn't make it into the book uh but this next incident also occurred while he was stationed in New Mexico not long after this one and uh it occurred inside a gold mine that was on the white s Sands range and not only did he see a being you'll see some drawings of of what he says it looked like if we can
(50:23) roll that tape downtime like that and time would pass I usually get would

get restless and I'd get in my car or the G5 command car but was no damn good because the dust came up inside of I take a Jeep or so and go visit the launcher areas cuz they had their equipment down there they were putting missiles together and I'd ride around this particular day I was visiting the sites the launcher sites so when I got the eat battery which was the furthest extreme over here I figured well hell it's a hot day and before that
(51:05) the boys had shown me the gold mine one month before I figured I think I'll go in the gold mine and sit there at least I'll see the animals around and huge snakes they dance metal snakes they pick around and they crawl up you know sit alongside the road so I went down there I decided to go down just decided to go so when I got there I walked in the mine it was an abandoned gold mine I how far away from the gold mine were you when you decided to go oh I say maybe 3 or 4 miles pretty close cuz it was near the
(51:37) launch area it wasn't not too far it looked like one of these reels you know like you see on the moon when you got the Jeep would go in a real like and they hit the side of a mountain and the gold mine was on the side there and water would come out Tri out of it that's why the animals used to come around there so when I got there I walked inside of it and sat down and it was cool in there so I sort of dozed off but then something happened I reached down for my 45 I was still in half a sleep on home like the Italian had the Instinct like
(52:10) when I pulled ni I reached my 45 and I yanked it out of the holster flipped the safety off and pulled it and I rolled over and then I hear don't came in my mind and my answer to don't was and and I saw this thing over there I didn't know what it was and my answer was friend or fa the answer came back was C me neither Jesus Christ that's a good I've never heard that before neither no friend and no F so then in the same phrase I didn't answer anything back I hear would you shut give me 10 minutes
(52:58) free radar time so at that stage of the gave I answered back what do you offer typical subhuman species make a deal give me something if you want me to shut them down I made the I answer question what do you offer I I suppose in human terms give me something if you want me to do something right and I I said that sub so I didn't say what I you offer I said what do you offer I didn't say what do you give me or what do I trade sure what was the answer a new world if you can take it if you can take it what's he mean by that I
(53:43) don't know for sure did he mean if we can take it is it too much for us or can we take it back here's what it look like well I don't know I know fire uh how far away are you one distance between you and and this being about from here to the front of the motor home so that's like 8 10 ft yeah well what after you got this a new world if you can take it then what happened did it just disappear or did it get in a craft and take off I left I disappear I left you left I got on I went out to my Jeep got on my
(54:24) radio I didn't say I didn't tell the the being that I do it I went up to my radio and got on and I called my command posts and I told him uh you get green time yet from uh why say I said yes I said his dude coming through any minute so we could fire again I told him when it comes through I told him this is an order keep our Radars down for 10 minutes and I told him I repeat the order to the captain I told him keep our radar down for 10 minutes I'm on my way then I get a call back on radio when I was on my way mm I said the C battery
(55:05) picked up a trajectory going 3,000 mph this must been let me see the tape you can stop it so yeah they did they picked it up on on radar and he apparently made a deal and turned off the radar and whatever it was took off um I want to tell you want to play one other segment for you uh because it's getting late and I know maybe you want to ask some questions about some stuff uh in this one Colonel Corso has asked about you'll recall we mentioned uh some of the devices that supposedly had been um developed because
(55:39) of material taken from Crash sites uh night vision goggles he says were was one of the devices that was developed not from anything taken from the ship he said but from the eyelid of an alien uh body that had been recovered and taken to Walter Reed hospital and he does lend some cred to the alien in in his mind it lends some Credence to the alien autopsy video not that he endorses it and certainly not that I do but he said there was similarities between the eyelid if any of you remember seeing that and and what he saw from Walter
(56:09) Reed anyway we can roll that tape oh he also talks about the possibility of a live alien equipment how did that development come about I mean what was the hint that we had our own laboratory we developed that and for at B far I think the

laboratory is still there but was it based on something from the material the it was based on two things the German Ultra uh what is it uh infrared infrared the German infrared and the eyelid the eyelid col yeah they never knew that we gave them the information they never knew what it
(56:46) came from now what did the eyelid information give col of white you know colors we think it's called it's actually a light collector you know these out these Tam you travel around the night and everything how the hell do they see you thought that was that I so that was is it a natural organic eyelid or is an artificial you remember the movie where they were operating on to be that's one of the things where I think maybe was part Au they they showed an eyelid that they took out right in the movie if you
(57:19) notice it close remember they show that they took an eyelid out that was the only other confirmation I've ever seen on that eyelid besides the one I had was it an artificial technological eyelid or was it a natural it was a natural from what the reports that I had anyway from W was a natural so in the in the files that you had there was a report on an autopsy yeah see the Waller re laboratory was ours we financed it it belong to R&D it was our laboratory it wasn't long the wallet re we financed the thing yeah still
(57:56) is it still there I don't know if it's still there were there photos with this report no oh I had one photo but it was pretty messed up you couldn't tell much from it of of an alien body it was pretty messed up did they preserve any samples they must have preserved tissue samples I really don't know I genetic material I don't think maybe the Air Force did I don't think the army ever did I never saw a report on any preservation of anything like that maybe they did but I never saw any okay well what was reported in the
(58:30) autopsy well the thing that intered me was the limp gland part and digestive system which didn't exist and the Brain L which is number one interest in this smothie by way when they open up the brain they show the Lo which you look close enough uh and the sex organs were all they called it an anoid oh atrophy like of use yeah atrophy atopy atrophy is that the we a n t t h r o p i r o p h i e d atopy they were lack of use FX organs were almost nonexistent so these are the things that really interested me that's where I saw
(59:15) that uh glove you know with the the suction cups on that was a glove yeah that was a glove that was no fingers they only had four fingers h now that was unusual I don't know no thumb how they used the time what did they tell uh night vision lab but did you actually give them the material no we did we did you just we did on the chips not on the eyelid not on eyelid so all you were doing we didn't have one to give life idios to well there was talk of one that was still alive but I have to question that
(59:51) because i' never seen anything too definite on that where did the talk come from it was in the St Augustine area that's why I where would it have gone was that physically where would they have taken it right P two right almost everything in those days you know they talk about Langley Air Force Base and the one had down in Florida no the what from what I knew in those days everything was Center to right that yeah anything to Los Alamos no Los ales wasn't handling things like that in those days now they
(1:00:37) are they do a lot of stuff like this but not in those days and that's it that's an intriguing thing there now they Los Alamos is interested in this stuff but um you know you ask Colonel Corso what happened to the material he really doesn't know he said that there was a hanger there was a great deal of it that wasn't right Patterson with the wreckage he thinks that the body was there as well there was some sort of a fire of uh a very intriguing origin that destroyed a lot of it that was covered up he says
(1:01:05) but he has has that information secondhand not directly the files that were in the Pentagon that he worked with directly lost perhaps stored in something like you know the the end scene in Indiana Jones with the you know something like that uh we we had had a a bead on on some of the information the possibility that it might be stored there might be a paper record in the papers of uh Colonel Trudeau but so far haven't found anything you know and I don't in the end you know what do you what do you make of Phil Corso bottom
(1:01:34) line sense for me just as a gut reaction is that I think he's telling the truth you know I found him to be charming and articulate and honest uh blessed with a good memory blessed with a good sense of humor and a sense of Honor as well because uh you know the critics have said you're just writing a book to grab some money that's it even though I did never got any money for it uh he didn't start work

on his book until after General Trudeau his good friend and Mentor had died because that's the
(1:02:02) agreement that they made uh so I think that's a that shows a sense of Honor you know certainly some criticism of Colonel Corso is is legitimate factual errors in the book that's perfectly uh fair ground but other criticism I think is just attempted character assassination by people in euphology who are either jealous or turf conscious or crazy or all of the above you know uh this is a story his is a story that should be on the CBS Evening News I'm not about I'm not talking about his Congressional
(1:02:35) testimony his story should be on the CBS Evening News it should be on the cover of the New York Times And The Washington Post and it's not and it's not because it's about UFOs and euphology is a crazy F ethologist cannot be trusted even by each other you know Corso story I think with the criticism and and a lot of the publicity has been muddled enough that it won't be taken seriously by the mainstream Media or scientists just like crop circles just like Billy Meyer just like mj12 and the other examples that we
(1:03:07) talked about earlier I'll say it again you know at these kind of organizations and and get togethers we need to get on the same page if this ever really is going to be an emerging science I think you should enjoy yourselves at conferences like this I am certainly very glad to be here and you should uh you know enjoy it when you read the UFO books and magazines but until we get it together you know you got to take it all with a great big chunk of salt uh I want to thank you for having me here and thank you for waiting for me I hope it
(1:03:37) didn't keep you waiting too long it's great to be here um I don't know we have time for questions I'll be glad to sure you bet sure uh first question given that Phil cruso was kind of giv a bad wrap by not getting his truthful information into the book that's previously out therefore his family should support you and getting your book out so how can we help you do that and when can we see it yeah you're going to wait a while for that one I've been promising to do a video project on Colonel Corso for two years
(1:04:13) now um get help I just stay on my butt I guess uh no oh I'd really like to you want to get the word out right you got people in this room that can help you let's make it happen well maybe I need to talk to his family about it they're uh they're very productive of his legacy so but I have a good relationship with the the son so say yes okay thank I'm on it right write that down George uh any new Revelations on Area 51 have you talked to any other people recently that you could talk about public not about the saucers I
(1:04:47) think the most interesting stuff to come out of Area 51 we were able to report two years ago two weeks ago um there was a lawsuit filed by the employees out there that sort of it's not saucer related but it goes kind of hand inand with the whole secrecy question because they're they're nuts out there about secrecy you know the Cold War is Over the only people who can't know what's going on at Area 51 are the people paying the bills so this lawsuit was filed a couple of years ago by employees
(1:05:14) and uh KV at my suggestion joined the lawsuit basically the employees wanted to get get records on what they're being exposed to and they had to stealth technology being tested Area 51 they're burning the waste material in huge open pits this is something like right out of the Stone Age and it was all the soot and dirt was falling all and Ash were was falling all over the employees week after week after week lot of them got sick couple of them died they can't go to a doctor in town and tell them where
(1:05:45) they work and what they've been exposed to or what's happened they'd be thrown in jail and instead of helping them their own employees the people who help win the Cold War uh the government uh uh slams the cone of silence over the whole thing tells them to shut up so a couple of them using John do sued the government uh the case went all the way to the US Supreme Court uh they they won some minor victories in that for the first time the Environmental Protection Agency is allowed to go in an inventory
(1:06:12) Area 51 although it's it's a military basis is hilarious they can't they say to admit that it has jet fuel in Area 51 would jeopardize National Security of course jet fuel at a jet fuel at at an air base I'm sure they're dancing in the streets of Moscow to know that you know anyway the uh long way around in this this story is that the workers went all the way to the US Supreme Court they did not Prevail they won some minor victories but the party that kaas filed did win and two weeks ago uh we got

(1:06:44) unsealed a secret hearing that had taken place in this court case some years ago in which they had to acknowledge that the security manual from Area 51 that's now available on the internet internet and which says a great deal about how the base operates and what's going on out there that it is a legitimate manual so it's a minor little Victory a little bit of a crack uh in addition to that the uh the plaintiffs Got U uh got some legal fees a couple $1,000 and they say they're going to make another crack in
(1:07:12) Area 51 so it doesn't directly relate to the saucers but it directly relates to the secrecy and the secrecy nuts who are out there running the place yeah that was a TV program was either sightings or date line on corso and uh the last reference the last question that he answered was something on time travel yeah Do You Remember That Could you um make a comment on that well torso had said that they were among other things that they were experimenting with the idea of time travel I don't think it ever got Beyond theoretical stage in
(1:07:45) fact I'm pretty sure he didn't and he told me he really got a kick out of the Dateline crew because it was right at the end of that interview that he threw that out there and just kind of cackled and he they all go what what time what and he never explained it to them either you know but uh I I'd have to look through my notes to to to remember that it's been a while since I've seen the time machine stuff but I don't get the feeling that we had one off the ground or anything like that as I say
(1:08:09) your work is great thanks for sharing um I was wondering what did you do with the manuscript that Corso wrote the original one that um considering publishing it or printed it in any way well I wouldn't have the rights to it no but uh I've got it at home you you don't have the rights to it no good to see you again George anyway yeah uh we're we're uh getting in high gear to update the series that you helped us on oh with uh with Grizzly Adams group um couple of years ago the fellow who wrote the book for Corso was
(1:08:48) here at this meeting Bill Burns yeah had a chance to spend a little one-on-one time with him and and uh it it became fairly obvious that he really didn't know anything about the subject beyond the box that Corso provided and whoever was feeding him information and uh but at the time I think this was I think this was 97 meeting here not much criticism had the usual Cisco bunch you know had come out but really not much criticism and I asked him specifically why he thought that was that the the debunkers hadn't come out of the
(1:09:34) woodwork and climbed all over him and he said they can't he's one of them he's one of them meaning Burns meaning Corso Corso is a debunker no no Corso was one of the Insiders and the debunkers didn't dare lay a finger on him well that's never stopped ethologist though and and I saw all kinds of stuff floating around about the book before it was out before it was out um but after it came out I mean still relatively speaking don't you think it's suffered less than than other books I'm I'm
(1:10:09) curious it certainly suffered less than say Bob Lazar Bob isn't a book but uh I you know Bill Burns I I've heard nothing but good things about him I think he started in the project not knowing a lot about UFOs he was going to write a different kind of book A different kind of memoir um at least that's the what he has said in interviews now he's he's like a muckety mucket UFO magazine which is a pretty darn good publication I think he probably knows a lot more about the subject than he did when he started
(1:10:38) with corso and I don't know that we can blame him for for the factual errors that were in there I I'm not sure who we blame they should have let you write the book hello um I'm missed your speech in the first 20 minutes so oh you missed the good part yes um I would like to know your opinion about the day after the Rosell because I have a book and I haven't read yet so you it's recommendable or reliable or how much perent that you can trust or can you explain where to begin I I'd say it's definitely
(1:11:15) something that you should read uh but as with everything in the field you take it with a grain of salt there are some factual problems there but in general the story told by Colonel Corso I think is an accurate one I I don't know that we can prove it Beyond Reasonable Doubt but I think he's accurate um I would like to say to all of you people here that uh a year ago at this very conference is when we began our effort with the star child many of you know about this and in that entire year and me talking to I would say over
(1:11:44) a hundred people and hundreds if you count those that shuffled me down the line the man standing up here is one of the handful literally of courageous people that took us seriously and tried to help us yeah we did a couple stories uh on the

didn't mention the alien but uh with a head tape like that what the hell is it you know so I'm going to return that favor for you George and try to give you some input as far as the publishing business goes I had a couple of novels published before I got into this field and I can tell you a little
(1:12:16) bit of how the publishing industry works with the two books that I had the first one I sold and said the one thing I don't want to change is the title you can everything else is flexible but don't change the title so I wait and the day I get the book in my hand they've changed the title they absolutely were convinced that they knew better than me about football and neither one of them had ever played football that were doing this work and they had butchered it they had invis it and I tried my very best to
(1:12:49) get it back sort of into the shape that I wanted but I'm still embarrassed by that book because of what they did and this is how it works in my second book it was the same thing I had a book a spy Thriller about phone freaking computer hacking and submarine warfare William Maro bought the book as is was ready to bring it out The Hunt for Red October came out big submarine book they call me up we're right before printing they say we want to do the whole thing over and make it a more submarine book again I will bet you any amount of
(1:13:24) money that the book that went in is not anything like the book that came out and Corso had no time to change it to get it right and he's being blamed for all the mistakes that were made in the editing process I bet you I know that they were under a a time constraint they wanted it to come out in conjunction with the 50th anniversary of Roswell all of those mistakes I would bet you had they given them time they could have cleaned them up and cleaned them out I'll guarantee you they didn't get it I didn't get the
(1:13:50) time they they put it off to the last minute because they don't want you to know the butchering that they've done and then they send it to you and it's just too late it's already underway thanks for the Insight Lloyd thanks very much George that's a fantastic presentation I respect your work great deal I thought your comments about the sort of Lunatic Fringe of euphology Applied very well to the last two speakers and the whole Frozen alien ate my dog scenario I missed it you missed a great one there anyway to to
(1:14:21) Coro um in his book he talks about the the military's concern about a sort of a sort of warfare situation between ETS and us um that was one of the more contentious areas of his book have you got anything did he T elaborate on that at all he I guess one of the projects and one of the things that can be documented uh because it was a real project undertaken by the Army while he he and and uh General Trudeau were there uh was to build a base on the moon and uh presumably it was to be sold with the idea of whoever controls The High Ground
(1:14:51) would have control Earth uh but but he says that the real secret purpose of it was to have a base to deal with the aliens and the comment that he made the ET made you know it's a better world if you can take it yeah did he I that's a great fantastic so succinct and to the point I mean did he elaborate more on that than what that sort of intentional no and you you saw a couple of uh different interviews uh that we did with him and and that was as far as it really went I'm open to suggestions from anyone
(1:15:17) who has a thought on what it means um I I just don't know I mean I thought about it and thought about it and and as he has over the years a lot longer than I have and he never came up with something more concrete anyone got a suggestion toss it out do you have an idea I don't know I suppose it may have to do with the uh the sort of Technology they possess that we may possess that might help us to improve the planet I don't know meaning like the computer chip and well maybe this free energy aspect of the technology non-polluting
(1:15:44) free energy from zero point I don't know it's possible I don't know there's a whole uh two-page list one of these days will I I I don't recall if it's in the book but there's a two-page list of of uh of modern uh developments that he says could be traced at least in part to to the recovered technology yeah uh let's see first of all you mentioned that that the UF ufologist uh needs to be improved do you have any ideas like a national body or something for focusing directions and the other thing is your
(1:16:14) take on rods by Jose esia updating on that and uh you mentioned cattle mutil mutilations maybe your take on that and then did you see the Jonathan Reed thing write these down just quick just quick things what was the last one all right well okay I'm a little tired here but uh your take on the rods with Jose es how that's coming along your take on the cattle mutilations that you mentioned in

Northern Nevada in general and then the last thing was did you see the Jonathan Reed presentation and what's your take on that so I I
(1:16:45) haven't seen it I I just walked in the door okay uh basically a couple of minutes ago right uh as for rods yeah I uh I I I know Jose we some of the folks who were here some of these other speakers we had a chance to see him uh in December in in um Mexico and uh I well I don't know I I think it's a real phenomenon he stumbled upon again I think that's a story that uh that also probably deserves a lot more scrutiny from bigger people uh than it's been getting but Jose seemed to be confident
(1:17:15) that he he was attract I don't know if you folks are familiar with this I hope you are these weird little things that he's been able to pick up on video floating through through the air and uh I don't know what the hell they are I I'm intrigued by them and and I talked I think I met Jose about five years ago and and uh he when he first had discovered it but I didn't know what to tell him then any more than I do now as for mutilations another big question mark I I think it's the evidence that it's
(1:17:46) something strange is very good the evidence that it's alien related is a little more circumstantial you know we've got a couple of witnesses here and there who said that they see strange lights in the sky and and in very rare cases according to Linda how they have seen aliens taking these things in I don't know what the aliens are up to I don't know if it's aliens or interdimensional hunters or uh somebody out for just tasty little cow Treats but it's uh it certainly is mysterious you
(1:18:11) think about the government if it wants to do environmental sampling of some sort why leave the carcasses out there to invite scrutiny want to just take them and and take them and cut them up somewhere else there's a case uh that that in the course of this series we did that occurred last year in Utah may be the strangest one I've ever heard calf U was being uh had just been tagged it's it's 11 10 o'clock in the morning bright day on this Utah Ranch the the ear had just been tagged by the
(1:18:41) by the Rancher and his wife they walk over this hill to tag this other calf uh they hear a commotion turns out to be the the mother of the calf they come back over the hill it's like 20 minutes later it's completely stripped of Flesh this calf not not your typical mutilation of like an ear or a or a lip or something like that gone like 50 lbs of Flesh there is no blood in the animal there is no blood on the ground there is no sign that it had been shredded by any kind of a scavenger what scavenger eats 50
(1:19:14) pounds of meat in just a couple of minutes there there is none uh they hired professional trackers to look for tracks of anybody coming in there were none obviously it's something that we don't understand you know they they have ex rods little bastards those hungry little bastards just a if I might follow up real quick is there a national umbrella organization that overse well there's a couple of umbrella organizations and none of them ever get along well if you had one that you could focus information
(1:19:49) into that could could move that to the media having made it through certain accreditation well I think the closest thing you got is the organization that I mentioned twice during this evening it's called nids Uh National Institute for Discovery Science and a lot of folks in this C in this in this field because they're not part of it are automat automatically suspicious of it it's funded by guy named Robert Bigalow a multi- multi-millionaire who's given who's who contrary to what people have
(1:20:14) said is not a shadowy uh drug dealer he's not connected to CIA he's a guy with a lot of money who's interested in this topic and he's funded more research on it than anyone in the world he set up an organization of top-notch scientists and they might seem secretive at times because they they don't want to be opened up to the kind of ridicule and nonsense that comes with dealing with ethologists they conduct research when it's done they put it on their website and let the world know about it so uh um
(1:20:46) I think that's the way you got to go and and by by maintaining a certain amount of discretion they've uh managed manag to convince some very highlevel credible scientists to stay with the organization and to give it a fair shake and of course that drives euphology crazy um you know there are other reputable organizations um at one point I think Mr Bigalow the guy runs nids tried to get them together for whatever reason it it it couldn't work out but there was an effort at that point and then I think he

(1:21:17) figured he was going to go off in his own Direction I think it's the best hope you got to get mainstream scientist involved to take it seriously because after they take it seriously the people in my line of work will take it seriously and we can all take a a good hard look at it okay yeah uh Corso both mentions in his book and in various interviews that the uh human body as we know it is cannot tolerate prolonged space flight and he uh he's quite adamant about that and I was wondering in your own research or in your own personal
(1:21:49) interviews has he reaffirmed that or gone into more depth I know for a fact that I I saw a book that was written way back in the 60s when when NASA was doing uh research with some of their old early some of their early space flights with monkeys that they already knew at that time that mammals at least mammals cannot withstand prolonged space flight and then um from other sources I know this too also uh the current uh project genome about uh the whole DNA sequence quen ing of of the human body may have something to do with uh with developing
(1:22:28) a similar creature like the EES you know I I was I'd like to know what you know anything about this well I don't I don't know that but I can tell you uh um what Corso had said to me that sort of lends some kind of credence in that direction he yeah he went on at length that people could not exist for prolonged periods during space uh travel he theorized that the aliens with at least they we could could using our present technology but one of the metal samples that he says he was sent to a lab to analyze what they
(1:22:59) discovered after a while is that the atoms were aligned and that this alignment allow would allowed that if we could have perfected it would allow us to harden the shields block out all the bad stuff and would have made prolonged space travel possible he theorized that the atoms in the body of the aliens were aligned in some sort of a fashion in fact in that if we had gone on with that last clip which I I didn't edit for for this presentation but he talks about that at length that was just a theory based on what he had learned from Walter
(1:23:31) Reed but that they had been designed in essence to fly through space for long periods of time uh so in that sense uh the project that you're talking about sounds at least plausibly similar yeah he never mentioned anything whether our whether NASA or some branch of our government is is trying to develop kind of a clone like cleat a creature using a human DNA no because at the time that he he was there I don't think NASA it was right at the birth right right time he was leaving was right when NASA was
(1:24:02) coming in in fact that the project that he and general Trudeau had for building a a base on the moon uh their great concern was that it would be taken over by some other branch of the service eventually it was taken over you know that that sort of thing under the purview of NASA okay well thanks you bet George thank you for a tremendous uh talk in presid presentation tonight on Phil Corso oh I need to talk to you don't I yes I I'm Paul David I produced the Kyle mclin uh Martin Sheen uh dramatization uh Roswell for Showtime
(1:24:36) was great thank you thank you I had two questions for you um I had the uh the great Good Fortune to be with Colonel Corso at roswell's 50th uh in 19 97 actually staying in the next hotel room to talk to him my impression of his integrity was the same as yours do you have an opinion about why he was treated with such disrespect and uh contempt by the national media at that time MSNBC did a real Hatchet job on him as well as dat line uh and uh they gave all their attention to Cal cor yeah I don't know uh you know it's
(1:25:20) the same stuff I mean it's so much easier to give that a hatchet job than to risk your career by taking it seriously and really it is a career kind of a risk you know that from your media experience and that uh why you don't have Dan Rather in those folks I mean 48 hours did a UFO program a couple of years ago it was tremendously successful for them but I know from my own contacts with CBS that they all said that's the last one of those we do because they don't feel real journalist should be
(1:25:47) dealing with something so ridiculous you know my other question for you is um you said that these uh oral interviews with uh Philip Corso went back to around 1992 uh although I think some of them were done more recently weren't they well my interviews my talks with him go back to '92 the only videotaped ones are from 96 and 97 um as early as ' 92 did he ever say anything to you about the eyelid did he ever say anything about that before the alien autopsy um film a great question was broadcast on TV
(1:26:22) that's a great great question and I don't know the answer but I I can go back to the notes and uh it would be valuable to know if he mentioned that in the

years before that was released it would be uh very helpful that's a great uh that's a great question thank you hey George great to connect with you again howdy um three quick questions um in in the morning huh you're on in the morning it was this morning they made a tape of it though anyway um three quick questions in all the hours of interviews with him
(1:27:03) over the years did he ever mention anything about knowing about any abductions um two live alien captured and three um underground connections with military we've heard so many rumors some pretty good some pretty trashy but maybe did he mention any knowledge in any of those three areas uh I'll take underground first the answer is no and of course my interest in Area 51 I want to know right off the bat if he'd ever heard had any Credence at all because there was a little bit of an overlap Area 51 had been founded in uh 1955 so
(1:27:39) it would have been a period while he was still he was very active uh in this and and he had no knowledge of that uh in in fact in part of that which we didn't get into here the whole question of the whether the cover up exists is an interesting want to pursue with him because he again it goes back to ethologist he said we really didn't have to have a cover up uh because the ethologist did it for us the debunkers in particular did it for us um so there was no and and there was no real paper trail he was more concerned not with the
(1:28:07) press or the public finding out but other organizations who might Co-op the program nothing about underground bases live alien we had the one brief clip there in which he mentioned and it was only a side thought I don't think it was something that he had personal know of he sort of remembered it as an as an afterthought only one that he had heard about being at right Patterson Air Force Base abductions I remember him saying yes that there were scattered reports of those uh in the in the late 50s that made it into the
(1:28:38) files but that's it I don't think that that's something that really caught his attention he was more it's more he's more of a nuts and bolts technology guy but he mentioned that there were those reports and in fact I can give you some of that tape John if you're interested yes that'd be great thank you George good to see you George first of all thank you for your terrific your absolutely terrific presentation thanks and you saved our day and you brought us back on the track of serious apology well I hope you got
(1:29:07) some laughs out of it too absolutely but you know I I spent a couple of days with Colonel coo about half a year before he passed away when he was in Italy in s Marino invited by the government of sarino who organized one time a year and and the only government organized UFO conference in the world did he speak he did he did and his book came out in Italy too and actually had a terrific circulation very high circulation and I even sent him uh two weeks before he passed away he got it a picture of his book sold on the in the Cur in front of
(1:29:44) the Vatican in front of St Peter even there you know in Italy they are selling books not only in the bookshops but you can also buy it in in a kiosk which is you know like a little news stand and they were selling it just in front of the Vatican they had a big poster and I'm sure many ones in y bought the book and especially because K coo did work with Pope pyus the 12 in the reestablishment of democracy in Italy he really was a hero we checked out his role in Italy and he was a very very important historical figure and we all
(1:30:15) recognize this in Italy and this made him and the book very important but what I would like to um you know actually I would like to add to the question of Paul Davis um you mentioned the eyelids and we have a reference to it in the Ali autopsy footage but he spoke in great detail to an in an interview I made with him I interviewed him for one and a half hours um one part of it you saw in my lecture on the Carlos di footage he mentioned the yeah the boxes uh the things the bio feedback computers where you put the hands in the the hand
(1:30:51) imprints and and the pilot becomes you know part of the craft according to Colonel Coro and uh he told me in this interview that actually it was the difference that what he saw had only four finger imprints and what is on the alen autopsy footage is for six fingers beside this detail it is the same type of machinery and I would like to to know if he mentioned in 1992 or at least before 1995 anything about the propulsion the control mechanism of the ship as he mentioned in his book I remember about much later nothing quite
(1:31:28) like that no not that far back um the closest he got was the statement that I think you heard tonight that he he had the the feeling that they had the feeling that the aliens were part of the ship right right as opposed to uh um that's as close as I can recall him getting he mentioned two devices he mentioned first of

all the bio feedback computers where we put the hand in and then one device they put around the head we can go back through the transcripts of the stuff Michael look for it but I don't remember it I really great okay
(1:31:58) thank you sure second second question about uh autopsy video which was a commercially available fact and fiction I think you may you are familiar with yes while I was watching I thought fascinating in the beginning and uh I thought it was true but in the last part some part it was six fingers and I thought every alien had four fingers so I thought it was fiction I thought it was fiction so I just want to I want to confirm with you what is your view for that well Corso says four the one he saw had four I don't know about the one in the alien
(1:32:40) autopsy I I always find it interesting um for example there was a report some years ago about the giant aliens in the in vones in Russia and the CBS News did did a story about it and they were kind of making fun of it 10-ft tall aliens looking like robots H we all know that aliens don't look like that well you know what do aliens look like how many fingers do they have which version is acceptable for CBS News these days anyway I I you know I've heard a heck of a lot of different uh uh descriptions of
(1:33:10) aliens and I think they could have all kinds of fingers and if you were to land on Earth from another planet and you were in Scandinavia and then you were in uh South America you would see people who beings who look very very different but are all from the same Planet so it's all different kind of fingers then I mean yeah I I don't I don't have the answer Corso said he saw four the AI thing which again i' I'd be very careful about I guess they had six thank you very much sure couple Le two questions was there
(1:33:43) ever anything said about the secret government no not not really I mean he you know as I explained a couple of minutes ago go his his concern was more about the the competition between different agencies he felt that there had been infiltration of the CIA by KGB and that they were not to be trusted that's where that some of that kns of shik shinny stuff came because there were groups of uh groups of officers who were very much distrustful of the intelligence Community feeling that they had been infiltrated and these were the
(1:34:14) days of you know McCarthy McCarthyism things of that sort I I don't think that he buys the idea of an all-encompassing mj12 he he certainly enter Ain the idea that something like that could exist that it might make sense for something like that to exist but at least in my interviews uh he never was able to confirm that that it really did exist thank you sure good evening thank you for a fine talk uh my name is Chuck I was born and raised at Corona New Mexico and my dad owned a bar there at Corona and I really
(1:34:46) wanted an attempt to and I did meet with Colonel Corso to see if he knew my dad because we knew an awful lot of his men but he did not know my dad but in the course of the conversation I told him my son was on the governor staff of the state of New Mexico and so Colonel Corso asked me to take a message to the governor and I did take that message to the governor and I was in contact with the governor's office and also uh Colonel Corso for the last year and we spoke a few times on the phone and all and then he sent me this
(1:35:21) beautiful package of information that had it been implemented would have been a tremendous economic development for the state of New Mexico I'm not sure what to do with that information the governor uh laid to decide after Colonel Hon's death uh is there going to be any kind of a papers Museum or or archives or anything like that from uh Colonel Corso because I think this is important that's a great idea perhaps uh perhaps you should contact his family I'm sure that they' be interested in it and if uh if you'll
(1:35:54) give me a card or an address I can I can get an address for you you can contact them I'd appreciate that and I had the privilege of meeting his son and grandson and I am extremely sad that he did not make it to the 51st and Rosell me too thank you all for coming hope it was worthwhile thank you [Applause] George thanks but Miss George I want to just tell you and everybody else why I wasn't here to introduce you um I had to go to dinner with my family tonight uh many of which came in but I just got some news at this dinner and
(1:36:36) uh I'm going to be a [Laughter] [Applause] grandma and I'm going to be a grandpa I guess and I've known for a month and couldn't say anything e e

Transcript:
(00:04) [Music] I often wonder about the nature of reality about our relationship to the creative force that forged the particles of our stars and intertwined them with the molecules of our bodies who are we and where are we actually sitting within the architecture of our universe are we alone or is the answer simply stranger than we can think my name is Jeremy Corbell I seek to weaponize your curiosity and if you're ready to suspend your own Prejudice welcome to the world of extraordinary [Music] [Applause] [Music]
(00:59) beliefs you know I'm a scientist and when I look at other questionable information or other interesting information I have to follow the scientific method and look if I it has to be reproducible and with proof and look I can't lie out all the proof to make it unquestionably true so you know according to the rules of science you are obligated not to believe until I can so yeah I'm not saying believe the story I'm saying this happened to me I'm sorry I can't I can't prove it you know without going back in
(01:38) time and bringing you there so um you know just let it be I don't really care if you believe it or not um it's just kind of a report what happened to me so that's the voice of Bob Lazar in 1989 Peabody award-winning investigative report reporter George knp broke a story that would send shock waves throughout the globe the basic premise that Lazar a former Los Alamos scientist working out near era 51 was given the specific task of reverse engineering extraterrestrial spacecraft for the United States
(02:20) government the audio you just heard was from my first physical meeting with Lazar it was unplanned unexpected and somewhat daunting I had years of questions for a guy notorious for not answering them so if you are not familiar with the story of Lazar it's time to do some research his story is extremely important people have referred to Lazar as the Snowden of euphology in hearing his story you need to consider one very important thing that Lazar could be telling the truth I will warn you that this experience is going to be personal
(03:02) you'll be going on a journey with me you will experience the double-edged sword of Desire on one side is knowledge and on the other utter frustration eventually what you learn will have to be cemented into your core by your own reason your own ration and your own deduction I will simply open the doors and let the light in what you see is more important than what I see for it will be you that has to carry that burden what you discover might change you it might break you at the foundations before allowing you to
(03:39) rebuild your Paradigm as it has me you will need patience determination intelligence and above all else you will need curiosity curiosity will be your greatest weapon on this journey you will undoubtedly question the Integrity of those I interview and then hopefully your judgment will turn into in word and you will come to your own conclusions at its core the extraordinary beliefs recordings are a series of conversations conversations that ordinarily never leave the confines of the four walls they're conducted in but nothing in this
(04:17) investigation is ordinary that you can be sure of so now I interview a man a physicist whose records can be verified a scientist who has worked at new numerous military installations and who recently revealed to me something profound on my search to understand the Bob Lazar UFO case the gravity of which can be described as [Music] Monumental what's your name and what do you do for a living uh Dr crangle and I'm an engineering physicist we're in a laboratory right now can't really describe it so hopefully we'll be able
(05:08) to film here one time but it's in very impressive laboratory it's a real laboratory with a lot of interesting gadgets which I cannot even fathom what they're

used for at this time and uh where are we right now what what state where are we at for the audience we're in the state of confusion that's always the case in my laboratory in Albuquerque how long have you been in the Albuquerque area yeah about 40 years 4 so not not that long yeah not that right I hated the place so much after I got stationed here that I
(05:37) stayed for 40 years just to make sure I hated it that much uh before we talk about why I got introduced to you um if you had to go through kind of your life phases you've mentioned a few to me uh being that you were in the Air Force flying helicopters and now you find yourself as uh an electronics engineer who does calibration for a variety of agencies what would be the major phases in your life if you had to lay label them you mean as I've been an engineer since high school you know as far as mentality and of course you know by the
(06:07) time you get a degree now you're an official engineer that's never changed the Air Force was just one of those things that I won the lottery the draft and couldn't refuse the prize so that that was a Hiatus from engineering that's but otherwise it's been engineering science and engineering okay so that has been your focus since uh the beginning and you had the hiatus through the military flying helicopters which I thought was pretty cool in your professional capacity so what are the benchmarks like
(06:37) you got a degree where'd you get it from what was the degree what were the different benchmarks of employment as far as your experience like what what can you tell me about your history of well my bachelor is from New York Institute of Technology my doctor is from MIT uh and no sooner I got my doctorate I got drafted uh so you know five six years in the military and when I came out of the military I had this vision of I was going to be an engineer with ulet Packard or tectronics you know Rank and file staff engineer well when I came out
(07:10) of the military which was in a recession not only they weren't hiring they were firing thousands of my peers and colleagues so it was either deliv a pizza you know drive a taxi cab or open up my own laboratory so when you get a doctor at MIT do you physically have to go to school on campus there yeah okay you do and how long is that process of getting a doctorate about four years four so you spent four years at MIT yeah I think you might know who I'm starting to talk about but it's Bob Lazar he told
(07:39) me about that he got a degree from MIT and he's told everybody that he stands by the story the thing is is that factually it's hard to prove that because he's not in any yearbooks or anything like that okay well if you're going for if you're going for a uh a graduate degree uh you wouldn't be in any kind of yearbook books that's you know that that's for undergrads you know the class of you know the class of 70 the class of 71 that that that's an undergrad getting your Bachelor when
(08:10) you're up there getting a a graduate degree you're not like with a class so like a master's or something right right you're in there as you're you're in there as an independent there's not like a class of 70 for your Masters okay so what years was it that you went to school there for your doctorate 69 to 73 69 to 73 so I mean sign ific amount of time four years went to school on campus from there what was the next kind of major step for you in your career well that was where formal
(08:41) education stopped at least in in engineering and science the there was a formal education of becoming the Air Force you know uh uh standup straight guy you know officer you know with the properly trimmed mustache and the shiny shoes that that means you're a super troop doesn't mean whether you can do your job or not you've got shiny shoes in a properly trimmed mustache you're were a super troop uh but when I came back from Vietnam they stationed me in New Mexico uh I complained and thought I'd been
(09:09) placed in the world's worst is to be put back on the East Coast you know home family friends and when I screamed and bitched a little bit about it the Air Force's answer was again keep in mind I came back from Vietnam the Air Force's answer was well you're 14,000 Mi closer to home than you were last week how do you argue with that kind of impeccable logic guess but I'm still 2,000 miles from home but somehow it's stuck cuz that must have been about 40 years ago it was about 40 years ago and
(09:39) came to the realization wait a minute hiking camping I'm I'm a gun collector I enjoy shooting no license no registration required down here and golly you you know from Albuquerque you drive 10 minutes in any direction and you're in Wilderness you can shoot till your heart's content I'm in heaven and and starting a laboratory I couldn't have started a laboratory in New York the Big Fish would have swallowed me before I had a chance to get off the ground where a laboratory here you know

again it's it's
(10:08) it's it's a much lighter economy we're kind of this cultural uh little Mecca within a giant poverty pocket and the the and the technological Mecca is you know sand die Laboratories Kirtland Air Force Base ctland Air Force weapons lab Los Alamos labs White Sands I mean you won't find that in New York can you tell me some of the Laboratories that you have done Contracting work for pretty much all of them can you list them because I don't know them and some of the listeners won't know them Air Force
(10:36) weapons lab San die Labs several different areas uh at San die area 5 Area 3 uh Los Alamos I've been up there I've done work with White Sands I've been out even as far as California uh you know where China Lake is you know Ridge Crest uh I've done some testing out of China Lake uh one of the things that I do is a company will call and say we want to do this test project how do we set up the test you we want we want to measure you know X how do we what what equipment do we need and how do we set that up and
(11:11) that's and that's the Gap that I fill one of the reasons why I was introduced to you was because you're not into this world that I'm investigating that includes euphology advanc propulsion systems but one thing that that I was told was that not only did you have some work that you did at Los Alamos but additionally that you somehow met Bob Lazar and so I before talking about that can you tell me what is it that you have done at Los Alamos what time frames and or whatever you can tell me about that I
(11:46) I've done contracts up at L Alamos pretty much all through the 80s uh I still do contracts with L Alamos uh not as many as used to uh but I still you know have some contact up there uh but all through the 80s that's I was doing you know design project this or you know the uh a kind of an aner engineering you know their Engineers have been beating a problem and sometimes you get too close to the problem you know where you you can't see the farest for the trees so they bring in people like me as as an outside
(12:18) contract to take a fresh look you know see what see what's going on though the equipment that I may have been working with might have been on some high security something or another that they'd have to kill me if they told me what it was but an amplifier is an amplifier a signal generator is a signal generator what you do with that equipment that may be classified but the specific piece of equipment itself is not classified it sounds like all throughout the 80s you were able to physically go to Los Alamos to work on X
(12:47) Y or Z whatever project they may have so you were a subcontractor is that what you call it right and the specific area of focus that you focused in on was what would you how would you describe instrumentation instrumentation and so again what is your kind of title as a scientist what is well engineering physics but uh what I've been functioning as primarily is metrologist okay not to be confused with meteorology I am not the weather guy no I got what's the difference go ahead and tell the the list Metrology is the science of
(13:18) measurements meteorology is the science of the weather I can control the instruments like you the the meteorologist they're on their own they can't control the weather how about mes Mory what okay so as a scientist you go and your subcontractor throughout the 80s at Lois Alamos um so you you were obviously allowed were you given a badge ever to get in there or how did you yeah you get you get temporary badges you know a visitor badge or a contractor badge uh which those those badge has those badges have a life there's an Extinction to
(13:50) them you know they might be good for a couple of days or a week but it's never a cart blanch pass like the employees have and and so as a with these visiting pages did they always take them back from you were they paper were they plastic what were they uh well the early days they were they were paper and and as as they progressed in their own technology they became plastic and yes now they have pictures on them and a little barcode and a little magnetic strip reader when did they start having pictures and barcodes on them from your
(14:18) memory probably within the last 15 years but back in the'80s no it was it was a a handwritten slip of paper okay and then so if but if you did have an idea let's say around 1984 or something like that would it have had your picture and a barcode if you were a permanent employee uh I don't think I've ever I've ever looked at what the permanent employees look like I would suspect it would probably be something that would you know like a driver's license that would that would fit in a wallet but to be
(14:51) honest with you I don't think I've ever ever looked at one the ones that

that the permanent party had yeah I'd be just curious to see and I I've been shown a couple and um do you have any of the badges that they would they let you keep them I'll bet you you know if I dig into some of my I'm I am not a hoarder honestly taking you back also I keep stuff that anybody else would look at and go why the hell have you still got but I'll bet you if I look back in some file somewhere I can
(15:20) probably find some of those you know day passes or week passes and do you like for example you graduated a doctorate at MIT you spent four years of your life studying there do you have that diploma like on your wall or something uh that that that hangs very proudly in my safe you know you get a degree like that you worked hard you know you got you have it but what you're saying is what's funny is it's in your safe you know just well getting the degree you know that when I when I do lectures for for engineering
(15:48) with engineering students getting the degrees is the same thing as get somebody going to school to get a degree in art well you can have a degree in art that doesn't make you an artist right uh my my litus test for the engineer is how many patents have you got gotta how many things that are out there in the world that you can point to and say that's there because I did that gotcha and so let me ask you this is what was the first memory that because it was introduced to me that you had run across Bob Lazar or worked with him in some at
(16:22) Los Alamos somehow what was your first interaction with Lazar and where was it well it wasn't much of an inter action it was you know one of these things you know meetings and you know like security meetings you know you have to go to go to that once every week or couple of weeks you know and they give you the the usual briefing about don't talk about what you're doing don't talk about what you see so Laz Lazar who's kind of if you've seen him you know he he kind of stands out frankly I think he he looks
(16:52) like Hawkins you know he has that same British Norman facial structure uh anyway that's uh we didn't work together but you know cafeteria kind of thing you know you pass them uh in in some of the the the commanders call if you will you know meetings you you you pass them so yeah I he he was up there we didn't work together and about what year was it that you remember seeing him to pin it down certainly in the 80s uh probably earlier than late 80s uh but if you if you try to pin me down to a specific year month week right
(17:27) this is not something that you've obsessed about over the last you know 25 30 years this is like I'm asking you out of the blue here when did you work there all this yeah of course you're not going to have the specific dates but you're pinning it down to around that time period but what's interesting to me is you're saying that you would run across Bob Lazar at like a security meeting you know don't talk about this don't talk about that or in the cafeteria was it your impression that he was a concession
(17:55) stand salesman or a janitor or did you think he uh he was dressed wrong to be the Cher okay so so how did you know Bob in what capacity was he there working from your knowledge you know what what was he there what was he at Los Al well he was a physicist which I'm a physicist uh we we kind of recognize each other you know it's the classic you know pocket condom with the all the proper different colored pens so that's he he fit that mold if if nobody would have told me he's a phys one look he's a physicist
(18:30) you know he he he's properly dressed and geeked him okay okay but but did people tell you who's a physicist or was that ever explained to you in in some conversations you know that somebody' be talking about what somebody was doing uh and they'd put over oh yeah that's you know that that oh and that's him over there what was your impression of what Bob was doing at Los Alamos in the 80s well at the time I I was there I really didn't know what specifically Bob was doing we didn't work together we simply
(18:56) crossed paths at least you know in in glance view uh I didn't know what he was up to any more than he knew what I was up to but you did know that he was a physicist yes and that was very clear to you that he was a physicist at Lo Alamos and not again like the janitor right okay right and in in conversations with some of my colleagues you know again sitting over lunch you know we'd be talking about something something happening or who's doing something it's okay to talk among yourselves you're just not allowed to
(19:25) tell your wife or your kids what you're doing but then somebody you know oh yeah that that's uh you know Bob over there is is working on something something project uhhuh and so did you get any other Impressions I mean you've described kind of him very well he's got kind of got the Hawkings face he's he stands out he's got

the pocket protector he's a physicist working at Los alos is there anything else that stood out about Bob um just yeah one of the fellas was telling me about him building a jet
(19:52) car and that since I'm a sports car nut also you know the shade tree mechanic uh that kind of kind of you know tickled my fancy it's like oh I'm not the only Looney in yeah he did in fact build a jet car um there's actually a you know you know that magazine when when that was put out through Los Alamos the Los Alamos something it's like a journal oh well it's not a it's like the the the Bas newspaper right and so there was this front cover image of him with his jet car on it oh really yeah one one
(20:24) time so that's kind of part of this the story of Baba the lore of Bob is that if he didn't work there how is he on I don't remember what it's called the Los Alamos something the Los Alamos monitor I think is what it was called and it's I mean the Bas the Sandia has the same thing you know Kirtland has the same thing it it's kind of you know what's going on you know these days and it you know it's more family oriented you know there's a lot of stuff about where the pool parties are and all that kind of
(20:48) thing but there's a little bit about you know who stands out you know employee the month kind of right so people say that like he's not a scientist that's that's like the big thing lazar's not not a scientist right um he was hired by Kirk Meyer to go out to you know Los Alamos he's not a scientist he's a lowly subcontractor that did nothing in scientific capacity what would you how would you respond to that well I don't know if he was again just like I I was a contractor up there uh I don't know if
(21:19) Bob was a official employee of L Alamosa for who was up there as a subcontractor but he was up there and would that really matter or you could still work on science projects oh absolutely I mean what I'm gathering from you is that you saw Bob Lazar on a number of occasions up at Los Alamos people pointed him out to you as a physicist but you would know that from a mile away that he was obviously not there clean in floors that he was a physicist like yourself and you are a do MIT graduate four years doctorate and you were a subcontractor
(21:52) going up there never fully employed by Los Alamos and you were doing cool scientific work up there I imagine fun stuff yeah and that's and and Bob certainly that's like we talked about with the jet car that's it's the curse of the it's the curse of the breed you may have a degree in in electronics but you're going to dabble that's that's the you know what an engineering degree is that's a license to mess with anything and everything and we do it's so fascinating to me to talk to somebody
(22:21) who's not you know drank the Kool-Aid knows the whole story and is really into it and just says I worked there I saw Bob he stood out you somehow and I understand how Los Alamos would would blackball him he committed professional suicide in what way uh by doing that uh that video that he did where he was talking about you know the the craft that he he' had exposure to uh he would he went into quite a little tutorial on how an matter antimatter engine might work uh which is how they would get enough power and energy in that craft to
(22:53) do what they wanted to do and he broke the code he broke from the fold he talked about it that's it that's a death sentence and why is it a death sentence within that security Community that's you're not even allowed to tell anybody what time it's you go to lunch uh that that's just that mentality that's up there of of don't talk about what you do so so from what you understand by by Bob publicly talking about his experience with the work that he did not at Los Alamos but south of
(23:30) Groom Lake he was committing a sort of professional suicide professional suicide because you get blacklisted for doing that is so you you've been told in your work obviously you can't talk about this and and and you didn't and that's how you maintained your if you want to make a living at your profession then you follow the rules I I would love to know have you ever heard about a a subbase south of Groom I mean I called the bass I know for a fact it exists but it's called S4 have you ever heard about
(24:03) that no never would you tell me if you had or could you not tell me I would at least tell if I heard about it I'd let you know if I knew anything further than that I'd have to shut my mouth yeah gotcha and that won't get me blacklisted right right and that's the main point right so so okay basically what he did and I find that very interesting you say he committed um professional suicide is that something that you knew found out about or how did you know that he did that what how did it

come to your
(24:33) understanding that he that he did that a friend of mine gave me a copy of his tape all right and then that's how you knew and I watched that and I certainly recognized him uhhuh uh Los Alamos from Los Alamos yeah and it's like okay I got to sit back and and and see what he's got to say uh technically I think he was correct as far as his description of how things might work could we are we capable of of doing that technology today no Bob says absolutely not Bob says absolutely not we're capable of doing that no way well
(25:07) it's that whole matter Eddie matter thing I mean to to be able to make a little piece of Edie matter and contain it is a real problem but theoretically what he was describing is is could be very real yeah so that that's interesting there's one thing which is that the the um the material science itself he said it's like dropping an iPhone in the um wagon you know days he says they they told told him can we make this with what we've got and his answer was no we can't so that's why he said
(25:33) back engineering at first he didn't believe it was nonhuman technology at first he thought it was the coolest [__] in the world he thought we were flying saucers we were flying them right and then he realized they're asking him to back engineer it yeah reverse engineer something that it didn't come off the UL Packer to tectronics manufacturing line right and so so that was kind of like you know his his wakeup call that this this was something weird was going on but so I guess what I'm fascinated about
(25:59) is when you saw that tape I mean you had seen Bob at Los Alamos you you knew him as a physicist there and a scientist he wasn't the concession stand seller no he wasn't the guy with the kiosk selling candy bars no right right so so he's he's a contemporary of yours and in the same field as a physicist and engineer and you see him on this tape and he's describing this science now a lot of people say it's gobbly G what he says about the science that none of it's real science that it's gobbly Bob says look
(26:30) I'm trying to explain it to you in the way that you will understand it very simply well if you're trying to describe it something like that to the public you don't do it with a bunch of exotic math the public is not going to understand the Exotic math you've got to put it in some kind of terms that the Layman can at least have a prayer of grasping and leave the Exotic math for your peers so you think that the way he described the propotion system that that as an MIT doctorate engineer you do think that
(26:58) it's um plausible yeah yeah have we done that yet does it exist as something made by us yet no but the theory is there I mean uh G was it Galileo that uh designed a helicopter oh is Da Vinci Da Vinci yeah yeah yeah Abol okay well but could they build that helicopter back well no but was the theory right yeah you bet one of the things that Bob talks about is that the element 115 which is stabilized you know which he said had to have been mine somewhere he says you you know it would take too much energy to create even the
(27:38) number of atoms that you need but that was the the the main part that worked in the reactor was this highly machined piece of element 115 as described by Bob and it was actually machine at Lois Alamos they didn't know what they were working on Machining it had to be put in these really thick th slices and then cut into triangles now this is what Bob claims what do you think of do you know about this and what do you think of it when he talking about is it it was highly machined a machinist doesn't have
(28:10) to know what it is he's cutting maybe have to know what the hardness of it is but he doesn't have to know what that's going to be used for you give a machine a machinist a print to fab here here's this this chunk of metal cut it the way the the fabrication sheet said it says it ought to be cut so The Machinist doesn't have to know anything more than I made this triangle and and what's interesting is that um Bob even knew the code for transport they obviously didn't write Element 115
(28:36) on the boxes so they called it La 1000 and that was the shipping code back and forth from the base where it was used to Los Alamos to be machined oh really yeah it was interesting so like all the pieces are kind of coming together on that but I guess the pertinent part of this here is did you have any verbal conversation with Bob at any point and you said yes later you did can you describe that to me well we we chatted it was it was after he obviously he was gone from Los Alamos uh he had a a company here uh in New Mexico in not in
(29:08) Albuquerque proper but over in the East mountains uh United nuclear and my first actual verbal contact with him was there was a company up in Santa Fe uh

eberline who used to make Geer counters and atomic probes um they left and they had a p P that was in the floor a pig is a is a lead Vault where their radiation Source resides they had they left the pig and they left the radiation Source there well the place that bought the company that bought that building didn't really want to glow in the dark uh so a
(29:47) friend of mine gave me a call and said who do you know so I called Bob to to go clean out the radio AC he had to go get this glow-in-the dark thing like hey dude you want this stuff and of course he was probably over the moon wanted it bad right right and so what made you think to call Bob Lazar to go pick up the radioactive waste that someone had left in the basement of some place this wasn't radioactive waste this was a calibration Source uh so that you can test a probe to say you know it reads in this way
(30:19) when exposed to this material uh but they left it there uh so I knew again through conversations with peers and colleagues I knew about Bob being over in the East mountains and his his company United nuclear and I and it had been rumored that you know that's what he's doing is selling uh radiation sources you know little samples you know you can get these little pucks with a a piece of cesium or a piece of tridium uh you know to check Iger counters well that's if anybody knows how to handle that stuff and knows what
(30:51) to do with it sounds like he's the man so I gave him a call wow and so I mean it's fun we chatted about his jet car and we chatted what no what did you talk about uh all all our little you know in involvements in our little pet projects I asked him why did you commit professional suicide but he said it was information that he really wanted he really thought the world should know wow and I did you and I asked him did you realize what that was going to do to you as far as you know your ability to function within and he was kind of well
(31:33) yeah classic yeah so okay so I mean what's so fascinating is a lot of people who never talk to anybody about it they like to just say Bob Lazar is not a scientist he never worked at Los Alamos he never went to MIT and that's proven by X Y and Z bottom line is you knew him or about him through colleagues as a scientist and you went to him because there was a you know radioactive equipment detection stuff that you thought he might like you guys talked about jet cars you saw him at Los Alamos a bunch and this is a real guy he's a
(32:06) real scientist and on a private phone conversation he admitted to he committed you know U professional profal suicide so so you would be satisfied by saying as being yourself an MIT graduate with a doctorate as being an engineer that uh and being a scientist that Bob Lazar is a scientist you know you can talk to somebody and get a pretty good feel you know just in in the matter of which they speak uh is this guy educated or not and educated doesn't necessarily have to mean formal uh I've met several people that were
(32:43) self-educated that would probably blow the doors off of you know most of the formal educated people they've got a lot more hor sense one of the things formal education does is is try to teach you what you can't do it's the guy that's self-educated that nobody but he told him he couldn't do that that's why he went ahead and did it right George knp who's who's my mentor in journalism he says left field Bob you know that Bob comes from the left field the problem solver Bob that like you know his talent
(33:10) is kind of you know taking something that other people are kind of scratching their heads about and come from a totally different angle and find Solutions the new approach the fresh look right think outside the box and it also seems I mean just sitting here in your laboratory and hearing your stories and life experiences it also seems like you guys are kind of Spirits it seems like that's also your approach to things I mean absolutely yeah yeah I've been the Rogue all my life and you're known for that in fact when I was young I was
(33:38) I was ostracized for it cuz I hadn't established my my position in the pecking order within the within the within the discipline of the science now that I'm old you know now it's a respected trait you know just just like grandpa is okay to to to mumble and Grumble but if you do that when you're in your 20s uh you're just an annoying kid what is what is the best I mean I guess what I'm searching for here is I I believe Bob and I have reason to believe Bob it's not because it's a
(34:12) Blind Faith Like religion he just like oh it sounds cool so I'm going to believe it all the evidence has suggested that he's a telling the truth completely and and B that people try to smear his name and try to demote his scientific abilities in people's minds if if you break from the fold look at Snowden had Snowden not done what he did he would be the the great kid that's doing the

intelligence gathering and so but he broke from the fold so suddenly Snowden is this terrible you know the government can generate the your weight
(34:49) and paper if they like you your wait and paper says you walk on water if they don't like you your wait and paper says you're the you're the Satan child so you know and and Bob is essentially the same thing as Snowden he broke from the fold that's fascinating man I would like to believe what he worked on I would like to believe that story again the scientist in me says if I can't touch it feel it sniff it smell it weigh it measure it come back and do the same thing tomorrow and get the same results
(35:19) so I can't prove or disprove what he'd worked on as far as what he describes and as far as the theory of how what he describes could work I think he's he spot on I wish I saw that same something you know then again too you in the capacities that you've had to or decided to work as a subcontractor for a lot of these agencies and businesses in these areas um you two have been shown things that that don't necessarily line up with the chronology of our own development of Technologies is that fair
(35:58) to say that's fair to say but we're not going to say yeah I'm I'm not going to break from the fold and and you know what I I guess what I'm saying is I'm not ready to commit at this point professional suicide maybe in a few years after I'm retired and it don't matter anymore okay well you make sure to call me on that but U but so but there is something that you have experienced that probably leads you to lean towards the idea that Lazar is credible is credible yeah well I guess Bob could prove his story in a
(36:37) number of ways if he wanted to or there are things he could use that I know about to to help prove his story but it's almost like he's disinterested because the more people believe him the less contracts he'll get the less work he'll get I mean it doesn't help him to be Bob the UFO guy you know when he's bidding on government contracts in fact that's working against him yeah right right and um you know he even said I you know someone asked him does it ever come up you know that you didn't hold secrets
(37:04) you know if you're working on stuff and he says well he says there it's come up kind of in a joke like I'll get i'll bid for a contract and they'll get it and they'll say now Bob this isn't top secret but we would appreciate it if you didn't talk about it cuz we know you got a problem with holding it and he's been like he's it's haunted him a little bit but all B yeah so but you are in at least he's managed to keep going I mean where where do you go from engineering physics at
(37:32) Los Alamos if you can't stay within your discipline I mean what do you do open up a TV and radio repair shop you open or go deliver pizzas you open United nuclear that's right I'm grateful that he spoke out about stuff because I think it it it's uplifted the conversation a little bit but you know at the same time people just are attacking him with slings and arrows trying to make him see seem like something else so that we don't have to deal with what he said just like Snowden yeah it's an interesting correlation
(38:04) that you say that you know cuz it's almost like um he's the Snowden of euphology yeah yeah so what happens you know when when the government gets caught you know when the spotlight comes on the Cockroaches they run so when the government doesn't want to be proven that they've been withholding something so then Kill the Messenger mhhm do you have any final thoughts on Bob Lazar the story he told anything you'd like to see in the future any final thoughts I'd love to see a little bit more detail I mean it can't anything
(38:39) that he releases at this point considering what he'd already done on that one tape it can't hurt him anymore so I would love to hear and see you know a little bit more detail of what it is he was exposed to um you know at a symposium that's one of those things I probably would buy a ticket to go see interesting I mean so we just did that you know where uh myself George knap and Bob all spoke at this UFO Congress 2015 event and it was really cool because we each gave a little presentation I gave a presentation about my film workk George
(39:19) knp gave a presentation about his whole experience for 25 years dealing with the Lazar chaos and then he did a Q&A with Bob on stage where they talked about what he experienced and he revealed a little bit more information but he says look I've told you everything so what you're saying is is that you'd like to hear a little bit more detailed explanation from a scientific standpoint some facts some figures some numbers that correspond to the G I I don't need all the Exotic math uh math to me is uh
(39:52) that that that's how an engineer impresses his colleagues uh I'm much more

interested in hearing the narrative part of it you know let let them ask support later and could come later but the narrative part of it so so what something that bothered Bob there were two things that really bothered him and I don't know maybe you have any insights on this and he simplistically just explained one thing that makes no sense to him with the physics that he knows now and this was his kind of gripe was that there there's got to be a physics
(40:20) that we're not being told about because this stuff defied what we should know these are supposed to be law you're not supposed to break these so two things that bothered him he said when they turn on the power source that he says go ahead and touch it and Bob would bring his hands he said it was exactly like you take two opposite poles of a magnet and you push together except it was with his hands and he said he had he does not understand how that happened but he says he would go up and push and he could
(40:48) feel it like magnets and and and that baffled him do you understand why that would baffle him no I hadn't I hadn't heard that I hadn't heard that descript description and and interesting yeah interesting and but but it really bothered him because he's like that shouldn't be it shouldn't be like that well to to say it it breaks a law of the laws of physics as we know them today but you know if if if you went back even a hundred years ago a jet plane that we take for granted today breaks every law of physics that a
(41:22) physicist from 100 years ago it's like that thing can't stay off how's that doing that and go faster than the speed of sound nothing goes faster than the speed of right we might break the atmosphere into a cataclysmic event if we break the speed of sound giant Abyss is going to open up so that's what breaks the law of physics as we view it today could be different in a 100 years or thousand years that's right okay you know if and physics is one of those wonderful things you know if you break the law you get a ticket you get a
(41:52) fine and you go to jail if you break the law of physics you usually get a Nobel Prize a lot of money Dynamite so um so I guess the other thing that was kind of interesting I never understood he says uh one of the tests they did was his buddy who was in the lab with him Barry they were they were partnered the guy brought over a a candle and he says when he brought it next to the so the power source when it was the antimatter reactor the power source when they brought the ca the candle flame over he says he doesn't
(42:21) understand how this works the candle became still so it was the flame became absolutely still yet it it was emitting light and he says if it was a gravity source so it essentially froze the plasma I don't know I don't know that he knows but all he knows is that when they brought the the flame over to the the power source it literally was like someone took a picture of it it just froze and Bob kept saying did it become translucent no see that's the thing he didn't describe any difference he said it looked like someone just
(42:55) snapped the photograph and put it there and he says my problem with it he said was that I know how photons work I understand how light it should not have been emitting if this was a gravity Source it shouldn't have Frozen it should you should not be able to see the light that's right that's right so it really bothered him it bothered him because he didn't understand how why that would be so here's a guy if you're making up a story why you going to leave a big hole that like you're the idiot
(43:22) like that that that you can't describe you can't figure it out well do understand I am not a nuclear physicist I'm a semiconductor physicist so you know anybody that's a physicist does not mean they are a nuclear physicist is that what Bob is I don't know what the uh I believe Bob is nuclear uh I'm semiconductor okay I I make transistors okay so the laws of physics apply to the specific field in which you focus on is what that means right so you know every physicist doesn't mean we're all experts
(43:51) in making nuclear weapons and running Atomic power plants right so if uh indeed you know Bob is a nuclear physicist some of the reflections of that would be the things that he's done such as build a particle accelerator in his backyard oh Lordy I love it okay so that is that is a symptom of being a nuclear physicist yeah for sure okay okay so don't and don't stand in front of the e beam okay okay so um this was a very cool beginning just to meet somebody who knew Bob professionally from Los Alamos in the sense that you
(44:26) you on there you guys were in I um you know don't tell anybody meetings what would you say what do you call the security meetings yeah security briefings yeah so specifically they they lump you into these you know it's little lecture halls or

classroom kind of things and you get your you know it's your security pep talk so so let me just ask you just real specifically so you have a direct individual memory of being in a security briefing at Los alos with Bob Lazar yeah yeah it was one of the when
(44:56) I'm I'm not talking about a classroom with 10 or 12 people I'm talking about you know the auditorium size kind of thing you know everybody after lunch you know go over to the auditorium you're going to get your security briefing for the week and yeah yeah that's I remember seeing and so so that I mean that just why you know why would he be there if he wasn't working in a capacity where that was important yeah I don't think they bring the janitor into yeah okay cuz I just want to kind of demystify that once
(45:24) and for all you know the fact that you're there at a security briefing at L Alamos and you're not even really into all this stuff but you but you knew Bob that's big that's big for me because I spent a lot of my time and effort trying to figure this out so thank you for your for telling me your experiences it's been fascinating I I wish uh this was film so people could see your laboratory oh go walk through Frankenstein's Playhouse yes it is absolutely fascinating in here and um thank you for
(45:53) your time and I I I hope to continue the conversation in the I'll have a lot more questions after I relisten to this way cool excellent okay weaponize your curiosity and go to extraordinary belief.com to learn more

bob lazar: ? UFO line, KLAV, las vagas radio show, january, 5th (05-01-1996) + [timestamps] - YouTube

Transcript:
(00:00) the following so it's been sponsored by a Trader production [Music] good evening and welcome to UFO line I'm Gene Hopper with Rivals are Bob are you set for the show oh sure I am bad for this is our guest again this week by popular demand is John Lear welcome John hey thanks Gene of course in this instance popular demand just needs that John demanded that we help them become more popular at the uh end of last week's show we touched on the subject of God and the switchboard lit up and so John decided
(00:48) to come back so we could uh rig God over the cold this week now Bob rosar and John Mayer and I I don't agree on many things in fact if we only talked about things on which we agreed it would be an hour of dead air but I think the one thing in which we all do agree is the conflict between youthology and Theology and probably the lack of the stereotypical Mission Army president omnipotent God so I think besides us off maybe we should tell people that our religious backgrounds are from our youth genre I was brought up in Christian
(01:21) Science and uh went to Sunday school for uh many many years up until probably I was 11 or 12. okay and obviously that's where John got all of its scientific knowledge was from the Christian Center John is it true that the Christian Scientists go up and use the Stanford linear accelerator and rather than turn the power when they actually pray that God will accelerate the particles into the target the only thing that was suspicious to me is that my grandmother was in Christian Science and uh my mom although she made us go to Sunday school
(01:53) she would take us to the doctor and we were told you know that we weren't supposed to tell grandma like what was going on exactly wait you were really raised it really oh yeah wait wait wait I have to delve a little bit deeper into this I can uh is still a Christian Scientist oh I absolutely yeah you're kidding and my sister teaches in Christian Spanish school down in uh in the valley oh Santa yeah Chandelier no kidding yeah absolutely by the way if anyone would like to give us a call and speak with us about God or
(02:29) if God himself would like to call us our number is 731-1230 our hit starts 12 30 on your cell phone Bob how about your religious background no how you were raised I was I guess I was raised Jewish I'm not exactly sure I was forced to go through a bar mitzvah by the way I'm offering a 500 reward for any videotape of Bob Adams farming so and uh I was raised the Lutheran I went to a parochial elementary school and was confirmed in the Lutheran faith I had to to memorize an entire book called The Lutheran catechism and actually spit it
(03:06) back out on command and um yeah I could probably say the scientific

statement of being wait how can there possibly be a Colorado don't you think anyone's listening all right you know how we both from time to time and I've read it too if the people really knew about all the the UFOs and other species other beings on other planets it would burst their bubble in our theology would be ruined forever well that's ridiculous because the same ultimate God Divine intelligence whatever you want to call
(03:46) it get created us would also have to have created them so I don't think any Church like there whatsoever it wouldn't burst my bubble about what I believe about God just to find out there's other species on other planets and if they can whiz through the time warp and then in sauces or whatever what has that got to do with God anyway what God do you believe in I'm going to say a Divine intelligence that created uh for emanating from this Divine Creator emanated everything that we could possibly see and he operates
(04:19) through us I guess and where did you first learn about that where did I first learn about it uh I guess as a child that I wasn't uh I'm not speaking to any particular religion because those are man-made my instinct tells me that something had to have made me The Marvelous creature where I can think things out and rationalize and create uh right come up with ideas that were never there before that that was not taught to me I just if they just happened and where did the side come from maybe it's not for us to know ah maybe
(04:59) if we knew it then we'd beat God wouldn't we see the problem is that that uh most of us were taught about religion in our youth and obviously established religion has been going on for Millennia uh prior to us being born and I think a a very good question is where the original concept of a god came from now whether you believe uh that God is an interdimensional spiritual God or you believe that there were actually beings from elsewhere who were misconstrued as gods in ancient times a good question is
(05:30) uh where the original concept of a god came from Francis would would cave them what made them think there was a God if there was no establishment yeah I was going to bring up the family like not Aborigines the people who were brought up in the first they have no traditional religion but yet they they know that there's something more than them and they find something to worship it's an instinct in there that we know there's something and us and and these people weren't taught anything about religion
(05:59) and yet they just know it it's just not kind of in our DNA I think and we just cut off by different names and then men created different religious because they want everybody to believe the way they do but yet innately in our things we know there's something more than us it's just storms you need to be taught it I don't think you can draw that conclusion at all because if you were surrounded by religion from the day you were born it's uh it's almost an unanswerable question whether the possibility of a supreme
(06:28) being someone from elsewhere that people would worship that would be superior in our ways is a natural solder as you say conveyed in DNA I don't think we can say that because in our nature but are you going along with the zechariah's Fiction's idea is that what you're familiar no it doesn't really matter what idea you go along with it it seems that there was some sort of catalyst the question is was there a catalyst made people think there was a god of sorts historically or is it a natural assault did when cavemen were
(07:03) were when they heard thunder and saw lightning in the sky would they presume that that was a god of superior beating or would they think for instance it was a monster no they would think it's something stronger and bigger than them which for people who were not they weren't civilized yet or educated that would equate with something bigger than me the Thunder like really must be something awful it doesn't matter to them in their primitive mind that was the equivalent of our speaking of God as power or Creator it doesn't matter it's
(07:35) more primitive but yes with those that are made in my opinion and but I'll listen and see what other uh premises you can listen up here thanks for your opinion okay go ahead you're on UFO lines hello yes yeah I just got a couple of things to say and that is uh recently been called by the Lord and uh on the phone or no is that loud yeah I'm just gonna like give him three plus penalty but uh very impressive very brief well you know anyway um maybe I'll just get to the meeting tomorrow anything that has to do with
(08:18) UFOs and stuff has to do with the devil and if you if you haven't found that out and you haven't found the truth of the matter and if you dig deep you'll find the truth because God is the entire night and Satan used to be able to hold the

light but he got removed from his position and how do you know that all right God has uh enlighten me with this knowledge of of which is out there and a bunch of people are telling what's going on in governments and in the world and it all boils down to Good and Evil and if
(08:53) you're accepted you'll go out and and search for information which will lead to your belief in what I'm I'm now believing but I don't think that could ever happen I don't think so either because Satan's the greatest season he's obviously deceiving you so good luck well thanks for the call and I can only say you eat that nothing next problem go ahead you're on UFO line yeah two questions sure I don't know which one I dare ask the first ask first because I probably won't get the house the second
(09:26) but something that amazes me I can't even call The Art Bell show but um every night I listen so this program and went here and enjoyed tonight and most other night to see whatever else is available for talk and nobody listen stars now locally as long as you ever heard he's still you probably understand no on the contrary uh at least his first half hour 45 minutes he's in NewsHour he watches a lot more the uh but by doing that he gives the best you know help her recap John you know our dog why don't you give us your
(10:13) opinion on that well I think our two puts on a pretty good show now I haven't heard it in a long time because I used to be honest like starting at 11 but I couldn't get any more because it came over another uh Channel or station that that I couldn't get but I enjoyed being on this program he's on right now I got him in my other ear really oh yeah well who cares go ahead John you are so right hello yes go ahead uh are you talking about belief in God well we're just talking about the connection between you follow gmcology
(10:47) but yeah I guess it basically he goes to believe in God well I believe in the ancient Egyptians is that God is the all of all right explains it well the African it's in essence of being it's the only essential being that is and everything else is resides within it and then besides within everything because everything is in its mind so you you don't believe in God as the stereotypical God who was flying around talking to people out of the sky in the Old Testament then no no I think what they call the gods were people that they
(11:21) imagined as a superior beings but in addition and so so you do believe that if there is an omniscient omnipresent omnipotent God he's certainly not anyone who is interacting with the uh with the Jews and the the well three Christians back in the Old Testament well and awesome being everybody and they can I think people are limited by their own interpretation of it but uh the uh the light in the darkness that Jesus speaks of is common and he's the first manifestation or the first concentrated form and then it manifests
(12:03) those wraths about the actual manifestation of physical existence so now do you do the egyptologists also believe this about Aman and Ryan I don't know what they believe and I could care less so you're talking about I'm on the same like the end of two donkeys yes and Jesus tells us they didn't stop the greater means he says in the Bible that all things will put under the father and uh that uh then the sun will also be put under the father that the god may be all in half in effect is the basic belief of
(12:42) Christianity to it comes from uh the old belief in Egypt so do you believe in in heaven and hell but after you die you go to heaven or hell well I'm not so concerned with that I uh think that's a mental state you put yourself into [Music] spirituality to where you understand what the spirit is about okay well thanks a lot for your input sure let's go ahead and take another call go ahead you're on UFO line hi Gene yeah this is Bill how are you hi Joe great hey uh I just want to I have a few comments okay
(13:25) I wanted to talk talk in the different terms but uh since we're talking about God okay well uh just for Bob's information you know God was in town in October visiting a company that's taking over the test site and his name is Keller and he didn't even call us right that's what I was going to ask you to call Bob however he was visiting out here uh talking to some Hungarian sentences that are part of this new organization that'll be uh you know over um teller was in town talking to some Hungarian physicists that's right
(14:09) okay okay with these guys he had worked with previously they they apparently are you where did you hear this from uh I I'd rather not say okay it wasn't there right no it wasn't John layer to get straight though one of the other things Bob you know your project code names you identified back in 89 and 90 to George map yeah project Looking Glass you know I heard this on a couple programs around the

television out here in the past two weeks you know and they used it in the context of going back in time
(14:47) I was wondering if uh you had any information on that this project Looking Glass no not really as far as I know they were just looking at using uh a gravity lensing effect create a small time Distortion we're talking about something on a milliseconds okay nothing uh as well just someone attempting time travel or is you know technically as feasible as that yeah I've got a couple more items here did any uh disc that you viewed out the uh how was the test site when you were there did they have a hexagon shirt or did you notice any with
(15:24) a hexagons or a turret yeah well I'll call them the cops the tourists you know no just no no so the subfloor which separated the you know first level where the gravity gravity amplifiers you know I'm talking about the top of the Cross no no round circular section everything was smooth everything was smooth well flat surfaces separating the bottom and the top um about three foot section instead of it coming to a point or two no C sharp edge no nothing like that okay when you're inside now did you get did you
(16:03) get a chance to feel the waveguide it was cold okay how cold it just I guess cooler than room temperature that's yeah I've made the same comment about the skin of The Craft itself that's why I said it was it was metal because it felt cool but that was my yeah only observation it could have been some other exotic material but but you didn't try and stick your tongue to it right now yeah all right it wasn't that cold anyway yeah it's it's uh well it's insulated too one other thing
(16:36) uh the other item I got is uh you know your smell grades that you got in your S4 saucer that tests for sale it's not my answer but yeah okay well you know whatever yeah uh I thought that possibly you know you you were instrumental in this in that design which is in the design of The Craft yeah but not in the addition of the yeah also the the version of the aliens that were in there no no no testers felt obligated to put those in there for some reason they wanted it just to show scale yeah I know if they're putting out an
(17:09) eight-inch version of that uh little dude that was inside the S4 you know your gift yeah I had heard that yeah in fact the president of Tulsa Corporation emailed us this morning and told us that that we hadn't seen it uh finished I guess I hadn't really looked for it has anyone seen any local hobby shops I brought them all out of the California oh you all of the little alien models I bought them all yeah ancestor said no stories have have picked them up that only the hobby stores are selling the hobby shops no major change like Walmart
(17:38) and Toys R Us thank you I think is it a pretty good model it's not bad I I've been uh salmon they've been you know uh buy them well that's great yeah is that all you got foreign you know you described it this because uh the disk drive is being capable of bending space-time yeah okay and we all know that the space time is interface or the space has interface with time so therefore I had a I I wondered if it's time and gravity are all interrelated I wondered if the operations personality you know during the the time that you
(18:20) viewed liftoff uh today uh did they have any kind of barricades or anything or uh indicate that you shouldn't bring it too close well it was out on the on the edge of the dry lake that they're inside no one was outside yeah okay I didn't no one was outside at all I just everyone just lined up by the uh you know hang our door yeah I was just wondering you know about some memory loss and that type of thing if you were close to that Distortion Fields there it's not that closer no hey you got a good you got a good man on
(18:58) there John layer you got any questions all right all right thanks very much okay now do we have a go ahead John UFO line hello yes go ahead they were talking about the existence of God well we were talking about the yeah the Collision of ufology and Theology and its relationship to God yes well I was thinking in terms of uh I guess theology uh tries to prove God's existence through uh Faith or Revelation or authority and I I know that there are philosophers and some theologians that try to demonstrate the existence of God through
(19:42) the idea of reason and uh Thomas had promised him with what they call the five ways in which he gave an argument for the existence of God one of the arguments was the idea of the unmoved Mover argument in other words that um since everything is in motion in the world there had to be a first mover which he claims was God another one is the cosmological argument um you know that that says that everything had a beginning and had an end you know comes into existence and goes out of existence so um since um nothing can cause anything
(20:29) else um there must have been at least one necessary thing to cause

everything else you know and then there's three other arguments but um I wanted to get in the idea of time uh the idea of time which we have very little of thanks for your call I wanted to uh point out some of the similarities that I've seen between uh UFOs and holographic projections okay why don't you do that go ahead You're On Us online hello hello I don't think they're there okay bye so now first of all whose idea was with the
(21:24) doors go on God [Laughter] foreignly was he wrote the gods of Eden he says uh in his uh his outrageous theory was human beings appear to be a slave race reading an isolated planet in a small Galaxy as such the human race was once his verse of labor for an extraterrestrial civilization that remains a possession today to keep control over its possession and to maintain Earth as something of a prison the other civilization is bred a never-ending conflict between human beings has promoted human spiritual Decay and is
(22:16) arrested on Earth conditions of unremitting physical hardship this situation has existed for thousands of years and continues today and he goes on to say that one thing they had to do is create a God to keep control to keep people fearful that if they didn't do what they were supposed to do that there would be some kind of Retribution what I'd like to do is uh kind of get an idea here with all three of us is what your current belief is I know you were raised as a Christian Scientist no I'm playing at you John
(22:49) uh it's highly unlikely to get there is a guy and okay I would say that in the stereotypical Christian judeo Romney president omnipotent sense but there is no God and if there is one I don't think anyone's seen any evidence of them in other words uh if there is a God I certainly don't think he was flying around farting seas and you know hiding behind burning bushes and things like that playing games with people in the old class I met that was somebody else yeah whoever if if indeed all of that
(23:23) happened it certainly wouldn't someone who someone who instituted the big bang and I don't know where he was when he did that but if he did that I don't think it would be so petty that it would he would be down there nuking Sodom and Gomorrah because people uh uh Bob and I had a discussion this afternoon that rather it's hard to understand why God would have allowed if he is who he's supposed to be why he would have allowed Free Will and allowed all the human conflict to the point where he'd have to
(23:50) punish people for being bad um when uh because God works he could have programmed everyone to be good and never had any headaches well he works in strange way and he certainly does right why would god of super oppose the tornado belt on top of the Bible Belt right right and uh let's go ahead and dig another call go ahead you're on UFO line yeah the me again well only you can say okay very well then I was disconnected uh it's a skeptic of kled yes I was going to start talking about uh the similarities between a lot of the
(24:26) weirder sightings that you have and uh an infographic projection okay um first of all why is it that most of the clearer sightings of the actual crap usually appear in areas that are highly dust concentrated moisture concentrated or like uh Ice Crystal concentrated like adult Breeze Nevada Mexico Southern California well you can see a lot about everywhere swamps you know it's swamp areas are you trying to talk about projecting a hologram yeah it seems funny though okay I'm gonna try to predict the Hologram of the laser well I
(25:04) can see even the minor lasers that we have even the minor lasers have you tried to project a hologram with a laser no I haven't because I don't know I have and you can't reject them Into Thin Air like that but you can if you have material in the air that you can reflect but I I have you met through a fog yeah okay I'm just saying I mean I mean a hologram is really obvious you know it's it's basically the color of the laser you know you're going to have an argon blue green or you know a
(25:35) Krypton laser or you know or a combination yeah but there's no full color three-dimension you know obvious three-dimensional image without scan lines on it it it's uh I don't mean to shoot down your idea but in a lot of the sightings in remote areas I mean who would have all that equipment out there and shine something in the sky just hoping that from hillbilly would drive by and see it again let me go further into it anyways it's my it's my personal belief and since I have no proof to to give this and that's
(26:05) a personal belief but I've seen even some of the more minor hologram technology and it's pretty good and I'm sure that if somebody's investing millions and billions of dollars into this that the holograph can be really good and funny

enough a lot of them they seem to perform amazing feats with no respect to inertia of gravity they disappear and reappear at will they don't show up on radar and use a lot of the photographs and and video camera footage of this they turn out to be kind of almost translucent looking oh I agree
(26:41) that most of the photographs and and sightings are you know absolute Funk also I just don't think that they're uh that Holograms would it would explain a lot of that well see I called you before and I talk about okay some of the I think that this is my personal Theory some of the craft are being driven because our technology is that far Advanced now that we can produce some pretty amazing aircraft some of them are holographic technology and others or hoaxes and I think if you tie it all together I I don't get me wrong it's not that I
(27:13) don't believe that that is an intelligent life in space I would be ludicrous but I think what we're seeing in the media and what's being projected and it's funny how you should talk about the single connection between God and ufoology because what we're seeing today is is like a diversion it's a scam I don't if they have all this technology why aren't they just coming down and saying hi what can we do to stop them if they can if they can manipulate time and space we're not necessarily motivated to do that the
(27:44) earthlings seem to have this sense of self-importance that we feel they would do that that would only be if they had just arrived and they wanted to say hi we're here and we're your space Brothers uh you know there's a lot of information that indicates they've been coming here from Millennia and they are no more obligated to uh to drop in and say hi than you are on a herd of cattle so also uh you know Bob was that we're you know back in engineering program at school in central Nevada on ET disk and which used
(28:15) gravity for Palestine and they distorted Face Time and actually do Cloud use that they're invisible on radar will actually the gravity fields and I feel odd thing this would have here but I guess he's not motivated to say it but anyway they destroyed the space time around the craft and they do Bend right and so a lot of things that you're claiming could be handled by Holograms are true but there are other explanations and one of course is that gravity does all those things uh that you're attributing to a
(28:45) hologram well I could go around all night about uh you know actually with our Technologies but I I want to skip to one more point and that is the connection with God and the UFOs and to me what I see is a very strong connection between Eastern philosophy and New Age theology which we seem to be directed into with everything from document rhetoric to UFOs into into Crossing between Eastern theology um and kind of pseudo-christian science all right well uh thanks for the call go ahead you're on UFO land hey you've
(29:30) got a good show going there tonight guys uh Mr Lazar a couple of months ago they showed some wreckage on TV of a supposed spacecraft and showed like a six hand print they claim the money control but this did you see anything like that on the disc do you seen a hand print I think he's talking about the access probably filmed some of the hardware there was a yeah the hardware part I thought just the alien autops I didn't either I just read about it on the internet no I didn't see anything with a handprint how did they
(30:02) did they punch in numbers the slightest idea I'd like to know that myself okay and uh Mr Lee what do you think the spirit world is the spirit world yeah you got me okay thanks it's the liquor store [Laughter] what is time it's uh 11 35. okay so uh okay so uh anyway John were there any repercussions about your groom white Groom Lake report last week well indeed there were Gene as a matter of fact a certain Colonel screamed and I quote find out where that little son of a gun is getting his information sorry Colonel
(30:53) but you'd be surprised our information slips through gate 700. and speaking of gate 700 here's a tip for all you test site workers who are that who are asked to remove their watches jewelry and necklaces and other metallic objects before entering certain black areas it's not the jewelry or valuables they're worried about it's your watch if they let you take your watch to work you uh you'd wonder why it's always wrong by two or three hours when you get home then hey here's a quick physics lesson
(31:20) for all you physicists uh they don't get to go up to groom Lake what is the smallest component that makes up all matter it's an SMU or singular mass units negative or positive charge-ons can bind to an SMU to make up and down quarts for instance the upwork was made of an SMU and two positive charge odds and a down Fork is made up of an SMU and one negative charge on the up and down courts make up the

neutrons protons electrons and neutrinos and what about the rest of the standard model with their charm and strange and top and
(31:53) bottoms it's all Bs and the answer of the age-old question what is the speed of time the answer is the speed of time is inversely proportional to the amplitude of the gravity flux and what is the theory of cognitive dissonance cognitive dissonance is the Mind involuntarily rejects information not in line with previous thoughts and or actions and to wrap it up here are some of the little gray alien jokes going around the cafeteria through Groom Lake last week what do they call an ugly female on beta reticulate we give up a
(32:26) greyhound what type of mustard do the Grays use on their hot dogs oh I couldn't get that one great coupon what are the two most common surnames on Zeta reticulate primer and theater yeah what's your favorite author ity all right and finally what's the first thing that goes through your mind when you need a grade a breathing plan and that's the Groom Lake Area 51 report for December 29 1995 John Lear babazar and Gene Hub wish you a very happy New Year to all of you at get one Don I'd like to introduce a new term into
(33:07) the English triangle which everyone's familiar with homonyms words that sound the same but are spelled differently and synonyms words that mean the same thing the new term is a Lyra name a lyric name is something that sounds true but isn't but just go ahead and write that in your Webster's Dictionary where it's along you know those jokes reminded me that John told me a story about him having a dream last week that he died and he went to heaven and when he went to heaven Saint Peter met him at the Pearly gate
(33:32) we're showing him Around Heaven that they were walking around they ran into Georgia damsky and John said George I've been when it's bound I literally have been dying to talk to you uh were those actual photos of the E.T crafts that you took or was that some sort of uh bogus set up a dancing you said no you know we made all those up there were no agile ET crafts and John was disappointed and just kept on walking and Lauren behold he ran into Dr Alan heineck and he said Dr haynik uh what was all the hidden
(34:00) information in Project Blue Book and and didn't you really have actual alien information to convey to Steven's Spielberg when you were a consultant on close encounters with a third kind and he said no really there was nothing to any of that I just took it to make the money as a consultant and I never saw any evidence of EP visitation what forever so Saint Peter kept showing John Around Heaven and finally they ran into God and John ran up and said God please tell me certainly those things can't be the only
(34:24) life in the universe and God said no really John they are all of the rest of that is just everyone's imagination God's children are totally confined to the Earth and disappointed John lost weight shaking his head and he said man this conspiracy is bigger than us if you want to give us a call dial 731-1230 on your cell phone let's go ahead and take another call go ahead you're on UFO line yeah why'd you cut me up United States and the kinds of God what is the basic thing is it your purpose to ridicule the
(35:04) belief system and run the prisons yes yes okay thanks for calling so uh what do you guys think the the you know people and again I was raised a Christian and and had big questions and uh it seems like with all the holes in the god story people seem to think that God uh ended stereotypical form uh test people's faith that a baby is born with brain cancer and uh dies with low deaths which drains the family emotionally financially and then at the end of all this they can still have you know it literally strengthens their faith in
(35:41) faith in God because they were tested it seems like that is an unreasonable scenario since if God made everyone there was no reason to make everyone uh worthy of being tested so anyway let's go ahead and take another shot which is probably seen dying which brings at the point that uh if you didn't exist it would have been necessary to invent him right right go ahead you're on UFO line I didn't invent him but it's a great show tonight and uh I've called him before um I I appreciate what you guys are
(36:12) doing I think it's great that there's a format on the radio for this and it's long overdue and um tonight I wanted to ask Mr Lazar I know he hates talking on the radio and he hates being on the show but he's a voice in the darkness it's great no go ahead um what I'm wondering is in the dish that you worked in was did you see any evidence at all any type of air filtration device or anything to purify the area no nothing at all I didn't see anything that looked like an air vent uh a screen anything that would indicate

(36:47) that there was any airflow anywhere in fact a lot of people who have heard you know Bob story and and they think that since they were able to fly the exists around the dry lake fed uh six or seven years ago that certainly they must be taking him to the moon and Mars and elsewhere and other than the propulsion which Bob worked on there are a lot of other problems in navigation and the life support systems and then the the things you're you're speaking about now I I kind of figured that and the more I
(37:13) hear about these things the more I'm convinced that all they really are is just minor shuttlecraft to go from a first shift down to here they may be they may be because I I don't see how you could possibly Traverse the distance of the galaxies in such an uncomfortable manner I mean I don't I don't care if you're a monkey or a human or if you're familiar I mean if you could cover great distances in a short time uh you don't need bathrooms yeah what if you get stuck somewhere in between well
(37:41) then there's a big problem because I have like an Intergalactic triple layer right Bob allegedly those those uh 59 footcraft we're capable of interstellar travel so that was a real Nation anyway yeah it was I mean Bob read that he didn't take one for his pin so it's uh the ones that you worked on have they been resonated with uh oh the one you were in uh when you worked in there were you in there on your own or was there a town I would never I didn't I wasn't even allowed to go to the
(38:10) bathroom on my own I kind of figured that yeah um the other people that you were working with were you all working on the exact same thing no no no it worked on the buddy system there were just two people at a time worked on a specific thing the guy I worked with his name was Barry and uh we worked on one particular part another group worked on another particular part so on and so forth and the groups did not have communication between them and you were kept segregated absolutely yeah and I imagine that's true with everything it's it's
(38:39) it's bad science really it sounds pathetic yeah well it's the military taking control over everything it sounds like more than more than the military well thanks for uh the opportunity to speak on the radio again thanks for the call tonight we're speaking about the time switch between Tia Our Guest is John Lear and Bob Lazar rather than I'm Gene huff and if you want to give us a call dial 731-1230 or hit start 12 30 on your cell phone let's go ahead and take another call go ahead John UFO line
(39:08) I wonder what about what you're talking about a few minutes ago what's your best guess the house are these uh crafts were coming from a very long wait five light years 50 light years or a million light years no guess whatsoever well it I I don't know I don't know I mean I've heard things but yeah I I don't know these crafts came from Zeta reticuli so what what is that around 40 light years from 30 38 something like that and uh but I mean I have no proof that that's the case so right and Bob also uh did
(39:50) not know or was not told they're showing what the parameters were of the a jump quote unquote you know if you just sort of save time to a destination for instance uh I don't think Bob you weren't led to believe that they could have a giant jump right over a span of 20 or 40 light years didn't you say with those uh success of smaller Jones no I said I didn't think it would be a an unbelievable distance like that just because of the energy density required to distort you know space of that degree
(40:20) so I think it would have to be a relatively localized phenomena that was artificially created and uh repeated in a high repetition right and of course requisition that would be the fact that gravity propagates us continuously because if you were at the mercy of of the speed of light of electromagnetic waves you could never Focus the gravity on a point distorted and jump there faster than you can fly there at the speed of light so obviously for all that to be true gravity must propagate instantaneously right well that's an
(40:50) arguable point but but for that to work it must be that way not necessarily because it distorts time also right okay exactly so let's take 40 light years how long would a round trip take I don't know see we don't know we've tried to figure that out before if it goes we don't know what the recycle time is the amplifiers I thought it was 12 milliseconds and if each jump was three Aus it would be 60 hours that's what we've had what about the right expectancy of the visitors that I have no knowledge of that at all
(41:29) it depends where they land it's a land down south it's probably about 10 minutes okay well thanks hey thanks oh man so anyway do you think these people are going to want to kill us for talking about that we haven't got uh really much guy

talking all right uh of course there's nothing in it for us I mean nothing would be better than if all of the god stories were true and uh so you don't believe it No No in fact as you know I don't know why do I not believe the god stories I don't believe there's any afterlife not
(42:01) that there's anything in them for me if there is and I hope there is I this is an instance where I hope I'm wrong nothing would make me happier so you uh don't think there's any devil or anything like that like that uh first caller that uh no no I mean the devil is the lamest of all I mean I can at least see someone hoping for a God but they blame everything on God they play if if something good happens they give God credit and if something bad happens they say he was testing their faith I really
(42:26) don't even know why there was a need for a devil they blame everything on gun anymore let's go ahead and take another call go ahead you're on UFO lines yeah I got a question for Bob so you have a question for John hey Bob it's Jeff uh just saying house for my mother and Jay Jeff who Leah yeah okay I have a question for you on the radio um if the spaceships go up in the space do they have gravity in the space you know do they need to keep routes or what if the spaceships go up inside the crowd yeah inside the craft
(43:06) you know I don't know if there's a localized gravity field that's you know leaking from the reactor or or how that uh so you think they can control gravity inside and outside the show I really have never put any thought into that at all I've spent yeah I was just uh spent my time thinking about how the grass is propelled I really never thought about uh didn't you say that inside the craft that that people would be the occupants would be in total equilibrium therefore they would need to there wouldn't be
(43:35) gravity there wouldn't be g's in the turns as perceived by an observer yeah but would there be a localized gravity field that that I don't know I never even really spent much time thinking about that there's no seat belts so I guess it was an interesting question yeah all right well nice talking to you Bob I'll talk to yours okay so uh anyway Bob you just got a letter today from Zechariah said she and uh asking uh uh if you'd like to ask him any questions about any of his books I know when we met him a few weeks ago you
(44:08) had gotten a copy of the God was it the Gods uh yeah no that's William Bramley it was generally yeah uh so have you read much of it and if so what do you think uh I haven't finished it yet so gregorization is really but I do I do find the book really interesting I it's uh I do lean towards believing Zachariah Mission has been raked over the course on the internet Lately by the typical guys of course no one is beyond attack I mean as people attack Einstein they attack Carl Sagan they're no nothing
(44:49) even a technique believe it or not nothing is sacred on the internet's end but I think the one one point that people Miss is that people are satisfied this you know a lot of people fall back and say well I just don't know and that's an easy out I mean pitching has correlated a lot of historic worldwide information and I look at all of his books as saying well what yes why why did civilizations have to evolve to a certain point and then destroy themselves and we find the residual evidence lying around and we just say
(45:21) well I don't know I think a lot of guys aren't willing to admit that they've got some preconceived notions a a scholar signed on recently a guy who is an authority on Mesopotamian writings and Babylonian writings and things of that sort and he started off by pretty much saying the people that believed in UFOs were really kind of nuts and there was no documented information at all about UFOs so that was a starting point and uh I think people like that need to open their minds up a little bit we're not
(45:52) we're not demanding that God doesn't exist we're just saying it doesn't make sense and it's certainly curious as stated well the switchboard is what up let's go ahead and take some more thoughts so go ahead your own UFO line yeah if you guys believe in the unified field even if I feel Theory maybe yeah do you guys believe that there is a unified field Bob why don't you take that one you mean do it are you you're talking about the unified field theory yes that all the all the that
(46:23) are interconnected some way yes yes then you believe in God that's okay all right how much energy do you think it takes to run your brains I really don't know very small amount staff all the energy in the universe if you're if you're capable of walking and talking and thinking then how can you say that all the energy in the universe or the unified field doesn't can't have those same properties I only had it at a far greater length just from a physical standpoint God must exist why because

because you exist because the
(47:02) minor amount of energy that makes up your body that makes you run is capable of all those things the mass of incredible infinite amount of energy the unified field will not be capable of those things it's not the energy itself that's capable of that I mean you can look at the uh you know look at this undercloud a typical thunderstorm as you know the power of several exploding hydrogen bonds and there's a huge amount of energy it doesn't display any intelligence the level of energy has nothing to do with that the universe
(47:32) itself there's a bunch of in what way you know there's you know billions upon billions of stars with your Fusion reactors burning in thine end you know throwing matter out in the universe stars exploding all that there's energy all over the place in all different forms and every way you can imagine it's not displaying any intelligence to me it's following physical law and doing things that that you know that occur naturally yeah there is some people make an argument that it's state or some sort
(47:59) of Destiny as opposed to like being a series of chemical reactions and I don't think anybody's got any actual proof either way it still goes back to the same thing as what you know where did the concept of God come from uh what was the Catalyst were there people flying it down of the sky and people said well obviously that's a God they're smarter than me they can fly they can do everything I can't do take Evolution for example I mean evolution is taught as fact and yet it doesn't even follow it doesn't even
(48:28) follow a scientific law doesn't mean follow scientific method it doesn't follow scientific methods absolutely not first of all nobody was there to observe it we haven't observed it happening or we've observed the job application but was never observed first of all it's a theory of evolution it's the proper term for it and it doesn't have to be observed but since there's a there's a Missing Link in in all of the kingdoms which is stated in the Bible but not stated in evolution
(48:56) they use archeopter like that's a missing link but it's not there's there's missing there's missing transitional forms in the Bible this will be a three and a half hour show and there were the worst reference you could possibly yeah I think it's an illusion that may have been an external Catalyst somewhere along the way uh whether that was God or not is questionable but uh but the kingdoms are created individually in the Bible you're right well actually you have to examine where the stories in the
(49:27) Bible came from and if you if you do take a look and do some research on that you'll find that a lot of the Bible the stories in the Old Testament are actually a synopsis of much older stories from older languages from Sumeria and Acadian that's certainly Babylonian and then they made it to Hebrew and and German and into English so by the time uh you or I I mean I don't know you could be a scholar or something but by the time the typical American read a Bible it had been distorted greatly from Hebrew and a lot
(49:56) of those the story of the flood is much older than is attributed to the writing of the Old Testament so a good question that of course is a question of Faith though because you gotta the only way without either believe that it hasn't been changed or you can't I mean that's the whole basis well there's evidence one thing I met one of the things I agree with Zechariah sitchin is if you don't read Hebrew you haven't read the Bible this is true and I do understand your point on that but the concept but
(50:25) the concept and what you're supposed to receive from it are the same if you have faith in it and like I said that's that's always going to be debatable because Faith it's just like bringing another dimension into an argument really there is no arguments okay go ahead uh next dollar you're on UFO and if you'd like to give us a call 731-1230 or it starts 12 30 on your cell phone go ahead Colin yeah yes go ahead or we read it somewhere whatever and yet about eight minutes ago you an adult not
(51:08) a child that you lean towards the amazing Zechariah because you've met it in his book and it's based on like Sumerian Parables which were also written by men would you explained to me what the difference is between my hearing about something as a child and believing it and you as an adult reading something and reading you're going back to where the concept of God came from what decisions information said that there were beings coming from elsewhere and this is where the concept of a god came from
(51:39) why do you believe one more than the other well those were people who made those steps near human beings that made those tablets and their human beings wrote the Bible that is true right and and that's why I'm seeing you because I'm saying

the Bible doesn't the Bible doesn't follow any logical progression whatsoever in the Sumerian writing and then the Sumerian writings have some scientifically verifiable information are folks so you actually examine where the stories in the Bible came from
(52:32) you're you're eternity go ahead you're on USA yeah I got a quick question for John Leary yeah um back in 1989 when you were the state the move on state director you and I and another individual we're out in the Hills out near Blue Diamond you had us looking for us secret doorway out in the Hills right this doesn't surprise me do you remember that John yeah I'm trying to remember the guy's name and he owes your gas money for that no I was just wondering John's has thought that uh
(53:09) maybe we had the wrong uh area and that he was going to continue this right area and the guy's name was Lou Terry and he's the one he's the one that came up with the vortex the various work experience and there was four vortexes and one of them was at Grim Lake one was right where we were one of them happened to be over my house and of course the only real one is in your toilet well John at the time you said you had believed him and and you thought you might try to look around for that and I never heard if you ever found that no we
(53:38) only went out that once or twice and we never bought it okay thanks a lot okay well we're uh kind of running out of time here we're gonna wrap up we can take a couple more times here we can go ahead there you go go ahead you're on UFO land am I on it yes go ahead okay I just I have to call back because the previous two callers really hurt me I've had classes in the history of science magic and Witchcraft and religion and these people need to take some serious anthropology courses and if um university of Las Vegas offers them
(54:09) these people need to sign up and they need to listen they need to learn their history well what do you think about specifically the origin of the Bible the origin of the Bible of us definitely came from other religions if you look at other religions a lot of the people I find that are what I call Bible Pounders really know nothing about the origin they really don't they're pre-programmed into what other people want them to believe right and they'll jump it into it also at Civic also keep questioning the Bible in
(54:37) fact when we met Zechariah Stitch and we asked him how he got involved in in trying to find out where the Old Testament stories came from and he said he was that he had actually found what was it he oh he had they were reading Genesis 6 and um and uh he had found what he thought was a mistake when they came to the word in the film which meant God plural and he stood up and told the teacher that he had found that and what did the teachers and that was when he was 10 years old and that's what started his uh his quest
(55:11) for trying to find out what was really going on that's that's how you find the truth you must ask questions and that's why we need people like you guys on the radio a lot of these are very good people you know attorneys doctors all people from our loss of life leave it up to the church feeling that certainly they're being given a fair shake from the church and and of course that's another story also that's true too in closing I just wanted to say briefly that if you look at the world's
(55:35) religions though you will find a common denominator in many stories and in in many beings that are sort of half God Half Men beings there's Vishnu Muhammad Jesus I mean you could there's probably 20 or 30 of these different people right my personal opinion is these were probably plants you also we're out of time here please give us a call back next week now if we've offended anyone we apologize we um uh if if there is a God and if we haven't found a damn I'd like him to go ahead and take this opportunity to
(56:08) strike John Lear dad John [Music] it was a sitting cell has been sponsored by dried out Productions

bob lazar: ? UFO line, KLAV, las vagas radio show, january, 5th (05-01-1995) + [timestamps] - YouTube

Transcript:
(00:03) [Music] good evening and welcome to UFO line I'm Gene Haas here with Bob ozar Bob are you set for the show No in fact this is the last place I want to be

tonight oh that's the spirit our guest tonight really needs no introduction in the Las Vegas listening area he's got a famous family name and he's made an Infamous name for himself in UFO research and that yes of course is John Lear welcome John thanks Gene so John I think a good place to start might be of all the stories that's why around us about you
(00:48) and ufology I think one that I always jumping right into this right right one that a lot of people don't know is how did you get interested in ufology how how did what was the Catalyst that actually made you pay attention to what's going on well you know my dad was always talking about this and stuff he was he had seen me deciding and uh um I had never been all that much assisted because I didn't think there was anything to it as a matter of fact 1980 I remember corresponding with uh John Andrews that uh of testers that there
(01:16) was nothing to it then in 19 when I'd heard all the stories that all the guys hears but in 1985 uh a friend of mine who I flew with uh in laws during the Southeast Asian conflict he flew a-10s he came to an Ellis Air Force Base on his way somewhere and he came out he hadn't seen him in about 10 years and in the conversation I asked him where all he'd been based in the since I'd seen him and one of the places he mentioned was bent Waters England and that's the United States Air Force Base about 70 miles
(01:44) Northeast of London and I said oh Bill Waters well that's supposedly where that Flying Saucer crashed in 1980 he said no John not supposedly it did he said I didn't see it because I was confined to quarters but I know the guys who did and he gave me the names of major Ted Conrad and Colonel Chuck alt and uh General Williams and I said what are you what are you telling me that this stuff is true and he said yeah it sure is and that's what started me off so I spent the next two years you know I thought I had known a
(02:12) lot of secret stuff I worked on an offer the CIA for many years and I thought you knew a lot of stuff but this is one big thing I missed out so that's what started me okay if any would like to give us a call you can call 731-1230 or hit star 12 30 on your cell phone uh John what's the latest I mean you're always good for an outrageous prediction uh why don't we get your comments on some of the the recent happenings what are your thoughts on the alien autopsy film uh I think it's it's
(02:42) uh it's not real it's his personal opinion there's no particular reason and but it doesn't look like uh a real alien as if I've seen a real alien before the same thing somebody faked it for money uh could be I really don't know what the story is well Bob has a giant list of TAPS John Lear predictions and statements and accusations that he'd like to go through to see which ones you still Stand By and which ones you change your mind on so Bob you want to go ahead and hit the list sure I do
(03:13) okay let's see here let's start at the bottom the driver shot Kennedy the driver of the limo shot Kenny what do you think about it I'm not convinced that uh still not convinced that uh he didn't do it of course everybody's dropped it by now but uh I went back but you still think it's possible it's possible um I went back and viewed some film that a guy had that was uh really close up and he was trying to sell that film the only one was the recruiter film uh yeah it was the enlarged from one of his
(03:45) opposed second through third generation films with and he was trying to show me the pink of the driver's Hands on the Wheel while this supposed shooting scenario was going on but but it wasn't all that convincing okay the Five Mile Square the five square mile roof over Area 51 uh yeah that was uh rocks okay he's one and one the two billion aliens living along the mountains or inside the mountains along Highway 93.
(04:17) that was pretty far-fetched I have to admit it's hard to believe it even use that okay I gotta say it's my favorite ones for last uh the underground tunnel from Boulder Dam to area 51. there's underground tunnels all over the place and so you think somewhere around the dam you can get in a tunnel and drive to Area 51 underground at Nellis or anywhere you want Edwards uh George Air Force you can drive from Boulder to Edwards underground uh it's it's not I don't think you can drive it they have
(04:51) these I think they call them mag lab or something man they got a maglev train in there you must begin ring no question no doubt about it in my mind as a matter of fact I talked and they built that without anyone seeing them dig the tunnel yeah what do they do with the dirt and the rock that was well I don't think I think it's the process of digging the holes that the the dirt is decomposed there

was the decomposed the dirt oh goodness the uh patent that I showed you a couple years ago that came that the two uh Los Alamos
(05:27) guys got for that train ever for that digging equipment that that uses the same process but that would be a major undertaking to construct a you know a maglev train under there you have no idea how far those things extend I talked with a guy who works in LA with a guy who was worked at Holloman and he talked you know he was talked about getting on this maglev and going different places you know it's just not out here it's all over the place yeah I'm gonna stick by that one okay don't call acid rescue
(05:58) we're here with John Larry if you want to give us a call dial 731-1230 okay uh let's see here I don't want to say that one yet what about the uh people are food for aliens what about that old time uh who probably stick by that yeah you're kidding me yeah I don't have to stick around okay um what about that little story about um abductees getting these implants and then at some point in time someone's going to have this device that resembles a TV remote control and uh be able to control these guys all in Mass yeah
(06:42) whatever they want to buy that one I'm getting scared okay what about um the stealth fighter the liquid crystals on the top and bottom of the stealth fighter so from above it looks like the ground and from below it looks like this guy they didn't use that on the stealth fighter but it may have been used on another episode which airplane was that too bad they can't see the easier expression okay uh 70 different species of aliens 80.
(07:16) he's probably 80 I have visited okay well where where do you get a number like that from the different drawings of the people who have made of the different types all the drawings I've seen with the expections the expansion did I say that word with the expectations with the exception of uh [Music] The Reptilian type guy and the pickle man the the remainder of them look exactly essentially the same exactly like the grade no these books and books and books of all the different things okay Sean was that your watch alarm
(07:57) [Laughter] um the Jailer um yeah I guess it was a jail down somewhere on the Nellis range to put all the UFO researchers at one point in time yeah if I said that I was a little bit off basement but not all faced with those other things no okay um now we're getting into my favorite ones here well not yet reptilians since we mentioned them there is a reptilian race and uh where does this come from where did he come from no where I mean where does this information come from the reason I bring up reptilians is because that one time I called you had a
(08:40) UFO drawing somewhere that you showed me and um I thought it looked pretty neat and wanted to get a print of it and you said I had a call Bill Hamilton or something like that yeah and uh you gave me his number I called and got his wife or girlfriend on the phone and she said that Bill's not here right now he's down the block uh because uh one of the neighbors was having some problems with a reptilian and I I thought it was a joke and she was serious and I said well what do you mean and uh she said well he was out hassling her in the
(09:18) front yard now this always has left an impression with me that these reptilian guys are out walking around hassling people on the street and well that's in California I'm not familiar I don't remember that story but the fact is uh there is a reptilian race and they are around and they don't walk down the streets so you think they're an advanced race apparently like the Grays way way ahead of us is there any contact with them now uh supposedly at the test site there has been contact with uh with a species
(09:53) called reptile what that they're working there in some capacity or they're just yeah you didn't captivity they're just there and the story was related to me about a guard uh who had to be or guards who had to be shown photos uh about three to four weeks and just flash photos uh of these species before they were put on duty so that they weren't sitting there and guarding something one of these things came walking down the hall and these guys dropped dead of a heart attack uh seeing this weird looking
(10:25) thing what would uh what do you do you have any ideas about the motivations or what is Visa is this a joint venture with humans and the reptilians similar to the old stories about the Grays are are exactly what is there I don't know no I just can't spy that you believe all this stuff well when we first met in uh I didn't believe in flying you didn't believe in flying Fosters and uh yeah but it's kind of like George knabs fan you know and uh in some of his interviews that that I have gone way
(10:58) overboard you guys got to remember that I've got about three or four heads a

year head start on you guys I guarantee you in three to four years and I think it's gonna be saying yes in these questions okay uh Venus nice place to live now yeah I know you have trouble with that I have a lot of trouble with that because there's a sulfuric acid atmosphere the surface temperature high temperature no but probes have gone there from other our country and other countries Russia specifically and uh you don't think we
(11:29) can back to the information the whole point of why would we what is the big secret so what if it's habitable but we want people to think that we are the best whoever runs the show they want people to think that we are the only people that couldn't be life on Mars there couldn't be life do you think there's life on Venus promise is one of them that lady that shows up to the UFO convention uh I don't know I don't know but what do you think the surface temperature is on Venus around the equator it's probably
(12:05) like Earth what about the clouds I know you're going to give me that stuff about the clouds and I don't know how it works and like we say we're we're dealing in a pain you know I don't have any facts I haven't been there anymore but that's the famous old Bible star come back have you been there no I haven't been there but neither of you and then you're just taking data that the government sells you on on what they want you to know okay and let's jump into it because I know
(12:35) you're coming up by atmosphere and water on the moon yeah in certain places there is it was not a great deal but there's enough to uh do we think there is that three mile high or 30 mile high Dome is that City inside it's a six mile high tower and I don't know if there's a city inside it kind of looks like an antenna but yeah evidence is pretty good that it's there and for those that haven't heard about it's in the uh Hoagland tape Moon Mars connection it's about a three-hour Chase
(13:05) and he goes through uh Orbiter um uh Pioneer and a lot of the other uh data and shows where this Tower is it's right directly in the center of finest Medi and when the moon is full uh it's in the direct Center of them so do the uh do the astronauts that orbited and walk on the moon are they aware of this and staying quiet yeah they are and I met had dinner with one of the four psychologists that was assigned to the Apollo Astronauts and they assigned them uh uh psychologist not so much of the the weird stuff they saw but the fact
(13:46) that they couldn't tell the public and that's what bothered all of the astronauts the most that's what sent uh Borum and overboard and and a few others they were really bitter at Nasa for not being able to uh to tell the truth about what's going on yeah but strangely enough Edgar Mitchell the Sixth Man on the Moon came out here to visit me and he was at because he was interested in all the UFO information so on and so forth in fact even said that all the astronauts had gotten together and they
(14:10) have kind of a powerful group that they formed I don't remember what they called it but um he didn't mention anything I'm sure that during one day meeting you he would have told his deepest darkest Secrets would have between him yeah we pointed that out to him also so you do have a good point to yeah okay um I gotta look at what I didn't check off here [Music] and the final questions were done well John how about says what's your what's your current view of the big picture I mean now you say we've got reptilians
(14:45) here where you're lying to us about uh uh you know survivable atmospheres and temperatures on the near Planet uh uh what do you think the big picture is I I can remember you know six seven years ago not that you were necessarily responsible for it but but UFO researchers always have something big is going to happen at the end of this year nothing big is going to happen that was October 92.
(15:11) and I made the mistake of making several producers and so I don't do that anymore I have no idea what to do we don't need to you know predict a big Invasion I just said what do you think the statuses of the big picture I I you know any impending doom or business as usual the government guys that I know uh all they can say is the next five years are going to be very very interesting but we've heard that you know for the last 10 years 20 is whatever so it just kind of nice to just sit back and watch me man notice stuff that we know to be real uh uh
(15:45) well I'm talking about this because you told us I assume that's real so John what are your thoughts on the land grab out here in central Nevada everyone made a big deal of it you were among some of the first you Jim Goodall Sean Martin Gary Schultz people like that who climbed up and and viewed down on Area 51 and and you uh how dare you mentioned in the company with John Legend but uh but uh you know obviously you knew that they were keeping photographic logs of uh you know the persistent Intruders and

(16:21) that led to the land grab what do you think about all the people whining about it when they actually got to land that was no big deal you know any uh Area 51 is just one of many areas they've got you know and they were smart to draw the attention there and get people from looking at this where other stuff is going on you want to go ahead and take a call okay let's go and take one go ahead you're on UFO line hello hi how you doing fellas good all right season's greetings um you know foreign [Music]
(17:12) [Music] aboard for 30 years they were a large supplier of uh components for a military aircraft uh and he's told us in 1960 he was involved with the government in anti-gravity research from about 1957 to about 1960 1960 down in Fort Huachuca uh and he had had a couple of sightings and a friend of his lots of fringes they did a couple of sightings it was interesting now that I look back to people that he used to bring home we are people that you know were very involved with the coverage cover up generalized Jimmy do
(17:51) level [Music] several of those guys that he used to bring home and he was he was very he can hear a lot about it he got a lot of criticism because he went down I think it was to Bolivia to sell some uh uh aircraft equipment and he was quoted by the press as saying flying sausages were real and he got a lot of slack over that but like I say I used to talk about it all the time but it didn't interest me because I'd never seen one and it just I wasn't interested I was interested in flying planes he has their 71 and stuff
(18:23) up too see I have my father was in the airport here in Las Vegas for roughly about 22 years 23 years now and um I've had experience through Facebook back when that pairing was really just really wasn't that much around there you know how bad it is yeah [Music] [Music] yeah they have a very good way and the
(19:33) government does of erasing people's memories it's it's very good I talked to uh a lady a couple of months ago who was with the Air Force and stationed at uh Total Parts range between 1970 1981 and her memory for that whole time is just coming there's nothing there she has uh you know flashes of weird stuff going on but no real memories really nice lady what do you think about doing that no I sure don't [Music] in the world but you know it's a shame that there are those people that are
(20:30) that are here that are doing these things to America and to Americans yeah well uh I agree with you but I don't think there's much help if I ever bringing this down that's like that's like finding who is the person you know or at least bringing the person who really killed Kennedy to Justice his father was [Music]
(21:55) I think the Curious thing about this recruiter film is the very what is it seven seconds or whatever you generally get to see and and all of the shots before the president got there uh all the shots of the graphic Knowle of of everywhere just general area Scott someone has that somewhere it included all of that on the film and that's what what was that photographed do we know that well yeah there was the food or film taken before the little flip you I see of Canada off the grass you know all and around the general area I think I
(22:25) saw that on arts and entertainment yeah yeah I didn't know that was like three photographed plan yeah I thought I thought we were talking about too but the driver um bill was his name and I know his last name and stuff like that but he's dead now and I mean like I said it wouldn't make a difference now because he's not going to be going there he's not going to be brought the trial and to be that I thought he was alive and living in Georgia or something he died since 91 1991 I think mysteriously from what I've heard okay
(23:02) well thanks for the call and thank you for taking the time and I sure hope to hear you guys show again maybe they can extend it to uh to two hours all right bye-bye [Music] if you'd like to ask John later Bob Lazar or uh any other any questions John uh you you know you're from one of the central Hub you you're you're a high profile guy and a lot of people approached you to tell you stories about being abducted and you know I I know that a lot of people even approached you that work at Nellis Air Force Base and
(24:04) other places I can I presume that you conclude by now that not all of these people can be crazy and not all of them are searching for attention I mean yeah you've seen that a number of people what about if we get asked all the time about whatever happened to John Grace the guy that wrote those uh Vladimir Valeria Valerian whatever Vladimir moved to Oregon and uh he has a real nice uh business going he still writes that what I forget what the name of his magazine was but uh he's doing well what did he
(24:33) do for an hour didn't he work for now yeah he was a tech sergeant and uh he worked in I'm trying to think it's been so long ago I was over his house a couple

times huh well how about the area 51 report this is going to be a weekly thing but why there's so much stuff going on first of all up at Durham we have two new proof of Concepts ready to fly one will fly next week and the other around March and both are very very fast and remember that helicopter we built about 10 years ago that could carry around 250 troops
(25:08) now we have one that can carry 600 fully armed combat related troops and over at Sandia they have that new remember Sandy that you basically built over there on Paiute Mesa they have a new computer that is a billion times faster than the past we can commercial use today hey do you know who invented the internet he was DARPA the defense Advanced research projects agency and they did it in 1967.
(25:34) what they first saw was the exponential use of the personal computer and saw the internet as a direct way into homes hearts and minds of the public this computer up at bandia can track what anybody ever wrote or said or aware of if anybody ever went on the internet with their PC and not only that whether your PC is on or not they can access your hard drive anytime they want and hey what's going on at tonopire we have the new counter Insurgency airplane that's being used out at Aviano in the Bosnian conflict the security is so tied
(26:05) up at the TTR but now they have three senses instead of one and the entire support team which consists of about 350 people are ability to ride out the flight line instead of back down at the gate like when the F-117 came out and speaking of the 117a whatever happened to the s19s the s19 went down the Skunk Works assembly line right back to the 117 uses the same game engines 404s but was an 80 bird and was a Batwing type aircraft they made about 60 of them it turns out that the f-117a was just a cover for this other hi-techer and whoa
(26:39) what's flying out of the Northern Nevada secret facilities it's black and it's fast so all you can see at night is a contrail which looks like a green neon tube about a mile long they've been doing some low altitude work around Idaho between midnight and 4 a.m that dude really gets along about four or five thousand miles an hour at low altitude and flying saucers apparently the aliens can't fly any better now than they could in 1947 because we recovered two of them in the past year right here
(27:06) in Nevada one came down between the dam and Kingman about a month or so ago and one in Northern Nevada last year and that's it for the test site update for Friday December 22nd 1995. this is John Lear and Barbizon wishing all of you at debt one and hey don't want us to get you guys over at station nine a very merry Christmas um [Music] let me see that little sheet of paper [Music] they can access your hard drive in a PC whether or not your computer's on yeah about as hard as you can get exactly how would they managers eat like
(27:55) that [Music] what I drew from where did you hear that Phil Cooper good old Bill he takes a lot of plaques like you know we we named the disease that Bill Cooper got that that many of us got was called the UFO disease right that in the UFO disease when you start out in this business and and uh you hear you know and see some stuff that really happens real real but uh you start adding on to it and and like Billy just he just got too far out he started taking stuff that I had in my files yeah and that's my favorite thing in fact
(28:35) maybe you should you know please our audience and tell them the story about oh Krill uh that oh Krill was the name of you and John Gray said had given to yeah for the people that don't know who which Krill was that uh John Grace who then worked for the air force uh wrote a treaties or something on aliens that he wanted the thought the public should know and I forget what it was all about but he didn't want to put his name so he said well can we uh whose name can we use and I said well you know the Navy
(29:02) had an incident that they supposedly contacted an alien in the late 50s and the name was Krill C or k-r-l-l-l why don't we call uh this guy Krill k-r-i-l-l and it'll be just kind of an inside joke and so John says okay and how about some initials and I said I don't know pick one he said oh H so then uh only hostage or something original original hostage yeah well that wasn't our intended it was the net was just picked out of things oh was it okay and then when Bill Cooper got a hold of his story uh he had seen that in in the
(29:38) Navy and the 08 stood for original hostage and we just picked those initials yeah and he had read that whole report when he was there yeah so about this uh flying disc that they what it there was an an alien piloted flying disc that crashed between Boulder Dam and Kingman and the last month supposedly and uh what was it able to fly away or did someone have to go pick it up supposedly there was some staged uh chemical accident or Road accident or something where people were diverted

from the dam for a day or so so that
(30:12) they could recover that oh that's what that story was behind that spilled on it well they did close I remember in the in recent months they did close the demo somebody told me that and I remember Laughlin and church writers I remember that there was an accident with with uh some Taiwanese or something but I didn't remember spill when the guy told me the story I was trying to think now where was the other crash you said there were two of them that was supposedly oh and and why do you think it is that these things uh crashed
(30:42) especially if I'm presuming these are are capable of interstellar travel or are they some type of scout ships out of a Mothership I'm just curious as to why they would be able to fly in from another star system and then crash so routinely that question is asked along you know a lot of times [Music] boy I don't know so it's so hard for me to digest this I mean I can understand well I'm not even going to start a fight so are you uh go ahead we'll learn we'll we'll start it here and we can end it up
(31:17) in the area so have you uh have you been walking back into the general UFO Community I remember it wasn't in the early 90s had they tried to ban you from the muffin convention here in Las Vegas quick move on and uh I hosted the muthon convention here in 1989 I guess it was and uh it was it was it was a real popular but uh I kind of was disinvited I couldn't speak at my own uh hosted convention and I did a little talk in all 291-92 but it cost me two good jobs so I quit talking about UFOs at all the the one job was American Trans Air was a
(32:00) captain there for uh six years and they hauled me in one day and they said you don't actually believe in flying sausage Duty and I said well yeah as a matter of fact they do and they said well we can't have anybody working here flying passengers and believe that so I lost that one then the next one I had was with orbital sciences and horrible Sciences operates cl1011 that carries the Pegasus rocket that launches payloads uh into space the I was hired as a project pilot and the senior project manager called me up one
(32:32) day and said John we applied for your clearance and I don't know what you've done but neither the U.S Air Force or NASA uh wants you on this program so that was the second chance so I kind of lie pretty low man we didn't need to pay those bills absolutely um so listen let's you've been around certainly involved ufology as long as just about anyone you've seen the personalities uh evolve unfold and even change so maybe we could go down the line here and hear some gossip and uh exactly what your thoughts are on these
(33:03) people how they started off and what their stance is now for instance let's start off with Stanton Friedman my buddy Stan obviously Stanton Friedman did a lot of good things um uh he went to bat certainly believed that the Earth is being visited by life from elsewhere uh specializes in the old-fashioned Mouton stuff here's some cross out Freedom of Information Act documents blah blah blah in recent days on the internet I've seen a lot of criticism of Friedman that uh out somewhere he won't answer questions for
(33:32) people unless they buy one of his books and and he signs it and and people have attributed some sort of a change in his personality have you seen that uh yeah I haven't talked to stand in many years I eyes and I really thought he did a good job as far as he went what turned me off to Stan Friedman is that when Bob came out and talked about working at the test site and Stanton was in town just about the time this was all going on up at my house and he didn't even make the slightest you know request to meet Bob
(34:04) or talk to him and I wanted here's the supposed Premier UFO researcher of the century and he doesn't want to talk about it so it kind of turned me off to stand okay you want to go ahead and take another call sure let's go ahead go ahead you're on UFO line yes good evening John good evening Bob is Gene up there yes well good evening good evening greetings from the really Goodman happening I'm not there but uh Billy's going to be listening to this tape shortly actually the reason we decided to do
(34:37) this show is we missed the old Billy Goodman show here in town and uh and tried to get some late night talk going while you're doing an exceptional job and I'm glad that uh you know about the last time that you spoke on the air was on The Happening as far as I know remember probably so probably so yeah yeah the old Vegas World right yeah that's right all right yeah we had an afternoon show there for us for a short time so I just wanted to give you my garden is Billy doing a UF event the scientific
(35:09) spiritual happening still still going oh he's he's still up there uh three

to five or no three to six every afternoon five days a week but wsuv out of Connecticut actually is where the uh station is at right now well Billy's a great host and he was always a good time and I people criticized him because he let anything go but you know that that provided for a fun show as he didn't pass judgment on everyone like we're just getting ready to do right now well John the last time I saw you was over there at El Dorado
(35:45) High School yeah I remember that and of course Bob came out that night and it was nice not willingly no of course not willingly but at least it was nice to see you both together so uh Merry Christmas and seasons greetings to you and everyone else all right thanks for the call say hi to Billy for us okay I will okay he'll hear this okay right bye and I did want to tell you uh recover one thing I think I told you both as uh south of town here meeting a guy on some business and this guy grew up in New Mexico which is about 60 miles north of
(36:16) Farmington about 70 years old and we get to talk and we're talking about you know something totally unrelated to really opposed and in the conversation he said that he was a a roughneck on a uh for working for El Paso natural gas and he started talking about seeing this thing land and and I said what year was that and he said 1948 he starts talking about a disc and I realized I'm talking to one of the only guys that's ever come forward that was at the crash at Aztec now you know the bills Diamond wrote the
(36:49) book price at Aztec and it's been uh thoroughly discredited by Bill Moore and all those guys but there is a lot of good information and I always believed it to be real but I never met anybody who actually saw it this guy was one of five workers at El Paso Natural Gas that we're standing there in hard Canyon when this thing crashed it was 110 diameter it had a small hole in one of the windows that they could peek in and see there was four aliens on the main deck and apparently there was some on a lower
(37:19) deck and they were there for five hours before the military got there and rounded them up and uh and swarmed the secrecy and all that and this guy's never told anybody this story in all these years he's 70 years old now but it was pretty interesting I went oh I talked to him first uh and I tried to see if maybe he'd read Bill's Diamond's book but no he hadn't so I went home and got the book and brought it back and he read it for a couple days and then I came back and interviewed him and he
(37:45) there's of course there's some maps and drawings in Bill's Diamond's book and he told me what was true and what was false there was a picture of a pole being poked through uh this hole in the window to catch the latch and open the door and he said the pole and the brook is much too big it was a thin rod that came off one of the natural gas we also also in Bill Stein's book it said helicopters came there and he said when I was there there was no helicopters but he said it was uh it was really an interesting experience that he
(38:17) never told anybody about it and it was kind of neat to uh to meet the guy how is that covered up I mean selling 100 feet in diameter I imagine people saw that inbound so on and so forth so they must have had a cover story it was such a remote area I mean nobody there weren't that many people around there this was just you know an Aztec New Mexico so yeah I'm not familiar with where that is well it's east of Farmington and it's uh it's a very desolate area Farmington if I remember is almost on the edge of the
(38:44) state the police chief was one of the guys that uh was there uh and they briefed him on secrecy he was later given a job in Long Beach as a police uh Chief there for 20 years then moved back to Farmington and uh Goldstein interviewed him and he just refused to talk about you know does he refused to to discuss the incident said that brings to mind uh [Music] you okay what are your your current views on that do you still think that there is an underground base and also yeah you know what story I'm referring to absolutely
(39:29) the guy that got out of there and the Vats of amber colored liquids why you know that there have been plenty of people gone up there snooping around oh yeah and there's no signs there saying secret underground days and the Indians of course not but I mean they've you know covered the mountains these guys were UFO's enthusiasts like yourself and they were you know it would have been more than happy to more than happy to find anything I mean they didn't find any event any even ground disturbance did you see any of this any
(39:59) of the work that Jim de la Dosa did no well he he spent six weeks there with real sensitive uh monitors recording monitors and they monitor all kinds of uh Power and stuff being generated around there you know it's been electromagnetic emissions

it does yeah and it's been four or five years since they talked about this so I don't have a lot of this stuff over off the dock of my hand but uh it was a it was a very good videotape it's fun [Music] but I think he called it section d ude what about uh the guy from Los
(40:44) Alamos whose name I can't remember either my memory is so fantastic the guy we both know oh yeah yeah I think we better not mention his game because he works so what made his name Tom we called him two fun or something yeah I know wasn't he a preacher yeah yeah because you started insulting Jesus and everything and then uh yeah okay John you you brought up Bill Moore before and uh Bill Moore always seems to take it personally upon himself uh even if it's transparent to try and discredit anything that he is not sponsored or
(41:23) anything he has not approved yet I remember George Knapp and I met with him a few years ago when he came up here and and uh Moore said that he didn't believe Bob was our story but he had some information that actually there were there was an alien settlement out in central Nevada before the white man moves West and we made jokes about how surprised the Pioneers must have been when I came right over there like a Twilight Zone episode and there was a flying disc space there but what do you think Bill Moore is up to Why do you
(41:52) think he feels compelled to try and squelch anything that that surfaces that he is not sponsored I think it goes back to the cover-up where everybody thinks the Air Force is in charge they're not it was the Navy the Navy's always been in charge of the uh cover-up and they use the Air Force as a Whipping Boy now the air force uh when Bill Moore got hooked up with was afosi uh the airport Air Force officer's special investigations and what they were trying about they themselves want to know what was going on uh so they enlisted Bill to
(42:23) pass around you know some good information some disinformation to Fair it out uh the truth and I think he got mixed up with AFA afosi and they don't know what's going on what was the the disinformation that bill Moore spurred around uh he claims to have fabricated the the bandwidth deal and Dolce and there's a bunch of others too fabricated the benowitz deal yeah he was the one that supposedly fed then which the information on Dolce okay so um as we March down the UFO gossip list now what do you think of Linda Howe
(42:58) I thought I think a strange Harvest still stands when did it came out in 1979 or 1980 that was very good and it was a great film and it was down to earth and and lately she's been called every name in the book because she has gotten UFO researchers syndrome and spread out and now she speaks her mind on crop circles and numerous other areas is pretty much a correspondent do you think that that Linda has degenerated or deteriorated his incredible info I haven't heard what Linda said in the past year a big deal about an asteroid
(43:29) running into the Earth yeah I remember it that was about four because that's when it started calling her chicken yeah on the internet I read uh that she was on the some other radio show here in town and uh played an audio tape of a crowd of people running from Bigfoot you know it happened oh that's right she's on uh it's shown in other uh our adult shows I don't know I've never heard it but I just see people talking about it on the internet and and uh yeah I haven't heard but but strange Harvest
(43:57) both the book and the uh NASCAR and and criticized and this guy comes on Bill Cooper Bernie says I can't vouch for all of us near says but I can vouch for 50 of what he says because I saw it in the Navy so I got invited Bill up and I talked to him he said yeah I worked in an office of Pearl Harbor and he said I was uh the uh you know the briefing team get out the projector now later he became part of the briefing game but all he was was the guy that brought the projector and he said he had keys to the safe and he recruit at night and read
(44:34) these documents and that's you know where he originally came up with one of his stuff so we talked for a while and unfortunately I think I contributed his downfall because I gave him he's with all my research stuff that I had collected and pretty soon he may be a month or two later not only did he Dodge the uh 50 of what I said he could now bad for a hundred and fifty percent and it just went from there it just got so far out that um it was ridiculous but Bill Cooper did start out and he honestly did see those papers in the
(45:08) Navy well I if I remember correctly amongst those favors he said he saw documents about this that the military was actually involved in the Kennedy assassination now they may have better got involved but I find it difficult to believe that there would be any hard copy alluding to that laying around that a chief petty officer could get in and read don't you find that hard to believe uh

yeah but as he told me the story he had the keys to save for all these shoes was locked up and I think I think the Kennedy thing was one of the things that
(45:36) we vouched for before all this addressed the information got mixed open and I am sitting here you guys are never this nice out there anymore listen we got to talk about drugs so the Uber was the assistant to the commander of the Pacific Fleet do I remember that actually now it's been 60 years since I talk about it it's the first time Cooper said anything or the only thing I ever heard him say directly was at your house John and and uh the only thing he had claimed at that time was that he was on a ship and saw a UFO
(46:15) come out of the water tumbling into the sky and that and that was it and later it came from like background of the water and two years later that object had become the size of two aircraft carriers right but uh [Music] Hospitality when he wrote that book he wrote two things that were really dishonest he said uh John private that he admitted to me that two of his sources had turned out to be bogus and I said you know who would those two sources be uh Jim and he said well one is Booth Bill Cooper I said Bill Cooper
(47:14) was never my source I was his Source you know and the other one was uh he said benoits and I said I've never thought that balance is wrong I always thought that balance was correct about the stuffies and he talked about it so he promised to retracted his next next book he never did [Music] so what do you think of the uh the push nowadays you know they had the uh the budget office investigating the Roswell crash and it seems to me that that the opponent for the Roswell crash are a lot more vociferous nowadays now that Jeffy
(47:48) Marcella said they walk on his grave they act like he's an idiot they're more on it he wouldn't have known what was going on I'm specifically speaking of the project Mogul balloon uh story uh don't you think that they're going way overboard and trying to discredit Jesse Marcel's in intelligence yeah but the thing is and and the year I go maybe another prediction I don't think we're ever gonna know the truth I I don't think it's in the cards ever uh every once in a while here uh like I just
(48:15) heard the other day oh yeah April April is going to be it they're going to start releasing information I don't think that they ever intend to tell anybody because the problem is the first little bit of information will lead to more and then people are going to want to know more and more and they can't tell I'm on the whole story and and why is that what do you think that the top two or three determining factors are I mean I I think we're Beyond uh the point where they think people will go crazy I think that
(48:42) there's nothing to do that it has to do with religion and the fact is that religion is the fabric that holds Society together people fear of God fear that if you do something bad there will be retribution um if you were to uh remove this religious Factor uh they think that society would start breathing down um if the first thing comes out like oh yes we we uh we would have responses from somewhere but we don't know where people are going to start you know questioning whether uh God is real that kind of
(49:18) thing and I think that's what they don't want to happen I don't know if that if that would be the case with Dad maybe the aliens too I always contended ufology and theology to ride head on and the bottom line is that no one can be elected president of the United States if they say they don't believe in the stereotypical Christian judeo God is President God we trust on our money and so you remember when that was put on no no 1962.
(49:46) oh really yeah but I wasn't old enough to have any money out there is that right what did you say oh it said silver certificate right and uh so anyway I think that's the battle no one wants to wage I mean there's no sense in this I think the real question is when we see someone like George Bush or Bill Clinton I don't know who knows what when we see them go to church on television I'm curious if that's just for show and they're playing to the Bible though yeah it would be really interesting [Music]
(50:26) just sent it to me and I got it for Christmas and this was taken in September of 1965. and these are the two a twelve Enders and this is the yf-12 hanger and this was the supported that they had f-11 days and f104s chasing me uh they are playing between the test program these are the U2's hangers right here and that's maintenance and this is the old Doom Lake control tower see that little bitty thing right there and that was the fire station right next to him those are the barracks and back further that way uh they call Baja and that's
(50:57) where they kept the uh the eight um a12s I mean I forget what's the difference between the ys12 and the SR-71 it wasn't what it was the nose right yeah

the n12 was the was the CIA version and that was a single place one and then when the Air Force when Zach found out that the CIA was foreign [Music] [Music] [Music] [Music] hi uh I called in last week and I just heard you guys talking about the yf-12 and SR-71 differences one thing I'd like to point out on the air that I've never heard anyone really discuss a lot about
(52:00) these aircraft is that the yf-12a carried four fused long-range nuclear tip missiles and uh the the Air Force was constantly trying to justify this in front of Congress and my theory has always been that this aircraft was specifically designed to intercept UFOs at high altitudes and the reason for this is because of the pulse Doppler radar system that that aircraft carriages which would give a false signature to any aircraft that is withstanding to fire missile cap and this was something that was totally unnecessary going up against Soviet
(52:41) aircraft at the time because none of the Soviet aircraft at the time had radar warning detectors they could tell where a plane was radar scanning it from it's interesting I never heard that one before and the ys12a also carried cameras which were mounted below the engines on either side which were designed for air-to-air photography because the cameras pointed forward and rear worked whereas the Spy version had cameras mounted where the missiles were pointing downward to take photographs of land right and it's always been my
(53:18) theory that the idea was to intercept the UFOs because this thing could travel at Mach 3 and UFOs to generally have versus speed up to mark IV from a sudden stop and this was our best hope at the time of using something to do this because there was just nothing else available to even attempt it what would make you think that UFOs would be vulnerable to missile attacks well if you used a pull stop or radar system and you were scanning them they wouldn't be able to tell exactly where you were scanning them from and if you fired a
(53:52) missile because the missile was going at Mach 4 which it had to because the plane was traveling at Mach 3. you're assuming that the the crafts are flying conventionally right if they're just hovering there there was it would be a stroke of luck this is what they would be hoping for you've got to realize that this was the best they could do [Music] one mounted under each engine okay and they also had uh radiation sneakers mounted with them and the different things you could detect anomalies huh let me check that out and the uh the
(54:32) cameras were mounted below the engines on Parts when it's a one camera facing forward one facing rearward well I'll check that out all right I also wanted to ask Bob real quick about the electromagnetic pulse effect from the disc press um are these is this done with a separate generator unit inside the craft or is it all connected to the main power unit or it's all connected to the main power unit the uh the amplifier the amplifiers are pulsed uh 10 microseconds apart and that's if you're referring to the pulse I mean the
(55:11) reach turned on sequentially right so that's not a separate self-trance unit that can be removed from the craft it's it's part of the way the craft works right and that's just a side effect of the way the craft works exactly I see um I also have information concerning a new Warhead that the United States Air Force is putting on the new Advanced cruise missile which is an electromagnetic pulse Warhead this came out this does it using an electromagnetic coil and a small explosive charge it's
(55:47) just enough to destroy the missile the idea is that this thing will produce such a massive electromagnetic pulse that it would you know be used against uh headquarters installations uh Financial targets where you want to disrupt money systems how howling how on Earth do they achieve that I don't know but it's been published in a magazine here it is here's the article which magazine is it in it's in an issue from uh July August 1993 Journal of military Aviation volume two number four and uh this has a special thing in here
(56:22) on the upgrades on The B-52s and if there's a recent addiction to the alcm is the so-called non-winkle or disabling Warheads which are well suited for regional or low intensity conflicts the Air Force has disclosed the development of a non-nuclear electromagnetic pulse generator an EMT burst is generated by creating a magnetic field in a coil and then compressing it via conventional explosives okay well thank you for the info we have to add you our phone line for the night but thanks for the call and give us a call another time we'd
(56:53) like to thank everybody for listening and thank Our Guest John learjan I hope you come join us again it sure will and uh we'd like to wish everybody a Merry Christmas and we'll see you next time thanks we will [Music] thank you please

bob lazar: ? area 51 & flying saucers IV (LA1,000 EDITION) [jeremy kenyon lockyer corbell] (2018) - YouTube

Transcript:
(00:02) foreign [Music] thanks for having me back again today wow um I just got out of editing a movie come here to join you guys and had to whip together this presentation current and modern because so much of this footage I've never been able to show anybody this is the case of Bob Lazar who in this audience is unfamiliar with the claims of Bob Lazar don't be shy raise your hands I need to know cool that's going to change all right so uh this case is really close to my heart because it is the reason most likely that I got interested in UFOs
(01:01) at all this is before I started looking into the subject it was before I even knew anything about the subject probably like most of you I heard Bob lazar's claims and that's what inspired me to try to find out is he telling the truth the central question about Bob Lazar and his story if he's telling the truth it's huge it's game changing but there's that nagging question do you believe babylazar so I'm not going to try to convince you one way or the other I'm going to just show you my journey in trying to get
(01:40) closer to that truth for those of you that I've never met I'm an investigative filmmaker self-proclaimed I I make films and I investigate things I think anybody with an iPhone these days can be an investigative filmmaker eventually have to put the the film out the movies out and I've been luckily been able to do that recently it just kind of started after all these years I can put this footage out there will probably be a lot of questions after the presentation about Bob Lazar so I will leave some room for
(02:13) that for those of you that want to talk about that because it's a complex case but I have to take you all the way back to 1989 in order to start this story so again my curiosity was weaponized when I heard Bob's claims he was on the radio with my mentor in journalism George Knapp and I heard them talking about the propulsion system that Bob said he back engineered at a sub base of Area 51 called S4 nobody had ever heard about S4 it was not a subject of conversation nobody even knew about the area that he
(02:52) was that he was claiming this was going on totally new information but the part that stuck with me was the way he described propulsion that that was my interest typically if you want to make something move forward you have to have something pushing back it's really simple but the way he described this propulsion system was completely counter-intuitive his claim was that these non-terrestrial craft these flying saucers that he saw and had a chance to try to work on one of the propulsion systems worked by generating gravity waves
(03:37) and if you can generate a gravity wave and you can distort or amplify a gravity wave you can distort space time space time and gravity there they they all operate together so if you affect one you affect the others basic physics the way that he described it the best way I can imagine it is the way exactly how he described it put a bowling ball on a mattress and push your fist down on the mattress and the bowling ball Will Roll towards your fist right so it's a completely different type of propulsion it's like as if
(04:12) you're falling into where you're wanting to go you're not pushing anything out so that was just crazy that was a wild concept to me his claims went everywhere what bablazar claimed whether you believe his claims or not something that is undeniable is the effect that his words had on the world No Words are Weapons they're used as Weapons propaganda that's how things work his words were weapons they sliced through the imagination of the American public and then the international public this was an omni magazine you might
(04:56) recognize one of the most iconic pictures of Bob Lazar with his geeky coke bottle glasses and he said that he worked on alien propulsion for the United States military but in 30 years now he has rarely made himself available he doesn't talk about it wants to get on with his life and getting to know Bob there's a lot of really good reasons for that but most people that's the image in their mind that they have a Bob Lazar however it's a new day Bob is again talking and he's talking to me and he's allowing
(05:34) me to finally put his story in documentary film form after 30 years this is

a guy that has never profited off of his UFO celebrity he never sought it he doesn't like the attention but he simply is telling a story and it's up to you whether or not you believe him he just wants to make sure at least you know his story and then it's up to you there's more to that but we have to go back all the way to how this started so I'm taking you way back the world's best known secret base I love that
(06:14) the reason you know about Area 51 is because of Bob Lazar it's because of Bob Lazar George Knapp and a man named John Lear you probably would have found out about it anyway our government has now finally acknowledged Area 51 but really the reason that it's in your mind anybody's mind why it's become a meme in their shot glasses and hot sauces is because it became this household name for secrecy for UFOs and that is directly because of the reporting of George Knapp on what John Lear was saying and what Bob Lazar was
(06:52) saying so that's kind of crazy so I'm gonna take you all the way back to the first time that Bob Lazar was ever mentioned publicly and they didn't even say his name they referenced a guy so you're going to see in this video George Knapp on a little tiny show that he had that nobody watched it was at a terrible time before he was this big time investigative news reporter right and John Lear is his guest John Lear is the Godfather of conspiracy I've known John for a long time and he came out and started telling
(07:29) George all this wild stuff and the ratings went through the roof people wanted to know is what John's saying true so this is the first time babazar's name was was not said where he was referenced so check it out it's kind of rare footage [Music] oh and welcome once again to on the record if you joined us last week you heard some startling Revelations about UFOs and the government cover-up about UFOs from noted UFO researcher John Lear are you uh you recently decided to take it upon yourself to try to get to the
(08:13) bottom of of this major cover-up would you say as a cover-up he went up to groom Lake which you say is like a center of this UFO activity what happened is I was approached by a government theoretical physicist employed by the government who works on the saucers up at Groom Lake he has seen the aliens he is tired of the cover-up uh he knows what a rip-off it is of how much how many billions of dollars we're wasting on trying to develop develop technology that's already been developed and he told me when and where to stand
(08:44) and we drove up there we were actually there on three occasions I mean the fact fact that that the military doesn't want you around the top secret base doesn't mean there's flying saucers there uh no it doesn't except we had just seen one uh the theoretical physicist that was with us that uh told us uh where to stand and you know what time to look uh the next day he was told that instead of driving to work to drive to a certain place he was debriefed with a gun in his ear and asked why you know he told this
(09:15) and told us that and well he's worked in what capacity with him up there theoretical physicist but I mean what did he do around the saucers or whatever all I can tell you is that when you find out the truth a month from now a year from now two years from now you'll look back and you'll say my God the son of a gun was right or maybe 30 years from now he must have said yeah it's so great you know you see George now talking there and you know he had never covered a UFO story he was covering mob stories because he knew
(09:46) some of the mob guys and he was you could see in his face I mean I love seeing that the first time he engages this topic with John Lear you know he's skeptical real skeptical and he should be it was wild then it's wild now what's what's being claimed but but John had credibility with the news station John Lear had credibility because he brought forward some photographs it's of Area 51 at Lake level you will never see photos like this again it was from 1977 where the security was a chain link and I told you
(10:20) that story yesterday how he snuck out the role of film it's pretty funny it's a bar story so John had credibility because he brought these photos forward and they actually identified a stealth fighter and a MIG fighter Russian Mig that was being I guess you'd say back engineered as well so he had really brought the new station some interesting information and uh John came to George's Mentor in journalism a man named Ned day and he said here's all the UFO stuff there's a secret program error 51 and their
(10:53) reverse engineering alien spacecraft and Ned day is like nope I would have heard about it no chance that's true John and then and then there's George Knapp kind of new at the station he said hey I'll look at those documents boy did he not know that would completely alter his public identity for the rest of his life you

know so what I like about this photo you got Area 51 up there and you have that little strip of tan to the right and that is Papoose lake that is not a place that was known or is known as having
(11:31) anything happen there's no Runway there really there should be nothing happening there especially at that time but that's where Bob said he worked he did not work at area 51. he worked at what he claims it was called S4 a sub base of Area 51 about 15 to 17 miles south on that little tan strip there called Papoose Lake so that's the first thing to know is that he's claiming to not have worked at Area 51 he's claiming to have worked near error 51 on the same complex but I want to still focus on John here because
(12:08) I spent a lot of time with John I did film about seven years of his life I am sure that film will come out to date I put out a 20 minute short film first episode on John uh the whole series will be called Immaculate deception when it gets made it's all filmed when it gets cut and put out but I'll just show you a little trailer for that because John really is what he was my gateway drug to ufology yeah you listen to John talk for a little while and you start questioning everything about the universe so
(12:46) I'll show you the little trailer because I make films so I figure they speak for me sometimes [Music] hello and welcome to a special edition of on the record in the more than five years since we've been hosting these programs No guest has inspired such a widespread and enduring audience response as has John Lear son of the famed aviation pioneer and a world-class pilot in his own right as many of you may know though Lear the sun is best known for his research at the UFOs a phenomenon described by some as a
(13:34) worldwide hoax described by others as the most important issue of our time [Applause] because it just happened it's written the exact second thing we're gonna die I have talked to the highest people and I know the truth [Music] Earth is like Alice in Wonderland things get curious here and carriers [Music] all right [Applause]
(14:55) Dreamland hearing land 515 16 000 feet you certainly couldn't figure In Your Wildest Dreams it would be the most important thing when you can't see the objective right so John Lear is intimately connected to the Bob Lazar story and the reason he's intimately connected the babazar stories because I've talked with a lot of people that knew Bob Lazar before he became public about before he even worked allegedly in the program and man he would say things like I feel bad for John you know it comes from a prominent
(15:34) family the Learjet family and he believes in UFOs he like felt bad for him so that was like Bob's standpoint on UFOs way before he ever found himself in the situation that he says he did so staying back here in 1989 Bob comes forward he says I worked on reverse engineering a propulsion system he they did not succeed in reverse engineering it he said it was an impossible task it was like you know dropping a iPhone out into the Stone Age and saying make one yeah he said it was absolutely impossible and there was such control
(16:16) and there was such a compartmentalization in these programs he didn't even really know what he was supposed to be working on until he went a few times and in fact this is what he says he says when I when I saw the craft for the first time he said I started kind of chuckling inside because I thought that's what all those UFO nuts were seeing in the skies and thinking they were extraterrestrial they were ours you know so that was his thought when he first saw the craft that's how kind of skeptical or
(16:50) analytical Bob was he wouldn't take anything on face value still doesn't you know one of the most um kind of interesting Minds that I that I've met so he did a lot to try to prove to you his story he did probably more than you realize to try to prove to you his story he says I've tried to prove my story I can't under the scientific method I can't prove to you be on a shadow of a doubt that what I'm saying is true so you're obligated not to believe me and nowadays he goes and if you don't
(17:24) believe me pass it on because it's caused um you only see it from from a personal perspective you can only really see it from personal perspective how it has negatively influenced his life what he's been through because of telling this story which supposedly in a lot of people's mind isn't real yet there have been some real world consequences let me just get an idea from everybody's you know I'd really actually like to know how we're divided in this group you know who absolutely believes Bob Lazar the absolutes who's
(18:02) there okay all right who maybe maybe not 50 where's the fifty percent of

undecided okay and then how do people absolutely lying cockamami [__] where are you come on it's okay oh come on you're hiding don't worry I'll get you after right okay so that's a that's about average um we all want to believe Bob Lazar how can you not you know how cool would that be so we all want to believe him it doesn't mean it's true but it also doesn't mean that it's false so we're kind of stuck with that a lot
(18:45) of you here believe him you raised your hand the majority of people maybe because you want to believe him we don't have all the evidence so you're inclined to believe him as you could tell from the news reports that George did George dug deep and that time period was so bizarre for the people that lived it they were followed by people George had six other witnesses that were coming off of the base to corroborate Bob lazar's story or parts of Bob Lazar story all six of them declined to ever talk with
(19:21) him again after their paid a visit and told that they would be harmed and we're talking about George Napier let's talk about people that do talk to him and and the stories of these people that that couldn't tell their story to him afterwards it's pretty incredible but other people have come forward and things have come to light over the last 30 years and let's look at those things and let's see if they provide proof or if they take away from Bob's story so babazar began to talk in 1989 and
(19:50) just to give you another little clip so you can judge for yourself if what you think he was saying back then could be true or not true here's another little clip [Music] all right well we take it from the top then I mean I mean okay well go ahead how you got involved with this program I had sent resumes to several National Labs around the country uh I got a response from a couple of them they said we might have something in the near future you would be very interested in you know you say you work on little projects I said yeah I have a particle
(20:31) accelerator in my master bedroom and and things of that sort and uh some time went by and they called me back in they said there was a as senior staff physicist that was leaving this organization and they basically interviewed me for that job I don't know many people with particle accelerators in their master bedrooms and I know a lot of nerds I'll tell you that you know and um I always found that really interesting I know for a fact that bubbles are is highly intelligent so he's got that going for him and
(21:09) that's nice I can tell for sure that he's smart but I too was skeptical I was probably like most of you that raised your hand I was like yes I believe because I want to it makes sense but that's about all that we had um until you really speak with someone you can easily uh just dismiss them if you're just talking about a name you don't know them you don't know their family you don't know what they've been through you can't even imagine begin to imagine none of us can so we're all stuck with that because Bob
(21:47) really doesn't make himself available to get to know him so I was skeptical and I don't know I I talked with George and George obviously encouraged me to talk with Bob and I'm like well yeah who wouldn't want to talk with Bob of course I want to talk to him so George made a point you gotta talk with Bob and you gotta tell this story and you got to do it yourself to really get to the bottom of it he's like but you got to be the luckiest guy on the planet for that to happen and he kind of explains that to
(22:15) me here you have to cover the story of Bob Lazar and the only way to do that is to talk to Bob and I don't know if it'll talk to you or not but you need to try well it was it's all going to be circumstance for you is the moment that you approach him the mood that he's in what else is going on in his life at the time you might hit the jackpot and get him at exactly the right time and the the universe is aligned and he's willing to talk about it but you'd have to be awfully lucky because in general Bob
(22:44) doesn't like to talk about it I think he's very happy in his life he's happy to have left the UFO stuff behind he misses his friends he misses John Lear he misses Gene Huff maybe even me some extent but he doesn't miss the UFO topic and he doesn't miss talking about it because ultimately it's disturbing these are disturbing issues they go to the heart of who we are as people as human beings the nature of reality itself is this a computer simulation are we all the product of an alien video
(23:17) game or some multi-dimensional movie drive-in movie theater production or something big questions disturbing answers and Bob has never been comfortable in talking about never so that was about as encouraging as he can get you're never

going to get him you have to be the luckiest guy on the planet he doesn't like to talk about it because it's disturbing it messed up his life is disturbing to everybody good luck right uh I'm pretty damn lucky and the first time that I actually met Bob like any of you really interested I was
(24:00) like okay I want to ask him these questions directly I don't want to look them in the eye and I want to see how he responds I happen to have a camera you know and he happened to let me turn it on and it had been a long time since he let somebody turn the camera on right so I thought oh man this is amazing let me see what he has to say so I'll show you a little clip of that first time I didn't know Bob at that time I didn't know him he was not a friend of mine he's just I accidentally got to be in
(24:33) the same place as him and had the camera and got to ask him questions and I wanted to give the public just a glimpse so I put this out it's it's in a free 20-minute documentary just a few minutes above so you could kind of be updated this was a few years ago but he talked about it in a different way and that's what I found so interesting it wasn't the Bob Lazar that I saw in all those videos from 25 years ago it was five years ago when I filmed this it was a different Bob you know it's like something had changed
(25:07) and you'll see the way he talks about it so I'm going to show you that little clip just so you get a update up to five years ago you know look you can nitpick anything you know to the point where you find inconsistencies and then you can add those inconsistencies up and say you know what this can't be true but the thing is you can do that with factual events and this was a factual event where I mean where the project is now where the parts are now you know this is all 20 years ago so I know there are alien craft here
(25:45) from another planet I now I saw other ones but I was inside one I know it was not made on Earth I know it was maybe the materials that we cannot fabricate we cannot duplicate and we've never been able to I know it uses a power source that's so Advanced it we could only dream of something along those lines and the energy density on it is phenomenal it's nothing that to I would ever expect to see um I know that you know this is done in the highest levels of security and you know that they use all kinds of methods
(26:20) to keep it quiet from disinformation to uh I mean some exotic ways of just hiding things like I said the installation itself was buried in the side of a mountain and you know uh I also know that there's lots of nonsense information that has gone around and whether it was started by the Navy or military or whoever's at the absolute bottom you know of the project uh and I I truly suspect that be the case because look disinformation is the most powerful you know way to distort facts you just throw a bunch of useless
(26:58) stuff out there and you know they just take the real facts along with the nonsense and bundle it together and say well this is just impossible and you know there your security is maintained but uh I also know that at some point they've examined or had bodies of alien creatures somewhere so I know that stuff for a fact and that's the bottom line pretty cool to hear him talk about it 25 years after he said it the first time uh just so I get an idea who hasn't seen that footage of mine anybody hasn't seen
(27:35) it okay so you're seeing it for the first time today I'm I'm glad I mean Isn't that cool aren't you stoked on that it's like man you know it's like Elvis meets Bigfoot you can never find a Marie's dad you know there's always a rumor he's dead and all of a sudden I got him on camera I have proof problems are exists and not only that but he's not backing down he's doubling down he hasn't changed his story he's telling you now the same thing he was telling you then I I find that really
(28:06) interesting and it's different when you can see someone has aged and they're a little bit more confident they're not like a geeky 20 year old kid now there's the geeky adult but they've changed and so that little bit of footage was the first step the first taste I got of [__] this I'm going to find out the truth I'm going to do my best because this story is too big it's too important and look I've already got him once on camera maybe down the line five years later I might be able to do some more
(28:37) filming with him right and really I'm doing this to bring it to you because you're seeing it just like I'm seeing it you now have three more minutes in which to judge Bob Lazar by right and that's all I was trying to do was get more data into the stream so we can make a more educated opinion on if history is true or not the Crux of his story is about a place called S4 site 4.

(29:06) this is a place that nobody had ever heard of there is not one mention in the public realm not even private circles I had no one around that time had ever even heard about it yet things were different back then and George Knapp called Nellis Air Force Base and they admitted that they had an S4 if not multiple S4s wouldn't tell them what they did there now they just completely deny it right we thought but George got confirmation there was an S4 so Bob somehow knew things he somehow knew that on Wednesdays at 8 pm over this tiny little lake bed that's not
(29:47) even part of Area 51 that there would be a test flight of something that looks identical to a flying saucer and he took people out there on a variety of occasions and they filmed it right how did he know that that's probably a real guarded secret wouldn't you think you know the existence of a of a secret little sub bass of Area 51 you figure out everybody would know that so I'm already kind of intrigued that he knew things that really he shouldn't know if he didn't work out there S4 is kind of the key and I'll show you
(30:16) little clips about that you've brought S4 into the Forefront it's been confirmed to you directly from the base maybe 25 years ago yeah S4 has been confirmed to me directly twice one from an employee of EG and G security was daunting and then somebody else who's confirmed to me S4 that that's exactly how it looks the story though is that there was a facility like that at Papoose there is a facility like that at Papoose flying discs not this UFO term that's created to make it ambiguous flying discs
(30:55) saucers that were piloted by non-humans they were not ours and this was confirmed by both of my sources that this technology is not ours Bob lazar's story was confirmed to me by those two same sources one saying that when he was working in secret capacity at White Sands in 1989 that it was common knowledge at the base about Bob's story and I said well what was the believability with the general believability and he said everybody knew that what was going on out there were with these types of projects and they all believed Bob's
(31:37) story and were they following it as it's unfolding 1989 that was the impression that I got was that it was big news if you ever see it if it's soundless noiseless it's hovering anti-gravidic or appearing to be away it is not ours I said not ours like America and he says not ours like humans so 28 is about 25 years after Bob's story and I started digging into it and started pulling up and calling up a bunch of the people who have advised my work in nanotechnology and Aerospace stuff and in investigations in general
(32:14) um the highest ranking military individual I've ever met has been someone that has advised my work for a while was in position to know and I've had multiple confirmations that Bob Lazar is telling the truth and the S4 as he described it existed exactly like he described it and for the purpose that he described it so I've got all these independent personal confirmations that there's a a grain of Truth to Bob lazar's story it was driving me crazy so I sat down with George and went through with him showed him he knows who some of
(32:45) you know the people that advise my work are he's satisfied with it I'm satisfied with it so we're getting you know direct testimony from people not for public consumption not for me to go on radio shows and talk about it not to put them in movies but just to inform my work people that care about me and my work too so it really started to Intrigue me because now all of a sudden it's not just one person saying this thing but 25 years later I'm getting independent personal confirmation of the facilities
(33:13) Bob said he worked at that wasn't happening 25 years ago so that was pretty cool everybody's focused on Area 51 we know the great things that were achieved at area 51. it's a shell game it's a sleight of hand we're talking about S4 right and we're talking about the acknowledgment of a secret base called S4 that has special projects there extraterrestrial projects well uh I I got confirmation from Nellis Air Force Base I called their public information office this is back in 1989 we're working on this do you have a
(33:49) place called S4 on the Nellis range and they said yes can you tell me where it is no do you have more than one yes can you tell me what goes on there no it's classified so we know an S4 exists we know classified work goes on there we know that they're not going to tell us any more about it no one had talked about a place called S4 in public before Bob lists are there's no printed records of it it didn't appear in a newspaper story he's the one that told it how did he know how did he know that those test
(34:20) flights were going to take place three weeks in a row there's been no news stories not in in UFO circles about test flights of something that looks like a

flying saucer over Papu's Lake that happened three weeks in a row they took people out there I've interviewed all the witnesses who were there and they've got it on videotape how did he know well maybe somebody told them you how how ridiculous that is maybe somebody told him but it's important that Bob didn't go to MIT how ridiculous
(34:49) is that here's videotape of a flying saucer flying over a secret base the government has never acknowledged and the important point of this is Bob did go to MIT it's ridiculous how about the main you're you're sort of losing burying the headline the headline is flying saucers at a secret base there they are on video and we're quibbling about whether he has a degree or not George Knapp calls up Nellis Air Force Base do you have an S4 and they say yes yeah we hadn't gone with our UFO stories
(35:23) they weren't on the only thing that had been on the air was John Lear on on the record and then this Dennis interview the interview with Dennis so I wasn't quite the UFO guy that I am now and um and actually the guy I talked to the public information officer at Nellis is somebody that I knew we called and you said does S4 exist I could try I mean I could certainly ask them whether they'd still answer or not I don't know you'll recall 25 years ago they would answer questions about UFOs you know they they
(35:55) might keep you on the phone long enough to figure out if you're crazy or not but at least they'd talk to you about it they don't talk to you at all they they won't have that conversation with you whether they'd answer that S4 question or not I don't know we could try we're calling Nellis Air Force Base a public affairs office and that's who I called 25 years ago we'll see if they will confirm for us that they have an S4 out there or where I suspect we're going to travel but we'll give it
(36:22) a try hi my name is George Knapp I work with Channel 8 news and I had a question I'm not sure if you can answer it or who might be able to answer it I'm trying to figure out if there is a if you can confirm that there is somewhere in the Nellis range a place called S4 a designated S4 a facility yes [Music] okay [Laughter] I'm going to pass you over to you in the media section thank you hi Airman my name is George Knapp with Channel 8.
(37:22) um I was calling to see if and I don't know if you can tell me this or not but whether you have something on the Nellis range called S4 a site or a facility or a location designated S4 yep uh I have no idea um I can try to get an air for you um that that'd be awesome but um uh this number here right for a Zone on the Range called S4 yeah I'll just let you know that I've been told some years ago that there was there is a place called S4 they wouldn't tell me where it was but in fact you might have more than one like S4 meaning site
(38:14) for um right I I'd want to know what if it exists uh we had been told that there had been classified work going on out there uh one one version of the story is that there was a facility near Papu's dry lake that was called S4 there's another version of the story that you've got a place at Tonopah test range and I just didn't know if you can confirm one way or another anytime there's no deadline [Applause] I appreciate it Airman thank you very much yeah so um you know it's just kind of
(39:09) interesting he already confirmed it decades ago we were just wondering what the climate of the situation was now and I could like tell you this story but it's much more fun to show it to you I make films anyway right so I can talk about it by showing you how these things go there's a little bit of humor in it so we waited for a call back and we weren't very hopeful we didn't think they were going to call us back back in the day uh George knew the the public affairs guy this time we don't know who we're talking with the
(39:37) kid didn't even sound like he knew much of the base you know so we don't know what kind of information we're going to get they called right back and left a message that's this it was the next morning yesterday you called to get Nellis Air Force Base to confirm S4's a physical location the one by the papoose lake that is the one we're interested in and they and you've called before back before a lot of this was secret and you got direct confirmation yes that facility exists we can't tell you
(40:06) anything more about it so we get a guy on there yesterday and he's like I have to go ask people that would know and you get a voicemail back the same day right it was yesterday and let's hear what the voicemail is she requested earlier today I spoke with the Nevada assessment training range headquarters and they let me know that um on none of their Maps and have a location that the site for as a designation um so that's what I can tell you right now so if you have other than

that have a good day so a couple things
(40:55) um one is that 25 years ago they did confirm not only they have won they had they had more than one S4 they wouldn't tell me where it was uh they wouldn't tell me what goes on there but they said it is a real place and I've got that from other people who worked out there not just Lazar uh secondly it was the parsing of the language is what I thought was interesting we talked to the people at the range and they don't find it on any map well it's not going to be on any map it wouldn't be on any map
(41:20) even if it was uh even if existed and so just saying that it it's not on any map is not the same as saying it doesn't exist it's a very specific kind of Truth it's a new day and age dealing with public information officers and not only for the Air Force but every Federal agency is that they are where you go for information and you never get to speak unless you get their permission you never get to speak beyond that it's like fishing as a journalist you want to see where the level of secrecy
(41:51) is and why S4 is important is because S4 is linked to all of these special projects that we've been looking into dealing with the Extraterrestrial presence yeah being able to confirm that there really was an S4 which is where Bob Lazar City worked goes a long way toward establishing that his story was true because it had never appeared in any newspaper it wasn't on any map that's what he claimed so when Nellis told me yeah we've got an S4 but we're not going to tell you where it is that was a
(42:17) really big deal I I you know I don't necessarily think they're lying to me maybe they this guy doesn't know maybe they don't call it S4 anymore maybe after all that stuff with Lazar came out they changed the name uh who knows but I just thought it was really interesting that the parsing of the language to say we don't see it on the new map yes that's just a fun little look into one of the ways that we can go about getting nothing from our government about these facilities um but you know it's kind of funny and
(42:48) you do learn a lot along the way it is interesting the way uh questions are answered or sometimes very telling and the guy was kind of chuckling actually when he had uh you know said we don't have any you know maps with that designation on it yeah he knew it was a BS answer to get around having to answer um so basically there's a lot of controversy but what is the proof when it comes to lazar's claims after all this time you know what stands the test of time I'm not going to go over every finite detail on what people think is or
(43:21) is not true about the Lazar story there are you know a few interesting things um this is just a copy of it but one of the things I went through is this box of archives and photographs and you know Bob would just I could pull any box out of his garage and he did not you know have anything to hide he was just like go for it look through it all you know but this was like a pay stub he got people say well why is it for so little and it's because he's just getting started with a job and they pay so little at the beginning it's not that
(43:51) much money even this has been hyper analyzed and people trying to see is it real because the name of the department is different than what's you know that's an older department so there's all these tiny little things that people like to go through and try to see does it add up but none of it adds up to is Bob telling the truth or not um like his schooling Bob has always claimed that he went to MIT and that he went to um you know he got a you know degree from MIT and there's no way to prove that Bob's not
(44:24) an offering proof we can't find proof okay so let's let's just say he lied let's just pretend he lied I don't by the way that's not my position I'm just saying let's just say he lied let's say he was homeschooled and just had no education okay well does that change the fact that he worked in scientific capacity at Los Alamos no that's established fact and I'll tell you why it's established back now I actually made sure it was established back but the point is we can go back to when he was a baby and
(44:59) it's like is that Gonna Change is this true about this story about what he's telling us now and so that that's kind of what I'm interested in I I really don't care if he was homeschooled by gnomes I like care if he worked at Los Alamos how did Bob walk George Knapp through one of the most secret and lockdown facilities in America at Los Alamos going into the Maison facility with cameras how did that happen it's it's like people try to belittle the story because they're afraid of the
(45:32) implications maybe let's stick to what we know Bob tried creating recreating what the badge looked like so that other people could recognize it maybe and then people say oh you made a fake badge yeah I made a replica so you would you're

welcome so you would know what it looked like I mean just all these crazy stories I see tape up there on the right by his name he made a badge replica so you could see what it looks like he also did diagrams and drawings of um you know these are like on napkins he's
(46:04) like famous for napkins I have like a stack of napkins from Bob okay so this is like one of the first drawings he did back in the day of where the the saucer out of the nine that he claimed he saw the one that he dubbed the sports model that's where it was and uh he you know he kind of Drew it out so people could see what it looked like from what he's telling um these are drawings I don't know if people have really seen some of these but um he saw a bunch of different shaped UFOs but from a distance so he saw there
(46:36) were nine but some of them called that one the jello mold the one below that the top hat he called that one the light bulb he doesn't even remember it now he's like oh yeah that was weird that one was weird shaped but they were all kind of like down this Corridor you know he only got to see the one little-known parts of his story very elaborate one time you know in that section where he goes I was inside one he's talking about a UFO he goes I was inside of one and I said well Bob what did that was
(47:04) that cool you know that's going to be really cool right and he goes now it felt ominous he goes it was so weird first of all everything is gunmetal gray there's not any other color everything is rounded there's no corner or Edge it was like an injection mold because but it felt ominous because I stepped in and the seats weren't for grown men they weren't for normal grown men human size right they were small and he says that was the moment when I realized this is weird we ain't in Kansas no more Toto
(47:43) you know something's weird here it's kind of dawned on him and then I think kind of the light display that came up with the alien writing probably sunk that right in at one point they were operating on a little piece on the ground and this display came up where a side of the craft that he was inside to look at a very specific part of the propulsion system there was this rounded window part and it just went transparent but not like even glass you know it was just clear so he doesn't know if it was there
(48:10) or not there but on that was very strange writing you know to us we don't know what kind of writing it was but he tried to kind of show what it looked like it kind of looked like amoebas you know he didn't know in like eyes but it was like that's kind of a replica of what he saw have you guys seen that before so there's all these details to a story that are just not well known because we get the bullet points okay another thing that he avoids talking about because it's so bizarre but he read all
(48:44) of these briefing documents that was one of the times he went out there was they just had him read through all these documents and he wasn't sure if it was like a test or a joke he doesn't really know what's going on but he flipped through pages and saw photographs and he tried to draw one thing that he saw on the left which was an autopsy page of a being and he doesn't like to talk about it he actually Drew this though from memory and I love it he goes that's all I know you'll have to make up the rest
(49:12) because he said that's what everybody does they just insert [__] you know he's like that's what I know that's what it looked like that you know to the best of my ability so he read all these documents he goes I don't know if they were true it's like you reading a piece of paper do you know that's true he goes I didn't have my hands on that so I don't know that's true but there were tons of things that he read in these documents bizarre things back to how the hell did Bob know okay
(49:41) this drawing on the right that was done by Bob right after one of his visits to the base when he happened to see on the bus a strange airplane they said worked on like a methane Fuel and he said it sounded like it was tearing open the sky turns out we now know he drew the back of the Aurora which is still a very secret plane that was being tested out at Area 51 at the time he was out there how did Bob know how did he know it worked on methane propulsion how did he draw the back of it correctly if he was never there again
(50:17) it's really annoying isn't it because all these things are kicking in the ass like uh I want to believe you but I want to know the truth I'm starting to believe you so then I found someone willing to speak with me after 25 years from Los Alamos after all these years everybody's making jokes that Bob was the janitor at Los Alvis he never worked there okay he's in the phone book I've talked to a bunch of individuals that were that knew him from working with him there but I couldn't go

(50:46) public with it finally I found a brave individual who was willing to talk to me on the record about working with Bob Lazar at Los Alamos in scientific capacity being in briefings classified briefings which by the way the janitors are not invited to the highly technical classified briefings with Bob Lazar and his name was Dr Robert krangle I have all of his documents all of his paperwork from all the contracts that he did during that time period at multitude of bases including Los Alamos during that time Dr krangle is telling the truth I can prove
(51:24) it what was your impression of what Bob was doing at Los Alamos in the 80s I didn't know what he was up to anymore than he knew what I was up to but you did know that he was a physicist yes and that was very clear to you that he was a physicist at Los Alamos and not again like the janitor right so he worked there and he went on record with me and says of course remember Bob was the jet car guy he was a rock star he looks like Mick Jagger how can you not remember Bob I remember Bob Bob was cool as [__] and yeah yeah he worked at
(51:54) Los Alamos big deal my big deal to who it's a big deal man and he goes why and I'm like because he's got a bigger story and everybody says a good link to that is did he work at Los Alamos because if he worked at Los Alamos there is a possible um reason he could have been picked up to work on a highly classified project through EG and G to go to the test site and work on this non-terrestrial stuff and Dr Craig was like okay whatever so I got him on record the guy's a really funny guy really smart and um
(52:26) next thing you know I publish it next day I should have warned him he starts getting inundated by calls by Stan Freeman just inundated you know I mean God you know I love Stan and I I like him uh we totally disagree because Stan's wrong so yeah so he attacked Dr krangle on the phone trying to belittle what Dr krangle said he goes Jeremy what did you do I this guy keeps calling me all I did was tell you a little thing and he won't leave me alone I'm like yeah he's looking to try to discredit you because
(53:01) he's invested in it not being true about Bob Lazar I said just tell him what you told me tell him the truth so anyway you know any way you get around it here's a physicist work to Los Alamos inside the capacity was in security briefings with Bob Lazar make of that what you will now for my most exciting part of this story this is the thing that really gets me has everybody heard of element 115 okay so you've heard about that because of Bob Lazar there's no other reason you would have heard about that back in
(53:31) 1989. um very obscure uh an element that we theorized you know we might be able to you know create a few atoms of one day uh Element 115 is a huge part of Bob's story because it's a very specific part he said that we had he was told 500 pounds of element 115 in fact if you remember his story that was the fuel source for the gravity wave amplifier and this sounded like total science fiction and everybody said oh it's very unscientific what Bob's saying all he said was that there was an element that
(54:12) was yet to be fabricated by humans that is super heavy and has this potentiality to create as a fuel source for these saucers and it runs off of that well it's uh you know it's pretty wild because we can't fabricate at that time we couldn't for at all but to this day and actually we will never be able to and there's reasons why we cannot fabricate stabilized Element 115 in any significant quantity now the argument that people make about Element 115 is that okay you're right okay we we
(54:43) fabricated some we have a few atoms of it sure but it's completely unstable just milliseconds and it's gone well Bob always said well he recently said he goes yeah that's true he goes but there is an isotope or I stop a combination that will stabilize it just because we haven't found it it doesn't mean it doesn't exist so I called up some physicists at UCLA at Berkeley a couple in Russia and I started asking them they're they're specialists in Isotopes and they're Specialists and elements one
(55:14) of them was very familiar with 115 across the board none of them wanted to talk about UFOs that was made very clear to me this is not about UFOs is it nope it's about element 115. okay cool totally unwilling to talk about this on the record but consensus they all said yeah we absolutely cannot rule out a stabilized form of element 115 there's probably an isotopic combination because it is theorized that as you move into that realm it it becomes stabilized for a long duration of period we can't rule that out so it is not
(55:53) pseudoscience to say that's a possibility and I'm like oh that's interesting because I know some like physicists who are like that's pseudoscience you know what

but Lazar is saying well apparently that's not the common thought it's not so I don't know why people like scream that all the time so it is within possibility that that is true now a sensitive part of the story is that uh Lazar described this very specific way in which this element 115 was machined at Los Alamos for use in the saucers
(56:31) the guy's Machining the 115 at Los Alamos didn't know what it was it would be shipped to them something called la1000 that's what they would ship back and forth and that was the 115. Bob alleged that at one point he got some Element 115 out of the lab out of Los Alamos yeah can you imagine now that's problematic why did Bob claim that whether it's true or not we'll get to that why did he claim that well if his story is true he was in serious Danger that is precisely why he went on the news with George Knapp in fact I wish I
(57:19) could have seen this I wish I could have filmed this the last second when George is about to reveal Bob's identity to the public on the news Bob and George start wrestling over the tape they're in the news station about to go live to error and he's like doesn't want George to air this tape he is scared shitless what's going to happen when people recognize his face and George is like dude you're already out we tried to protect you by putting you kind of out there under your boss's name not a smart choice Bob Dennis that
(57:50) caused some problems but so if his story is true he's being threatened what is the one thing that could prove his well there are a few things he could prove his story I actually believe Bob could prove his story I don't think he wants to I think he wants you to know the story but he doesn't want you to know for sure he's telling the truth that might cause problems for him but let's just say it's true the one thing that would save his ass his trump card would be having Element 115 stash
(58:19) somewhere right making sure somebody knows where it is dude that's proof positive so if we're deciding to believe his story right now wow that that's a Twist right there and he did claim it not saying anything out of line but you notice he hasn't talked about it 20 something years probably 25 years hasn't even mentioned it because it was a sensitive topic you might have heard that he was once rated in New Mexico by a multi-agency raid they were looking for something and uh that is a story he doesn't like
(58:55) to bring up because it traumatized his life can you imagine so you're at home right you have your wife and your animals and all this stuff and your house is just [__] rated and they're looking for something which you don't have right Okay so I'm going to show you this this is not Element 115 okay this is just Arrow gel just say that first okay but this is a piece of Arrow gel before anybody knew what aerogel was that they used to package around the la-1000 which is element 115. this is actually a piece
(59:29) from the 115 which may or may not have come out of the lab it's turned yellow over time right but this is a piece from that packaging material which is so funny because nobody knew what Arrow gel was back then in 1989 so they thought it was extraterrestrial they're like oh man it comes with the 115 it must be alien you know they had no idea turns out you guys ever seen that Arrow gel it's like lightest smoke it's amazing it's like insulation or something it's light as smoke and it's just this little clear it
(1:00:00) doesn't even feel like you're holding it it's really strange anyway so this was part of the actual packaging from the LA 1000 and you know look this is Bob's story in a nutshell he's the element 115 the flying saucers the government secrecy coming forward because he was scared for his life and annoyed at all of the um secrecy and it's really kind of sad actually what what happened like how he kind of why he decided to do it I don't know he would do it again I don't know he'd come out again you
(1:00:33) know I think he would have loved to continue working on those projects if he worked on them right I think he would have loved to continue it I got to bring back to one thing that that George has said to me and I showed you the other day which is it's the duty of journalists and scientists investigate the Unexplained not explain the uninvestigated what what does that simply mean it's just we need to look at the things we don't know not try to explain them as if we know them and so I've got a couple
(1:01:00) more clips for you that I think you'll find interesting the idea that Bob was a disinformation agent or part of a program to mislead the public is wrong he's not and I can say that after knowing the guy for a quarter of a century the story he told then is the story he tells now he didn't add to it he's not making it more elaborate he's not remembering new parts of it it's the same story it's consistent

all the way through so that's you know impactful when somebody kind of tells the same story
(1:01:38) over 30 years there's some Merit to that you know it's not changing one thing we know for sure is real is the impact that Lazar has had on ufology and the world and I love the way George says it and just think of the things that in the 25 years since Bob came forward with the story there are those who it drives them crazy that he gets attention that he is obviously is a phony he didn't go to MIT he made this stuff up I'm sorry but they lost uh Bob one you look at how far that story has traveled
(1:02:12) when you've got President Clinton on on Jimmy Kimmel talking about Area 51 and aliens and then a week or so later President Obama says hey by the way at an event for Shirley MacLaine he mentions Area 51 and I'm the first president to say it in public you know look at what has happened since Bob came forward the government has acknowledged there is a place called Area 51 for a long time they they denied it they pretended that that the base that everyone could see didn't exist we know that there is a place called S4 they
(1:02:42) confirmed it to me Nellis Air Force Base told me that there was one we know that there is something called element 115. um they've synthesized it it's not exactly as Bob described it but as he says there are different isotopes you can make different kinds of um different versions of it and eventually we might be able to make one that's more stable uh scientists who the scientists who made it talked to Bob they called them the ones that synthesized it the first time were in contact with Bob asking him questions
(1:03:13) about 115. uh the area 51 meme has gone everywhere it's in The Da Vinci Code it's in National Treasure it's in Independence Day it's in The X-Files the books the TV shows it is part of our culture all over the world our baseball team is named the 51s we've got the Extraterrestrial highway on a table on the other side of this room is 50 or 60 products uh that are being sold product lines different kinds of Trinkets and and collectibles from Area 51 Bob did that that's from Bob that's from Bob
(1:03:48) Lazar that's why this story caught Owen that's why it went worldwide it is now part of our shared collective experience and knowledge and it's not going away so it must drive his detractors crazy who those people who think he's phony because they lost and Bob won Aldous Huxley said facts do not cease to exist merely because they're ignored okay so you're pretty thoroughly up to date now in the Bob Lazar story you know we could go into finite detail about any of the specific claims or what arguments
(1:04:28) people have for or against I'm pretty well versed in it at this point I I pretty much know and have interviewed and talked with everybody involved from the beginning but also having covered new stuff and so that's what my film will be showing you it's coming out December hell or high water like that's my deadline so it's it's coming out December so this story has really just begun and I I'm going to take you in the movie through some areas of Bob's life which nobody has ever really been able to see
(1:04:59) I've been able to verify some things that have been big question marks for 30 years Bob's life was not traditional I mean he was kind of an outlaw he was he's a weirdo man and then he had this like jet car right just blowing fire he still builds jet bikes by the way he built me a flamethrower I live really remotely in the desert so it's totally safe dry lake bed besides maybe blowing myself up but he still likes to to do and make these incredible things so he had a multitude of Jack cars he still has this Jet bike
(1:05:32) he takes around still draws on napkins and uh you know still looks like the same guy that's kind of an interesting photo right that's from one of our filming's different glasses same dude I have yeah okay I'll play it I have just like a one minute clip and one minute clip of just audio so you can hear maybe why Bob is deciding to allow me to bring his story forward again I think it's important because you understand why it's happening so you can just listen to this one the biggest roadblock to
(1:06:10) understanding is the ability to dismiss someone because you don't see them as human as a person so what pisses you off I mean disinformation and lies and attacks that have no basis in reality I mean you can disagree with me and say hey I don't believe that that's fine I haven't presented you with enough information I I understand that I'd probably be in your position but don't fabricate stuff there's some important information that needs to be released and everybody needs to understand

(1:06:42) the truth to it and not distorted versions of it you really need to pay attention to what I'm saying because I have better things to do than come up with this I'm not interested in doing this I don't like being in the public eye I don't got money for doing this and quite frankly I could make up a better lie but I have no motivation to lie this hasn't this hasn't helped me out it said something that it's information that I'm releasing and that's it it's not an ordinary life that's one thing I
(1:07:14) would like I don't like living in a James Bond movie I like watching James Bond movies yeah I mean one of the most striking things about Bob as a person is he does not waste his time on [__] you know it's like he could make up a better lie would he no I I asked my wife one time I said what do you think of Bob you know because she thinks I'm crazy you know what do you think of all this you know she's like yeah he just doesn't seem somebody that would like waste his time with stuff like that I'm like yeah
(1:07:44) for 30 years wouldn't waste his time now when was 30 seconds of his life um so that was you know that's the kind of impression you get from him I have one more piece of audio and you can kind of see why he's probably letting this happen now people have been trying to minimize who you are people have been trying to trivialize who you are people have been trying to twist your story based on absolutely absurd things that's got to wear on people to a point you got to set certain things straight it's time
(1:08:11) to pull things out by the roots just to get things reset and get people familiar with the story and who I am and this is what's true the Divergence has increased just over time I'm trying to tell you exactly the way things were I mean what I was exposed to you think there's something more secret than that that the flying saucers are a cover-up for some of this stuff just sounds crazy to me and I I understand I'm biased because I'm behind my eyes and see everything but this is this is crazy [__] yes I
(1:08:47) think it gets kind of annoying you know getting trolled and you know by people and you know oh you're such a liar why are you holding all this information back holding holding what back I've told you everything so I think that uh people inserting fantasy and fiction and their own opinions altering and distorting his story is precisely why he's letting this happen now you're going to hear a story again and then I'll have some updates as I was able to uncover some pretty interesting stuff so to kind of conclude this part on Bob
(1:09:17) because you're really going to see it in my film um I I do have an exciting announcement which is nobody has seen this yet this is a little uh maybe two minute trailer with some new footage we get to hear from Bob very very recently and of course I've done tons of filming but you got to wait for my film but I can show you this little piece they're using a canned Film Festival to get the movie out to Market which is pretty neat so first time ever just a little clip to again update how much information you
(1:09:49) have on babazar exciting nothing good comes from your opioid forehead this is a reluctant UFO Messiah it changed his life this week we've heard the contention of UFO researchers that there is a secret government within our government well there's several uh actually nine uh flying saucers flying discs that are out there of extraterrestrial origin the live interview with the shadowy dentist Drew International attention portions were broadcast by radio and six European countries and in a nationally televised
(1:10:29) TV special in Japan despite numerous inquiries and feelers Dennis has remained Anonymous until now his real name is Robert Lazar he says he was hired to work in an area called S4 which is a few miles south of Groom Lake at S4 he says are flying saucers anti-matter reactors and other working examples of technology that is seemingly Beyond human capabilities I did not believe that this should be a security matter some of it sure but just the concept that there's definite proof we even have articles From Another World another system
(1:11:06) you just can't not tell everyone [Music] it was like a Twilight Zone episode just kept getting a stranger the fact that it was happening at all was the weirdest part look it's been 30 years and all of a sudden you raised it to this level you know this is a powerful technology fearsome technology and you just don't want everyone to have they'll become obvious how to make constructive as well as destructive devices from it it's my only guess as to why they have never released information it's kind of difficult once you release
(1:12:02) the technology to be analyzed and give it to everyone they can just run with it you really can't keep the weapon potential hidden you really can't look with

ET technology you can literally rule the world well I am Dylan the truth I I've tried to prove that uh what's going on up there could be the most important event in history you're talking about contact physical physical contact and proof from another another system another planet another intelligence that's got to be the biggest event in
(1:12:40) history period and it's real and it's real and it's there [Music] I'm so excited for this film to come out I'm so excited to actually make the film I still have so much to do you have to edit the whole thing but this is the story that I've always wanted to tell you know since I first started looking into the idea of UFOs I want to know like you is Bob telling the truth because if he is if any of that is true it is game changing and I gotta tell you through my movie process we're closer to
(1:13:24) the truth than ever before but you're gonna have to decide for yourself because somebody telling you something is not as good but there'll be a lot coming out that I'm so excited to be able to bring that to you because like just as a fan of this I would love to see the movie myself so all of my work for those of you that haven't met never seen my work before you can spend weeks at extraordinarybliefs.
(1:13:47) com but there are tons of videos and clips and everything from my films investigations and reports I hope you enjoy it you know I make it so that everybody can just watch it for free that's the point you know the films are what I do now for a living which is great hopefully that works out but everything is on that website for you to just go to enjoy and experience again I'm not trying to tell you to believe or not believe or I'm just trying to provide you a little bit more information hopefully those two clips of
(1:14:18) footage one I know nobody's seen before give you a little bit more insight and the movie will provide even more than that because it is a very important story [Applause] [Music] [Music] foreign [Music] [Music] if you do that right now in the audience
(1:15:23) I'm going to ask a few questions from Twitter thank you for a second because George is always the one interviewing everybody so I want to take a second to interview George on something uh you know for 20 almost 30 years now um you know George been standing up and saying hey I believe Bob's story but he's never really told everybody some of the things why so 30 years ago and to this day you believe Bob's story can you just tell me a couple reasons what you did at the beginning for Bob to earn your trust
(1:16:08) first of all did you notice I had brown hair back then I think the fact that it's turned white is a lot to do with Bob Lazar might be my wife Anna has something to do with that too you know uh Our Hope for the film The what Jeremy set out to do was sort of to let the world know a little bit about Bob because once you get to know him uh the the improbable premise becomes more probable um I was never able to do that in our stories we were always arguing about what school he went to and what he did at Los Alamos and and what has happened
(1:16:48) since then and all the picky little crap that ufologists and the debunkers want to want to deal with and I never got to really tell about Bob other than his crazy interesting interest is jet car and blowing stuff up um but it but it it's what won me over I think back then is just getting to know what kind of a guy he was and that you know at ufology and I think most of the people who are here who are familiar with that field you know what it's like for uh the phonies the people who come up with these crazy stories they always
(1:17:22) have to keep adding to it to keep themselves in the Limelight you know so uh one day they saw a flying saucer the next day they got to say they were abducted the next day they had sex with female aliens the next day they got a wife on Mars the next day they're trying time traveling to Mars um and they always have to keep adding stuff up Bob wasn't like that he told the same story to Jeremy in this film that he told me 29 years ago and I think that that had a lot to do with uh him having credibility for me
(1:17:52) [Applause] he just stuck with the stuff he he knew or had personal experience with and it impressed me that he didn't necessarily believe in himself I mean he was skeptical about the things that he read the reports he couldn't quite figure out why he was allowed to see this stuff we have entertained the idea that maybe they had an idea in mind that he might leak it that it was a false flag or uh running up the flagpole and see how the public reaction and pulled a rug out from under it made it he doesn't pull
(1:18:27) that stuff up but as Jeremy pointed out the film the people who know about the best who are closest to him who know that he's not a liar he doesn't make stuff

up and this story has been really consistent and then the other part that's really hard to explain I don't think that dominate the whole conversation here up to it but uh double your help had a hard time conveying it was all the weird stuff that happened to mostly Nevada but also to others of us in his Circle in those days while we were trying to work on verifying a story
(1:18:56) and building the case um you know a lot of really strange and unpleasant things happen you heard this story that he told about his tire being shot out as a warning but there were all kinds of other really weird things uh break-ins at his house where they just move things around write things on the board break-ins to his car um just gamesmanship to let them know that they were around and then for me as I'm interviewing people who had experiences out there uh two dozen different people who had worked at Area 51 or crew Lake
(1:19:28) over the years people who agreed my fault to give me information one after another were visited by agents who told them to keep their mouth shut up six people regular Road you know today we take it for granted that our phones are are tapped that it all goes into some gigantic database in Utah uh monitored by the NSA back then I took umbrage at it I realized that somebody was listening to my phone but it happened again and again people who offered to give me information that would buttress the story that it was
(1:20:02) told by Bob were visited by agents who told them to shut up or else one of those ladies worked for the Clark County court system and they had these two guys came to her she had been a secretary and over had a stenographer in these meetings with a defense contractor at which they discovered discussed crashed saucers and they came to her and said uh look you're still under your security oath we know that you travel back and forth to uh Los Angeles to see your daughter and that she comes here it's a big desert
(1:20:32) out there it'd be a shame if something bad happened and she was scared to death and 10 years later I went back to her thinking maybe she'll talk to me now she won't she wouldn't so those things were real the things that happened to Bob were real the things that happened to all of us in that Circle were real somebody was really messing with them threatening him and it's because his story was true and I don't know if you figured out the the mystery of what was in the beginning of Jeremy's film with
(1:20:57) the phones that was a raid that happened that wasn't 30 years ago that was a year ago anyway I didn't I didn't uh I wanted to show that for the first time yeah George um yeah I wanted to show you guys that you know for the first time that that was real that did happen I experienced it and uh that was shocking because I didn't set out in the movie that something like that was gonna happen so I kind of I'm starting to understand a little bit you can think whatever you want that happened so really Bob George
(1:21:33) and I are sitting here and the thing is you've never needed a Defender you've never needed somebody to talk for you and people have said that and the thing is you've never needed it you just didn't think it was worth your while but you have a receptive audience here of people that whether they believe you or not they're willing to hear your story and I think this is a different era and a new time I I feel that now from here so I'm gonna shut the [__] up and let Bob talk a little bit but I do have some
(1:22:09) specific questions but from all this experience of me dragging you into this world premiere and do you have anything you want to say before I start asking me questions no just go for the questions all right I got uh one for my buddy Dan in a in a clip from and this is my fault as a filmmaker I didn't clarify you can't clarify everything uh Dan in a clip from modern day he says he never saw an alien but in the clip of 1989 he references seeing cadavers that was both the clips were in my movie can he explain
(1:22:50) Ed yeah that that was in the briefings there was uh we were given two or three page briefings of all the other projects going on and everything was compartmentalized so we had uh you know we dealt with power and propulsion and there was another group that dealt with Metallurgy there was another group that dealt with any biological entities that and anyway we just had little briefings between the groups so we kind of knew if there were any connections and that was part of the biological entity briefing so they had a
(1:23:25) Viva section uh drawing of a a creature that was some drawing was actual photograph and it was the only thing it showed was there was a single organ in its body as if the heart lungs liver everything had grown together into a single organ and they had cut that apart and we're looking at the different chambers inside and

that's pretty much literally that all I got to see from that but that was kind of fascinating in itself and uh I mean you know that's that's why I think people just kind of take that for
(1:23:58) granted you're saying it and oh everybody just slip up on words or you said drawing first Bob drew me a picture of the you know the alien Dabber thing so that's another thing I noticed you to get on the air even with George you've been pressed for so long bob is so like worried that you're gonna when he's talking if he says the wrong words just listen for what he says you know don't just try to pick a part of the words I think that's so important uh I I feel like it's a new kind of day but but
(1:24:25) Georgia I know you also kind of hate having the camera on you and you love that scene I did where you're in your house and there's Awards you had you hated that thing but uh I love these I mean there's so Random I don't even know where to start um they're you know well one of my friends actually asked me does babazar smell like science experiments anyway do you believe undercover agents are in the room at this very moment if so what would you like to say to them hi so is it true that also George that one
(1:25:16) of the people tasked with following you during that time period actually admitted and proved to you that they were the ones following you that is true um there were these we one of the places we used to hang out was a Watering Hole uh called the smuggle smuggling and we would meet there with the uh to sort of strategize and figure out where to go next and there were a couple of other people in that small group and when the guy who was one of the ones who had followed us around he met me there this is years later and
(1:25:46) told me that it had been his job to follow us there and he got to like the bar so years later he was still going so I got they're coming in Fast and Furious you guys on all forms of my phone I see one right here Erica you wanted to know a question for Bob how close to duplicating the alien propulsion system did you achieve oh we didn't that's that's just about it I mean we we couldn't even duplicate the material that uh I mean even the casing material we didn't really even understand what was going on it's one of
(1:26:26) those things where we can see what's happening and be proficient at using it but uh there wasn't a single thing we could duplicate at all at least at the time when I was there I have no idea where they are at this point okay um what breakthrough I can't really understand it but it's my eyes uh what breakthroughs did you come to with any of the research that you did there were there any Greek did you experience any breakthrough expand the question did you have any breakthroughs when you were working at S4 on alien spacecraft Bob
(1:27:03) did you have breakthroughs well anytime you you were able to decipher something it was a breakthrough I mean when we determine the fuel was a super heavy element that was a breakthrough when we finally figured out how the reactor and the amplifier worked together that was a breakthrough when we finally figured out how to shut the reactor off that was a breakthrough and I mean every single thing was amazing to us it's like uh you know having a couple little children playing with Advanced Materials it's it
(1:27:34) install you know is pretty much all luck I guess you know I'm going to put this down for a second some of the things I know that you probably want to know because it was news to me and talking with George all these years and um talking with Bob as well Bob would say things and it would kind of hit me like I didn't know that if I've been researching this and I don't know it I'm sure you don't you said something to me recently you said look I don't know for sure 100 that the physics I described and how it was
(1:28:04) is the way it worked it was like magic I was telling you to the best of my ability to what I think we got to so people people don't know that so basically what I want you to explain to them like you explain to me is you're kind of given your best shot of what you how you think it worked but you're not positive about it no there's no way to verify it a hundred percent you know the situation we were in we just really were able to observe and then come up with a pretty much an educated guess as far as what's going on
(1:28:35) but that's the best way to do at that time uh our friend Mark says how fast is the super uh heavy element Decay like you know how fast does Element 115 against decay well the 115 we have the isotope we had the isotope that powered the craft does not Decay that's a stable element the element 115 that we synthesized recently when it was a few years ago that does Decay very quickly and any element can have a whole host of Isotopes and those Isotopes can have various half-lives or

be stable so the isotope of the 115
(1:29:14) that's used in the craft is stable and does not decay funny little story um you know when gravity was admitted that it was a wave for sure I call Bob I'm like Bob Bob Vindication man this man well you know I had a 50 50 chance if you think about it Jeremy I was like okay okay and then Additionally you know it's like Bob Adams of element 115 and it's so cool it's so hard to impress Bob Lazar about UFOs it drives me freaking crazy I just had to say that um I don't know man I just hope that you
(1:29:59) guys through the movie that you get a chance a little bit to to get to know Bob and he's not happy being up here like he's doing me a favor um and it's not because he doesn't want to answer your questions he's tried he tried a Twitter account for like a few months um I don't know it's just uh you're kind of done or I don't know you you talk to yourself man [Laughter] you're uncomfortable admit it yeah I know I know I have social anxiety so this is like this is horrific to me
(1:30:29) love your courageous hey guys [Applause] okay I'll find you tough guys I know I'm number one so uh I don't know it's a different day maybe maybe with Bob and um I mean again you know Bob's never been one he's not a shrinking violent you know Bob can uh is that himself he's a jet car guy the Bronco guy the shotgun guy you know he's a little bit crazy he's living a wild life but um I don't know I guess Bob out of at everything that you did whether people decide to believe your story or
(1:31:29) not believe your story a lot of times that's because they either don't have the information or they do but whatever whether they believe it or not is there a message to you can't see anything here but I mean you know 800 and some people that on here 800 something people we have sold out for all these people and I know you traveled from other countries from around the world every country is unbelievable to me the messages I'm getting thank you for supporting my work thank you for supporting George who was holding the
(1:32:04) microphone trying for 25 years Against All Odds and Bob that you want to tell this audience right now just what's what's important about you sure whether they believe you or not what do you want them to take away when they leave this Auditorium no I understand it's an incredible story and I myself would have a really tough time believing it as I said in the film but uh the events that were portrayed occurred just like they were shown and um you know quite frankly I prefer people don't believe it because then I
(1:32:44) don't get asked questions and don't get bothered at all but uh you know for those of you that can see through that it uh all I want to tell you is that that's really the way things happened and that's pretty much it the sport model okay I'm gonna take one yellular question like that no more no no more zero zero more shut your mouth zero more no yelling you're about to be kicked out by me personally no more out loud questions I I think it's really interesting I had a guy he's an aviation
(1:33:13) writer and he is a very sophisticated you know uh website about all this and he said one of the things that's killing me is I don't know how Lazar came up with the sport model because it is from an aviation standpoint it is so perfect the Sesame described it's genius and I was on a photo of him I'm like well maybe he didn't make it up okay so tell us a little bit about the sport model uh before we jump off stage here just tell us a little bit about um what was most impressive to you about
(1:33:42) the sport model about the science of it about what you got to see inside of it what did it feel like to walk inside a flying saucer it was really more ominous than um interesting at the time and um everything is exactly one color it's all a dark pewter Gray there is no sharp angle anywhere everything has a radius of curvature to it as if somebody built this thing out of wax and then let it melt a little bit and then let it cool off um it's a very unusual I mean it feels unusual just to be in there but even the most simple things
(1:34:22) inside are and pardon the poem are completely alien uh the little doors that snap open um are made of little hexagons I mean it's hard to go through everything that pops into my mind right now but um it's difficult really to say but it there's nothing that it's it's like going into a room where nothing looks familiar at all not even the room itself so it's uh was really something I'll never forget small Furniture well yeah and that's that's a good point too but even that's
(1:35:00) unfamiliar why would you have something you know a seat that's half its normal size so it was really uh it's a shocking thing oh I just want to say you know uh thanks for including me guys because this has been a ride I mean earning George's trust and him telling me you're never going to give Bob on camera go ahead good luck

kid you know that was awesome thanks for the encouragement um but thanks Bob just so you know it's very clear Bob did not ask me to make a movie he's getting Zero from this movie
(1:35:31) he he actually gave uh to a science charity the last time we did a screening um the things you think are just [__] wrong and go ahead and and you know take that angle if you want or you can hear the the story and you can with your rational mind with your skeptical mind but with at least a part of your mind open to hear the story you can hear it and I'm not you know as even as a journalist at some point you got to take a stand right I don't know what's the ethics in journaling I got to take a stand and your friend Dave Navarro was
(1:36:01) here um he had called that he calls himself a hopeful skeptic okay he hopes that true he wants to believe like the poster from the X-Files but he still uses his mind skeptical system is a healthy thing in this kind of a field so you have to just buy it you're skeptical of your own story in some ways and some of the things that you see understandably so it should be you know but but it doesn't mean having a closed mind there's going to be a storm of information that comes out over the next um probably six months what you saw is a
(1:36:35) glimpse it's just a glimpse into Bob's life it's a glimpse into the work that George Knapp has tirelessly done for 30 years into this story slowly I'm going to be releasing clips and little pieces and just you know let's get the information out there you saw the bulk of it but the conversation has started now if if you liked the movie if you thought it was good to help people that is the whole thing let people know because that's how we spread the movie and that's where we spread the
(1:37:04) information thank you that that's what I got to say what final words final words well we live in interesting times I mean back when this started in 1989 Bob was kind of an outlier you know it was uh telling a story that a lot of the world wasn't ready to hear in the last 12 months things have changed dramatically you know uh that New York Times story in December of last year the ttsa Lou Elizondo coming forward the those videos released by The Pentagon suddenly people in my line of work are doing UFO stories
(1:37:37) and they're taking it seriously and they don't start off with uh funny jokes and put downs and and maybe the the page has turned maybe we are really Arc in a new era that an era when Bob's story can be viewed in a much more positive way without all the nitpicky [__] [Applause] yeah well I mean I don't have a lot to say other than uh I know a lot of people came from great distances to be here and I I really do appreciate that I appreciate all the support that I've gotten and um really thank you thank you
(1:38:25) and really thanks for coming out here and and watching your amazing we appreciate everything everything back that they actually talked about it and Bob was willing to talk about element 115. and then there's a house got raided after that conversation uh that kind of blew me away I loved it Jeremy's worked extremely hard it couldn't be happy for him more happy for him and Bob and everyone involved um the 115 Element 115 I have a question a lot of questions [Music] thank you [Music] [Music] the story is extraordinary
(1:39:27) especially if it's true and it all started in the desert this north of Las Vegas a local scientist who worked at Groom Lake said to be where top secret weapon systems have been tested over the years he has asked that his identity be shielded exactly what's going on up there what's going on up there could be the most important event in history [Music] physical contact and proof of from another another system another planet another intelligence what happened to you if the government information [Music]
(1:40:02) he just wanted to stay alive maybe this has been kept from us for a good reason my name is Bob Lazar I'm known for working at a classified base and reverse engineered alien spacecraft [Music] can we ever be made whole but for not believed we can't verify what was going on in this background I have no motivation to lie the science and the technology can change us we've always looked to the skies [Music] imagine a place between Shadow and
(1:41:09) substance a place where the world has just been not many pass through here you just tend to get burnt up infected is a allergens corrosive like a an acid the mind can unwrap so you're going to want to keep your wits about you you gotta show great to patients they say the secret of the finder sometimes that's true you better hope that's true welcome to the world of extraordinary beliefs [Music] [Music] McMinnville yes yes I haven't outlived my welcome here thank you again for having me guys what an incredible really exciting

(1:42:12) weekend just as a fan and I'm very excited Bob Lazar is here we did it man we flipped the script thanks to Bob for deciding to tell you his story again we will have a live q a there are specific things we'll go over you haven't heard before we're going to get very specific today but write really thoughtful questions you know not manifestos questions right yes questions and then we'll do our best to to answer them enjoy the film we'll be right up here on stage after and thank you guys the story is extraordinary
(1:42:54) especially if it's true and it all started in the desert this north of Las Vegas a local scientist who's worked at Groom Lake said to be where top secret weapon systems have been tested over the years he has asked that his identity be shielded exactly what's going on up there what's going on up there could be the most important event in history [Music] physical contact and proof from another another system another planet another intelligence what would happen to you if the government learned that you were giving
(1:43:26) us this information [Music] that's for a good reason sir how do we know you are who you say you are my name is Bob Lazar I'm known for working at a classified base and reverse engineered alien spacecraft he put Area 51 on the back can we ever be made whole before not believed we can't verify what was going on in his background I have no motivation to lie the science and the technology can change us we've always looked to the sky into herself thank you Bob for letting me make the movie this story spans as you know 30 years so
(1:44:27) thanks for watching the movie Let's jump directly into it it's been said by George many times that babazar is a reluctant UFO Messiah I want to hear when you are going to be put on the news and you were nervous about your well-being how George Knapp had the tape and you said okay let's do it and the second he's putting in that tape there was a wrestling match you did not want your name and face out there so each of you I want to hear your side on stage before we start the agreement was that we could film all
(1:45:01) of this back in the 80s and that at any time if I change my mind George guaranteed me we'll just pull it that's it there's no problem so we did film all of it and things started to get tense and I began to get worried as time went on and it finally came to the day where it was going to be aired on the five o'clock news if I recall and you know kind of near the last minute but not the last minute you know I decided you know what let's not do it I'm not going to go public with this and uh
(1:45:40) George just said no we're doing it and uh so I tried to grab the tape from George and uh I think that that's about all I remember I don't know where it went after that well I wouldn't call it a wrestling match it was more of a tussle and I won um uh but just context of that is that 30 years ago this week this Wednesday marked 30 years since the dentist interview the anonymous interview and it's the synchronicity of it with the anniversary for this festival and the 30th anniversary of that event that
(1:46:16) changed our lives and the the life of Area 51 itself is amazing it's almost like it's scripted but uh we did that interview with with Bob as Dennis I had not met him it was a last minute day you know it was somebody had canceled I'd been hearing about Bob from John Lear for a long time somebody had canceled for our five o'clock news and we um said call dear hey can your flying saucer guy at that area 51 guy can he do an interview I had no idea what was going on on Bob's life at the time that
(1:46:45) he'd ran into some trouble with his employers and was afraid for his life and was surprised when they said yes we put the five o'clock interview on this story comes spelling out all of our Jaws were dropping the general manager comes running in Is that real the news director calls me in is that for real the phone's ringing off the hook all hell's breaking loose we don't know if it was real but we decided to find out and so the next weekend we go to lear's house to meet Lazar my news director and
(1:47:16) I Bob we're going to put him through his Paces we're going to ask him a bunch of questions about his background figure out if we believe his story and we left that meeting on holy crap this sounds like it's true and if it is it's the biggest story we're ever going to cover it was also the riskiest story we were ever going to cover because our reputations were on the line individually as journalists we could be ridicule it could damage the reputation of the station so we're going to take
(1:47:41) our time and check this out I had to talk Bob it took me another month to talk Bob into getting a safety interview going on camera not to be aired just to have it in case something happened to him because it was a lot of strange stuff

going on at the time threats that were being made to him we were all being followed around our phones were tapped it was a very tense time and it's hard to convey to people uh 30 years later how real it was but it was real we lived through it what was going on so we had that first interview
(1:48:09) that was our safety interview and I promised I wouldn't air it that was just in case Bob got bumped off or something and also as a measure of protection to let people know that we've already got the interview you don't need to kill him anymore we're still going to tell this story and then we did another interview in November for this series and I remember Bob stoddahl and I were walking out of the meeting with with Bob and saying gosh we could do a multi-part series this could be like five parts or
(1:48:35) something we end up doing two weeks each of the stories were you know a typical news story even in those days is a minute and a half two minutes these stories were 12 13 14 minutes long and it was the biggest highest rated thing that's ever been on television in Las Vegas so more context we ended up doing a two-week series part six is where we're going to reveal the identity of Bob so we're five parts into it setting it up history of Area 51 and ufology and all that stuff we've already teased it
(1:49:06) over the weekend Monday's the day we're going to release the identity of this mysterious Dennis character and the whole world was trying to figure out who he was and that was the day that Bob's in the station and uh trying to grab the tape I've changed my mind I said no sorry we're too we're too late into it I mean literally we were editing right up to the last minute and I am taking the tape down to the edit Bay and I'm going to run out to this studio and we started tussling for the tape and wrestle a
(1:49:34) little bit and I no it's too late we're too late into it and ran down the hallway stuck the tape in the machine and then I went out on set and history was made so no there's a lot I want to cover today based on your questions so let's rapid fire go through them Bob do you feel that this movie accurately tells your story yeah it really does um I mean I had a chance to kind of go through it and uh Jeremy assured me unlike George that it at any point you know uh if there's something that weissit wasn't accurate I
(1:50:17) just said it had to be factually accurate um it didn't matter if I like something or not just as long as it was was true but yeah yeah there was it certainly told the story up to that part I mean there's a whole lot it didn't say uh but that's way too much to fit into an hour and a half and you know there's like two hours of bonus materials and I'm still releasing footage to clarify certain points but just to be very clear Bob gave me absolute access to his life was able to interview his mom you know his
(1:50:49) friends that all went through this a lot of people that didn't go on camera couldn't go on camera on behalf of Bob because of whatever reasons they had so a lot of the information I gave you everything I could in the movie The only restriction because as I'm looking this you know I'm looking I to be honest you got to look for holes I'm looking at Bob I'm looking at a story and he gave me complete access his archives of tapes go ahead and take them documents cell phone who do you want to call he was helpful
(1:51:18) in every way he could for me to help clarify his story the only thing he said was do not twist it more it's got to be accurate that's it and so hopefully we achieved that and you got a taste of that and there's a lot more coming through the bonus materials okay this is interesting one because we have um commander fraver in the audience so I'm really excited to speak with soon I'm grateful that you're here Commander uh Bob do you have any thoughts on the recently revealed UFO videos and program
(1:51:51) detailed by the New York Times so meaning that I can gimbal the Tic-Tac yeah seeing those craft do you have any thoughts about your experiences and and now the acknowledgment of a reverse engineering program the attempt to reverse engineer propulsion system as far as how they're looking at it but more importantly the Gimbal and the Tic Tac the movements of those do you have any thoughts on that yeah very much so I mean they they move they behave I mean they act exactly like a gravity-propelled craft would it's to me
(1:52:23) it's a very vindicating thing and speaking to Commander fraver and in looking at the tape and you can see the way uh you know a craft move as he uh mentioned the way it moves like a ping-pong ball in a cup and bouncing around something that doesn't have inertia I mean propulsion like this is not possible with our technology and probably won't be for a very long time but uh yeah these crafts

seem to operate exactly like the craft that I worked on so it was uh I find that really fascinating I'm I'm anxious to talk to
(1:52:56) him some more about exactly what he saw yeah people are making that connection now because look in 1989 George and that broke the story with Bob government program attempting to reverse engineer UFOs remember we had been told in 1969 that all ended that has proven to be a Lie by the Pentagon Now by their own admission and thanks George for approving those videos were real through the right process so now through the lens of 30 years not only the reports of how these things move and the videos of how they move but we're living
(1:53:28) in an era where we now know the study of UFOs has been and is currently live and strong so we have to account for that when we look at what Bob has told you again Bob is just telling you his story take it or leave it it's better for him if you leave it because his life and his wife is great and he doesn't need more Interruption but he thought it was important enough to untwist the knots over the years that have been twisted so that's what you get hopefully in the movie okay okay this is interesting what some some
(1:54:00) of these little obscure questions that Bob didn't cover in the film what is the history of the alien human interactions according to the briefing documents that you were able to read when you were there what is the history of the kind of human alien thing like what did they tell you about the they didn't tell me anything I have to make a very big distinction between the information and Technology I had hands on and could verify and you know analyze and briefings that I read that had to do with other facets
(1:54:38) of the project which I can't I can't say if they were real I don't know why they would be other information I read in the briefings was accurate so but there was some information from other groups everything was split into so many different groups that some dealt with Metallurgy some dealt with you know the origin of the craft and information was so compartmentalized we couldn't talk to the other groups which is a really ridiculous way to have science move forward you have to have communication so there uh the way the
(1:55:13) military handles stuff it just doesn't work with research but they were so concerned about you know somebody getting more information than they need they kept everything separate but in any case they alluded to the fact that there was there was some alien human interaction at some point but um that they had been involved with us for a long time that's the allegation yeah it went back it went back very far the crafts had been here for like ten thousand years or something like that right you had mentioned before kind of
(1:55:49) new new information that uh you they were they gave you the impression that the craft that you worked on and the other ones were from some sort of archaeological that's the impression I had it was for more of an archaeological archaeological dig it wasn't like the aliens land and said here is one of our craft it uh you know I think it's just something I don't know how we came across it um but we did but they were they were very old I want to get into these specifics that for 30 years people have
(1:56:19) asked and Bob has explained to me but he just haven't explained to you so let's get into these little details you mentioned in the documentary that you have dismantled devices from another civilization what Fasteners methods are used to hold it together screws Clips whatever can you tell us about yeah this is something that fascinates me I mean back in back in the 80s there was no 3D printing so it was it was a complete mystery how this stuff was put together the craft itself there is not one single right
(1:56:54) angle anywhere in any part of it every single thing has a radius of curvature to it and I think in the 80s I said when talking with George it's as if somebody made a big model out of wax and then heated it just a little bit so it all melted and then let it cool and that's the way everything looked it had everything in a smooth interconnecting look to it there were no Fasteners anywhere there were no seams anywhere and uh you know nowadays you think well they had some gigantic 3D printer I guess you know using alien technology
(1:57:29) they could make it that way but I I didn't even think of that back then it was just a mystery how it was but I mean was it was even more so of a mystery is that there's no wiring anywhere you know the sub components from you know a reactor that generates tremendous amounts of power and the other sub components the amplifiers and the emitters there's nothing connecting up and when you remove them and move them away they still work it's it's unreal I mean it is absolute borderline magic so it's it's nothing

(1:58:02) that we're gonna you know duplicate and we're gonna add this to an F-16 or something it's it's going to be a long time before we know what the hell's going on so George has said to me from the very beginning look if people don't want to believe Bob they're going to find a thousand ways to discredit him because that's they don't want to believe you so go ahead however you're If you deny the evidence that we have then you're missing the picture and some of the greatest Skeptics online you know tend
(1:58:30) to fixate on these little things and one question that's been like looming for 30 years and Bob and I talked about it for like a minute and people are asking well how did you turn the reactor off Bob if you if the reactor is on and you're putting your hands to it there's a gravitational field right and you can't put your hands how did you turn it on or off and that seems to be one of the things like the people that want to just not believe just bring up it's not even in like a nice way just asking a
(1:58:56) question so publicly just how did you turn the reactor on or off Bob are they implying that it can't be turned off or yes the implication is with the gravity field as described oh so you can't reach it okay that's that's not how you turn the reactor off you don't touch the reactor I mean there there are actually a lot of ways to do that but the way we most commonly turned it off is if you take one of the emitters and rotate it I don't know what the angle is I think it was like 80 degrees or something but if
(1:59:25) you rotate it at the reactor shuts down so the it's kind of a load sensing reactor and rotating the emitter to that angle at Magic angle whatever it was um that's like a null position the reactor shuts down and that's how we turn it on and off but I mean there's there's not an on off switch everything is very fluid and operates when you really don't think it will yeah so um how has your life or business how has your life or business changed since the release of the movie besides the raid Bob yeah
(2:00:09) yeah the raid was not a good okay let's think about the good how is your life or business change since the release of the movie or has it um not a lot you know it's a very specialized business we sell scientific equipment and you know radioactive isotopes and chemicals it's not like the average person goes I need some strontium 90.
(2:00:27) and you know they're not gonna so it really it's not an increase in business although you gave me some of the extra movie posters you had and we put them on the website so we sold some of the posters but I mean by the way Bob's having a sale on strontium 90 this week right so no really it it hasn't affected it at all I mean that's not to any big degree I should say the effect that that I have seen is that uh now in light of what is known publicly around the world about UFOs and about the projects that people
(2:01:00) are now not with their pitchforks in the audience they want to hear okay maybe he is telling us the truth they want to hear what you have to say and I think that's the biggest change um you know Bob is not a profiteering off of my film he wants me to succeed as a filmmaker he just wanted me to tell his story accurately I just want to make that clear because you know the hardest thing that I see is that people try to vilify or try to attack the messenger to dismiss the message and that's what I've
(2:01:31) seen and I think it's ridiculous but here we go next one small stature aside why else do you think they might have been called the kids remember they called they never said aliens they said they always said the kids yeah yeah so so why do you think they call them the kids that's just conjecture I mean at the hey it says small stature aside but that's the only thing I would grab onto was just because there were little creatures obviously but um I don't know I really don't know uh do you think that you were part of
(2:02:06) some sort of covert operation unbeknownst to you at the time so you know how people say you were there they showed you like a movie set they faked stuff you know do you think you were part of a covert no okay so how do you know how do you know that what they showed you wasn't faked and uh it's important for people to hear well first of all the stuff that I had hands-on experience with um it is impossible to fake things like that you cannot fake a force field you cannot fake time slowing down I mean these things are not
(2:02:44) possible at all and probably won't be for hundreds of years using our technology so that you know there's there's no doubt about the technology I was involved in was Way Way Beyond what humans are capable of at this point um the way the craft was assembled like I said you know the huge amounts of power moving around

without interconnections and I mean this is beyond what Tesla would have ever dreamed of uh again these things are not possible so yeah a movie set that's ridiculous Bob has always made that
(2:03:20) distinction to me I was like how do you know the difference between you know the documents and he goes what I had hands on is what I can tell you about you just said two things I want you to clarify force field and time just slowing down time or stopping times time dilation explain those the forest field when we had the reactor fired up it was one of the things that Barry my co-worker showed me and I think I mentioned that in the movie you put your he said put your try to put your hand on the sphere of the top and you couldn't it just
(2:03:53) pushed back it was like two like polls of a very large magnet and you know without having a metal hand it was uh it was an amazing feeling I mean I was I was really excited at that point I said oh my God it's a force field I mean this is this is awesome um and jumping over to the other question the time dilation when we had the reactor and the amplifier and emitter set up in the on the test bench we did a couple experiments and one of them was how uh we could get a watch to run at different speeds in the gravitational
(2:04:31) field so we actually saw time dilation so it was really fascinating one of the things I had mentioned a long time ago to George he lit a candle and you can see the flame stop flickering but it's still emitted light which it kind of shouldn't have so I mean there are lots of indications that some of our physics wasn't complete in explaining what was going on so that's why some of the stuff is so important that it be released to the public but I just I don't know what's happened to this information or the technology
(2:05:04) since I left the project you know Bob and I had discussed many times over the years um could this be disinformation of some sort were you shown something and they assumed that eventually you'd spill the beans and it serves as a diversion or cover story for something else that's going on out there that they wanted to divert attention away from something else that was being tested at Groom Lake that was the first round of disinformation accusations sent our way what would be I know specified in that yeah what would be more classified than
(2:05:35) flying saucers that's the first but the other thing is if somebody did have an idea in mind that we're going to put out this Flying Saucer story then we're not going to crush him and crush his credibility and we'll distract attention from something else out there that was kind of a miserable failure because as a result of Bob's story every media organization of the world beat a path to area 51's door tens of thousands of people have gone out there with binoculars looking in this guy for
(2:06:01) whatever it is that's uh flying out there Area 51 is a really legitimate National Security Site the men and women who toil and obscurity out there have helped us win the Cold War they protected our country they do great and important work and they don't I mean this is not a good thing to have so much attention focused on that facility it's still important they still do important work so if somebody came up with a plan let's put out a flying saucer story to divert attention away from The X Project
(2:06:26) man they they got sent to to Alaska or something and because that was a really bad idea and and again Bob has always made a distinction between the technology that he had hands on and the stuff that he read because some of that is pretty wild stuff and it fed into narratives that were floating around in the UFO world at the time we've met secret treaties with aliens and we've given them permission to abduct people and they've genetically engineered us he doesn't know if that's true and he
(2:06:54) doesn't know exactly why he was shown that information and we've discussed it a bunch of times you know it's possible maybe that was a an added little bonus that they put in there just to flight up the flagpole and see what happens but big secrets can be kept big secrets are kept that was one of the arguments about us tackling this series back then is that nothing this big could be kept secret well we'll ask Commander Faber about that later today whether big secrets can be kept because they can be
(2:07:24) you know 1969 Project Blue Book ended we didn't know until December 2017 or at least the public didn't know that they had an ongoing UFO study that it was going on that millions of dollars were being spent that a lot of people working on it and we've learned since that there are other classified projects along the same line that we still don't know the names of we don't know who's involved and what their focus is so Secrets can and are kept so I want to keep with your questions to honor the fact that you wrote them I

(2:07:51) can't get through all of them but I I do want to bring something up right now the raid the FBI raid there's recently released agency assist reports and I just want to tell you my experience I make this film people accused me of fabricating The Raid to dramatize my movie I made it up I dealt with that for months they said Bob's wife Joy was this was the FBI agent that you saw the photo of the back of I mean just crazy stuff so there I am one day defending that I'm a documentary filmmaker I'm just I don't need to share
(2:08:25) it with you I'm trying to document and share with you what I'm experiencing and seeing so there I am defending that next day A friend of mine he was able hours before us to get a local agency assist report we were unable to get the FBI report Bob said there was a warrant he goes I saw it upside down but you know they didn't hand it to me and we're thinking well we can't find it so we get this agency assist report and then like the next day I'm defending something else people are saying oh now it's
(2:08:57) prosaic it's just prosaic why there was so much law enforcement multiple agency wasn't the first time Bob that uh people came to Bob's place of business and I said we were surveilled we have our own reasons to understand that the report comes out I thought there you go it proves what I said in my documentary it proves the scope the scale the forensic truck the surveillance and I'm like oh now I can relax on Twitter not the case it is my belief and Bob's and George's that they were there for
(2:09:32) 115 and we have very specific reasons that I can't prove yet to you but we have specific reasons to believe that's the case I want to hear from Bob what was the experience I want to hear your personal experience it was sworn with over 24 individuals from what I count but two came up two out of door two came up to you with something in their hand they were coming in anyway were they looking with Hazmat teams no there's no Hazmat okay so tell us tell us your experience though on this and I'll clarify later now when they first
(2:10:08) came in they gave me the cover story and yeah the place had 24 or so agents in there it was shoulder to shoulder you had to kind of move around there are so many people in there and which already struck me as being weird I said if you guys are just looking for receipts what are why did you bring everyone here and uh some of the other underlings they brought with them just gave me some paperwork they said yeah we're looking for you know thallium metal and I said oh okay I'll get it gave him a little vial here of Valley Metal and I said is
(2:10:42) this what you guys have to sit now or just you can put that away so I went okay these guys are starting to section off the building into cubic meters and holy cow what are you doing they had everybody else working down below and then they took me upstairs we went up there then they had the guys jump on the computers and try to suck everything off of those and that's when they played me here you know our conversation which was we what we were talking about is where the 115 was hidden I want to get a little more specific about that the
(2:11:19) experience though they they said hey Bob they showed up behind you two people and they're they have a upside down obvious warrant from FBI look you know we have a couple of people coming can we come in so you're allowing in two people and then all of a sudden there's about 24 forensic collection agents truck multiple agencies the report the agency assist reports proves this It also says that there was a HazMat team you know and the whole suits Hazmat and they cleared the place to make sure that didn't happen that didn't happen right
(2:11:52) so I talked with Zach about that too because in the film he he just said Hazmat because that was he just told me out that you know that's the word that came to his mind he goes but it wasn't like that from what my account that I've heard from you and Zach they appeared disinterested with this basic idea of toxic materials the whole thing was they wanted to talk to you upstairs is that correct yeah that's that's correct they wanted to talk to me and the other guys all they wanted was a couple sheets of
(2:12:19) paper so they did say to you out the door we're looking for receipts and an order form from a client of yours that's what they told you when they were yeah this is something that happened like two years ago right we had already been over all this so it was clearly just a cover story to come back in and have access to the property which is which is our opinion based upon our experiences but I just wanted you to hear from Bob the agency assist report it's very odd it's very detailed and not only that Bob's
(2:12:48) experience of what happened doesn't jive with what you're reading in that agency assist report in a lot of ways no it's a lot of that is not is not true we

are convinced behind a shadow of a doubt that our conversation was taken in the woods at his property the day before but I just wanted you to hear from Bob his personal experience of that moment because every turn we make you know there's people that just they'll never believe and they look for anything to dismiss it or almost worse they just
(2:13:19) believe without thinking so well either way they're welcome to dismiss it and then they ask me less questions and that's fine okay back to back to some details from the audience have you ever looked at S4 from a satellite image could you identify it great question about S4 like could you see it from a satellite image have you ever looked for it on Saturday yeah a lot of times um and I do like to make that distinction it is not Area 51 it is S4 Area 51 is to the north although a lot of people relate them together they say
(2:13:53) as far as part of the area 51 complex but that even that gets into some technicalities there because people say oh I know somebody that worked up at Area 51 there's no flying saucers or anything like that up there and they're right there there isn't um it's down at S4 there's only 22 people when I worked there and um as far as seeing it from the air yeah I've seen it many times there's a lot of people have sent me emails where they they think they see the hangar doors at the right angle and yeah you can see it on
(2:14:26) Google Earth it's it's not obvious but you can see the road that I drove to down from Area 51 that's where I flew into and took the bus down and uh yeah I can point it right out to you in fact uh you your buddy John ferrat uh hired some time on a Russian satellite to take a photo of an exact time that you said take a photo of Papoose Lake the Americans wouldn't let him do it so he went to Russia and they did yeah and he's and he's got the original uh negative and on that negative is so
(2:14:59) there and they posted it back in the day is a circular metallic object hovering right over the mountain range of Papoose have you guys seen that the poster they made it into a poster yeah it's it's great I mean they he hit it right on the nose it was awesome right when Bob told them they should shoot that shot from a satellite from Russia um George Knapp has said to me before a weave and this is something that project I think we're going to do together we've learned more about the U.
(2:15:27) S UFO programs from Russia than we have from the U.S and I think that's specifically because George took a trip during glasnose and pro-estroika and came out with some documents from the UFO program in Russia which the world has yet to truly be able to see and I think we're gonna coming up soon next project George Over My Dead Body oh yes yeah we'll do that project sometime yeah uh it he's not exaggerating I went I went to Russia I had a unique opportunity in the early 90s when you know they were trying to
(2:16:01) open up to the world they were experimenting with capitalism and democracy glasnos perestroika I read in the New York Times that the KGB had opened up the Lee Harvey Oswald file and I thought this might be the time to go and see if we could get the UFO files so we did we worked on it we had a Russian physicist who had been a national security advisor to the Russian Parliament and Deborah Yeltsin and we sent him he had been in the United States lecturing on nuclear disarmament at our National Laboratories had nothing
(2:16:32) to do when he went back so we hired him a company I was working for and and set him up and said go find people who were in a position to know about the Russian UFO studies who have never spoken to journalists western or otherwise and let us know and it took him eight months and he set it up and I went in 93 to Russia and I met a guy named Colonel borasakalab Ministry of Defense who had been in charge of this Russian program it was the largest UFO study probably in in history and for 10 years the every unit in the vast Soviet military Empire
(2:17:04) at the time was ordered to every anomalous aircraft or ball of light or UFO or a strange object in the sky when you get those reports from military personnel fully investigated get pictures get witness statements put it all together and send it to one central location and they did and we were able to acquire a lot of that information and interview Colonel sokolov and basically he said they were doing the same thing we're trying to do he said we're we know that these craft have capabilities beyond anything that we've got and we
(2:17:36) wanted to study this to figure it out so we could gain an advantage over the U.S in terms of stealth capabilities we wanted to figure out the technology which as it turns out is the same thing we've been doing you know trying to figure it out to be continued Bob back in 1989 when you were terrified and I just released

a new video on my YouTube talking about that time when you were scared you took friends multiple groups three Wednesdays in a row you said guys things are really complicated for me it's one thing to tell you it's
(2:18:13) another thing to show you there's this little place called Papoose Lake it's not Area 51 it's South there this obscure mountain range there's a test flight and I know when it happens and I'm gonna I'm gonna show you and you brought friends out there and you showed them those test flights as proof to your friends because you said to me it's one thing telling someone it's another thing showing someone right well working there I had the test flight schedule so that's when I took it was I mean the
(2:18:40) majority of my friends at that time we went out there and um and you know the craft came up you know over the mountain range at the at the time I indicated and uh you know clearly everybody was amazed we watched it uh you know do some amazing Maneuvers since we got away with it you know we did it a couple more times you know and right up until we got caught so and George and I have talked with I think everybody now that was in those sightings and they don't agree on most things in life they do agree on one
(2:19:13) thing that uh Bob is right he took him out there and what he showed them they had never seen anything before like that or sense so they also filmed it and there there's a it's an old 80s camera not like our iPhones but even iPhones you pointed at dark you get a light however there's a gentleman in the audience that did some incredible analysis of Bob's original footage of the Flying Saucer coming up over Papu's lake with the new software and analytics that he did it's it's pretty incredible
(2:19:46) and he had a question why does the shape of the craft in your video change from frame to frame so radically are we seeing localized gravity lensing yeah that's exactly what you're saying because remember there's three emitters in that craft each emitter is producing its own gravitational field out of it and gravity bends light so it's just like taking a prism or cut glass ball and rotating it and you'll see different facets of light so the same thing happens as the craft move around and you see through one
(2:20:23) gravitational field to the next the crap is going to look different so it looks like it's jumping around or flickering and and that's that's exactly what you see in the video um you're probably familiar with the m Drive which is that propulsion device do you think this technology the EM drive I'm sorry okay em Drive do you think this technology is close to Breaking the Barrier for space travel no it's useful but I I am not that impressed with it I'm sorry you know it's the hardest
(2:20:59) thing sometimes to ask I said Bob Bob look after all this time you know they've proven Element 115 was fabricated and he looked at me he's like yeah of course it is German but not the stable version I talked about there's you know dozens if not hundreds of Isotopes or whatever he said he was unimpressed with the fabrication you know even though they called him when they were doing the experiments at fabrication uh you know a particle accelerator making he was unimpressed the next one I go Bob they just came out
(2:21:28) gravity is a wave you're Vindicated it's a wave it's it's not just a graviton like you said he goes well Jeremy you know if you think about it I had 50 50 chance of being right so it's hard to impress Bob with he's very skeptical dude so I think the most pressing question I saw on all of these cards Bob what is your favorite pastime [Laughter] that's actually tough to say um well I don't know that's that's a stumper there I can tell you it's making laser beams and shooting off Rockets
(2:22:03) come on yep I mean probably building weird things I guess would be a pastime blowing stuff up comes to mind well I pyrotechnics I've been yeah I've I've done pyrotechnic since I was 12 so probably probably that or any kind of technical thing I love building stuff so I I tell her to say I I really enjoyed the making of the film because the breaks of our film are usually blowing things up or building lasers or hearing Bob um you know talk on the phone to you know physicists from universities or government Labs that are
(2:22:39) asking him about you know the the atomic weight of you know certain Isotopes however they're explaining it was above my head but just hearing you do your thing my my goal in my film it was not to to prove Bob's story Bob said from the very beginning I I don't have everything to prove to you my story that's not why I'm telling you I'm telling you to save my own skin and I'm also telling you because he believes you have a right to know take it or leave it he's always been like that

however
(2:23:09) however the movie after 30 years it's really hard to ignore some of the evidence but most importantly what I hope you got from my film is what I got what I personally got getting to know Bob and George told me this from day one when he challenged me in 2012 to try to get you know the Bigfoot of ufology the Elvis born again on camera The Reluctant UFO Messiah on camera when George challenged me to just show you who Bob is to humanize him to show you his daily life the big question we're all sitting here with is he's telling you a story
(2:23:42) is he worthy of your trust that well no that's the question that really is the question if we can't prove it definitively he's telling your story you have to decide is he worthy of your trust and and the world has changed now and I think I would love to hear from George we are living in a different world now we're living in a world where we're it is now admitted there are unknown craft of Unknown Origin flying in our airspace with impunity and an increased frequency in our own government is not only interested now
(2:24:12) but has been for a long time proven so George can you just touch upon Bob's story and that well it's a really exciting time and things are starting to move so fast I mean two weeks ago the U.S Navy comes out with an announcement just as astonishing to say we're going to try to make it easier for our Pilots to uh report UFOs these encounters are increasing there there are dangers to Aviation there are legitimate concerns legitimate reasons why we need to start making it easier for Pilots to talk about it that would be Unthinkable a
(2:24:45) months ago I think commander fraver who we're going to hear from later today probably had a big role in that happening in speaking to people in Washington and letting them know this is going on and the fact that these reports keep coming in that there are a lot of them that keep coming in now dramatic sort of encounters and and things that are are undeniable and the fact that you know we've we've learned a lot about atip and OSAP and you know the things that uh that I had been allowed to know about
(2:25:14) but couldn't report for a long time is spilling out there's so much more that's still to come there's there's so much more to still to come in uh I don't know how much of it and how soon but it's coming you know and and the fact that it it's synchronized with Bob's story and coming full circle 30 years ago he comes forward and now Jeremy's film is out and and and all at the same time all these news events are happening where the doors are opening up a little bit I mean they're
(2:25:43) not wide open but they're opening up quite a bit and uh it's an exciting time I don't know if it's Vindication I never felt like we needed to be Vindicated but yeah it kind of feels that way it kind of feels that way yeah um so I want to hit a couple things too uh you know Bob has always said to me like in private he goes look Jeremy I I'm explaining to you the best I understood in alien technology I I'm explaining to you the best it was described to me and what I saw you know I don't have all the answers I'm sorry
(2:26:13) but I can tell you what I saw in what I think and one of the things that was always really touching I just want to be straight you know did Element 115 was the known fuel source for the Extraterrestrial craft that you worked on at one time in 1989 you said that you got a piece of element 115 out of Los Alamos whereas being machined under the code name la1000 you say that in my movie you did have a piece of 115 at one time right well what where are you going with this well I I'm just I'm just saying the the
(2:26:55) element 115 was the key it is the thing that generates it's the fuel for the craft if you want to look at that way yeah and it has unique properties oh absolutely can you explain the unique properties of element 115 so that everybody really grasps it the way I feel it we were in a hundred percent sure how how it worked because you just can't cut open the reactor to find out what's going on but um it looked like the 115 is bombarded with radiation and it produ and it produces a stronger gravitational
(2:27:32) field now the rest of the equipment in the craft the reactor it takes that that wave that gravitational wave that comes off of it it Roots it throughout the craft uh in a conduit just like microwaves and through the skin of The Craft it takes that and funnels it down into the amplifiers and then to the emitter so it seems to behave a lot like microwaves do which propagate through tuned channels but it all came back to one little triangle of 115 that was the center of the whole craft and no I mean we don't know everything about it I'm
(2:28:09) not sure I could duplicate you gave me a piece of 115 I'm I'm not sure I could do much with it I could probably make it explode but I don't think I I'm not

sure I can make it Propel anything but um you know a lot of it was was guesswork too we were just trying to do our best educated guesses to come up uh with how this worked and you know our number one aim was to see if we could duplicate this technology with what we had at hand and uh you know clear across the board the answer was no all the time
(2:28:43) so we're talking about a stabilized form of element 115 so for example I learned this it's not okay stabilized it means you take something I mean let me clarify so there's I I learned this from Bob and I can hopefully translate to you so for example there are 37 different isotopes for gold one is stable it's what's on your ring right right the rest are radioactive and yeah Decay so the versions that have been fabricated by slamming particles in a particle accelerator and getting maybe four atoms at about a million bucks a
(2:29:20) piece that lasts for 220 milliseconds we're talking about one or two different isotopic combinations where there could be many many more combinations in fact it's predicted by science that there's an island of stability right in that sweet spot for 115 so what you're talking about is stable physical element 115 220 something grams that was highly machined that were used in these craft is that correct yeah that's correct well you know say you were trying to use gold as your as your example I mean say you were just
(2:29:54) trying to fabricate gold you know just from atoms I mean would you say there were 37 Isotopes or something like that look you only have a one in 37 chance of making it so most likely you're going to make unstable isotope after unstable isotope until you know one day you fall upon the combination that it results in a stable isotope so yeah they just began playing with 115 and just the fact that they made you know four atoms of it on their first try and it was unstable you know that that really doesn't tell any
(2:30:32) story you have you've got a long way to go before you figure out every combination and if one of them is stable you'd said back then um that you didn't think we'd ever be able to make it it would be too expensive take too much energy to make a stable version that you thought it had to be natural that wherever we acquired it it was performed produced naturally Supernova double star or something like that well I I stick by that when I say we can't produce it I mean a usable quantity four atoms is not
(2:31:04) not visible not useful it it's nothing I mean to make to make a gram of it is still impossible even the version that they made so um yeah it's the amount of energy and time it takes sitting there plugging neutrons in is uh is it time consuming expensive task so you were told that there we had a stockpile of 500 pounds of element 115 however in your hand or you were able to work with about 228 grams highly machined in this triangular formation so you physically saw was it 220 hours that was 23. it was 220 something I said
(2:31:41) because I wasn't even I just remember but yeah that's all I ever okay but even that amount that couldn't have been made by any human technology oh hell no not even within our Supernova do we think we could I mean it had to become as cargo from somewhere else is that correct well I mean you don't know there might be Advanced ways of you know a raging atoms and fabricating you know elements on it on a gigantic scale that we haven't even conceived about so the only way I know of is you know the energies required and pressures
(2:32:17) and temperatures you know as some you know gigantic natural you know Foundry like you know a neutron star or exploding Supernova something along those lines but I don't know look look at the technology that these guys have I mean they nothing said and since they can control gravity and they have force fields and things I mean they might have a machine that can crank this stuff out you know like we make plastic but my point is humans humans can humans cannot no did not cannot no no not at all if humans can't fabricate this and you
(2:32:55) were told this story what's so interesting to me is you the first time you go to site for and by the way site four it's not toxic you're not going to die of cancer just being there people try to debunk Bob's story being you can't step foot on there too much radiation you're going to die I've talked to two employees of Area 51 who have gone on Papoose for extended periods of time and they are not sick so that's another thing people try to debunk with actually one was stopped by
(2:33:22) civilian contractor EG security and he was a Navy guy and kind of pissed about it and they stopped him if so if there's no if there's no facility there I'm not sure why he got stopped but I got him on record and I will be able to release that later one of the things about your story that I find really interesting your account of it Bob didn't believe this was extraterrestrial his friends that knew him

before that I've spoke with said that Bob felt bad for people that believed in UFOs you know they got to be
(2:33:52) crazy yeah so that's who he was before the first time and I want you to tell us this feeling the first time he saw the craft in the hangar he he ran his hand along he wasn't supposed to touch it and he thought wow everybody that saw finds saucers it was us it was America that's what he thought but I thought that was the first time I saw it when they let me in through the hangar I thought oh wow I mean this is the new advanced fighter we're keeping secret and this explains all those crazy UFO sightings and um you
(2:34:29) know it all made perfect sense to me until you know I got in contact with everything until you stepped inside walked inside tell us how you walked inside because people want to know that but that feeling you describe of seeing everything the size of the seats the feeling you had can you explain that to everybody like you explained to me yeah um there is a hatch on the side that extends below and above the center line and when you go and you pretty much have to crawl in there they have a little stanchion to go up there but it was
(2:35:06) obvious I mean immediately when you go in there why did they make this thing so small what the hell's going on you couldn't stand up in the middle it was clearly made for something much smaller than a person you know it's aside from all the technology but just the physical aspects of it that the material you know was all the same everything was the same color the way it was assembled everything started looking stranger and stranger to me um you know and then it became obvious once we started having discussions about
(2:35:37) what I was working on that this is a reverse engineering project you know it took a while for this to hit me because I was uh I really didn't buy any of this UFO nonsense for a long time so George I wanted to ask you know again through the lens of 30 years I know neither of you expected this to transform your lives and take over like this how has reporting and taking that risk on Bob's story because you vetted him you didn't just leave you vetted him hard how has it changed your life over 30 years
(2:36:11) well it certainly affected the Arc of my professional life um I think I probably put a cap on what I could do because I would forever be the UFO guy and you know I've done a lot of UFO stories over the years starting with Bob but I've done thousands of other stories and and uh I've got you know Matt and I have had some success in terms of uh recognition for those stories but it doesn't matter wherever I go I'm the UFO guy and I'm stopped and you know in restaurants and bars when I end up in a bar and uh at
(2:36:45) Men's in men's rooms and urinals as I told yesterday and uh and in foreign countries and airports and you know the UFO guy and it and grocery stores and people want to come up and hey do you do really really believe that stuff and you know they don't they don't really care what I believe about UFOs they want to tell me their UFO story and it's just amazing to me that everybody's got one uh and you it everybody's got one it's somebody in their family they've seen something or somebody else in their
(2:37:12) family or their Grandma has a story or something landed in the backyard or out on the farm uh it's amazing how far it reaches so it has changed changed me in a lot of ways in that uh I was not really that interested in it you know until started working on this and and then it it's uh captured my attention ever since it's uh I don't work on UFO stuff all the time but I think about it all the time so I would add just one other thing in that skepticism in this topic is important it's important for you to be
(2:37:41) skeptical and ask questions but skepticism in the sense of hey I want to know more I want to learn more I want to ask questions I want to be in I have those questions answered that's fine it you need it in here because there's so much crazy stuff in the UFO world it's right to ask questions of Bob and ask about his background and and figure out if there's a logic to what he's saying but skepticism and debunking are two different things or so much garbage and junk there's so much backbiting and infighting and turf wars
(2:38:09) and debunking by UFO people presumably people are interested in getting to the bottom of this who because a story comes from somebody else they got to attack it and it's just an amazing learning experience the last year or two since atip ASAP ttsa all that stuff came out how vicious the the field can be it's debunking it's not skepticism so ask questions be skeptical but have an open mind and an open heart and be willing to learn stuff about it what we've learned from Bob is I I think it's true if it wasn't true I wouldn't

(2:38:42) still be reporting about it 30 years later this mystery seems to be tantalizingly out of our reach we learn a little bit more and it moves a little bit away the goal post seems to move a little bit maybe it's leading us somewhere maybe it's a learning curve I hope so but we don't know and uh but it's exciting time I'm so glad for Bob that some of these other events have happened to sort of like take the burden off of him as being this lone nut ball talking about applianceau programs reverse engineering uh because
(2:39:14) uh he hasn't deserved the uh the scorn and ridicule and uh you know all the stuff that's come with it over the years it's been it's been a [__] it's been a [__] well I just I want to end on one question for you but I I just want to say you know thank you uh Bob thank you George for letting me go on this ride with you I you know I hope that um we were able to bring things forward in a way that were logical for people to be able to consume thank you for letting me be a part of it uh you guys I know have
(2:39:47) been in this war together for 30 years just trying to get to the truth kind of last question what do you want the audience here in McMinnville from your story what what is it you want people in the world to know from watching your film what is it you you're telling them what do you want them to understand very simply it's just like I said in the movie the events that I portrayed everything that I said happened exactly like I said it did that's that's all the government really does have or at least at that
(2:40:18) time uh had recovered alien craft and they were spending a lot of time and money trying to figure out how they work and see if they could duplicate it I have no idea where the project is now but back then that's what was going on and that's what I did thank you [Music] [Music] [Music]

george knapp, jeremy corbell, bob lazar, C2C.AM interview pt-1 november, 25th (2018) + [timestamps] - YouTube
https://www.youtube.com/watch?v=2eAZsseyENc

Transcript:
(00:01) for Bob Lazar the topic of this new film by Jeremy Corbell the topic of this program tonight uh it has things have been sort of like a jungle uh filled with perils and uh and dangers back in May of 1989 I was hosting uh the five o'clock news on klas we had a five-minute interview segment in each program uh five days a week and uh we had a last minute cancellation and it occurred to me gosh we got to fill this with somebody interesting I called up John Lear I said hey he had Lear had told me in late 88 so 30 years ago that
(00:37) he knew a guy he thought was going to get a job at at Area 51 and might know something about ET technology out there so I called leer up said hey you think uh your saucer buddy could do the interview and Lear calls back yes you have to black out his face so we did this interview with a guy the shadowy guy named Dennis blacked out his face and he first told the world this incredible story three and you know people have speculated about why uh Bob had come forward even though he wasn't using his name or face at that time why
(01:10) he came forward uh he must be making a ton of money he must need the attention he's a disinformation agent working for the government blah blah blah blah blah all kinds of different scenarios that people generally made up for Bob things were pretty simple though he was trying to stay alive and when I said at the beginning of this program it's one of those things where you had to be there this is what I meant is that there were so many strange things that happened to him threatening things um messing with his mind with his life
(01:40) and took whoever was doing it was took direct action that really crossed the line back then so Bob gave the interview because he wanted to stay alive the people who were around him at that time can testify to that one of them was interviewed for Jeremy's film we're going to hear a clip of that right now it's it'll be just a second what is your name and what's your relationship to Balthazar my name is Mario Santa Cruz and I met Bob actually in my neighborhood uh he lived like one block over my attraction to Bob was his jet
(02:14) dragster so I saw this jet dragster sitting out in front of uh his house in our neighborhood which was extremely just the jet dragster alone was rare but in my neighborhood to see something like that was unbelievable people were harassing Bob

threatening him and you were with him in one of those experiences at least one couple of times actually I actually had a weapon with me you know when I when we rode together because he had been shot at you know he just wanted to stay alive that's why he exposed himself how he
(02:50) pulled out of it and now he dug deep it's a pretty incredible story so people who were not there at the time I have a hard time getting their heads around this where their threats real were they really messing with Bob were they breaking into his house into his car threatening his life shooting in his tires were those things real well we're going to ask the man himself Bob Lazar he's here with us and we're going to jump right into that in just a moment stick around welcome back the moment has arrived here
(03:24) Bob Lazar is the president of United nuclear that's a company that specializes in research and development of cutting-edge Technologies design and manufacture of radiation detection equipment and a retail of scientific equipment and supplies he previously was a senior staff physicist out there in the Nevada desert and also worked as a physicist on Advanced projects at Los Alamos National Laboratory and in 1989 he went public with a story that is the subject of Jeremy corbell's new film about Advanced alien technology being
(03:59) hidden and tested in the Nevada desert Bob great to have you here thanks George good to be here I'm sure you're thrilled yeah can't you tell it in my voice yeah yes I can um I want to talk about uh the sound bite we just heard from your friend Mario about those days because people have come up with all kinds of reasons about why you came forward in the first place either you made it all up or you were working for the government as a disinformation agent and the purpose was to tell the story or they allowed you to know this
(04:32) information figured you would leak it to John Lear and you would distract attention away from something else that was really secret out there at area 51. can you go back in time to that period about why you came forward and then we'll get into sort of reacting to the conspiracy theories that have popped up ever since yeah you know some of those theories are really entertaining and that that one that you just mentioned is kind of ridiculous but um anyway what I mean what are we asking here about Mario or the how are you what
(05:08) was going on in your life that made you take the the step of going forward with that Story doing the first interview the Dennis interview and then agreeing to go on camera with with us later on well as you know it was a really complicated situation at that time and um I was you know I had given permission uh to have my phones monitored and while I was going through my security clearance now boy I'm wondering how to do this in short form because it's kind of a long story that's all right um we got time
(05:45) yeah I guess we do um I was still going through um the clearance process now I had already had acute clearance civilian top secret clearance from Los Alamos that they reactivated and uh but this required um I know some additional checking into my background or something up along those lines so I wasn't allowed full access and I was only permitted out to the site uh occasionally and what happened at that time was I was really keeping with the program and had hadn't even said anything to my wife about certainly not about what I was
(06:34) working on but um the hours they were calling me to go to work were really odd and some of the times it was you know later in the evening anyway to make a long story short uh I would get calls you know odd hours saying it's gonna be 4 56 now um within you know an hour or so you need to be at McCarran airport and you know get on a flight there and you know go out to the base and this happened you know fairly frequently and my wife at the time began to think that I was having an affair and this story about going out
(07:18) uh to a job uh you know it was just something I fabricated to cover it up because who has a job at these odd hours and you know disappears for a long periods at a time anyway at the time she was taking flying lessons and she began to have an affair that uh that was being monitored by uh whoever it was FBI or whatever agency um you know does the clearance check on you right and I'm trying to so they told you exactly how this went down did they tell you um what was that did they tell you did someone from the government come and
(08:05) tell you hey your wife is fooling around because that becomes a security uh concern I would imagine yeah the way it is I mean not only do you have to have no connections to foreign governments and that sort of thing and uh you know be a somewhat stable person but your your family life your home life must also be stable so uh that began to be a problem and they let it they let it proceed for a little

while and then they stopped calling me into work and this is this is basically when the problem began so I believe it was uh
(08:47) well shoot I really can't remember the date um that's that's that's pretty much what started started the whole thing and they put my clearance on hold um at that point I think I started it you were getting threats right I mean eventually you started getting threats is that right or at least threatening things happening break-ins at your house that sort of thing yeah well I mean first was people started appearing in front of my house just watching the premises now this wasn't this was never part of uh
(09:35) you know the clearance process before and I began to get a little concerned everywhere I went I was being followed now where I wasn't before and I started to get a little concerned about this um they had already given me a lot of classified information and now there's no response when I call the person my contact out there they're not calling me into work anymore so I started getting a little concerned and this is when I first started telling some friends about it because at that point I didn't know what was going on I
(10:14) started worrying and I just wanted to tell someone hey in case something happens to me maybe they decided look you can't be part of the project but we've told you too much and you need to disappear or something like that and it sounds like it's right out of a movie but um you know that's that's honestly what was going on in my head so I told that's when I started telling some friends and when I actually took some people out there you know to see what was going on well outside the base when
(10:45) I knew the test flights were in process and we know where it went from there uh subsequently after you do that interview you get called from Dennis Mariani you're Superior who oh my gosh he was pretty upset and then things got worse uh Mario referenced uh carrying a gun and um I remember going to your house after that been a break-in and you're peering out of the window uh holding an Uzi and you know as I've said it earlier in the program I don't know if you're able to listen to it but those things
(11:17) were real that was really going on there was a lot of tension there were mind games being played and it's hard to convey that what was what it was like back then uh for the people who already don't want to believe your story uh but it was real all that stuff was real yeah it was absolutely real and it was very confusing you know 30 years later I hesitate in telling the story because I don't want to get the the order of things happened in wrong uh things happen so quickly and I was in such an incredibly stressed out
(11:54) condition um yeah Mario and I uh we at the time we're going to uh this little place right near me just to work out and we would go at different times almost every day and we almost we always took my car we drove out there uh one night and got out of the car locked the doors went inside worked out for half an hour or so came back out the doors the hood the back hatch we're all wide open and you know we checked it checked the car very quickly made sure nothing was stolen nothing was touched and we just looked at each other going oh my God you
(12:43) know we left the car open and maybe a couple kids came by and just opened everything up so we let it go anyway next time out there the same thing happened again but after we got out of the car that time we both checked the doors and when we came out that was a real shocking surprise um we had no idea what was going on at that time and being followed constantly um I began to wonder you know are they doing this just uh you know to fool with me or uh you know or show me that they can just get in anywhere so that's when we
(13:30) started carrying weapons with us and in fact the final time after this time we just stopped going um that's when I carried the you know a submachine gun with us and I left it in the car with our wallet and you know we locked the doors and we're only going to be in another short time and sure is there as hell we came out the doors were open the hatch was open and there was the gun our wallets and everything just sitting there so it was no random person doing that they certainly would have taken the gun and
(14:10) the wallets um and it really started getting even worse from there uh I don't exactly remember where you know when I spoke to John Lear about this um people would say the fact that you knew John Lear would be a disqualifier for you that there's no way that they would ever allow you anywhere near the program or that base if you knew John Lear at all because they figure well if there's any risk that John Lear would leak it they're not going to put you into the job how do you reconcile uh yeah I can't

(14:51) remember when uh I started telling John about what was going on uh if it was before or after that you know the dates are kind of fuzzy in my mind but um and when I when I was interviewed they asked me about a lot of stuff and they did ask me about John Lear um they understand we was a friend I said yeah I I've known him you know for uh I don't know I guess about a year or something at that point maybe a little less but um I said that's all he's just a friend they asked me about pretty much everyone else I knew too
(15:33) they seemed to know who all my friends were already um so there was no I mean there was no big deal um so I don't see that that being a problem a lot of people said well you can't possibly have gotten a job out there knowing John Lear and uh I don't think that was a factor in fact uh Kathy I don't know if you remember Kathy um George from uh she used to work at Goldstone yeah receiving station out there and uh she she died recently but before she uh she did she was able to get a job out at Groom Lake
(16:17) and uh she put my name down as a reference what that I thought was hilarious that you'll never get a job doing that out there and she's still got the cut stationed out there which was really a surprise to me so apparently your friends don't uh have a big influence on your security clearance you you have to be careful in anything you say in a public setting right I mean that that lesson was learned a long time ago because the UFO people will parse everything you say put it into some kind of timeline if you say anything that's
(16:52) at at odds with anything you've ever said before you get pounced on right yeah that happens constantly and quite frankly I just say things differently all the time I mean I you know I'm not reading from a script this is how I remember and we're talking about 30 years so can I make a comment about that yeah yeah I think it's you know listening to Bob talk here on the radio and you know having spent so much time with you Bob I mean it it pains me because I can hear that it is difficult for you because you feel like you're
(17:31) accountable for every date and every detail and we know this is 30 years ago you know we I just want to know you know the the overall story people I think are beyond that now trying to entrap you into everywhere but it has affected you it has affected your life you're such a literal scientific minded person and you know it's it's painful to hear that when you're struggling because you you want to make sure that you're not misunderstood I am so glad I am so glad we made this movie well I am too and uh yeah it is
(18:04) difficult because all I have to do is if I slip up it's it's like I get a tech just using a different phrase it's it's ridiculous you know nobody talks exactly the same way every single time they tell us you know a story I don't understand but um you know like I mentioned in the movie this uh these events actually did occur you don't have to believe it or like it but they did we're going to get into some of the specifics uh in a moment going to go to a break now talking with Bob Lazar and
(18:38) Jeremy Corbell about the new film Bob Lazar Area 51 and flying saucers from 1989 Stevie Ray Vaughan Crossfire which could be the title of Bob lazar's life story he's been in the crosshairs of a lot of people uh ufologists cranky UFO researchers government agents who were really messing with his mind back in 1989 a primary reason why he came forward spoke to us and uh so we have to ask why he would be speaking now to Jeremy Corbell why allow him into his home into his inner life and tell him what's going on inside his family and
(19:16) tell that story and stir things up all over again we're going to get into that next on this segment of Coast to Coast AM we're back with Bob Lazar Jeremy Corbell uh Bob tell me this why stir it all up again why jump back into this let Jeremy into your house who knows he may have taken the silverware uh you you don't know um why jump back into the into the frying pan well that's uh that's a good question um aside from Jeremy hounding me um they're you know there's I constantly receive emails questions from people and
(19:55) a a good deal of people just want to know where are things these days you know whatever happened did it continue you know what's going on how did it affect your personal life and um I don't know what the the main thing was that that finally made me agree to do it but uh I did I guess it was just to uh you know take care of some of the questions that so many people were asking and it was actually turned out to be kind of a surprise to me I thought we were talking about something that had come to an end and just talking about life afterwards
(20:35) and to my surprise it didn't some of it is um is very emotional in in the film it's a side of Bob Lazar that very few people ever see and and I was surprised

by how how much you opened up uh to Jeremy but it was clear that this takes a toll over the years the constant pounding the little sniping that that you get uh in addition to the questions and of course I still get them every single day as well of the same stuff over and over but you get a special brand of it and it's um that adds up I guess doesn't it
(21:11) yeah it does and it uh it kind of wears you down after a while especially considering the way information is passed around on the internet these days you know it's way different than it was back in the 80s um you know you get these bizarre scenarios that people come up with and uh you know people just seem to eat that stuff up and it's it's complete nonsense and I guess that's that's a good portion of it too you know I just wanted to you know put something down on the record hey this is the way it happened
(21:49) you know I've seen even when I've agreed to do interviews before you know even with bigger you know I think who was it the uh not the Travel Channel but maybe the History Channels and producers with that I'm not quite sure who it was but uh you know they'll shoot an hour or two worth of video uh do an interview get the story and then weave something together and then six months later they'll just take little pieces out and assemble it into another story that uh you know or connect it to something else
(22:27) and just have clips of me in there um you know so it appears like I'm verifying something the the bottom line is I just wanted something in its entirety something that wasn't going to be re-edited uh just to get the facts straight of you know what had happened and what's going on these days but the facts are you really did work out there S4 side of the building a side of that a mountain Papoose Lake nine craft that we didn't make right yeah let's get that straight right now everything I said is exactly as I said
(23:05) it there's there's no if ands or buts about that Jeremy people are uh you know they're in one camp or another there's never going to be proof unless they open up the hangar doors and trot out one of the saucers and and uh admit they've been lying to this about this all these years I mean chances are that's not going to happen maybe not in our lifetime but um um will your film does this uh change the dynamic of the debate about Bob on the on the radio yes it does I mean here's the deal man
(23:47) um you know we're living in a different world we're living in a world where the New York Times came out and said that the study of UFOs did not end in 1969 we have active UFO identification programs right now it completely Alters the light in which you hear Bob talk you know he's an understated dude sorry Bob I'm going to talk like as if you're not here on the phone I'll go for it he's an understated dude you know it really maybe it takes a little bit more to really understand and I think you see
(24:15) that in the film Bob is telling you he worked on flying saucers with gravitational field propulsion systems not reactionary system at a sub base of every one called S4 in the side of a mountain every other liar and Faker and charlatan has come forward repeated his words over and over and over and twisted the story to a point where I think I got really lucky and I was like Bob look at this look what somebody else thinks look at these socks somebody's printing with your face on them oh look at these Spandex and
(24:51) pants Oh look what they said about you they they're saying this about you I I think I just prodded him enough where it was like okay you're right people have twisted my story to the point where it is unrecognizable so we are going to untwist that story to the best degree that we can and I think that from my perspective I remember our first kind of meeting about it Bob I came out I didn't even know if we were actually going to film I brought my cameras but I just I wasn't sure we never really said
(25:22) we're definitely filming this and then you know Bob said the one thing is just don't sensationalize or make anything up and you can have complete access the first thing it is give me his phone number to his mom I mean it was like totally open so I'm sitting here with a different perspective I think um where I'm watching this and I'm sorry I'm listening to this right now and I'm I'm so glad we made this movie because that is the core of the story we need to look at it through today and I think
(25:49) that's why Bob probably said okay was because it had gotten so Twisted it needed to be untwisted so at least people hear his story and judge for themselves that's all he has ever asked is that you live you lift judge for yourself I thought the material from your mom Bob was pretty moving in that I remember back when we

started down this road your mom and dad were off limits you didn't really want me talking to them uh but your mom um you told her the same story you told me you told her the same story you told
(26:26) your wife they believe you and I I think it's a powerful thing that would you make this up to your mom and your wife that's very different from the typical UFO scenario now my mom and dad at that time were were off limits because they were easily frightened and a lot was going on a lot more in the 80s as you know as you know at this time and I was really concerned that you know adding them to the equation could really be a problem I didn't want them you know Disturbed in any way so um you know now a lot of time has gone
(27:04) by and uh you know my dad has since died and my mom's you know in her upper 80s so um I don't think anybody's gonna you know cause any problems but um I want to tell you something I'm sorry Bob I just got to say something no go ahead it's you know when Bob I would meet with them I would meet them with them in different states I would go you know somebody uh what Mario came to to California Pioneer town they would come over they would meet me and they'd say Bob says I can completely be open with you anything you want
(27:45) court and we'll talk about it straightforward No Holds Barred Bob didn't say oh don't tell him this don't tell him that Bob said just just talk to him tell them whatever is is true to you whatever's going on with you tell them and I just want to make that point really clear um because that's what happened so that's what you're going to see in the film you know there's an interview the one thing I'd like to address is you know my motivation you know I I don't understand
(28:18) uh a lot of people come up with different stories and and but really you need to explain to me what might a motivation would be to make up a story like this and I've said it before I said it in the movie I can absolutely make up a better story there's so many loose ends in this thing but um you know for people that think there's a big payout or a bunch of money involved that's ridiculous I have avoided doing anything you know other than maybe once every 30 years any kind of lectures I've had so many offers to do so many
(28:55) things and I won't do them specifically because there's money attached to it and I don't want to give the idea this is being done for money in fact we had a pre-premier of the movie Up in northern Michigan and you know we had it was a donations only and they took in four figures worth of you know cash from the movie and you know I absolutely didn't want any of that money we had we had it donated to the science programs in the schools in the general area up there but um you know this has been my thought
(29:34) through the whole thing that that there's just just no motivation for me to do this I hate attention I cringe when people ask me to go on a radio show like this and uh you know if it's I'm not looking for the attention I absolutely don't need or want the money I do find for myself uh please tell me why I would do this well but you do want people to know something and that I think is one of the thrusts of my film was to convey a message for you and so I do believe that you're you're talking to me because you
(30:11) do want people to know something oh I do I do I absolutely do I'm saying why would I want to make up a story that wasn't true right but what is it that you want people to know I want them to know exactly what happened I wanted to know there was there was extremely advanced technology that did not come from humans that was being researched out at S4 in the 80s I have no idea where things are now but when I was there I this is this is a really really big event that has been completely squashed by the government
(30:56) you know that we live in an interesting time Bob and back then you didn't see a lot of UFO stories on the news other than a few programs that I had done at least in the local news it wasn't given much credibility and it and it over the ensuing 30 years uh you know it generally is treated like dirt uh people in my line of work make fun of UFO Witnesses and UFO stories and don't give much Credence but in the last 11 months things have changed the New York Times I know you don't follow you followed you all that closely but in
(31:28) working with Jeremy you've heard about the Tic Tac video released by The Pentagon uh the time we met Tom Delong at the the one event the one public event that we did together back in 2015 and a lot of interesting things have changed I mean this the subject is being taken seriously are you uh up on any of that stuff what do you think about that Tic Tac video and is it is it getting perilously close to the point where your story converges with other things that are unfolding yeah I really think they are beginning

(32:00) to converge and in general I don't follow UFO lore UFO stories I don't you know look into accounts or any of that I'm I'm I'm not however that being said the Tic Tac stuff really really interests me um and I'm I would love to know more information about that you know the the craft behaves like it's a reactionless vehicle it just reeks of the drive mechanism that uh you know I I worked with it S4 so I'm uh I'm really that there's finally a you know uh a UFO story that's really caught
(32:48) my attention um and uh you were inside one of the craft right I remember you in our stories our first stories you talked about seeing a test flight you know one flight just a little bit off the the tarmac out there but you were inside one of The Craft right yeah I was permitted inside to see uh the components that I was working on were the power and propulsion system and they were on different levels in the craft and you know as I've mentioned before there's no physical connection between the components and sub components
(33:27) there's no wiring they just need to be near each other to operate um so because the placement might be critical was the only reason I was allowed in the craft to see where these devices were and um you know that's that's when it became incredibly clear that a human would never build such an uncomfortable craft you know for a human body it's it was clearly built for something that was much smaller than us probably half the size but uh you know technology was amazing uh the power levels uh that these
(34:08) systems operated out were absolutely mind-boggling yet there was nothing between them to conduct any energy it was uh it was quite fascinating and when you everything you see is as I've mentioned before everything is smooth and rounded everywhere there are never any sharp corners and that's even what caught my attention about the Tic Tac again it's a completely smooth rounded object and uh you know really moved around and behaved like it was a gravity propelled craft and is the there's the shape significant
(34:44) is that significant in compared to say the sport model is there a reason for those shapes yeah I mean generally when you see one of the byproducts of the um the way the reactor works in the craft it produces I don't know if it's a byproduct or an intended product but it produces extremely high voltages and high voltages are contained by rounded objects that's why you see vanity graph generators and if you ever see pictures of you know giant high voltage things everything has big rounded uh rounded shapes to it uh any sharp
(35:25) edges will you know allow electrons to stream off or create discharge points so everything is really kept in a you know a rounded fashion and since everything seemed to have a function there was nothing done for Aesthetics in the craft there was no coloring or any of that sort of thing so um you know clearly the fact that it's rounded was for a purpose so I'm wondering if the sport model were to take a a flight over the Nellis range and uh a pilot a military pilot comes across it and has gun camera uh
(36:02) equipment if the sport model would look like and act like the Tic Tac I know it's this is speculation on your part but I mean could we be talking about the same basic technology well it depends it depends on the angle that he views it from um as you remember uh my supervisor took me out once the crafts lifted off the ground and was probably I don't know maybe 50 60 feet in the air he said walk forward to his towards it and as I began to walk under the craft that was now above my head I could see the sky above it and
(36:45) not the craft which is a really a fascinating thing and an image in my mind that I will never ever forget as as it almost has a distortion like uh you know if you've seen uh oh some hot tarmac or roadway in the summertime where you see the normal distortions coming off of it as you approach it the craft looks like that but then you can't see the craft you can only see the sky above it it's the way gravity bends light so there are some points you can't see the craft at all I mean it's the ultimate stealth but from
(37:23) other points you certainly can it just depends on and maybe maybe from other Vantage points um you know the craft shape might be distorted or look like a Tic Tac for all I know who knows but uh all right we're talking with Bob Lazar and Jeremy Corbell about UFOs ET technology coming up gravity secrecy and element 115

Transcript:
(00:00) we are talking with Bob Lazar and Jeremy Corbell about Jeremy's new film Bob Lazar Area 51 and flying saucers uh those who know the story of Bob Lazar know that element 115 plays a key role it's this element a heavy stable element that Bob Lazar said we had out there at S4 and that element was a key to the creation of a gravitational field gravity waves that powered these amazing craft uh in light of the fact that back in 1989 Element 115 didn't exist but it is now on the Periodic Chart we want to
(00:38) get into in this hour the differences between the version of 115 that Lazar described and the reality of the 115 that now is on the charts what that means to the story and maybe ask about whether this magical element could be responsible for the kind of craft that are now have been well documented in videos Tic Tac Gimbal and those others that have made news in the last 11 months we'll be right back and jump right into it welcome back since last December when the New York Times had this front page story about uh the pentagon's secret UFO
(01:16) program a lot of stuff information has come out and um it sort of changed the the whole uh Dynamic of the UFO issue resulted in a lot of serious news coverage across the board I think many of the media folks who did the initial stories have dropped it since then as we probably could have predicted uh but it you know the the ground has shifted in the last year and people are asking questions about UFOs and ETS and hidden technology and I'd like to ask you Bob and then you Jeremy about secrecy in general Bob you know you were upset back
(01:50) then when we first talked about the excessive secrecy not only because it made for an unpleasant place to work despite the fact that you were involved with this amazing technology but also that you felt in essence the public deserved to know what was going on that we had made contact at some level with this other intelligence from somewhere else talk to me about that and whether you still feel the same way and I ask it in this context is that a lot of people think you made this stuff up because you were working with your employers either
(02:22) wittingly or unwillingly unwittingly and that you made it up to distract attention from something else that was out there at Groom Lake talk about secrecy and and that idea I've I have heard that scenario a lot of times and I mean to me that's ridiculous really what else is out there you know there's Advanced aircraft and Technology at Groom Lake but it's nothing like what's at F4 that's why they made a separate facility for it so I'm really gonna have to push that aside because I'm sorry that's ridiculous
(02:58) concerning uh secrecy um you know there's really two Avenues of thought there because you have to look at the weapon potential of this technology and it's it's impressive because really if you have a handle on this technology you literally control the world hands down there's there's no defending against it I mean you win period so and that means an awful lot to the military even if you don't have a handle on it just the fact you know you have the technology and the chance to research it
(03:39) and try to see if you can duplicate it which is what our job was that's a big big deal so yeah are you going to keep that secret you pretty much have to it's not a safe world and considering what's going on with China and Russia all the more so now so yeah even I would keep you know the technology Secret but you really have to look at the other side of the equation that you know there has already been contact and we have artifacts from another civilization I mean we know there is other intelligent life out there so
(04:21) there has to be and maybe they just couldn't find a way to make a happy median of keeping you know half of its secret and just letting everyone else know you know what had happened that that you know we really do know that there is life elsewhere so I don't know it's a it's it's difficult I don't know how you would really separate the two but uh I can see both sides of the coin myself you know we've talked about the possibility that maybe you were shown this stuff and they were going to
(04:55) goad you or allow you or somehow manipulate you into releasing it eventually is kind of like a test balloon to see how the public reacted and then they could yank it back here's a guy we can discredit if we want to you know well I I was you know I'm probably an easy guided discredit but really I mean it's hard as it is to believe this it wasn't all that organized these guys were really fighting over

themselves they're trying to do it with you know a group of researchers that is way too small and you know they're
(05:35) interfering with free discussion between them which is where ideas and problems are solved so it's I the project in my opinion at that time was run very poorly and there's no big master plan you know we'll use Lazar as our puppet you know it it really wasn't like that it wasn't nearly that organized these guys were really scrambling just to come up with something because there had been so many failures before and I think that even explains you know why they got me they're looking for someone that thinks
(06:09) out of the box you know just just to get some fresh ideas in there a fresh mind and see what they you know they can come up with um I mean we made some progress but uh well I'd love to know where they are today Jeremy you've heard that story as well as you travel around and talk to people in the UFO field uh and you you read the harsh criticism of Bob's story still uh that ah he was upon um you know he was telling something to distract attention from something else out there being tested in the desert
(06:44) which I always laughed at is that man if you could if that was your plan somebody got fired over that because as a result of saying there's flying saucers out there every camera in the world every news team came to that location Congressional investigators exactly and and to this day 29 years later there are people out in the desert with binoculars and cameras and telescopes looking for whatever it is that's flying around out there yeah look it's it's absolutely incredible what has happened since Bob
(07:18) of the hazar story it has forever changed the landscape of how we see ourselves in the universe and the way that people think about UFOs and visitation Bob is saying we have contact in some way shape or form we have Hardware we have technology and that not only did he work on it he dismantled it I mean that's what he's saying he talks again I'm talking like you're not here Bob but he talks softly and he talks gently but what he's telling you is huge UFOs is no longer a matter of belief that is a a data poor perspective
(07:56) haven't looked at the evidence and I would say same with Bob's Story look it's either true or it's not true and that's going to be up to you to decide you have the right data to look at so part of making this film was to be able to show you a little bit more intimately and with new and information and details for the hardcore people that follow this stuff like it's not real life but it is real life and so you're going to see in this film you know a a very intimate look at a very private person I'll have
(08:29) to say Bob you know Bob is extremely private so thank you for allowing me to you know to spend time with you and and it's been fun but really the goal here is you know the the the consensus reality people need to catch up they need to hear what is being said they need to judge it with their own intellect they need to be skeptical because that's the only way they're going to arrive at a real conclusion but it's got to be so we need to get rid of the false arguments the fake news about Bob Lazar the repeated parroted DS
(09:06) things that people have said for over 30 years because yeah they have been unopposed because Bob doesn't have he doesn't make the time to oppose that all of that needs to go away and people need to hear the story and they need to judge for themselves and really I hope that's that's what we do sorry if I'm passionate about it but guess what got a little pent up energy here I am passionate about this this is what got me started in it I'm interested in this and so Bob's telling you a story
(09:33) and you judge for yourself whether or not you believe it but take the data in look at the evidence well we'll come back to what new details you were able to dig up uh to support Bob's story and to take it further a little bit later I want to return to Bob and talk about a key part of his uh encounter or his account and that is element 115.
(09:58) Bob can you give me a synopsis of element 115 and how it works and why the element 115 that you saw is different from the one that has since been created in a lab sure Element 115 is what you would call the fuel that propels the craft it doesn't burn like a conventional fuel it's used more like an atomic fuel um and really to to cut quickly to the second part of the question which I think is more important uh I mentioned Element 115 which was theorized you know way back you know in the 60s maybe even the 50s that there there could be some
(10:41) elements that are stable uh you know higher up in the periodic chart and for those who aren't that familiar with chemistry that uh you know the chemical elements once they reached 92 they become like uranium plutonium and the heavier the element

the shorter Half-Life they have they literally disintegrate they emit radiation they fall apart and the heaviest elements only survived for milliseconds or even fractions of that and they disintegrate well it's been theorized that there might be you know an island of stability
(11:25) a few elements that higher up could just suddenly become stable again and then become unstable as they get heavier the um labs for heavy ion research in darmstadt Germany I believe were the guys that first synthesized some element 115. and they called you right they called you what's that didn't they call you yeah some time ago yeah um the um the elements they created was Element 115 and it it decayed immediately meaning it was it was unstable unlike what I said was a stable element that that powered The Craft
(12:11) now when you make an element you know in an accelerator um you don't make visible amounts of it you make just atoms of it you take atoms and you accelerate them usually fractions or pieces of atoms at high speed in opposite directions and smash them together and then you may get a couple atoms of a new element that fly off that you know relativistic speeds speeds that are close to the speed of light and detectors pick them up for a flash of a second and go that was Element 115 so it's not like they're
(12:44) making Element 115 and they have a little symbol full of anything we're talking about just atoms but they can tell that those atoms by Alpha emissions or you know other methods that it it decays quickly um the material on the craft as I said was stable but this is this is a normal thing and a lot of people have a point of contention about this they've got look you said Element 115 was stable they made it and it wasn't like all elements have stable and non-stable versions of them take the element hydrogen that we are all familiar with
(13:22) you know a light gas like helium flammable completely stable but there's two other isotopes of hydrogen they're both hydrogen all of them are element number one there's hydrogen two and three and the hydrogen one we're familiar with now they give them names hydrogen one the hydrogen we're always familiar with it's called protium hydrogen II is called deuterium and hydrogen three is called tritium well hydrogen 1 the hydrogen we're familiar with we know is stable hydrogen 2 deuterium
(14:02) is also stable it's used in heavy water and nuclear reactors it's kind of a weird thing by itself hydrogen 3 is a radioactive version of it I mean take the element cesium that has you know over 20 different isotopes so you know all elements have versions of them that are stable and not stable and it's just a matter of plugging the correct amount of neutrons into the atom as to whether you get a stable or unstable one so if they continue to experiment making with element 115 I'm sure eventually they'll come up with
(14:45) other Isotopes and they will you know happen upon the stable ones that powers The Craft so Element 115 is the magical ingredient I'm just using that in air quotes that allowed those craft that you saw and you worked on to do what they did it generates gravity uh through I'll allow you to explain the process but without element 115 uh we're not going to be able to duplicate that technology are we I mean I I ask it in this context in the last 11 months we've had a lot of information that came forward Senator Reid had
(15:23) sponsored this program um Lou Elizondo has said that we're kind of in a race to figure out how the technology works that the Russians and the Chinese are trying to do the same thing that whoever gets this technology first as you said Bob will will have a great advantage over their adversaries can rule the world but what I understand you saying is that nobody's going to duplicate that technology without Element 115 is that correct well I mean I can't say that say that for sure I don't know every way possible
(15:56) you know to generate your own gravitational field but certainly uh the devices I worked on you know alien technology craft they used Element 115 they produced and Amplified their own gravitational field and used it for propulsion now maybe there's another way to produce it I don't know um I would imagine if there was an easier way to do it they would have used it but as far as I know if you're not using Element 115 you're not going to be you know producing A system that operates like that and a lot of people
(16:36) say well they always do you have a magic element that just produces look it's similar to the discovery of radium you know when the curies discovered radium it was a magical thing the thing produced you know radiation copious amounts of it that they didn't even know about it sat there and glowed in the dark and they thought this was just a magic um you know this is this is just an element that has a weird Quirk to it and there are plenty of elements that have really unique

properties to them but this this really does something unusual
(17:15) to gravity and the way the reactor Works in The Craft um it allows you to take that that bass wave the base energy from the element the fuel and amplify it and use it to propel the vehicle now I've heard of some stories I think comes along even I've seen some emails or something that uh he had a group trying to work on a faster than light craft or something like that I don't know if you've seen that but um I don't know I I find it really hard to believe anything can be done without using that material
(17:56) Jeremy you took a deep dive into the pursuit of element 115 and what physicists would say about it I know a lot of the UFO physicists are pretty hard on the whole the whole idea and dismiss it with a wave of a hand without really looking into it but you've found some that have different opinions right I that have different opinion they're absolute idiots I'm sorry Bob is right you are wrong I called around the world from Russia to San Francisco to Washington DC I called around the world and I talked to physicists particle
(18:38) physicists I didn't Bob I didn't even really tell you all of this uh when people thought I was talking about UFOs I would often get shut down but there were people that would go deep with me into this and the consensus across the board is that we cannot rule out a stabilized version of element 115 what Bob has been telling you from day one that there are different isotopes you know people try to say oh Element 115 was created and that proves Bob's story Bob's like that doesn't prove my story no I'll tell you what Jeremy I'm
(19:11) sorry to interrupt we're going to have to pick this up on the other side of the break talking with Jeremy Corbell and Bob Lazar talking with Jeremy Corbell and Bob Lazar about Element 115 that part of the conversation continues in a moment but coming up we're going to hear from a physicist a guy with bona fide credentials as a physicist PhD from MIT who worked with Bob Lazar verifies that he worked where he says he worked and that he did was employed by the US government as a physicist we're going to hear directly from him as we
(19:44) continue our conversation in a moment here on Coast to Coast AM Jeremy Corbell before the break we were talking about Element 115 and the conversations you had with other physicists who were not told about Bob Lazar or the context I think of the question uh what did they tell you Yeah so basically around and tried to really deep element thing and you know Bob would explain it I needed any kind of opinion and you know here's the deal when people would get ticklish if I was talking to them about UFOs I said look I don't want to talk about
(20:17) UFOs I want to talk about hardcore physical science I just want to understand about elements Isotopes and about stability and what that means like what is a usable Half-Life that kind of thing and wow after all of this I have to report in that uh you know look a lot of people don't want to go on camera and that kind of thing cross the board cross the board they're telling me that we cannot rule out a stabilized form of element 115 it depends on the Isotopes it's exactly what Bob told us you know all along the way so you get these kind
(20:54) of armchair physicists who don't even have phds coming forward and they're saying oh you know Bob's not telling the truth and they're twisting it and and they're distorting reality the reality is if you're a scientist if you're a physicist you know better and the truth is we cannot discount a stable form of 115.
(21:16) so everybody's just got to deal with that you know Bob I remember this was way over my head when we started the conversation still is it's gravity you know the the um we don't really understand gravity at least we didn't back then uh you would explain to me Element 115 anti-matter reactors things of that sort uh and and sort of how it works a lot of what you said uh including the 115 uh wasn't a reality back then but people have learned scientists have learned a lot about gravity since then that sort of goes along with what you said or is does
(21:48) it directly go along with what you said yeah it does I mean the predominant Theory back in the 80s was gravity was a particle it was a graviton and um you know I you know I said clearly it's not um we're working with devices that use gravity wave and um I believe it was only recently within the past couple years that they built gravity wave detectors and I think first detected uh a couple of neutron stars or black holes converging somewhere in the universe and the gravity waves passing through Earth so we've pretty much proven that gravity
(22:31) is a wave and that you know the thought was different back then Jeremy are there other pieces of the Bob Lazar story that you were able to advance that you think support his overall uh the overall story that he's told oh absolutely yeah so share a couple well I mean I you know I you know everybody hates this and I go into

much more depth into the movie you know and you get to see it yourself you get to kind of go through that Journey with me I'll tell you some things that didn't make the movie how about that
(23:03) um look there's a guy Jim tagliani where you know some of you are familiar with him he worked at area 52. I mean he literally got his clearance ripped just for knowing Bob Lazar he mentioned to someone at Tonopah at Area 52 a you should listen to this guy it's about to go on the news report and then buy the intelligence uh you know officers that were dealing with this you know dealing with the fact you put Bob on the news they pulled him aside and they started questioning him so that's a guy who knew
(23:33) Bob before he was Bob the UFO guy knew Bob from Los Angeles and in fact I think towards to to you George it talked about how you know he would drop Bob off at Caltech or at least his buddy would and so these are people that support Bob's story who have no reason to support it and they tell you Bob is telling the truth I knew he was working on these exotic things you know the cool stuff that I wasn't that's what you know Jim said to me publicly um there are a number of things that occur in the film that I I want you to
(24:07) experience as they develop we will have a different conversation after the film releases but yeah there are many things that Bob has said over the years one of which I'll tell you then okay so after 30 years Bob was always saying that there was a guy who did uh you know security clearances a guy named zinc pen right so Bob already told you he had a cue clearance but there was a guy named sigpin who uh was doing clearances for uh the base of the Majestic clearance what's that it was doing clearance for Majestic
(24:43) clearance yeah well actually so I talked with them Bob so after 30 years George called him out on the news and you know he wouldn't pick up anybody's calls I I got a hold of him I got a hold of him after 30 years he lives on the East Coast not only did he admit that he was doing clearances you know high level clearances for the base he also admitted that he remembers you so additionally he won't go on camera doesn't want to put a dark stain on on the work that he did out there but he admitted he was doing those clearances
(25:17) at that time exactly when and and he admitted that he remembered you he also told me that he would officially call and ask if he could talk to me about S4 and I have yet to hear back from him and I'm sure the answer is no but I mean Georgia that's pretty neat that he offered that well I I pushed him a little bit Bob I mean I was like you know but he didn't say I don't know what you're talking about he did he says I will ask if I can talk about S4 officially to you you can tell people that you talk to me
(25:54) but I can't he at first he said he'd go on camera and then he decided he wasn't going to go on camera but here's the point that's one thing from the film I'll give you right now George that yeah that is something that is something let me give some context on Mike Thigpen because when we started trying to verify bits and pieces of Bob's life there in 1989 after the shadowy Dennis interview and before we unveiled his identity to the public in November of 1989.
(26:24) so I'm trying to verify what I can and and Bob had said that he was uh undergoing review for this upgraded security clearance I said well who's doing it you know and he had he said well the guy worked for an agency it's like the FBI but I don't think it is the FBI and he knew the name it was an odd enough name that I figured well I might be able to check that out turns out that the agency that he worked for is com something called ofi and I never heard of it before the office of federal investigation and sure enough
(26:50) that agency that outfit does background checks for people who would go to work at the Nevada Test Site perhaps I don't know if they also did it for Nellis Personnel but they were involved with people who worked at Groom Lake Area 51 and so I had called the FBI to see if there was a guy named figpen working there and no I thought it might be a dead end I got a tip after we did the story about Bob I got a tip that thinkpen worked for this agency ofi I called him up sure enough an agency that I didn't know existed was real and they
(27:20) really did have a guy named big pen who would not talk to me at that time but I'm glad that he talked to you the significance of it is this guy is real he really was investigating Bob's background to do a security check for his work out there and that's a pretty big part of the story in fact George he was watching local TV and all he's eating like you know dinner with his wife and all of a sudden you're calling them out on the news you're calling them out saying well Bob thinks he was
(27:48) visited by the FBI and his name is Mike Thigpen and he like dropped his Fork

you know he's watching the TV like what and so that really kind of got him in trouble a little bit he had to defend himself he had to say look I'm I'm not talking to reporters I I didn't give people my name I did not say I was an FBI agent because he wasn't an FBI agent it's just it's hilarious um you know there is actually more to this that I think you know will be coming out but I I do want to thank Mike
(28:17) I mean I doubt he's listening but I I do want to thank Mike he was so open with me and so straightforward and you know look I've been visited by people to help with clearances for friends of mine you know and I know it's a very serious job and they take it very seriously so fast forward 30 years the fact he was even willing to talk with me to the degree he did you know look it allows me it allowed me to want to you know kind of understand Bob's situation even more so yeah there's new stuff in the film
(28:47) there's a lot of new stuff and you know the focus is really just trying to understand this story from a rational logical clear perspective where you're able to look at it and understand the big picture which Bob I don't even think you've hit yet tonight and and I think it's so important you know where did these crafts come from how long have we had them you know at one point you told me you know maybe they were ancient you know can you talk about that a little bit yeah I mean that's that's my gut feeling
(29:20) from hearing little mutterings here and there I mean now this is my own personal opinion so don't cast this in stone I I believe that these were part of some sort of archaeological dig now I don't have any evidence I didn't read anything like that but it's it's just I that's the that's the feeling I got um you know because they're talking about the you know how long these things have been around so um you know I don't know I always wondered Bob if they gave them to us if they just showed
(29:56) up and it's like you know giving a cell phone to a Chihuahua or something here you go figure this out yeah it and it it could well have been that I literally have no information on that and I don't know why it sticks in my mind that that these are very old but um it does you read a lot of these reports that had all kinds of information related to ETS and uh uh Zeta reticuli and and uh things of that sort can you share some of that and do you think that that stuff was accurate or they were showing you something to
(30:30) see how you'd react yeah I don't know I don't know you know I like to just stick with the things that I can verify by having hands-on experience with and uh because you know you know how famous the military and government agencies are you know employing disinformation where they can take you know some true facts and and weave in some nonsense with it so if the information is ever released it just doesn't make any sense to anyone and you can't pick the real facts out of the you know the ones that were
(31:06) fabricated now I don't know if I was exposed to any of that but I do know the things that I had my hands on the things that I dismantled the you know the components that we analyze there's no question that stuff is absolutely genuine but some of the stuff in the reports you know how can I determine if the crash actually came from The Zeta reticulate star system uh that's a star system that's only visible from the southern hemisphere it's about 30 light years away I have no way to verify that
(31:34) it was just in some reports um so but like I said I prefer to stick with the things that I know for a fact uh as opposed to you know making some sort of educated guess on on the other information in this facility S4 inside the side of this mountain these nine hangers nine different craft as if they had the variety pack you once told me um how many people work there um I think you had told me at one point it was 22 total I mean it seems like a program like this deserves more people and more resources than than that but
(32:12) maybe the more people you have the harder it is to keep a lid on it and maybe that's the reason but there were at that time there were 22 people on the planet that had knowledge of this program now that included everyone and they even gave us a list of the people um so the reason behind that maybe it was just to keep you know the actual numbers down but that was uh the main thing we talked about um Barry who was my lab partner when I worked out there um that was we were always complaining about the absence of free discussion and
(32:55) The Limited number of people and any time we would say we need a specialist to bring in somebody that knows you know about you know something about whatever we were working on uh whatever component at that time anytime we wanted any additional you know help as far as you know people it was always turned down and scoffed at we

can have the checkbook was open for any equipment or anything else we needed but you could not bring another person in there or consult with anybody and you know that was destroying the progress of the project I can only
(33:33) hope they push that aside to some degree and made some made some more progress because things were moving so incredibly slowly uh the one name we had from that time period back then was your supervisor the name he gave you was Dennis Mariani I can't tell you how many hours days months I've spent trying to find Dennis Mariani now back in the before the internet was so common and social media was so common it was a lot harder uh to make those kind of searches we did find a Dennis Mariani who was attract to a little town a post office
(34:08) box in Southern California a town that's very close to Edwards Air Force Base and and I thought we were on the trail there have been some other leads that that have been pursued um but Dennis Mariani as far as we know has not surfaced nor anybody else of the 22 people who knew about that program out there Jeremy you took a stab at that as well right oh man yeah I mean look I I can only imagine what you've gone through George I mean I've called every Dennis Mariani in America and Beyond I mean I've talked
(34:38) to people who were farmers named Destin Maryland I was like are you sure I'm like look man you could just talk to me I'm a filmmaker I'm cool man don't worry about it I mean I have tried like I found a guy I found a Dennis Mariani I showed Bob the photos and Bob it's like it's a it's in it is absolutely immediate if I show him a picture of figpen right it's like boom yeah yeah yeah that's that's the guy but but but with you know the Mariani thing he's looking at it I
(35:04) showed I found a Mariana guy that was like racing on Dry Lake beds jet cars you know I mean he's like that is a cool car but that's not Mariani nice try you know so that's what I enjoyed about this process I mean I really I call people up I talk to him and and Bob is the first to debunk anything he is the most skeptical about UFOs about anything I have uh probably the highest ranking military individual that I have ever met for sure that has always talked to me about about my work and has advised me
(35:36) and I he has told me what not to focus on to waste my time when it came to Bob and it came to Bob's story and it came to Papoose and it came to S4 he told me now that is a story you should cover that is a story that is worth your time and and Bob that holds no weight for Bob no wait at all but you know who I'm talking about George and uh it holds weight for me so I don't know man I've been around the globe twice you guys been around 10 times it's what a wild ride it's a mixed bag you know uh a
(36:14) lot of the debunkers the people that don't believe Bob and there are some people included in that whose opinions I value highly I'm not just uh dismissing them with the wave of a hand they come up with stories look I checked they'll say I checked with my sources insiders high level people uh Bob never worked out there or another one will come back and say yes Bob worked out there but not on flying saucers or Bob never worked at Los Alamos or there are a variety of different people who do have high level
(36:42) contacts who will tell different versions of the same story um and many of them did you put Bob through the ringer did you have people from Area 51 ask Bob what did it look like when you landed did you do that in 1989 yes we did and as far as they were concerned he really had uh had been out there that he knew some tiny details that were not obvious questions to be asked I don't know what kind of weight that has though it's the same as these unnamed sources who tell you or me or some of the sources that I
(37:15) have that Bob is not telling the truth you know it you have to lump it all together there we have one hour remaining in our conversations with Bob Lazar and Jeremy Corbell Bob I'm not sure if you're sticking around but at some point in the next hour we're going to open up the phone lines and we still have to hear from the physicist who uh verified at least part of your story well Coast to Coast will continue momentarily

george knapp, jeremy corbell, leslie kean, C2C.AM interview, october, 22nd (2017) + [timestamps] - YouTube

Transcript:

(00:10) foreign you're in the right place at the right time this is Coast to Coast AM blasting out of the Mojave Desert like a Scirocco blazing across the land slamming into your radio like a supercharged nanoparticle of unobtainium greetings from the boldest bodiest most outrageous city in the world the planetary capital of sun Fun Sin sex and secrets my not so humble Hometown Las Vegas Nevada my name is George Knapp your occasional host designated driver of the airwaves and moderator of tonight's upcoming cacophonous Cavalcade of conversation
(00:55) the Felines and I crawled up out of the command bunker tonight to check out the balmy October Desert Sky feels kind of like Maui this time of year here in Las Vegas minus the ocean of course got so much to talk about tonight and two great guests here to help us process some fairly dramatic events that have come bubbling to the surface of late on my calendar this is the Sunday I had marked for the last several months written in bold letters Tom Delong Sunday it's the date we plan to have rock star entrepreneur Tom Delong on the
(01:29) show to talk about the next stage in his ambitious plans where things go from here talk to key members of his team as well figured it would come right after his announcement that date has changed a couple of times as you know we changed with it well we learned two weeks ago on this on the same day he made his announcement on a stage in Seattle that he would not be able to do any interviews for a while as many of you know Tom Delong announced the creation of his to the Stars Academy which is governed by the rules of these
(01:59) Securities and Exchange Commission at his lawyers advised him that he and his board members should not do any broadcast interviews meaning no TV or radio so not while this public offering process is underway if you watch the announcement event or watched a rebroadcast online you know there were no reporters present it wasn't a news conference and since the announcement of course people have been anything but shy in expressing their opinions about what unfolded that day and you know I feel the same way you do
(02:29) about it I really wish we had Tom and his team here with us there's so much to talk about so many questions to ask but that is not the case uh if you've heard his earlier interviews you know Tom is not a shrinking violet he's not shy uh he's very open to speaking about his projects and interests and I know he'd like to be able to speak in detail especially right now he needs to get the word out there but it is what it is so we move on there is still a heck of a lot of news to cover and that's what we're going to do
(02:58) tonight if I had told you a year ago or two years ago that in October of 2017 a group of five insiders men with the highest security clearances in our government who'd been at the Pinnacle of military and intelligence agencies of power in this country would step forward on a stage and announce among other things that the study of UFOs never stopped with Project Blue Book that in fact the military has continued to collect UFO information and analyze it as a Potential Threat that our government has studied the
(03:33) technology of UFO craft trying to figure out how to duplicate these amazing abilities that the government's collected striking uh films and videos and photos of UFOs and I'm talking about clear daylight images not these fuzzy nighttime cell phone shots that are satellite systems and Radars have detected UFOs that the government takes this very seriously that it's real the UFO phenomenon is real that one of the men on that stage had been in charge of the UFO data program and threat assessment for the Secretary of Defense
(04:06) that he worked directly served with was friends with Secretary of Defense James Mattis General Mattis that others had also worked for the Secretary of Defense and intelligence capacities that one of the men who is now saying UFOs are real has been a 30-year CIA professional who gave daily briefings to the president of the United States and another who worked on classified technology programs for multiple three-letter agencies for decades that one was a brilliant engineer who's worked on the most top secret Platforms in the U.S Arsenal and
(04:42) that all of these men were putting their reputations on the line to say it's all true you would have considered that to be an historic day well it happened it happened this month that and more it happened in October this month but you wouldn't know it if you read major newspapers or watched a network news programs the UFO Community the pubas of the Flying Saucer Realm reacted as if someone just kicked their mom in the ribs well tonight we're going to talk about what was revealed at the event in Seattle what it means a Leslie Kane is
(05:18) the journalist who reported about the Tom DeLonge announcement the day before it happened her story filled in the broad Strokes of what would unfold what

people should watch for and outlined what was likely to happen and then she wrote a follow-up after that event and based on her many years of chasing the UFO Story the UFO reality she considered that to be a landmark day a hugely important news story she's had some time to digest the events and the reaction and Leslie joins me in a few minutes to separate wheat from
(05:49) chaff and to address some of the questions many of you have been asking about this undertaking the other dramatic news from that day involved a vivid example of what our military has been dealing with for the last 60 plus years a well-documented clear daylight encounter between the U.S Navy and a gigantic Tic Tac for lack of a better term this UFO had been popping up in and around this battle group of the USS Nimitz a warship one of the most powerful and most sophisticated in the world fighter planes were sent out images were
(06:24) recorded the technology displayed by this big Tic Tac thing was far beyond anything that we have there was an intense investigation more than one in fact and like so many other solid UFO cases this file got stuck in a desk somewhere and everyone pretended like it never happened I know that a civilian agency one of those three letter outfits looked into it and then a few years later another group started its own investigation outside the purview government then an article appeared in an aviation magazine one that's read by pilots written by
(06:57) pilots until Tom delong's Seattle event the only other public discussion about the Tic Tac UFO was on this program when I interviewed filmmaker Jeremy Corbell who has developed his own sources and new information about this incident which we will get to an hour from now when Jeremy returns to the program the fact that a Former Intelligence official high in the Department of Defense would not only acknowledge this case but add new details to it in a public forum vouch for it and then use the case to challenge Congress to launch
(07:30) its own inquiry is I would say news It's News if I told you a year ago that this would happen I'm not sure you wouldn't believe me we're going to talk to Jeremy about the 2004 Tic Tac incident and more recent encounters with the very same craft and so other surprises including his film patient 17 which is about alien implant surgery is performed by the late Dr Roger Lear maybe even a Bob Lazar sighting a new interview who knows we have a lot to ground of ground to cover as I mentioned so you know let's get to
(08:04) it webmaster Lex lonehood and I have called together items and Oddities from around the world we call it naps news you can find it on the coast website among the stories tonight a new account of the Tic Tac UFO posted Friday on Facebook it includes a link to the original leaked document which was incorporated into that Aviation article I referenced a couple of minutes ago more about the documents and the validity of that later also if you're wondering why we haven't made contact with aliens we've got a
(08:33) story about a confirmable contact I should say but got a story a science article about the impact of icy worlds blame it on Hoth I guess you could say also a really interesting story about the Bradshaw Ranch near Sedona in Arizona where a lot of the same kind of weird stuff occurs as at the better known Skinwalker Ranch in Utah and with Halloween on the way a story about the origins of some of our strangest Halloween holiday Customs that and more in naps news while you're there check out how to become a coast Insider
(09:04) cost you about 15 cents a day gives you access to a vast Archive of previous programs you can listen to them anytime you want as often as you want on just about any format Coast Insider is still a great deal you can also find out how to subscribe to George norie's TV show beyond belief which covers a lot of the same ground that we cover on this program with that let's assume the position bring in the dog and cat put on a pot of mud slip into those silky jammies try on those bunny slippers and plop down to the
(09:33) barca lounger turn down the lights and Turn up the radio because we're about ready to rumble in a moment Leslie Kane I'm George Knapp and this is Coast to Coast AM welcome back to uh prepare for tonight's program I sort of look back to refresh my memory about Tom delong's history on coast to coast and in a way you and I have had a front row seat for how his projects have evolved over the last six years or so I his first big public interview about his interest in UFOs was right here on Coast back in December
(10:03) 2011. then he returned in 2014 he talked about personal experience he he had had in the interim uh then in March of 2016 he came here to tell us about government contacts he'd made insiders who were telling him things about the UFO mystery and and many of you didn't believe him and it's it's right to ask questions about this I

mean why would insiders talk to a rock star many of you asked as I did then the Wikileaks thing exploded that same year a couple months after he was here we found out he really had been
(10:33) talking to well-plus placed people on the inside generals and such and he had a plan in mind to give those insiders a way to get information out into the sunlight those plans changed with the Wikileaks Revelations but by February of this year Tom Delong was back on coast and at that point he said the program he was working on would be different than what he originally had in mind but he was moving forward with a process that would achieve the same thing it would take place over a couple of years and a lot of people decided that Tom
(11:06) meant by that that he was going to announce UFO disclosure with a capital D I know that several hundred of you have written emails to me that effect no matter how many times their attempts have been made to sort of temper those expectations that is still what was expected if disclosure means the president comes out and announces UFOs are real and he opens up an ice box holding the Roswell dead alien the no that didn't happen but given the pedigree of the people who were with Tom earlier this month I'd say
(11:36) it's a major development the ball has been moved down the field Leslie Kane is a veteran journalist and has been my guest on this program to talk about two terrific books she's written one focused on the UFO subject and about the major players inside government who take it seriously the other about the survival of Consciousness after death her story is about Tom delong's announcement generated national attention when they were published by The Huffington Post still generating reactions I should say
(12:03) she agreed to come back for this first hour tonight to share some thoughts and reactions to what's unfolded Leslie thanks for doing this hey George great to be with you thanks for having me share with me a little bit about uh the The Briefing that you had where this all unfolded and your reaction to it then and your reaction now that the stories came out well the briefing you're referring to was about exactly one week before the the release date which was October 11th and um you know they the team just wanted to
(12:35) have some really good coverage of this and I knew two of the team members I've known Chris Mellon and Hal putoff for quite a while so they invited me to come down to Washington I met with Hal putoff and Jim semivan who had no haven't hadn't met before Lou Elizondo and Chris melon was there as well and it was a four-hour meeting and the real interesting part for me of course was Lou Elizondo because this man had literally uh resigned from his position at the Department of Defense literally the day
(13:05) before I met him and as you alluded to earlier he headed up the dod program which investigates what they call Aerial threats and within the study of aerial threats they investigated UFOs and here we had the head of a government program coming forward and acknowledging that he headed up that program that the program exists and that as a result of that the conclusion is that the phenomenon is real there's no doubt about that and so at that meeting I got to know him quite you know as well as you can get to know
(13:41) someone in four hours and what was really important about it was that he was able to verify for me through documents and various things that he showed me that he indeed is who he says he is that his job was indeed what he says it was and he was very concerned that I that he'd provide that documentation for me that he wanted to make it absolutely clear to me who he was and what he did and that was entirely fascinating to me and I came away from that that meeting after speaking with these these guys for four
(14:09) hours uh very very excited about what they're doing and interested in reporting on it because as you said earlier George I believe this is a big story and I think it's really important so that was the value of the meeting for me was really to just begin the process of of getting enough background to be able to cover it uh you know the week during the week just before the event and then the same day another story came out so I know you've been down this road before I mean your book was UFOs generals pilots and government officials
(14:41) go on the record so you know there are people inside government not the government we can't uh you know say it's one big megalithic entity or something but monolithic entity but um you know that there are people who take it seriously but this was a real step forward because this guy confirms yeah we've been studying it the whole time it didn't end with Project Blue Book that seems to me to be a pretty significant news story I completely agree with you and I think you're right you know

I have
(15:09) had a lot of experience dealing with these types of people but many of them that I dealt with George were from other countries you know very high levels but nonetheless there weren't that many Americans that I was able to bring forward in that book because most of them work behind the scenes and sort of in the shadows and I think that's what's so phenomenal about what's happening right now is that these high level very key people are coming out of the Shadows they're stepping forward into the public
(15:35) Arena they're keeping their connections to government which are very important or to the various agencies that they worked with but they're still independent so there's a bridge now between this independent public company and the government which is really important and they're coming forward for basically the first time at least they are in a new way in a way that they've never come forward before and Elizondo of course is coming forward for the first time so even though I have talked to people
(16:03) before in high levels I this is something to me that's unprecedented in in terms of the American situation and as you said it counters the official line that has been set up ever since Project Blue Book closed which is that the government's not interested in this and we don't investigate it now we know that's not true what's the reaction been public reaction and media reaction to the stories you wrote two stories that one which outlined what was to come and then another story after the announcement
(16:30) that that largely focused on Lou Elizondo and and Chris melon and their stories yeah I mean I think you know the stories got picked up a lot over the Internet doors but you know I'm never happy with the fact that the mainstream media the big guys don't go don't grab it and I think it's a huge story but um it hasn't kind of broken into you know CNN MSNBC Fox New York Times Washington Post that type of media hasn't covered it yet I think they will because more is going to come out there is going to be are
(17:02) going to be some more very interesting things that are going to come out and at some point I think the major media will grab it but I think it's gotten a lot of play uh uh there have been a mixture of responses it's certainly in the media but I think a lot of the public have had as you mentioned a lot of questions many of them are critical of the organization for various reasons and I have been a little somewhat surprised about the Intensive negativity that I've that I think is out there but nonetheless I'm
(17:32) I'm a journalist that I'm going to keep covering it and I I think you know as I said I think it's really worthy of coverage and I think you would agree that this is something important and positive very positive uh Chris Mellon uh used the example of the Tic Tac UFO incident we're going to talk about that later as well if you want to talk about it now that's good too I mean as a as a direct challenge to Congress I mean he worked for the Senate intelligence committee for for years had high
(17:57) clearances oversaw all kinds of black programs he knows those people and he was directly challenging Congress look if you don't know about this technology about this incident you'd need to have a briefing and I thought that that that incident that those statements by him we're also we're not only should be taken literally but also you can read between the lines suggesting that maybe there is going to be Congressional interest in this sort of thing at least behind the scenes yeah I think it's a really I mean he
(18:26) just sort of feels like that case and I I don't want to go into that case now because I really don't know it that well and I know you're going to have an expert come on soon but you know was it a very important incident that took place and with around the aircraft carrier where there's a tremendous sightings and broad daylight seen by many many witnesses and picked up on radar two different Radars um and I think you know Chris Mellon really sees this as a potential Catalyst this particular case
(18:51) uh and all it takes is one or two members of Congress to request a briefing on it doesn't you know completely privately but once a member of Congress is interested and gets briefed on it then he believes that That Could That Could escalate that could build and others will become interested in it so he sort of is hoping this this will be something that will open a door and he's going to try to make that happen I've had the conversation with Tom Delong about tempering expectations a bunch of times and I know people I guess
(19:20) people had it in their mind this was going to be something else I don't know

what the something else is but as I said I thought this was this does move the ball down the field quite a bit um did you get a sense that there is a lot more to come that this was just sort of the set up the infrastructure of what comes next definitely I think there's more to come and they have they have announced that themselves first of all that they're going to be releasing videos taken with top-notch military cameras that they as you mentioned are
(19:48) not just fuzzy images taken with cell phones but really really technologically advanced cameras uh and these videos have been you know Declassified and and all provided legally uh through Lou Elizondo when he was at the Department of Defense and uh this is I think this is going to be something that's really going to be important when they're they're right now setting up the mechanism through which they can release those those videos it's not a simple process but it's certainly going to happen and I think that's that's going
(20:19) to be a big big deal and there will be other documents and other information that they intend to bring forward as time goes on they will also be letting people know about things that happen various meetings that they're going to have uh events that are going to take place that they're involved with to the extent that they can make these things public they are absolutely committed to doing that we're talking about Leslie Kane about the uh the announcement of to the Stars Academy made by Tom Delong in
(20:47) his group when we come back we'll talk about a couple of other members of the team Steve Justice who just came over the from Skunk Works Hal put off and Jim simivan we're talking with Leslie Kane about the to the Stars Academy announcement made by Tom Delong and his team of inside advisors when we come back we'll get into the financing that which has raised a lot of questions and concerns out there among the public and I think Leslie can help address some of those questions we'll be right back
(21:14) Leslie Kane in a moment we'll jump into the financial stuff and I know it's sort of tricky for us to deal with it because we're not directly involved but we'll get to in a second before I leave the public reaction to it though the reaction of the ufology pubas the high priest of ufology is not surprising to me at all I don't know if it surprised you but it's I've I've been in it 30 years now and uh you know this activity is characterized by backbiting and infighting and turf wars
(21:46) uh it's a nasty little business the only thing that unites the high Priests of ufology is when somebody comes from outside their Circle uh with a new source of information then they circle the wagons and they sharpen their claws and and man they have gone after Tom Delong he knew that this was this would happen I mean he knew it you know a couple of years ago and was trying to shoot for a larger audience uh beyond that UFO group but tell me this are you surprised by the the vitriol I'm surprised George but you know I
(22:18) don't have my fingers sort of plugged into that world as much as you do I mean as you say you've been covering it for 30 years and I think you follow the events of the UFO Community a lot more closely than I do so I'm really more outside of the whole thing so therefore I'm more surprised because you've had more experience with it than I have um so I think you know and I do I think people have every right to ask questions people have raised some good questions but I am surprised by the the sort of
(22:46) hostility the negativity and the jumping to conclusions that people think after this one event that it's all about raising money or this and that and they they don't really think carefully and read carefully I don't think before drawing conclusions and that disturbs me I I know that there there's a hundred people have sent me this video that's on YouTube that just rakes me over the Kohl's too for not getting into the finances which I'm not sure that these internet journalists understand what a
(23:14) TV guy's job is but I have a three minute window to tell the news of what happened on the day of that announcement and I thought the news was about UFOs I I think the financial stuff is definitely you need to explore it I would not urge somebody it would be inappropriate for me or for you to tell people put your money into this we don't know what people's finances are and we don't know all the intricacies of how this thing works so I would not advise people to do this I wouldn't give them
(23:39) advice either way you know you look at the information that they're posting but I've seen stuff that's posted that's just ridiculous you know it's uh about the long and his motives I mean he had a company he could have kept this whole thing to himself uh he had all the intellectual properties that he'd already put like a

million and a half two million dollars into developing that will become big projects he rolled it into what will become a public company it didn't have to and I don't know if
(24:05) you understand sort of any of the intricacies of of how this thing works but it doesn't look to me like the long is ripping off the public that it doesn't look like that at all you know and George I I think um I'm just sort of beginning to look into that aspect of it because like you the interesting part to me was the UFO story what this meant who the people were what they were saying I wasn't particularly interested in exploring the financial structure of the organization or what they were asking of
(24:34) their investors because that's not the part that concerned me but as a journalist I also understand that people want information about that as well I have approached members of the team about that uh literally today we I had discussions with them about that they are going to put on the website very soon uh some clarifying information that I think will help address the concerns that people have raised and they're aware of what those concerns are they're not hiding anything they very much want to explain things to people and that's
(25:05) going to happen and I just think it's better that people hear it directly from the company than hearing it from you and me sort of trying to figure it out but you know if they can go directly and they're going to be able to do that I think a lot of the concern had to do with a loan that Tom DeLonge had provided as you said he put you know a million and a half two million dollars of his own money into this and you know there was some misunderstanding about how quickly that loan was going to be paid back it was going to be a huge
(25:32) chunk it's really not going to be a big chunk it's going to be paid back slowly and I think that's something that needs to be clarified by the members of the company and they are going to clarify that so I just want people to kind of stay abreast of that and I will be posting on my Facebook page a link when they do put this put some new information up so I think that'll help clear things up a lot for people I think a legitimate question too that was raised by a lot of people is about the cost of what Steve Justice talked about
(26:01) Steve Justice was the head of advanced projects for the Skunk Works Lockheed Martin Skunk Works which has developed amazing technology over the last 50 years or so including a lot of stuff tested here at Nevada's Area 51 but but he's talking about this amazing craft reading between the lines it sounds like something that maybe the black world has already built based on technology they got from somewhere else but he's talking about building this craft that might take billions of dollars to develop and clearly these guys are not
(26:34) going to raise that kind of money so again reading between the lines it sounds like they're going to have to partner with some folks exactly and and Tom actually told me today that that is exactly what they have in mind the Aerospace part of the project is going to be a little bit later you know they're initially going to get other things rolling and they do intend to partner they do intend to get contracts with major aerospace companies even with the US government they'll get grants they'll work with uh contract you know
(27:03) they'll get contracts from companies and and government agencies that have the money for this and that's how everybody does it that's how the Aerospace business works you can't possibly raise the money yourself or something like that but it can be done if they partner with the right people and it looks like already there's some interest from some very important uh I know one big Aerospace company anyway is already expressed interested in working with them so it just takes time for this all
(27:30) to develop but I it's conceivable that they could do that and people have to understand that it's not just they're not planning to crowd fund to get money for that you know that's something that will take time and will happen over the long term and it will depend on partnering with outside uh entities that can help support it um you know the other there's another issue that's come up ever since Tom came onto the scene it's about this information well clearly he doesn't know what he's talking about he's being led
(28:00) by the nose this will be disinformation whatever he gets will be fed to him and it's stuff they want out to divert attention away from blah blah blah um that is a legitimate concern because in this field as you know Leslie there's been some some people have come forward with totally bogus stuff they've spied on UFO researchers and infiltrated UFO groups and you have to be on the alert for that kind of thing the thing is about the the group of people that he brought forward I don't see them

fitting
(28:26) into that category come out as an example for a long time and there's absolutely no way that I could see him being part of anything like that and I don't get that sense of the others just because of the high level people that they are and I really did I do believe George that they have a very genuine motivation and intention to do this for the right reasons for the same reasons that all of us have which is we want to understand what this phenomenon is about and we want to be able to harness the technology to for
(29:04) the good of the planet and I have never had any sense from any of these people that there's anything other than that that motivates them to want to do this so I I find it I would find it hard to believe that you know and also their credentials and everything is documented I mean they're not sort of shady characters that are you know spreading disinformation through leaked documents and things like that everything is above board with them well at this stage of their lives too I'm not sure any of them
(29:32) need to have their names tarnished they spent their adult lives in in service of their country and honorable service of their country Chris Mellon comes from one of the wealthiest families in the world I don't think he needs the doe a Jim semivan 25 or 30 years with the CIA uh the Clandestine Service one of the quotes in in an article I saw from him it said you know a lot of people in our group are former government employees who know the stuff is going on when it comes to uaps which is their term for UFOs we feel there is something to it
(30:05) and people in the government and people anywhere some have had unexplainable experiences others are curious he's a person who's had an unexplainable experience right absolutely and I think it's just terrific that he has had the courage to actually write about that and speak out about it and I think that all the people out there who are experiencers and feel like they may have been marginalized you know from from sort of the higher level people that are dealing with this topic it's not going to be true with this
(30:35) group they are conscious of the whole Realm of the experience or world one of at least one of their members as you said is an experiencer himself and has spoken out about it so I think that's another wonderful thing about this group is that it's opened up to that realm and it it recognizes how little we really understand about what this phenomenon actually is how complicated it is and uh you know just something way faster and more complicated than we really understand and Jim semivan knows that better than
(31:09) anybody because he's actually had a direct experience himself so that's true there you are I don't think someone like Jim simivan is out spread disinformation when he's been humble enough to talk about his own personal experience that he said changed his life yeah I I don't think there's anything wrong with being on edge and being uh of a position where all right show me show me what you got um you know there they've talked about having films and access to the things that are either unclassified or going to
(31:37) be Declassified and released to them I I've heard the same sort of uh behind the scene Whispers that you have that maybe they already have some of this stuff they're going to release it but I I think people have a right to say okay show me and verify it it makes sense to go ahead and check it if if the stuff is true if it's legit um then it should be treated as such absolutely and I think people have every right to ask too well if you have this stuff why aren't you showing it to us now I think people were disappointed as
(32:06) you mentioned uh that the the launch didn't include like you you mentioned you know the alien body but let's even that it didn't include any videos say and I just think you know people have to understand that and I learned this when I met with them that there's a real process involved with with releasing those videos it's not simple but they have them and it's going to happen and I I have every I have every confidence in that and so I I think uh it's just a matter of people having patience and
(32:32) they will get they'll see those videos and when they're released they're they are going to include documentation that show the chain of custody of those videos that document where they came from how they were Declassified if they were Declassified what the process was all of that will be documented so it'll be no question as to the veracity you know the authenticity of these videos uh and and that they actually are what they're being told what what they're saying they are is you know is the real
(33:02) deal so it's all going to be provided and it's very hard to to wait you know

when you've been waiting for so long and a Tom gets very enthusiastic and people get very excited and they have high expectations but um I think things will evolve and people will be very pleased with what will come I mean I I don't know any a lot more about that than anyone else but I've talked to the people involved and that gives me confidence that they're telling the truth about but you know about what they
(33:29) have and that they are going to bring these things out Tom's enthusiasm has sort of caused him problems you know and he's done it on this show and in interviews that I've done and probably with you as well and he does he gets uh pretty enthused and and um you know and and has been advised to temper expectations and I think he's had to do that over the last two years uh because of events that unfolded he's had to tone it down a little bit and realize it's not going to all happen in one day
(33:57) it's got to be over a length of time at least that's what he's told me why do you suppose these other guys came forward now why'd they do it well I mean you know I think because um well first of all Tom has been sort of talking to them behind the scenes for a year or two at least and it just seemed like the circumstances came together a number of a number of them were retiring now anyway I mean they didn't just leave their jobs to do this they it just so happened that they were about to retire
(34:24) I know Steve Justice was about to retire Lou Elizondo was about to retire um and they they just had a bunch of meetings for the last year or two and it just seemed to sort of gel at this time so you know and there was this entity there was this company through which they could all come you know there was there's an umbrella for them to gather under and that didn't exist before so I and I think there's just been momentum building up I mean I don't know if you agree George but there are just there's
(34:56) just more and more frustration I think even at high levels of among those people that do want this information to come out that that it is time that people have a right to know and there's been momentum building in that direction so I think Tom just sort of stepped in and offered a way to make that happen and just had this ability to pull people together and having the resources that he had uh to start a company like this makes a huge difference there's a famous quote from Ben Rich who was the the genius at the Skunk Works he
(35:28) helped develop the U2 the SR-71 the F-117 Nighthawk stealth fighter amazing other technologies that maybe we won't see for another 50 years and he is quoted as saying that we have technology in the black world that will take us to the Stars it would do it right now we don't have to get have E.
(35:48) T get a ride home we could take it ourselves and he said but it's so wrapped up in and classified programs it will never see the light of day you know he said that a couple of years before he died and then you have somebody like Steve Justice from that same company from the Skunk Works talking about this very exotic technology that for all intents and purposes sounds like a flying saucer and then some that could not only fly through space and bend time but go through matter um that that seemed to be that could have been the headline as well
(36:19) I know I think it's true although he's talking about something in the future he's talking about something that he intends through this project to develop and hopefully to build and uh but I agree with you and I don't know to what extent you know what access he has to information from the inside about anything that's already been developed that I don't know but I do know that he wants to develop it and I think he feels as much as he loved his job at Skunk Works and has nothing but praise for
(36:49) that company he does feel that there's a certain Freedom that he has once he's independent of the of the corporate world uh to be more creative and to do things that he couldn't do inside to bring it out in the open I think that's the key thing so I don't know I don't know how much they might already have uh you probably you know more about that than I do but well I have some guesses um yeah the other the other uh the other part that that seems to have rubbed people the wrong way is Tom the
(37:18) entertainment division that he's he's going to launch that has launched uh the idea of producing films and books and documentaries and things of that nature I don't know why people are mad about that Thomas talked about that since the very beginning says before he had these other uh plans in mind that he was going to use those platforms to reach an audience beyond what would be reached at a UFO conference or just a normal UFO book uh I think it's uh it's ambitious and it could work I know I mean it is something that that
(37:51) file and it's something he loves to do good at and something that can gener

generate some Revenue so I don't really get why people are so upset with that either I mean it is it's just one branch of the company now where before it was at or the whole company and um it is you know why not keep that going it's been successful and it's a good way that he he feels it's a really good way to reach people especially in younger audiences and maybe it will help Finance some of the science work that
(38:20) they want to do uh you know if they can make a successful go at various projects that they have in mind not only does it get the information out to a big audience but it also allows them to develop uh you know to raise some Revenue which they need in order to finance some of their scientific research that they want to do so makes sense to me I don't really have a problem with it I mean my only issue as a journalist is to be very clear about what's fiction and what's non-fiction I'm not crazy about blending fiction and
(38:49) non-fiction but that's my particular Personal Taste but I think as long as they're clear about that uh there's it's it's great why not hey Leslie I don't know what kind of reaction you got from your editors or how many people read your stories but I would think that uh maybe there'd be a call for you to do more on this topic I would be happy to do more George and I would like to and I intend to so uh stay tuned and I'm hoping that you know as things develop I can continue to do the stories and and
(39:15) people can learn you know learn about what's going on and let's just keep going I hope you keep covering it too you're covered your interviews with Tom have been fantastic and really important and uh I hope you can continue the coverage as well oh count on it thanks Leslie we'll talk to you soon okay of course George take care we have links to Leslie Kane's uh previous work and their articles and uh or books on the coast to coast website in a moment where we shift gears but not very much the Tic Tac UFO incident that
(39:46) was discussed at that Tom Delong event October 11th pretty dramatic stuff it's not the only one it's not the only encounter the US military has had with a craft that looks like that and a filmmaker Jeremy Corbell will be here to talk about that and a lot more so stick around switch gears but just a little bit now to talk about a very unusual incident the scene is November 14 2004 about a hundred miles off the coast of San Diego the Nimitz carrier strike group that's led by the USS Nimitz aircraft carrier one of the most
(40:22) powerful and sophisticated ships of war in the entire world it's accompanied by the Ticonderoga class guided missile Cruiser the USS Princeton they encounter something really strange and they dispatch a number of different fighter planes to go check it out and this thing looks like a gigantic Tic Tac that made some incredible Maneuvers zipping up and down from 80 000 feet or so to uh hover just 50 feet above the water there was something under the water causing some kind of a disturbance there were radar
(40:55) sightings there were visual sightings there were film recorded of this incident investigations commenced and then the whole thing sort of went away uh Chris Mellon spoke about this event during the Tom DeLonge announcement October 11th in Seattle other than Chris mellon's mention the only incident or only report about this was in an aviation publication called fighter sweep and some of the principles involved had revealed that this thing had happened uh some information made its way onto the internet and then got got pulled uh the
(41:32) only person to speak about it publicly has been Jeremy Corbell filmmaker who's been my guest a number of times on this program and is back to talk about the Tic Tac UFO and new information and witnesses that he's contacted and wow is this a heck of a case we'll be right back with more welcome back Jeremy Corbell is a filmmaker with a passion for the weird he set out to tell the tale of the late Dr Roger Lear who was our guest on this program many times over the years that's a guy who surgically removed alien
(42:02) implants from people and we have uh quotation marks air quotes around the word alien in his film patient 17 Jeremy Corbell explores Dr lear's Legacy and the truth behind alien implants and we'll get to that in just a bit but first we're going to talk about Tic Tacs Jeremy welcome back hey George great to be on thanks for having me this is a night that was many years in the making I want to say uh for full disclosure first because journalism compels me to say this that I I am working with you on a project regarding Skinwalker Ranch
(42:36) it's a film that I started working on a long time ago and never finished and you're working on it now and I'm I'm helping you with your film but I wanted people to know that going into this before we start our conversation um the Tic Tac UFO other than and Robert Powell whose Facebook post of Friday we put online on our

Coast to Coast website other than him I don't think ufology has written one word about the Tic Tac UFO incident and yet when it was announced on October 11th the reaction was ah you know that's
(43:08) kind of old news uh you know we're going to write another book about Roswell because that's new news um do you as far as you know has ufology anybody there written done anything with this case no it's it's actually really difficult this case is is fundamentally difficult because it's a military UFO case and it's current it's modern day it's 2004 at least the one that is outwardly put on on a Blog so this is a difficult case because it is current because it's military I personally have
(43:40) struggled with what information is classified and what is not that was a huge gift given to the public by Chris Mellon and people might have missed that point but we're going to hit that tonight well let's tell the story what happened on that day your your version of it or maybe you want to start with how you've got your way into this story sure I mean look it was more than three years ago today and I I heard Whispers of this story I was tipped off in some way by sources this is one of the most dramatic modern day UFO and Uso military
(44:15) Encounters in in modern history this is an incredible case I heard about it but there was no public mention and so those spider bots you know you put out little Google Search terms and things ping back so you get names like Nimitz Princeton 2004 and then all of a sudden an article pops up and this article it tells the story from a first-hand experience through a friend of the pilot and you can read all about it and so that was really the Genesis to start hitting this hard and trying to contact the principles of this story and learn as
(44:53) much as I could silently and under the radar before this got changed changed or distorted or Twisted so that was kind of my experience was I was lucky enough to kind of get tipped off on it and then there was public mention and it was go time it was time to start looking into this and finding out exactly what happened and who can I speak with and what can I learn before the public knew about this just to make sure it didn't get distorted so did the principles involved in this the people who were actually
(45:24) Hands-On eyewitnesses did they know that announcement was coming no actually I was able to let them know the people that I was in communication with that this story was coming out and odd I thought that of course they would know but oddly enough uh the the main individual and individuals involved in this case did not know that this is going to be publicly announced and handed on a silver platter to the public and also you know as you mentioned earlier in the show to Congress as a way as a push button for this other
(45:58) announcement so no people were in the dark can you uh sort of walk us through it I I know there is the version that appears in the in the magazine article of the story there's a version that Chris Mellon told there's a version that Robert Powell tells on that Facebook post can you walk us through the sequence of events as best you know about what happened absolutely I I you know I have to say that most everybody got this wrong except for the first public mention which was in that article that Chris Mellon referenced when he came on stage
(46:31) what actually happened that day is something very different than what you're reading other than in that blog report so you know let's start from the the very beginning first of all something that that's not understood this is not an isolated event between November 10th and November 14th of 2004 there was a series of events involving the Nimitz carrier strike group that took place and that's just off the coast of San Diego and essentially there was uh just phenomenal aerial that you know what they call them
(47:08) aavs this is something I've kept myself for quite some time anomalous aerial vehicles that is an intelligence term used similarly to UAP which is the new version of UFO right but that is the term that is used so on these days leading up to the 14th which is the report that we know about in the blog there were a number of of these you know contacts so you know the fire control officer and the Fire Control Senior Chief they had detected multiple returns descending far above like the radar that they had the scan volume which was 80
(47:45) 000 feet or higher and these targets that were dubbed in almost error Vehicles they would drop down from 80 000 feet and hit and hover at 50 feet above the water in a matter of seconds so just imagine NORAD or imagine any of our you know really complex radar systems looking at this this looks like a threat this looks like icbms coming into our atmosphere so this was this raised a lot of alarms a lot of people knew about this and it was happening for multiple days and then we

get the report and this is the report that's online that was
(48:24) written by a man named Paco and you know he himself you know he flew um a6e Intruders f-14as Tomcats uh you know he had 10 years active duty this is a guy who's also very qualified as a pilot and he's writing this in an obscure Aviation blog and he's writing about a friend of his and all of this is public and you can read it so I'm not saying anything new in this but he talks about a primary pilot who had Direct engagement with this object a direct engagement meaning what meaning well you can read about in the
(49:01) blog meaning when he came in you know he he was out on a normal Mission a normal day and he's going out from the Nimitz and he's doing his routine uh you know operations and he essentially gets a call asking what ordinance that he has on board his plane which was a strange request because he's right off the coast of California so he replies back says what ordinance he has he's given coordinates and he's said to go basically investigate so there he goes and he rolls up on this object and this object you know first thing is
(49:38) this is an object it was specifically uniformly White it was that's why they call it the Tic Tac it was about 46 feet long which is like roughly fighter jet sized in fact these are some details that that are not publicly said but it was it had a discernible midline a horizontal axis like like a fuselage but it had no visible Windows no propulsion systems no heat exhaust we're looking at this or he was looking at this through through flear fears are highly Advanced forward-looking infrared radiometer it's
(50:19) it's thermal it's a thermographic camera I mean it it detects things in three to twelve micrometers it's this incredible technology that we have so he's looking at this object and it's sitting there just hovering below this object is a large 747 size dark Uso unidentified submerged object the water was churning it was just churning in a circle and I'm just giddy right now because I came on last time to Coast to Coast I couldn't say any of this I mean I was only essentially putting a fish hook out to see if one in
(50:58) a million chance I could get some other contacts in this case and sure enough after the broadcast I got further contacts in this case so this is so exciting so there it is there's this Uso churning water and this Tic Tac as they call it was essentially docking it was docking with this other object for for lack of a better word and it took off it took off blinding speed not only do we have a fighter pilot who is you know highly credited is an a trained Observer we have footage and that's something that's super
(51:37) interesting that's something that was promised actually by Chris melon and his whole group was that there would be this clear military footage but I myself was worried about classification of this footage as I was investigating it so you had it but you couldn't say you had it I did and now it's out there now this morning like a gift from above it came out online I confirmed this was in fact the direct footage from the pilot from the fighter pilot this is real footage of an aav anomalous aerial vehicle like a UAP
(52:19) or UFO something that uses non-traditional propulsion that is not like anything that we on Earth have you know I'm not a pilot I don't know how to interpret the image as I saw but I watched the film The Day of course and and um I mean you obviously have seen it multiple times what do you make of it yeah so you have to understand the the footage in its context so as I was saying before and this is really interesting there's footage from this flear system but when the pilot went to engage this object the object actively jammed all
(52:59) the weapons systems and this is a modern fighter pilot a modern fighter plane this thing actively jammed all those systems but we do have the square footage so it looks black and white but you have to understand you can read altitude you can read time you can see velocity in this this video when analyzed appropriately by people who know what they're looking at I mean this is huge that it got out I don't know if it's classified I don't know if it should be classified that was my dilemma I couldn't even show it to the primaries
(53:35) in the case that I was talking with because I didn't know if I had something that shouldn't be shown but it is in fact now out and people can analyze it and so you're you're worried about showing it sending it to the primary Witnesses and it's something that they should not have and if they had it and it's still classified they could get in trouble for it absolutely correct now here's the deal that that's speculation but you know I like to work as a journalist from the point of okay this
(54:05) is you know what is legal that I can do and then this is what is illegal so my problem that I had even last time I was on that is something I haven't told

anybody until today so in fact yes I had the footage for a long time and this footage was leaked onto YouTube in the early days of YouTube and they would share it and pass it around but people couldn't screen grab these images or these videos as easily as they could today so the big question was is this classified now I know there was at least one intelligence report done I believe
(54:40) it was by the DIA and essentially they looked into this in 2007. and you know from there it it wasn't clear if this footage was classified or not but at this point it's out again not by my hand so I can talk about it you can see it it will be analyzed um and so did you run it by your primary witnesses to say hey is this what you saw that day absolutely I did and 100 confirmed that is the video that is the same video that came out was leaked onto YouTube somehow in a mysterious way originally back in 2004 I believe so
(55:21) right around that time or just after that time this is the video you are seeing the real deal when you so tell me a little bit about approaching these Witnesses um you know these guys have security clearances um top secret stuff and I would imagine they're a little afraid to talk to somebody they don't know about these things yeah I you know I always kind of reflect on this you know you get some guy calling you you look them up online he makes UFO films and and you know I'm bearded with tattoos I mean honestly I I
(55:54) find it hard that people will talk with me but you know over time you know they will begin to realize that I'm not somebody who's just going to come in and like take their story or break their trust so I I have earned the respect and I've earned that the situation where people will talk to me usually it doesn't always happen but but also I am genuinely curious about this and you know what anybody who's seen something like the Tic Tac or anybody who's been involved in this experience you know
(56:26) they are also genuinely interested and so that I think bonds us over time but it takes years sometimes to have these types of relationships uh it just does so it's it's Touch and Go you know the the article that was on that fightersweep.com um there I was the X-Files Edition these guys are serious dudes I mean these Pilots they're the they're the best the best of the brightest and and there they are encountering something that they don't want to admit is real and they kind of dance around it in that language
(56:59) in the article but they're telling us hey this is real I wonder if you get the same sense in talking to the primary Witnesses um what they make of this absolutely I mean I asked you know a question like so you don't you don't really know what you saw and I got a quick response I know what I saw I'm telling you what I saw I know what I saw but there's still looms that this question you know what you saw but what does it mean what you know what what are the implications of what you saw and that that's the hard part you can
(57:39) you can describe specifically as I told you before what this thing looked like no wings no traditional propulsion systems look like a oblong 46 foot long porcelain white with a horizontal axis like a fuselage but but what does that mean when you see this thing zip away and outrun anything that we have in known technology that Peaks the Curiosity of any human being and do they answer you do they go as far as to say what they think it is you know of course we've talked about speculation with with any of the
(58:15) witnesses involved with this case that I spoke with there is speculation on what it could be but uh that that comes down to personal understanding personal belief it definitely defied all known characteristics of modern propulsion by any means I know at one point I guess a radar operator on the one of the ships maybe it's the Princeton relays the it's is in communication with the planes and he says this thing just disappears and then all of a sudden it reappears in a very strange place so this this object that
(58:53) we're calling the Tic Tac and again I want to repeat this is not an isolated incident we know that this was going on from the 10th through the 14th I'll go a little further and say that off the coast of California was not the only incident of the Tic Tac appearing this sort of thing appearing but on that day it was vectored by the Princeton and Banger okay so these are two sis or you know two ships that basically from what I understand we're able to catch this thing on radar so this thing was vectored in they knew about it from the
(59:26) temp all the way to the 14th when you read about that article and you will tell you what to Jeremy before we continue we're gonna have to take a break but that's a great it's a great dramatic place to end we'll continue the conversation about what the Tic Tac did this amazing maneuver in a moment talking with filmmaker

Jeremy Corbell we're talking about an incident from November of 2004 the USS Nimitz battle group Carrier Group off the coast of Southern California they detect something pretty strange they send a
(59:56) couple of uh of their best planes toward it a fast eagle 0-1 and fast Eagle 02 are the call signs for these planes four aviators on board what they saw was unlike anything else they had ever seen before this 46 long 46 foot long Tic Tac hovering over the water doing things that nothing should be able to do and something else was under the water as if it was trying to dock with the Tic Tac and uh they were able to record some video we're going to be posting an independent link to that video so you can see it on the coast website here in
(1:00:29) a minute and uh Jeremy Corbell will pick up the story of what happened next we'll be right back so Jeremy before the break we're telling the story about these aviators who encounter this gigantic Tic Tac I want to back up for a second they make the sweep in I'm trying to remember the article but they make the sweep in and this thing suddenly notices them and it reacts to them right this end reacts to them it actually turned and angled towards them almost like looking and this was you know astounding because you have this large
(1:01:01) hovering Tic Tac object I really want to drive this home this is a modern day UFO and Uso case from a military perspective with film footage eyewitness testimony it is a dream case the only looming thing the cone of silence the security all of this is the problem this is something that happened it is now out it is public and it is something that people should be after they should be after this not disrupting the lives of the people involved but everything we can as Citizens to understand more about this because this is modern day it is now so
(1:01:43) this thing notices them and remember so this is a Tic Tac or a Tic Tacs multiple that we're hovering over the same spot it was a latitude and longitude of about 30 nautical miles to like 34.5 miles off the coast of Baja you know just southeast of Tijuana this thing is just off the coast of California these aavs descended hovered and zipped away at impossibly fast speeds and that's a quote impossibly fast speeds and then they it it reacts to them by turning sort of in their Direction and then uh as I was mentioning the guy on I
(1:02:27) think it's the Princeton or one of the other ships radar guy is sort of interacting with them and then at least as far as his sensors are concerned this thing disappears and then reappears behind the fighter right okay well there's there's a lot of misunderstanding with this event and we're still kind of looking at uh how many people interacted with this because remember the only mention of this publicly is on the 14th of November in 2014 but we do know that these objects are doing this same old game from the
(1:03:00) 10th to the 14th and again this is not an isolated incident so there are other Pilots that did have engagement with these objects this is not an isolated event so the the the way that it moved around them all I can say is what I know is that when the object noticed one of the pilots it turned pointed its nose toward it and then faster than you can snap your fingers this thing ascended and disappeared goes to like 80 000 feet or or Beyond in seconds Beyond because that's the scope of the radar system we have the Spy one
(1:03:39) for example that was out there which is an incredible piece of technology but prior to this we had all sorts of agencies and radar systems looking at these objects and what was going on over days and I I do want to say this is something now that people can look up it is public information so I do want to say the fleet commander at that time he is he's now in the private sector with vice admiral Derwood C Curtis he was the big dog that day I believe the captain of the Nimitz that day I believe with Admiral or vice admiral Ted n
(1:04:19) branch in 2013 he assumed the office as the 65th director of Naval intelligence he had a call sign of twig so this guy these are major major players so so I just want to put that out there this is public information so we should we should we should be asking questions because these people have intimate knowledge well we I'll definitely come back to the investigation but before we move on to that so the footage uh we're posting an independent link on the the coast website so people can watch it I I've seen it I I don't know what to make
(1:04:56) of it I guess you need to have the narrative to go along with it to understand what you're seeing but there's an object clearly right in the center of of this this device that's being used to record those images right the narrative is really important with the video footage when you're looking at Clear footage you have to understand what you're looking at and and absolutely this footage I again I can tell you it is the footage of the Tic Tac on the day described in on November

14th in the article written by Paco that
(1:05:27) is the footage so it's black and white you see an object you have to look at altitudes speeds all of this stuff but but we have actual flear footage of this the background is what gives this footage so much importance we have direct eyewitness narrative that goes with this military footage so what are these guys what happens after they fly back to the Nimitz what happens then are they debriefed right after the in the article that's online there there were other Pilots that went out right after to the same coordinates
(1:06:17) so you know everything is so compartmentalized it's got to be frustrating for some of the pilots that engaged the object or or attempted to engage it when they're when their weapon systems were actively jammed so there were there were a lot of people actually that had kind of encounters with this object or these objects in fact there was something just I heard as we say out here where I lived word on the wash but I heard that the next day on the mimics itself a bunch of the crew went out with tinfoil hats on to salute at Sea so it
(1:06:54) was something that was passed around among the ranks this is something a lot of people know about not just these you know the fleet commander and the captain of the Nimitz who I named not even not just them but a lot of crew knew about it that who had personal direct experience within 100 feet about of this object not many people all right in the fightersweep.
(1:07:22) com the original article that they had said that uh that the principles at least that are mentioned in this article were debriefed that uh I guess that's by the Navy by the people at the Nimitz I don't know if they were debriefed Again by others did you ask any of them about uh who came to talk to them or how often well there are limited things that that someone can tell another person based upon what information is classified or what security clearances they have I mean I have none so there's limited information that can
(1:07:55) be provided but I do happen to know just as a journalist that there was a 2007 intelligence study that was done on this particular case and that's fascinating to me that is something that people can look into and again I mean I I just kind of word on the wash I heard it might be Dia but there are different intelligence agencies all throughout all branches of government but this is something that I know was done very clear and concise report of these events was established so that's a matter of foia although there's not
(1:08:36) going to be a lot of information that can be garnered from that and actually a lot of the information you do get through foia like I believe some of the information that's recently come out was grossly inaccurate but that's just simply because of the people who are logging these reports might not have had first-hand experience with these objects meaning that somewhere along the way somebody wrote something uh in the early stages that got leaked out and that since then more information has become available that's
(1:09:08) sort of uh amplifies or corrects or clarifies some of the initial information more that I encourage mentioned that Chris Mellon handed to the audience to the public on a silver platter by giving the exact Google keywords in order to reach that article in a single stroke of the computer keys I suggest reading that that is the most accurate there was another document I read that came out with the video this morning and it's basically a log but that log was done by kind of a second-hand experiencer it was grossly
(1:09:47) inaccurate to what was going on on that day and that's just the kind of thing you get through for you I mean that's why I'm hopeful this information can kind of reach out past that cone of silence because maybe some people like Chris melon are interested in getting it out well well I wonder how far that goes because somewhere along the line This got stuck in a drawer uh you know there was an investigation I would think the Navy uh at least what I was told that is the Navy did one and it got buried and
(1:10:18) then that other agency did one and that never went public or at least hasn't so far I know there was a an outside the government attempt to get to the bottom of it uh some time ago and and if they succeeded uh it hasn't seen the light of day so do you have an idea about what became of any of those investigations well I I think that they got the information that they were looking for and they're not going to tell you or me but I but I also think that now that this is a public case now that all of
(1:10:49) these facts and details are put out there and it is a modern day UFO Uso case I think we have a chance we have a puncher's chance a Fighting Chance there are people within the Aerospace industry the Department of Defense NASA who have been

instrumental I mean to me personally and also to cases like this for getting information out and there seems to be a coordinated attempt uh you know within the Department of Defense or the office of the Director of National Intelligence you know these agencies there are people that want this
(1:11:24) information out but but the issue is always how much can we get how much can we learn and what does it mean we're not even talking about that yet so let's talk a little bit about the Delong announcement because that's sort of where the Tic Tac incident stems from that that announcement that put this on the front burner uh these guys stepped forward and uh say UFOs are real and we're going to work with the long and and try to get this stuff out and it's been pretty nasty um people have legitimate questions of
(1:11:56) course they do they want to know how this is going to work in particular when there's money involved when you're being asked to invest or something like that it's perfectly understandable people want to know how it is uh I think a lot as we were talking to Leslie in the first hour it seems like people have jumped to a lot of conclusions and and the Really the the story has not been told um maybe you can Vault uh to the stars for not getting all that information out right away or however you want to do it
(1:12:24) but I think that it's there's still a lot of information to come out that will clarify things but what's your general reaction to what you heard on October 11th you know I was fascinated by by the presentation I think people are missing the high notes of what happened on that day and for whatever reason you know it might be the stardom of Tom DeLonge or people just don't you know want to kind of associate him with this I it doesn't matter if you just take that part of the equation out and look about what
(1:12:54) happened I I want to give him credit for bringing those people together but just look what happened on that stage we've talked a little bit about Chris Mellon handing the public the Tic Tac case on a silver platter let's talk about uh Lou Elizondo this guy is a former high-ranking Department of Defense official who ran a program at the Department of Defense involving the study of anomalous aerial threats this is a fascinating person we now know the Pentagon has an active program I was told Years Ago by the highest ranking
(1:13:28) military individual that I have ever met that every single branch of our military has active investigations into UFOs today right now and we have proof Department of Defense through Lou that this has been going on he confirmed that that official unidentified aerial threats program did that exist it's a UFO program at the Pentagon and he personally confirmed his understanding that UFOs are real they exist and that they have been officially documented I mean he said this he said this in his quotes with Leslie Keane I learned that the
(1:14:09) phenomenon is indeed real the fact is we might not necessarily be alone this is big this happened on the stage that day so people need to get out of their own way and look at what happened on that day and there's more that happened on that day he you know Lou also said we are planning to provide never before released footage from the U.
(1:14:32) S government systems not blurry amateur photos but real data and real videos that's a direct quote I I wonder if he was thinking to release the the footage of the Tic Tac I thought his uh his use of one particular word uh was pretty interesting he used the word liaison that he intends to be a liaison between this to the Stars thing and active government entities meaning you know it sounds like a partnership on this stuff maybe it'll take a while to dribble things out I don't it's not going to happen overnight but that reading
(1:15:04) between the lines that use of that word seemed pretty important yeah I mean he can't declassify things himself but but but acting out as a liaison you know for the organization you know that that makes me very hopeful I also want to touch upon what what Jim savidan said I mean this is a guy you know in the CIA since 1983 and he had 25 years solid than the CIA he said one of the most extraordinary things in the Articles he said I have come to realize that the phenomenon is curiously multifaceted exasperingly
(1:15:38) exasperatingly complex and appears to exist both in our consensus reality and in other unknown space perhaps if we're lucky someday we may understand its ultimate purpose I mean holy cow this is said by a CIA official this is pretty cool I think people just were maybe expecting something different or they got thrown off by the fact that this must be a business of some sorts that they're missing the point of what was said at that press conference to me it was very exciting I thought it was cool well I like the stuff from the

(1:16:15) Skunk Works guy too I'm the former Advanced project Skunk Works a guy who's talking about building this amazing craft and it again reading between the lines he says the technology is doable yeah the implication being we already have one or we know it can be done somehow yeah that was Steve Justice and that really threw me for a loop because it is my understanding from all the evidence that I have gained over the years we have not cracked anti-gravidics we just haven't the idea that a private company is needed to do this blows me
(1:16:48) away you know it's my understanding from the Lazar case that it requires super heavy elements that we don't have in abundance unless we're gifted them so the fact that Steve Justice said that that's what he's looking to do and and he's you know former Advanced systems director for Lockheed Martin Skunk Works I mean this is a guy that knows what he's talking about so that really was fascinating and in fact I talked with a scientist who I very much respect who is on the inside and I I ask them do you
(1:17:17) think we can do this with the technology that we have you know gained or learned from these aavs and he said yes and that blew me away I'm still grappling with that because I have I was strongly in the position that that we didn't really have a shot at this quite yet uh so we're talking with filmmaker Jeremy Corbell about the Tic Tac case about the long uh announcement and uh he mentioned uh Jeremy just mentioned about Bob Lazar we might uh hear from him a little bit later also still ahead patient 17 the
(1:17:49) film that Jeremy's been working on and we did get a call Jeremy uh during the program during your discussion from somebody who was on the USS Nimitz we're gonna hear from them uh soon uh we'll be right back with more Coast to Coast AM we're talking with filmmaker Jeremy Corbell the first hour with Jeremy we talked about the Tic Tac UFO we will return to that subject uh in our last hour uh when we go to the phones because as I mentioned before the break we got a call from someone who said they were on
(1:18:20) the Nimitz at the time of the incident we'll see if they saw anything heard anything a little bit later in between now and then we're going to shift gears a bit I told you Jeremy's a filmmaker extraordinary beliefs is sort of the umbrella title that he has for his film projects a lot of the topics that we cover here in a moment we're going to pick up the conversation about patient 17.
(1:18:42) the last time Jeremy was here we talked about him making it and um and what he had found the strange material inside patient 17 as it was object 17 that's undergone a lot of rigorous scientific testing we'll find out where things stand and what's happening with the film right after this on Coast to Coast AM Jeremy Corbell Let's uh talk about patient 17 for those who didn't hear the last time when you were on that talk about working on that project let's start with Dr Roger Lear how you hooked up with him sure so Dr Lear was investigating the
(1:19:14) alleged uh implant phenomenon he was surgically removing foreign bodies from select patients and analyzing them elementally and isotopically at the time when I was first approached by Dr Lear about this I didn't want to touch it with a 10-foot pole my good friend Reuben Langdon essentially said Come on talk to Dr Lear you know he's done this for a long time and and Dr Lear said the same thing I've been doing this over two decades Jeremy you've got to look into this so reluctantly I did and I filmed
(1:19:50) what ended up being his 17th and final alleged alien implant removal surgery and that became the subject of my new film now what was your agreement with him that he put any restrictions on what you could do No in fact uh he was adamant that I come and film and he really wanted me to to capture this on camera in the style that I do the the one thing I told him was that if you Dr Lear if you are pulling the wool over people's eyes or you are fudging the data or you are manipulating people in any way I am going to out you are you sure you want
(1:20:26) me to do this to follow your investigation and he said yes so I said okay and if you happen to know had you looked at any analysis uh whether it had been done on any of the previous objects that had been taken out of people you know I had heard about him and I had you know seen little bits here and there but no it was outside of the scope of my knowledge base interest or even you know believability I I really went into this just thinking cool I get to witness a surgery and film it but that all kind of changed after I met patient 17. all
(1:21:02) right describe the the setting uh the date when when and where and what happened well this was in 2014 and it was a surgical center outside of Los Angeles or within Los Angeles and essentially going in there it was very calm and and just like a routine little you know cut out a little piece of something out of somebody's

leg but what transpired over those hours we were there that's where it got extraordinary you know the you can't underestimate the the interest people have in this subject I mean the waiting room got flooded with
(1:21:35) you know Believers and people that wanted to see and people with interest and I found myself almost protecting in a way patient 17 from the public because he didn't want to be known he didn't want to be seen in fact there's a scene in my film where I literally helped sneak him out the back door because I felt bad for him and he's just a normal guy and an ordinary guy of extraordinary height he's six foot put nine a megalith of a man but he was soft-spoken you know kind of like the Cowboys have passed you
(1:22:10) know he was just a soft-spoken understated individual totally different than what I thought and that's what sold me to continue telling this story was was the human element I wanted to get get answers for this man I wanted to get answers badly how did he get talked into doing this sounds like uh he'd have to be dragged Kicking and Screaming to to something like this yeah he he loves just riding his motorcycles you know he has a great family a great life he's not a fanatic into the UFO thing he doesn't
(1:22:41) like public attention but you know his curiosity was there he had something in his leg there was a foreign object it had been there for 10 years we know that by the x-rays he was kind of convinced by these authorities that maybe it had something to do with his abductive experiences now he knows his abductive experiences are real he is sure about that but he he is he remains like me the biggest skeptic the the object found in his leg has anything to do with his abductive experiences and that's what was so interesting to me so you've got
(1:23:18) to know him uh in between now and 2014 when this started um have you been around him in a time period when he's had one of these experiences I have not been around him when he's had one of these experiences they they began in childhood and they continued throughout his life that it's not like it's every night you know we have to look at this from a bigger picture millions of people claim abductive experiences we need to deal with that on a very factual level that is fact millions of people claim
(1:23:49) abductive experiences if you remember we all remember John Mack former head of Psychiatry at Harvard University he even went on Oprah Winfrey with an abductee acclaimed abductee and talked about this he believed these were not fictitious they were not a mental disorder that these were factual events that people were having these experiences with non-humans so I went back and read all of that got kind of learned about that and then I followed Dr Lear and I tried to follow as he pointed me in what direction to go to and looking at this
(1:24:23) case also the day of the surgery uh do they put patient 17 does he put him out and what is the chain of custody for the evidence for the piece of stuff yeah so they did they didn't put him out it was actually pretty procedure it was just a as I like to say small incision big mystery you can see it all in my film they actually go they enough you know they put a little antiseptic in there and they numb it and they cut I mean it is kind of brutal I mean they go in there and they open the flesh with these prongs and you know cut
(1:24:54) out this this object this alloy this piece of metal and they pull it out and they put it in a serum of his own blood and then that was in the the custodianship of Dr Lear and then we went to seal Laboratories to have our first look through the scanning electron microscope to get basic spectral analysis but just eyes on visual observation is this metal what do we have and and it turns out that on that day where I thought we would get all answers and so did patient 17 that all we got was it was like people like my good
(1:25:30) friend John Lear looking at a picture of the Moon everybody saw something different essentially everything looks cool under high magnification the real tests were yet to be done and I pushed him on it I wanted to know what we'd find out today even patient 17 said the foundations of his State as a Christian would be shook if it turns out this object is something out of this world so on that day as you'll see in the movie you know we come to some conclusions that it's worth further testing but we don't get the answers and then sadly
(1:26:04) as we all know Dr Lear died and then it was everybody dropped the ball no is doing analysis and it infuriated me it infuriated patient 17. you can see him get visibly angry in the film I mean it's intense you know when he goes through this even when Dr Lear is alive he's arguing with Dr Lear about what this is so we picked the ball up where people put it down and I had a lab Northern analytic a great accredited lab do broad spectrum Elemental analysis and isotopic Analysis on both

zinc and copper well I remember you told me about this
(1:26:41) and I the last time we talked it certainly seemed like this was odd absolutely odd any way you slice this it is odd there's 36 different elements within this object some of which are highly toxic Rare Earth elements it is the majority iron but at the same time I had a nanotoxicologist look at this and said yeah you you're lucky you got this out of somebody's body but the real interesting point the point that has pushed me to to try to get this sample back for further testing actually with with jock valet you know that somebody
(1:27:18) who's looking into this precisely right now in his life so it was the the isotopic analysis that really pushed it over the edge the results came back on the isotopic analysis of this object it was in patient 17 and the zinc 64 was way above what we'd call the terrestrial Norm so the the the actual zinc 64.
(1:27:44) that isotope of zinc was definitively non-terrestrial even with a with a relative standard deviation of 1.25 this thing was was outside the terrestrial Norm so it begs further testing we need to replicate this I need to get my hands on Sample 17. in order to replicate if we can these results or to debunk it well we'll talk about uh how to get your hands on it in a moment but back to the test results so outside the terrestrial Norm sounds like it's leading toward extraterrestrial but not necessarily well actually these results do show that
(1:28:23) the zinc 64 is not matching with terrestrial zinc 64. you can tell Distance by the Isotopes within different elements so the elements on the moon will have different isotopes let's say than the elements on Earth and and and this zinc 64. it came so far outside the terrestrial Norm the percentage of zinc 64 that you can let your imagination roll there I mean this is outside of our galaxy if it's correct so the question then becomes what could cause these results if not non-terrestriality and I found a zinc 64
(1:29:07) extraterrestrial zinc 64 specialist and this is this is a weird thing to find but I found the dude well he must have loved it well he was now he's just a paper back maybe 12 years ago on Zig 64 extra Isotopes he thought I was Bonkers that he might be right but I called him up and he really thought I was Maddie he goes I know what you're looking at here let me see the results and I said okay well here are the results and his his answer was you know you're being duped somehow the laboratory is messing with you I'm like
(1:29:44) are you kidding me you know I'm gonna call the laboratory right now what could cause this and he says well sometimes copper 64 let's say can interfere with zinc 64 if they don't triple wash and cleanse in this process I call it the lab they stand behind the results a hundred percent and they said it's your problem what the results are our problem is just analyzing it so does the lab they're not offering any kind of opinion they're not saying boy this is weird they're they're hands off look here's
(1:30:15) the results you do with it what you will absolutely zero opinion they wouldn't touch it with a 10-foot ball I mean they did see I mean I heard in the voice of the gentleman I spoke with who was head of the laboratory you know he did recognize that what we had was anomalous but he stands behind the work they did triple wash it so it didn't uh contaminate I think it's actually with nickel 64 whatever it was it didn't contaminate but you know the bottom line is and this was the conversation I had
(1:30:44) with with Jacques valet when he came up to my Ranch we compared notes and data because he's looking into 15 samples right now with broad spectrum Elemental analysis and isotopic Analysis so it's it's right in that wheelhouse and I showed him it and and he agreed this deserves more testing because this is truly anomalous at this point so that's where we're going that's what the movie is about the movie is about the these people going through these experiences and and how they're perceiving and
(1:31:13) interpreting the data there there's a subtext to the movie as well about the sample uh the drama over what happens to the sample you'd like to do more tests yeah I could make this up I mean it was crazy the fighting when Dr Lear passed away over the custodianship of the sample and then the enigmatically and you know interesting character of Steve Colburn his interesting past interesting guy I mean it was really difficult I sat there hands empty waiting for a FedEx with five scientists in New Mexico who had the most
(1:31:48) state-of-the-art cutting-edge equipment to look at this and who are willing to look at this for free for me and I stood there empty-handed it was a miracle I got this object to Northern analytic so the interesting part is getting it back and what we can do from here I do have good news but uh that's you know that's

where we're set up in the movie right now if you watch this you have the whole background for what's about to happen talk to me about patient 17 um has he sort of come out do we know
(1:32:22) his name is he trying to keep a low profile and when you maybe start with the story of when you shared with him these results well you can see in the film when you know Steve Coburn is reading the results I mean patient 17 is rolling his eyes he's just almost Furious you know he wanted we wanted to prove this was a Tonka truck we wanted to prove this was some sort of you know something he picked up in Road Rash as a child and it was frustrating to him that it wasn't that easily just you know pushed away that all of this he's in a
(1:32:56) pickle if if it's not true right then he's crazy if it is true the reality might be even worse and so that's where where he stood he doesn't want public attention he is a good friend of mine now we are fighting together to get more information but no you're not going to see him running around UFO conferences telling everybody about this I mean it was difficult that his face was put on the poster for the movie that's on iTunes I mean it's like that's a big deal so he he's had a little time to
(1:33:28) digest it though as it changed his life in any way um I mean is he still having the intrusions the experiences yeah he uh the removal of the object has changed his life this is a guy that likes to play music I admire him greatly actually because you know he a lot of people talk about stuff and he does it he loves to ride his motorcycles uh he's the kind of guy you'd want to have around a campfire and just talk stories with his life is is normal again he's he's got a a great wife a great life he doesn't want the
(1:34:03) Limelight on this but his Curiosity has been weaponized he wants to find out he doesn't remember being hit by a meteorite as a kid or something does he in fact I excluded this from the probability of what could have happened I went to the Head meteorite specialist at UCLA and I had him look at the results this is in fact not as he was being told patient 17 was being told there was meteoric iron in this in fact there's no meteor iron this is not a meteorite it's not something that just fell into his leg it is highly Advanced
(1:34:36) it's technical it was made by an intelligence is the best of my information at this time yeah meaning like it it it shows signs that it was machined in some way or manufactured manufactured a hundred percent and that's what that and look all of this is open source I would love a prosaic explanation for this to me it doesn't matter I would like to know the truth and so does patient 17 it's all open source on my website take a look write me personally what your opinion is however we're going to get more tests
(1:35:12) well that's good I if if you're going to get access to the sample again that's good so talk about the film where it is um it's finished now I I saw some notices about your your events that you've been having screening so where do people see it well on iTunes is the best way although it's on all Pay-Per-View platforms such as like Amazon Xbox Voodoo everything you can imagine I like iTunes turn it on watch the movie you can click Start rate it write or comment this whole process is to move the needle
(1:35:44) forward I want people to watch it because it might actually make a difference in people's lives the more eyes we have on this film The more opinions we have and the more intelligence we have where we can move forward with investigation seems like you're making a career out of premieres you're bouncing from one Premiere to the next yeah right I'm joking running around I was a national museum of Copenhagen I was able to Premiere the film in Europe with my mom we traveled all around Europe I got to
(1:36:14) meet up with amazing UFO people who would see that I was in their city and really host me and my mom and take us around uh so that was so cool and then here in Los Angeles uh same thing sadly George you don't make money off of you know premieres you're basically showing the movie for free when people should be buying it but that's cool you know just showing these things is really fun are you in LA are you in Pioneer town I live in Pioneer town on California but I do like to show my movies in Los Angeles
(1:36:42) and in the desert out here like in Palm Springs Ace Hotel just did that one all right we're talking with Jeremy Corbell about his film patient 17. he's got a series of projects that he's working on called Under the Umbrella of his title extraordinary beliefs some other film projects in the works we might even hear from some of the folks who are behind Jeremy and trying to propagate his films get get them in front of a lot of eyes surprisingly or not surprisingly there's a great deal

of interest in UFO themed
(1:37:14) uh film projects and documentaries at present and we're going to hear more about that in our next segment coming up we're talking with Jeremy Corbell about his latest film patient 17. he's got a lot of other projects in the works and there is a continuous growing appetite for that sort of material these days we're going to learn more about that in a moment and a little bit later uh catch an update about Bob Lazar stick around more Coast to Coast AM right around the corner Jeremy talking about patient 17 one of
(1:37:44) our listeners reminded me of something we talked about the last time you were here an unusual uh element that was found in the uh the piece that was taken out of this guy's body I don't even know how to pronounce this this element but tell me about what it is and what the significance of it is yeah Atrium it's it's pronounced a couple different ways I guess but um y-t-t-r-i-u-m there's 410 parts per million within this which seems small but but that's that was focused on by a couple people because uh it's used in
(1:38:15) making superconductors it's it's highly toxic as you'll see somebody in my film talks about how you have to wear a mask when you're Machining it because it's deadly so you know this object seems to be fabricated by an intelligence is kind of what everybody's saying but let's get more tests let's get more results but that was could that be could that be human though could that be us yeah absolutely uh you know there is always the idea that it could be human it could be us but one of the people I went and
(1:38:45) talked with was a NATO physicist who works with these you know minute scale making uh of your combining elements he described this as a witch's brew of 36 elements found in this object again that's his opinion and we need more opinions but it's all open source go to my website okay well we'll send people there I I should point out you know you've been working on a variety of different projects in this sort of genre for a while kind of like the starving artist uh um and it seems like patient 17 is your
(1:39:19) first Big Break uh how did that happen and what is the reaction so far yeah absolutely it was I mean I I do this because I love to do this this is not how I make my living this is something that I do because I just am so passionate about it and this was my first break and I essentially said no to everybody I mean tons of companies wanted to buy this film and nobody would give me Final Cut I became known as the guy that says no it almost became a joke like I'm hard to work with the thing is I didn't work with anybody and one guy
(1:39:55) called me and I got in touch with one guy and he asked me the most important question he said why do you say no to everybody and I said I've never been asked that it's really simple you can't change a frame of my film and he says we don't want to and we're the orchard so the orchard uh you know I see I watch Netflix uh here and there when I have some spare time it seems like about half of the movies that I see you see that logo for the orchard pop up um I guess they're pretty big in this
(1:40:27) this field yeah apparently they're huge and that's something that I didn't know but not only are they big but the the man the person that I'm dealing with is in incredibly smart he has his finger on the pulse and all the content I watch seems to come out of their company so they're on to something they have their finger on the pulse the orchard is a company I'm proud and happy to be working with but in particular uh with a guy named Jim Martin he's the guy that that really convinced me uh to to to get
(1:40:59) this out and and gave me the leeway as an artist well we've got him we've got him uh and I've got him on the phone primarily because I love the title the job title he Has director of paranormal content Jim Martin uh can I steal that title for sure George I think you you own that title much more than any anyone else um so is there uh I don't know if you can gauge how the reaction is to Patient 17 yet but help me understand where it fits in in the Orchards plans is this a hot time for this kind of stuff
(1:41:33) it is a hot time and patient 17 is a a big priority for everyone at our company and we're very honored to have Jeremy on board and uh 217 as you know has been a breakout year for UFO content UFO documentaries and um it's it's definitely a Renaissance period right now for the genre so what do you how do you handle we have a lot of filmmakers who listen to this program budding filmmakers people who want to put their own documentaries together how do you handle unsolicited material what happens well we review everything that comes in
(1:42:05) and have an open mind when reviewing any titles but me personally I I

really try and focus on the market leaders and who happen to be my heroes as well um so we we only have so much time and energy so we we are very selective about what we distribute um obviously is Jeremy's Jeremy's film shows and um yeah we try and we try and work on films that we know are going to make an impact and and reach a big audience and it has to be credible I guess it has to be of course of course um is there anything that's outside of
(1:42:36) the Paranormal that's just too far out for you guys you know it's hard to say we focus mostly as of now on UFO material that seems to have a really strong demand I'm a big UFO fanatic myself so that's what I gravitate towards I mean we we like ghost material and all that but I think with UFOs it's so interesting because there's a lot of evidence a lot of Visual Evidence that you can incorporate into films and and that's rare for the Paranormal genre I mean UFOs have been around a long time some of the biggest
(1:43:05) movies in Hollywood history have had UFOs and aliens is there a saturation point or as uh is there a hunger that's still not satisfied for this stuff that's a really great point I think there's actually a scarcity of content in the Home Video Market specifically the documentary market and and it's an exciting time now because you have filmmakers like Jeremy there's a lot of really great movies coming out in the space that really haven't been available in the past so I think we're just seeing
(1:43:34) the beginning of this genre actually and not in terms of a blockbuster a Hollywood perspective a more born in terms of putting out the truth real evidence real films real stories I think it's just the tip of the iceberg I see what's happening with Netflix and Amazon and the online uh content and uh I don't understand the business model I really don't because it seems like as I mentioned uh leading into our conversation here I see the Orchards logo all over the place all kinds of a little independent films and and larger
(1:44:05) projects and I I don't know how how it works well the distribution environment has certainly changed there's a bigger audience than ever now I mean as you mentioned Netflix alone has over 109 million subscribers and in the past to reached that many people you would have to have a Hollywood studio behind you and a full-on worldwide theatrical release now we can put films out on Netflix and reach just as many people I would argue um in a even more efficient way um and the way the business works it has changed certainly a lot is we're still
(1:44:37) selling movies um renting selling them digitally through platforms like iTunes Amazon Google and then you have streaming services like Netflix um that tend to you know feature the films after their first run of for sale distribution and that's given these movies a much longer um lifespan and and as I said before we're just reaching more people than ever before so it's very exciting time all right Jim Martin thanks for uh chiming in with us here we'll have you back sometime and I am getting business
(1:45:05) cards made up with that title director of paranormal content by the orchard thank you so much George I really appreciate it all right hey Jeremy what else do you got working what the what other projects are in the in the can well as you know with me I always have a lot going on some of which I can talk about some of which I can't but uh at this time I I'm very focused on on my next movie that's coming although there will be a chapter two to what's going on with the story of patient 17.
(1:45:37) um I know that we have I hinted about Bob Lazar uh earlier in the program uh I should uh say that you have been in contact with Bob he's a controversial figure always will be in this field I think so he's going to sort of been going through for the last 25 plus years the kind of things that Tom DeLonge is getting hit with now um but you've recently had some conversations with him how much can you say about that project well you know honestly I I want to talk about that I think that that it's important this is
(1:46:09) the probably arguably one of the most important UFO stories if not the most important in modern history it certainly has touched more people than any other UFO story you have a guy coming out through you back in 1989 basically saying or saying definitively I worked on reverse engineering the attempt of extraterrestrial vehicles to to replicate them and this has just gone through Society every if you stand up anywhere in the world and you say the name Bob Lazard of 100 people a handful is going to know him so this has been my
(1:46:48) childhood dream is to get more and to learn more and to verify the story for myself this is something that I was told by you a long time ago you got to talk to Bob well who gets to know Bob Lazar that's the problem people don't know him so

it's easy to dismiss him so my goal my dream has always been to get to know and let people get to know Bob Lazar is a person to get into the details of his story that are personal that haven't been able to be uncovered because of Bob because of his unwillingness to open up
(1:47:23) to the public and I think we have uh we have two clips from an interview you've recorded in the last couple of months Bob's kept a pretty low profile for a while but I think it will be an interesting uh for folks to hear this because it because it kind of puts a human face on on the the name that people know uh but the person that they don't know let's play the first clip from this the biggest roadblock to understanding is the ability to dismiss someone because you don't see them as human as a
(1:47:56) person so what pieces you off I mean disinformation and lies and attacks that have no basis in reality I mean you can disagree with me and say hey I don't believe that that's fine I haven't presented you with enough information I I understand that I'd probably be in your position but don't fabricate stuff but there's some important information that needs to be released and everybody needs to understand the truth to it and not distorted versions of it you really need to pay attention to what I'm saying because I
(1:48:31) have better things to do than come up with this I'm not interested in doing this I don't like being in the public eye I don't have money for doing this and quite frankly I can make up a better lie but I have no motivation to lie this hasn't this hasn't helped me out it said something that it's information that I'm releasing and that's it not an ordinary life that's one thing I would like I don't like living in a James Bond movie I like watching James Bond movies and yet Jeremy
(1:49:05) um you talked him into going on camera I did I did you know I think it's when you get to a point where people are twisting your story you can hear how passionate he is in just that little excerpt right there when people twist you enough when you get pushed and and you're someone like Bob who who doesn't put up with that you know at some point you're going to stand up and you're gonna throw a punch back and that's what I think we're seeing right now with Bob and and I'd like to say
(1:49:35) it's happening this is I've known him for a long time he does get testy uh every now and then um when it's sort of the weight of this thing because he's been Bob the UFO guy for a long time now we have one other clip uh we have an interesting exchange with them let's hear that now people have been trying to minimize who you are people have been trying to trivialize who you are people have been trying to twist your story based on absolutely absurd things that's got to wear on people to a point you got to set certain
(1:50:06) things straight it's time to pull things out by the roots just to get things reset and get people familiar with the story and who I am and this is what's true the Divergence has increased just over time I'm trying to tell you exactly the way things were I mean what I was exposed to you think there's something more secret than that that the flying saucers are a cover-up for some of this stuff just sounds crazy to me and I I understand I'm biased because I'm behind my eyes and see everything
(1:50:39) but this is this is crazy that's a that's a pretty funny thing is there something more secret than flying saucers because that's the story you hear from Bob for Bob Lazar oh yeah that area 51 step that was uh they just made that stuff up and to cover up something else that was going on out at uh Groom Lake and you know it was a cover story and as if somebody would be fired if that was the plan because whatever is flying around out there as a result of Bob's story uh tens of thousands of people have gone out there in the desert
(1:51:12) there's always someone out there watching with binoculars and other kinds of equipment every news organization in the world is beating the path to their door Congressional investigators have been out there that that operation that facility which is critical to National Security has got so much more attention because of Lazar so if that was somebody's plan to distract attention from there it didn't work very well would you agree yeah that's what's so absurd I mean I love hearing how fired
(1:51:38) up Bob is in those pieces because you know pushing his buttons you know he he says it like it is like it is I mean it's that is so absurd what could be this is a cover story for what I mean he's trying to tell you what he experienced and he's been trying to say this for almost 30 years now you know for self-preservation at first but now it's it's become something else it's become personal and that's what I'm going to explore in the film so you there is a film in the works there is a

(1:52:09) film in the works the definitive documentary on Bob Lazar authorized so are the the personal side of it as much as anything absolutely like all of my films in order to know this is something that one of Bob's dear friends said to me he says if you want to know the truth if extraterrestrials UFOs if all of that is true then you need to understand who Bob luzar is because if you know who Bob Lazar is you'll know if he's telling you the truth or not you know I I know people say he's not a scientist it's all baloney it's his
(1:52:45) physics don't make sense I I just know that he he knows a heck of a lot of stuff about anything electronic technical chemical um I'm installing a solar system in my home and uh and I of course Bob knows all about it he knows about different variations different Technologies what works the best he's he's uh inspired to get his own I mean you see the evidence as you if you spend some time with him at his um his company that he works on a lot of different stuff at the same time well in fact for seven days
(1:53:24) three in the morning till bedtime and I was able to see the way he interacted with clients and agencies that would call him for different kinds of uh information and it was it was incredible I almost played that clip for you tonight where he talks just about that how that's crazy he doesn't sound like a scientist and and he explains that to you in this clip that that I didn't play tonight so so yeah the more you get to know Bob the more you realize the stories out there deep trying to debunk him the ridiculous stories that have
(1:53:57) zero evidence and that's the thing the stories people say about him have less evidence than Bob has about you both it's it's absurd so it's so cool to hear him you know talk and to really get to know who he is as a person because that's the Lynch you know key here that's that's really going to be it for people is they judging him based upon such a limited amount of data what you're about to have a lot more data you mentioned about agencies and it makes it sound like he's been working
(1:54:28) with the CIA or something there are government entities that come to him for problems at times right well absolutely when Element 115 was fabricated here on Earth he was contacted by those scientists for whatever data he had or information or input as absurd as that sounds that is indeed the case so people do contact Bob from clients you know that just want to know a little bit more about the elements that they're working with I mean I heard him on the phone he literally says who do you want me to call who do you want to have access to
(1:55:01) you can have access to everybody and anybody let's do this right we're talking with filmmaker Jeremy Corbell a patient 17 was one of the projects he's working on a film about Bob Lazar there's some other things he's got in the works as well when we come back we'll open up the phone lines including a call from that uh that uh serviceman who was on the USS Nimitz uh during the time of the Tic Tac UFO stick around much more to come here on Coast to Coast AM we're talking with Jeremy Corbell
(1:55:31) filmmaker about patient 17 and other projects of his uh we're going to open up the phone lines in a moment here and talk to you about whatever's on your mind hope you have some questions for Jeremy about his projects He has a pretty good depth and breadth of experience now I'm willing to let you tee off on me about Tom DeLonge if you're mad about that or whatever's on your mind we'll be right back with your calls questions and comments here on Coast to Coast AM so Jeremy before we go to the phones you
(1:55:57) mentioned about the the trip to Denmark I I was uh fortunate enough to go a couple of years ago to speak to that group it's just a great group uh and Denmark's such a cool country Copenhagen such a great City how was your film received is there is there a a language or cultural uh issues in in how it's interpreted yeah the the only Parts when I watched this film go that really get me twisted up I I want to see if people laugh at the right points there is a dry humor in my film because I'm looking at
(1:56:30) this just like anybody would any viewer and I'm I'm going through these experiences and there are some big twists and turns some serious twists and turns in this film that I'm going through as a filmmakers I just want to see if people laugh and it's incredible in Denmark my host Frederick he is so cool and the audience everybody speaks English there I mean mainly people really do have a great grasp of English so they really did receive the film well that was such a fun trip and to see it on a big screen in such a prestigious
(1:57:03) theater the national museum and uh and and that's free by the way that's available now people can watch that presentation and lecture free so it was such a cool experience the UFO Community is the coolest Community they took me and my mom

about for beers all over Europe it was like the Drunk History of Europe my mom uh yeah well I I saw some uh photographic postcards from there it looked like you were having way too much fun um I want to mention you would also so people can see that on your website uh that presentation and also uh you
(1:57:37) posted something about Lazar oh yeah this is great so after a few years finally I made a short film on Bob Lazar where it showed the history that you had reported on and then essentially brought in a few minutes of extra testimony because it was just I I wanted people to see Bob now saying what he had to say now all of that is free I've just unlocked that that's free also on my website people can just watch that that snip of Bob Lazar talking current modern day of course there's a lot more coming
(1:58:09) but I think that was a big give a 20-minute free piece for everybody to watch there and the national museum was 50 minutes long really cool content and there's also for the first time in his history Eugene rodden Barry my friend Rod we call him Rod he is the son of Gene Roddenberry creator of Star Trek and he went on camera with me and publicly talked about his views on aliens extraterrestrial life and UFOs and that you can also find there it's the first time he ever did that which I thought was crazy yeah we used a piece
(1:58:43) of him last week when we had the Star Trek technology guy a treknology guy on the program talking about his dad interacting with the scientists of the day to sort of preview the future it's cool hey uh Jeremy one more question before we there's a lot of phone calls holding on here but I wanted to ask you about Pioneer town because it's a if people don't know it it's uh out in the desert it's a weird little Cool vibe uh people go there and live off the grid kind of it was created as a movie set and I
(1:59:13) swear it could be a movie set now it's as if all the characters are kind of from Central casting for uh like an interdimensional sitcom uh but you it's it would seem like if you're going to see a UFO it'd be in Pioneer town and you have yeah in fact um in fact I have that you know I've been put pointing my camera at other people you know for for almost I guess it would be almost maybe uh but at least the audio recorder for 13 years now and I had never seen anything myself that was extraordinary something that was a
(1:59:48) true unidentified flying or floating object until I moved to Pioneer town and you're right this place is still active with filming especially because I'm here the stories out here are exceptional just exceptional this place you people gravitate here from from a few fields of music and art and you you do not underestimate the people out here I did see something that I cannot explain and the only reason you know about that is because of a little tiny podcast this guy named Ken Lane does something called
(2:00:22) the desert Oracle the voice of the desert man it's like you are in this world of the Mojave when you listen to it so he gave me a few beers got me talking and sure enough episode one on his podcast is me telling my first unexplained experience with this phenomenon and it was wild it was intense and my buddy was with me who's one of the biggest Skeptics and he always was joking with me about what I do for a living sure enough we brick our phones and this object comes down the Mesa on my Ranch and floats above these Joshua trees
(2:01:04) splashing this amber light totally silent it was like six to eight feet in diameter I got my telescope and measured it because I'm a maniac and it was astounding he thought we were being watched by some sort of military or something I mean he really got scared when this thing happened and and and I was really calm which is which was very strange you'd figure I'd be jumping up and down but grabbing my camera but it was a beautiful thing it was this strange luminous large silent glowing object and I have no explanation I mean
(2:01:42) I thought I'd see a disc I want to see a Mothership of crap I've never seen anything like that but it kills me I know I know uh let's take some calls West to the Rockies Ryan in Seattle hey Ryan how you doing hey good evening gentlemen I have a question for Jeremy but first let me set up my question by saying that the question has to do with Dr Roger the arrest in peace um before he passed away and I know you spent some time talking to him and George you did too before he passed away he was going out and doing lectures and
(2:02:16) going to different radio shows including appearing on George Knapp show for two hours uh he really wanted to tell people about a personal experience that he had uh and I'm you guys are probably familiar with this but he was attending a UFO conference in Turkey and uh during that time the entire country of Turkey was experiencing UFO uh sightings all over the place including close encounters with

Pilots but of course uh he uh who to me I don't know about you guys does not seem like the kind of person that would concoct a
(2:02:52) huge story well there's he was photographed there he was interviewed there he was there it was proven to be there and uh he was one of the witnesses of course there was an entire Village of people there A lot of them speak Turkish that are probably still around that all witness this happened and it was going on for three years and um it was for all video a lot of it was videotaped on Mini DVD cassette which it was analyzed by the uh uh an institution within the government of turkey turkey's a you know a very friendly
(2:03:29) Muslim country to us um it's sort of dangerous place to be now but I just wanted to ask you and let me get to my question um this whole series of events uh you know there Roger Lear described with nap that there wasn't any lighthouses in the water no no boats no uh oil containers or anything it was just open ocean and I just nobody's ever been able to really come up with any explanation that really makes any sort of sense and I'd be the first one to say well you know this has got to be a fake because there's of course most
(2:04:07) videos these days are fakes but this is this is just different but my question to you is before he passed away and maybe George you can discuss it did you have any time to ask him or did he talk to you about what he encountered there because to him it was a big deal and he wanted people to know about it well we had a show about it and uh I never talked to him in person maybe Jeremy did Jeremy you ever talked to Roger I I did I'm gonna talk to him a lot in person but specifically about the turkey UFO yes I mean hearing him talk about it they
(2:04:43) borrowed this special lens that you know a guy said oh look over there they end up filming it it is one of the most uh astounding video you know pieces of footage that we get the back story and you see this object I mean they had a really special lens that day so I know it did impact him but look the Seeker is the finder when you look up when you are looking for these things they end up appearing this phenomenon it seems to play upon your Consciousness as far as I can tell and Jacques Valley has studied this a lot that there is a cycle
(2:05:23) and there is a pattern to these sightings it has something to do with awareness and frankly just looking up this is happening now it's happening everywhere if we take our eyes off the phones and look up you're gonna see something give it time thanks Ryan appreciate it uh we mentioned earlier in the program that we had a call from somebody who was on the Nimitz during the time that this weird activity happened I have no idea if this guy saw anything or heard anything but he's on their first time caller uh line
(2:05:56) Trevor is calling in from Phoenix hey Trevor how you doing I'm doing all right all right sir thank you for calling in so did you hear about this thing during the time it was happening no I was um I'm actually with station on the minute promo 2005 so um I was uh I worked with the air radar so I want this object all morning long basically um like so basically used to that the radar and you would just you know you would Mark the contacts and you would see what's going on around your operating area and at that time we were doing what they
(2:06:38) call jtfx which is like exercises war games and stuff and uh I kept seeing in the northwest corner of this operating box um like flipping in and out you know all like all my eight hours on my watch and uh so I was curious about it brought it up and uh the reason I it's nothing it's nothing I'm like but it's something because it was going on for long periods of time and with my experience you understand you know I mean what you see so anyway I did a pass down at the end of my watch to a gentleman that deals with uh communicating with
(2:07:22) the F-18 and I told them hey uh check this area out watches and maybe you guys want to do something about it well I went off watch went down to my birthing you know do what we do and I got a phone call and sure enough uh Rana ran up and uh they hit the video and uh yeah watch the video and I knew and I didn't literally run because you're not allowed to run on the ship but um what it was incredible and I knew I only had a short amount of time to watch this thing so so I get up there and I'm sitting there watching with all the
(2:08:04) other officers and a couple semen and it was it was quite incredible to be honest I never seen anything like it in my life so what is everybody thinking uh what are the possibilities of what it is anybody saying it no we knew the UFO yeah like when you watch the video and what you could see it was um you know like just a saucer type something like that it wasn't clear today you know because the F-18 is recording it because they have a camera underneath the nose of the plane and so uh yeah we're just sitting there watching

(2:08:42) it and one of the officers started analyzing it and we started putting in slow-mo you know like uh like free things for anything going frame by frame on the computer and I mean you could see this thing just like skip like skip time or space I don't know what you want to call it but man it it was mocking the F-18 and then boom it was gone and you could see where the space and time where this thing's nothing I mean it was incredible they couldn't even put a number of G's on it it was it was insane I'll never I'll
(2:09:15) never forget that day were you uh were you debriefed was anybody uh else debriefed or told uh we don't talk about this nope nope nope it's yeah yeah tonight I was thinking about it I'm like we never never debriefed and uh I mean I would tell you a little more but I don't want to say it over the radio but the they probably shouldn't have posted it the way they did you know what I mean so yeah all of us that had a certain type of clearance shouldn't have seen it but we did see it because some people had to access
(2:09:50) whatever so um but it was pretty incredible so I had about 15 minutes to watch that thing and damaged it it's gone Jeremy you have a question for Trevor yeah definitely Trevor I would highly encourage you to reach out to me through my website extraordinarybeliefs.com write me an email personally I'd like to correspond with you uh it's I'm you I feel like you're very lucky to have seen it I wonder which day it was that you saw it uh was between the 10th and the 14th I believe you're talking about the
(2:10:24) exact footage that you know has just been pushed out this morning publicly but uh if you can reach out to me there's a number of things I'd like to talk with you about I'm in touch with a number of individual uh you know Prime witnesses to to this event and I think that every piece of the puzzle is important I think that's very cool you saw it and as you said you knew it was a UFO it's not something that was in question it was not ours I'll tell you what Trevor if you want to leave your your number with Donna uh
(2:10:56) we'll we'll be in touch man I can't thank you enough for calling in that's a great story thank you thanks appreciate it in touch thank you uh Joe on the Wild Card line in the Bronx Hey Joe hey George how are you all right it's on your mind uh yeah I wanted to ask Jeremy now earlier he mentioned uh the element that was found in patient 17's leg was of a form of nickel I believe you referred to it as an extraterrestrial element 64.
(2:11:28) do I have that right not exactly there were 36 different elements within the sample we specifically looked at the isotopic analysis of both the zinc and the copper we knew that it wasn't meteorite because of the ratios of nickel to iron the the object was primarily iron so it was not meteorite so maybe that's where you got confused but it was it was 36 different elements and and we looked at the Isotopes of zinc and and copper and the zinc 64 is off the charts non-terrestrial okay can I ask you this then how long did patient
(2:12:05) 17 or how long did they figure that he had this uh medal in his leg and how is it that his health was not affected prior to it being removed so we know that it was inside his body for a minimum of 10 years because he had severe pain which you'll see in the film he describes that and then he had a you know an x-ray and they showed an object a foreign body there was more dense than bone but he he didn't think that this had anything to do with his abductive experiences nor would he tell his GP about that so he just went on with his
(2:12:41) life then it was removed now how it didn't reach out or give any you know kind of toxication to the body I had a talk with a like a nano uh toxicologist who just happened to be sitting next to me one day we discussed that and essentially if the body produces um the ability to encapsulate something you can have a piece of lead or even a bullet in your brain I mean there's a famous story of a man with a bullet in his brain you know that lived his whole life out so you can have foreign objects in your body even lead and your body
(2:13:14) will do its best not to to allow you to get sick from so we don't know exactly how this works we just know the object was in there he didn't have any ill effects from it and then it was removed thank you so a lot of folks thanks Joe appreciate it we've got a lot of folks on the phones with some interesting topics uh but I don't want to go to a call and then have to go to the break I'm just still reacting to the call we just had there Jeremy that's a it's a pretty big deal big deal and and George
(2:13:42) I'm running into this a lot as I contact people I mean I have a lot of friends who are actually on deployment that I didn't know and they didn't know that they were on deployment on the case that I was looking at because I couldn't talk to

them about it but I had friends on that deployment close friends so I'm not surprised that out of the millions and millions of listeners tonight there are more people out there that didn't pick up the phone and that's what's important if you know anything about this case if
(2:14:10) you know some of the fishermen who were identified in a recent article as their boats being out there at that time reach out to me and let's look at this together let's try all right we're going to go to a break uh we'll be back with more of your calls for Jeremy Corbell we're talking with Jeremy Corbell about his film projects including patient 17 little discussion of the Tic Tac UFO Bob Lazar Tom Delong a lot of people on the phones will get right to them right after this on Coast to Coast AM
(2:14:40) our final segment with filmmaker Jeremy Corbell we go back to the phones the Wild Card line Thomas in La Jolla Hey Thomas good morning hi George thank you for taking my call Jeremy fascinating um research you're doing and filmmaking you know Jeremy concerning the Tic Tac incident were very focused on photographic evidence but when you have a carrier strike group like the Nimitz you know outside of San Diego California there's several forms of electromagnetic surveillance going on simultaneously to protect the strike
(2:15:25) group and to protect the aircraft carrier you have satellite you have Ariel reconnaissance you have usually a couple of submarines with a strike group like that so you have fairly intense underwater sonar you have within a thousand miles of the coast of the West Coast at least underwater sensors that can pick up you know Boomers so to speak you know foreign submarines that could possibly carry cruise missiles Etc what I'm saying that this is a friendly question here it seems like if there was a Freedom of Information Act request on
(2:16:10) the electromagnetic surveillance at the time such as satellite surveillance it could reveal far more of what was happening not only with this UFO but also the underwater submarine object that was recorded near the Nimitz and I was wondering if anybody's ever thought of um you know a foia request for what was happening electromagnetically you know from satellites underwater sensors um Aerials yeah yeah thanks Thomas that's a good point uh Jeremy do you know if that's part of the known database or is that even accessible via
(2:16:55) for you right so he makes a really good point on everything that he said and I highly encourage people to do for you is there have been foyers that have been filed on this event but the information that is received back is dependent upon classification so foia is this thing that we think is so powerful but more and more we're finding with different changes in terminology that's why I want to drill into people aav anomalous aerial vehicle when you they change terminology or things are classified our ability to get them through foia is is
(2:17:30) is is greatly reduced it is something we should do we must do on this case I encourage people who do that regularly to get into this case with that but yes there was a lot of detection of the of these objects a lot of people know about this that's why I'm hopeful but foia is not the only answer thanks I appreciate that call we're going west of the Rockies weighing in Washington hey Wayne good evening gentlemen um what's on your mind in in viewing uh the jumbo viewing screens inside Iron Mountain at space command
(2:18:07) um I noticed uh that the everything on there that was in space and around our space of viewed from satellites was watched very carefully uh by space command and everything was abbreviated as to what it was whether it was a satellite a dead satellite space junk and they had an abbreviation on what I could count to be at least a dozen if not two or three dozen because I don't seem to see all the screens um because there was a 360 degree screen room uh what they called at the time afcs and that stood for alternate
(2:18:45) spacecraft so we we see these things coming in and out of our atmosphere all the time and uh as Colonel Corso said we can tell the good ones from the bad ones and we've got crafts that take the bad ones out wait are you saying that you worked for space command no sir no sir I'm saying that I saw these screens on the documentary this is six but between six and a half and eight years ago it was either on History Channel or Discovery Channel but it was on space command and they allowed them to go in there and uh
(2:19:20) tape all of this and they showed it and it was shocking to me that they revealed what they did at the time oh yeah I see what you mean uh well yeah that's amazing I guess they figured nobody knew what it stood for but you know you're not to this the as the book says you know there's nothing known to the sun you know almost 4 000 years ago after the great to lose and the oldest book that we know of

that was written uh job said all good things come from the Pleiades and of course good things are Godly things and that's where God uh
(2:19:58) resides whether it's in our Dimension or in another dimension I can't tell but um that is a long way away it's one of the closest uh star systems at 433 light years but uh there was a beam there that was sent from there to Earth and he came in four minutes and I worked it out to be at about uh 56 000 or excuse me 56 million uh well actually closer to 57 million um work okay all right uh thank you Wayne for that uh observation Jeremy I'd imagine there's all kinds of sensor information uh satellite information I
(2:20:39) mean as Jacques valet has said I mean it's the government it's the military that has that kind of equipment of course they've got that information somewhere yeah absolutely I mean I've talked to Pilots who've said they have from time to time been the UFO I mean it's like this is a known phenomenon within the United States government governments around the world and our intelligence communities it reminds me of the revelations from Gary McKinnon talking about non-terrestrial officers so there are acronyms and ways to look
(2:21:09) at this and there's a lot going on but yeah I I find this highly fascinating what he said about alternate spacecraft but again this is just this phenomenon is real we know this we deal with this we saw that in the Delong announcement last week you know I'm rooting for him and what he's doing more information that comes out the better will be off inch by inch Life's a cinch yard by yard life is hard um thanks Wayne for that call I'll come back to the topic of of whistleblowers uh toward the end of the program but
(2:21:39) we've got a couple of people hanging on for a while uh Justin in California on the Wild Card line hey Justin yeah thank you for taking my call and thank you for interviewing Bob Lazar I attempted to do so actually did meet him in Las Vegas with his buddy um was trying to convince him to do some video interviews to follow up on George's interviews of him we had contacted Bob through John Blair and um but so when I met him I was discussing with his work to extricate the power generating unit from the sport model but one thing I
(2:22:19) never got around to asking them of course was Bob and his buddy did not agree to do video interviews so I did not have a complete interview so I'm wondering if you ever covered interviewing Bob about how the control systems work on the power generator which was the anti-matter reactor in other words he was charged with another person from EG at the time to remove the device from the sport model fired up and tried to re-engineer it or figure out a way to re-engineer it that's what Bob's uh you know story what
(2:22:59) his job was at the time so I'm wondering as far as his task to try to do that was he able to complete this task that he was brought into area 51-4 and how was this unit fired up once it was removed from the sport model and how was the Spartan sport model controlled in terms of its control uh let's let's ask Jeremy that because I you know my interviews were with Bob were 28 and 25 and 26 years ago so I know we covered that topic I just don't remember the technical um specifics that he answered to uh so
(2:23:40) Jeremy did you get into that absolutely that's what's so cool about being able now to do this movie with and for Bob really is because these types of specific questions will be answered first of all he was never tasked to remove the power source that was removed for him it was in the lab when he went in there essentially he talked about it being powered on and powered off it was a resonance machine it didn't have these fine-tuned controls and it was an impossible job with the material science alone we have today we could not
(2:24:18) replicate what he was given not even talking about the the super heavy elements element 115 that you need to power this device it was an impossible task thank you Justin appreciate the call uh Nancy east of the Rockies in Arkansas hey Nancy good morning hi good morning what's on your mind well I once upon a time I lived in Lubbock Texas and it was 1975 I think or maybe it was 76 but we came home from school and we came out in the evening and we saw a number of ships in in the air and they did some pretty amazing things
(2:25:00) and they traveled in a triangular format and they were pretty much triangular ships and they zipped across from one side of the Horizon to the other they they did what looked like acrobatics over several days in the evening they appeared and hundreds of us from our block we were over off of 45th and Memphis in Lubbock we came out and watched them and more people every night and of course we called Reese Air Force Base to ask if they were doing uh anything and we were told no uh and we just dealt with that and I

(2:25:34) thought it was funny as I got older given that it went on for so many nights and it culminated in what looked like three ships that went in separate directions and then rapidly came back in One Direction and appeared to collide with one another and then just vanish and then that was the last week we saw of them and except there was no debris you know there was nothing and years later I was reading I believe the gentleman's name is Bob Hopkins Hoskins anyway he writes about UFOs somebody gave me one of his books and in
(2:26:06) his book he talked about the Lubbock lights and I got really excited and I thought well good somebody's going to talk about it but it turned out it was 25 years earlier also at the end of August also for a series of nights also over Lubbock it sounded like it was the exact same phenomenon only nobody's ever written about it and I and I've always been curious as to if anybody's ever researched it and it seemed odd that it had happened it's such a cyclical you know I don't know but well actually the
(2:26:38) Lubbock lights are pretty Lubbock lights are pretty famous Nancy uh there's been quite a bit written about it I'm guessing you're talking about Bud Hopkins uh book uh he'd written several books about abduction phenomena but included a lot of UFO cases uh the lights of Lubbock though don't act like what you're describing that's pretty spectacular Jeremy any comments yeah I mean it sounds like you witnessed a mass sighting with multiple eyewitnesses and I encourage you to reach out to me so I
(2:27:07) can see what I can do to help find out more about this recent or more recent sighting that you had you know UFOs are a part of what we call the phenomenon which is a catch-all term for this apparent display and it's been with us since the beginning of recorded human history but when you get opportunities like this we have multiple Witnesses you know the dates that's something we can look into so I encourage you to reach out to me thank you Nancy appreciate it on the Wild Card line Jimmy in South Dakota hey Jimmy good morning
(2:27:37) Good morning George how are you I'm doing well how's it going good good say um project Roswell and Area 51 now I've heard a lot about that in the past when I grew up knowing that there was some information about it but I'm still confused is there still some ongoing investigation on both these projects or is it just non-existent anymore well uh it seems like about once a month the new book comes out about Roswell uh there are a lot of folks who are devoted to trying to nail that down in the UFO
(2:28:17) Community there's a great deal of disagreement about specifics on Roswell where the crash was when it was exactly whether there's one crash or two where their bodies or not multiple versions of the story and yes a lot of people are still working on it as for Area 51 that's uh it's an ongoing investigation as well but I'm not sure that anybody's going to get anywhere it sort of culminated in 1989 when we did some stories about Bob Lazar who didn't actually work at Area 51 he worked at a
(2:28:47) place called S4 south of Groom Lake the area 51's main base and um he had said that he had worked on flying saucers from somewhere else taking them apart to figure out how they worked and they were stored in hangers built into the side of a mountain it's kind of a long story to tell now if you haven't heard it but there's a lot of information you could probably find to get caught up on Jeremy's website Jeremy yeah absolutely look there's a lot of history that we have here I am excited
(2:29:16) because the UFO phenomenon has not slowed down since those big cases so getting a case handed to you on a silver platter like the the Tic Tac 2004 Nimitz case if anybody out there knows more about this reach out to us or if you know about other Tic Tac cases or cases that involve this kind of description because there were more uh thanks Jimmy we'll try to get one more call in Elizabeth in Wyoming on the Wild Card line uh good morning Elizabeth hey uh did not think I was giving it on here there you are um that's crazy uh biggest thing that
(2:29:55) happened in Wyoming for a minute um so what is your guys's Theory like on black holes like what do you think that is in general like what is what what do you think it is black holes sounds like completely different like Theory and it all kind of wraps around with this the Tic Tac thing and well black holes are a collapsed star uh where they gravity is so dense even light can't escape um what what where are you heading with this well my theory is okay remember that movie that just came out it's called like arrival or something and it
(2:30:28) was like the aliens came here and they're like we're gonna do a symbiotic relationship you know which means like you do something for us we do something for you and then we live harmoniously and it must happen well just like in chemistry like elements and atoms they like come in and they bond and they've you know all the

stuff and they're stuck together by like this electricity or this magnetic pole but we just can't really uh for any kind of science to it besides just labeling it what it is but we
(2:30:59) really don't know what the poll is what if microcosmos macrocosmos what if we were doing that like with our solar systems what if like our orbitals you know like I don't know if you know anything about chemistry but orbital shells valence shells we have the electrons on them what if that was like somehow like our planets and like so we are really just becoming like like black holes aren't going anywhere they're becoming something else like it's not a do you know what I'm talking about like they're not yeah I think so
(2:31:28) it's it's a very exotic explanation unfortunately I don't think we're going to have time to get to it but thank you for calling Elizabeth I appreciate it and thanks to all the other callers as well uh Jeremy one more I I don't know if you have a comment on Elizabeth's uh um theory about black holes just just that you know we need to investigate the Unexplained and not explain the uninvestigated you know all of this is fascinating science is catching up we're living in just an incredible time of life and you know
(2:31:57) look my life is like the modern day Twilight Zone with a Twist of Twin Peaks except everything I'm experiencing is real and that's because I'm just looking for it so I just encourage people like the last caller you know keep thinking put information out and try to learn as much as you can science is catching up we live in a very Mysterious Universe and you know we've talked about the whistleblowers and people coming forward in this program it's important to be uh you know beyond guard to be careful
(2:32:25) about the kind of information that comes forward you should ask questions about it people should ask questions about uh Lazar about Tom Delong uh good healthy questions but you want to keep an open mind uh Jeremy Corbell filmmaker will check out your stuff extraordinary will check out your website we got links on the Coast to Coast AM website and we're glad to be here thank you so much for the opportunity and I look forward to learning more thank you George and thanks to my colleagues their Coast Nathan Staton Donna Walker Dan Galati
(2:32:54) our webmaster tonight Lex lonehood Chris boros our producer uh George Norris back tomorrow I'll be back next Sunday night with my guest Dave palaitis good night

george knapp, and john lear, C2C.AM interview + transcript july, 29th (29-07-2007) - YouTube
https://www.youtube.com/watch?v=-IIckcSKwdg

Transcript:
(00:00) we've been debating since the beginning of the modern UFO era what the impact of uh realization that we're being visited might have on society uh speculation and and Studies have been done about uh whether our social institutions would collapse would disintegrate in the face of what presumably would be a much more advanced a race of people and a lot of folks think that we're not ready to understand that kind of thing well I think the viewers the listeners of this program are certainly ready for it
(00:31) because this is something you've been interested in you've all been studying it and listen and hearing about it and debating it for a lot of years it was only a little bit later that uh that I I learned about the Flying Saucer story about the possibility that et's technology was being stored and tested out at Area 51 actually more specifically a place called S4 and the reason I heard about it is the guy who's going to be coming on in a couple of minutes John Lear uh John has uh has a distinguished career as a pilot
(01:02) he's flown missions all over the world for the CIA his father is the inventor of not only the Lear jet but the eight-track tape system which was mighty fine technology back in its day just a moment from now we're going to be talking with John Lear and you should buckle up your seats because you don't want to miss it I'm back in a moment with Coast to Coast AM welcome back to Coast to Coast AM I'm George Knapp let's get right to it John Lear um is a retired Airline Captain a former CIA pilot as well as the son of the
(01:33) famous inventor of the Learjet he's flown over 150 test aircraft he's won

every award granted by the FAA he holds 18 world speed records and has worked for 28 different aircraft corporations but back during the 1980s his life sort of took a a different kind of a Twist when he started looking into the UFO mystery had issued a Manifesto that today remains controversial John great to hear you great to talk to you good evening George and good evening to all my friends at above topsecret.
(02:06) com the Three Amigos Mark Bill and Simon and just a reminder that all the stuff I'm talking about with George can be found on abovetopsecret.com well glad you got that plug out of the way John let's let's go back to uh let's go back to the beginning at least for me 1987 is 20 years ago the first time I I met and talked to you uh you came into the TV station and you already had some credibility with my news managers because of some other stories you'd worked on with them that were that became national International stories
(02:37) um you tried to talk my my mentor and friend the late Ned day into taking a look at a stack of UFO documents Ned wanted nothing to do with them but I was eavesdropping and I said hey let me take a look at that stuff and I was just flabbergasted by what I read I think it included the mj-12 documents as well as some some uh documents that have been squeezed out of the government through the foia process that you provided me and uh so I had you on a little show I had back then called on the record one of those shows that airs
(03:06) at four o'clock in the morning and and nobody watches and the mayor would come on or a city councilman and talk about things that nobody cared about and and you come on and start talking about flying saucers and my phone was ringing off the hook I had you on again a second time and and the response was even bigger and I realized that whatever you were you were saying touched the pulse of the public in a way that I had no appreciation for previously so that's how I got started in in looking into UFOs I'm not sure if I should thank you
(03:36) or blame you for that that's exactly the way it happened and I remember I was very good friends with Ned he helped me expose a couple of frauds that were going on uh in Las Vegas uh one with the police department and uh he was really a good guy really informed and if you remember I was the one that tipped him off to the uh stealth fighter I think it was in the early 80s before anybody knew about it and he was writing for uh the Valley Times Bob Brown and uh when he wrote the story uh he he misunderstood
(04:09) what I said and and said it was a stealth fire f-i-r-e instead of stealth fighter anyway uh we both almost went to jail over that one but I do remember that day clearly when I was in there trying to tell Ned about what was going on at Area 51 and I remember what he said to me he said John it's not possible I would have known about it and that's when you came up and said I'd like to take a look at your stuff well I sure am glad for that because back in those days you were very gracious to help a rookie investigator
(04:41) look into this stuff providing me time and expertise and a lot of Doc access to your files voluminous files and and really gave me a good underpinning and understand at least get started on this mystery you know I was kind of cocky about the whole thing back then John thinking well look this what this mystery needs is a good investigative reporter give me six months I'll have this wrapped up and of course of course that was 20 years ago or certainly not any closer to it you had had an interest in Area 51 long before the rest of the
(05:09) world had heard heard about the place I think something in the late 70s with Bob stoddahl another Las Vegas news man right yeah back in 1963 when I was uh working uh as a flight instructor in Hawthorne I found out about the SR-71 and the guy who told me about it talked about a secret place up in Nevada and it took me like four or five years to find out exactly where I was first of all I thought it was up at Tonopah and then I came up here to work for a little while in Las Vegas and uh one of the pilots that used
(05:44) to fly up there like in 1967 1967 1968 says no no the place is called Groom Lake so I looked at that on a map and uh by gosh that's you know that's where it turned out to be so then I moved up to Las uh out to Las Vegas flying for an airline and Bob stoled out ran a story for Channel 8 and the story was um security leak it groom light so I called him up and I said Bob I've never heard anybody mention Groom Lake on television uh are you supposed to do that and he said well you know it it's there and and we do have a story on it
(06:20) so I said well let's have lunch so I went down to have lunch with uh Bob and we met at the flame remember the flame right oh yeah sure so uh and then we started talking and he says well it doesn't make any difference anyway because it's going to be exposed next in a few weeks API or AP and UB I are going in on foot and I thought

oh shoot that that that's great but I wanted to be first so I grabbed a couple of my Airline buddies and we drove out there about five o'clock in the morning and I
(06:48) think it was like a weekday morning and that was before the um the guard gate was there and we drove over the other side and I took a bunch of pictures and we got there like about seven o'clock in the morning uh the lake bed was wet it I think it was in the winter it just rained and um we got a bunch of pictures and that one picture they happened to have one of the migs out in front of the hangers and that hand that that particular picture is on the special projects website it said that blows your mind doesn't it
(07:19) that you were able to get that close to the base and take photos and nobody hassled you you didn't get arrested I mean that would be impossible now yeah it would be impossible now I know uh you know about 10 minutes later uh we saw a a cloud at dust as the guy was driving around so it was kind of funny because I had my old um Mark for uh 73 uh Lincoln black and a couple Airline guys we were just standing there and I had the camera on a tripod so uh what happened is this guard was letting uh a pickup truck out so all
(07:52) there was was a little chain uh a chain link or a just a chain across the road and he let the chain down let the guy go through any and he sees putting the chain back up he turns around and there we are we're not like 10 feet away and he didn't notice us and he said what are you guys doing here and we said we're not supposed to be here he says hell no you're not supposed to be here and so he says you wait right there so he goes back to the truck and he gets a radio and he calls somebody and he comes back
(08:25) and starts talking to us he says you wait right here they're coming out to uh to check on you and while we were waiting for the other guys to come out we told him you know I told him look I grew up in Van Nuys California I used to see the Lockheed three constellations uh take off every Monday morning come back every Friday afternoon many of my friends flew the SR-71 uh you know I hang out at the Pilot's table at uh uh at the um uh at the Van Nuys airport uh I forget what they call that restaurant oh the um uh the trails and we told them
(09:04) about the history I told you know first guy to fly it was the who who that was um I'm trying to think of his name and uh um uh went through the whole thing I said I had a good friend named Daryl greenemeyer he was the fifth guy to fly it so by the time the the other guy gets over there he he's he this other guy is really hot and he shows up and he starts screaming at us you know what the heck are you doing here and the guard who was there talking to us he turns around and says relax they know everything
(09:32) so the upshot was the uh the guy that came the next day and says okay well I got to see some driver's licenses and Social Security numbers and there was you know they kept us there for a baby half an hour or so and he said okay here's the deal we want you guys to leave Drive in Las Vegas in a week you're going to get a call and you're going to get a briefing and then you're going to get a debriefing and uh so we left drove back and never heard another word huh uh tell me this John did you
(10:06) have a suspicion back then or perhaps the best way to ask it would be when did your suspicion about ET type technology being out there when did that develop it was I know a lot of people think it started with Bob Lazar but it was well before that wasn't it yeah it was before that uh see the three guys that were interested in Groom like uh uh and really did the research on the SR-71 and the YouTuber me John Andrews and Jim Goodall and John Andrews was the U2 guy uh the interested guy and Jim Gaul Jim Goodall was the SR-71 guy it you know
(10:39) and I was just interested in secret airplanes not about uh you know UFOs I didn't know anything about those as a matter of factors the famous letter floating around on the internet that John Andrews who was then vice president of testers uh wrote to me telling me about um UFOs and that I should check into it and the famous letter was the one I wrote back saying there's nothing to it I already checked it out so I'm sure people have flashed that in your face now and then yeah yeah so so do you know of the approximate year when
(11:11) when you're hearing the the ET stuff yeah I think uh 84 or 85 I was over at a friend's house in Las Vegas and I picked up this book called missing time by Bud Hopkins and I read that thing and I'll tell you the hairs on the back of my neck rose up because I knew instantly that that was true now I don't know how I knew it was true but I said this this is true and that's when you started then I ran into the guy the Air Force guy that I knew over in Laos he was uh one of the Ravens uh you know the sheep dip
(11:43) guys that they took out of the Air Force gave civilian ID and they flew in

laws for us uh Greg Wilson was his name um he lives down in New Orleans and I met him at one of the uh southeast Asia pilot reunions here in Vegas and I think it was 1984. and we start talking and uh he told me he was at bent Waters well uh stationed at bentwater is flying a-10s well I knew the bent Waters figured into this story because in 1980 there was a landing there of uh three aircraft of three saucers and it was a big deal it was called the ventwasher vent Waters
(12:19) incident there was a book about it so I said well oh bent Waters I said uh did you ever hear about the bentwater's incident he said yeah I was there that night he said I didn't get to go out and see the saucers but I know the guys who did and I said wait a minute you mean this stuff is true and he says as far as I know it is and then he told me the story and those two things Bud Hopkins book and what Greg told me were the ones that really set me off on saying I gotta find out what's going on well you knew a
(12:48) lot of guys in aviation circles you knew a lot of guys in intelligent circles military circles so so you basically went on a one-man information campaign to find out what everybody knew right right and basically most of those guys knew nothing and um you know it was so secret and then I took that little trip in 1987 where I went to drove all through um Colorado and New Mexico that's when I joined up with Linda Howell and we went down to Roswell and we ran into all those uh mutilated cows I think it was the most bizarre trip I ever made and we
(13:24) that's when we met Clifford Stone and uh I I met some of the UFO guys in crestone Colorado to exchange information with them and and then on my way back when I was coming back from Kingman that's when the drive from Kingman to the dam was as black as black could be do you remember making that drive when it was black sure that you know these days I mean there's lights the whole way but those days like 1980s uh 1987 is when I drove back it was black and something followed me and it scared the Living Daylights out of me
(13:59) and it was you know it was just a light or actually it was two lights and it never threatened me but it scared me to death and I got home and and that's when I wrote that uh you know uh the world is around or whatever the thing it was you know I assembled all the information that I had and and started out and that that's what started the whole thing I was going through my John Lear files in preparation for this program and and found some real Treasures one of the things I have is the statement You released December 29 1987 uh attached on
(14:35) the front of it is a handwritten note from you uh some background information Dear George attached to some background information you may need for the next year happy holidays which is quite a collector's item because this really puts you into the Maelstrom into the into the eye of the storm of uh of UFOs and UFO theories and and uh you caught a lot of flack for it yeah did I ever and uh you know when I started talking about this I had no idea that the military and the government not only knew all about
(15:07) it but they were you know that they were you know on the whole thing I it just didn't occur to me let me ask you this something else I found in that file of John Lear stuff is a an article from August of 1957 from the I think it was called the nicap bulletin it's about your father and I was wondering if I know UI have talked about it privately about this before whether you have ever got any information on this subject from your father William P Lear senior but in this article it notes in a surprising
(15:35) reversal it says William P Lear noted Aviation an Electronics inventor recently stated that the flying saucers do not carry creatures from other planets but probably our intelligence gathering devices launched from other worlds in February 1955 Lear publicly revealed his belief that UFOs came from outer space and are piloted by beings of superior intelligence did you ever sit down with your dad and have a conversation about this no see he got his hand slapped by uh mj-12 he was close to most of them particularly uh
(16:08) Vandenberg white Vandenberg uh was always at the house he was one of the original members of nj-12 as a matter of fact my mom in later years and I'm talking like 20 years ago way after my father died said that uh Hoyt Vandenberg had had a crush on her uh Jimmy Doolittle who was as close to mj-12 as you could get without having an mj-12 number he was always around the house my dad was friends with Nathan Twining my dad was on the board of um of the Lovelace clinic in New Mexico they're the ones that did the autopsies on the
(16:40) aliens he was really involved but you know during the time he was alive he never discussed it with me and I think he made some comments but it's only in the recent like three or four years they found out how really involved he was he was one

of the primary contractors on the Annie Grant stuff that was uh developed between 1955 and 1958 and it was fully developed after 1958 but that statement in 57 was it was the response to the hand slap he got pretty his statement in Bogota I'm just assuming that when he made that statement it was
(17:18) totally unauthorized and he got contact he said look bill when we told you about these flying sauces it didn't mean you were going to supposed to go out and tell all your friends about it you don't suppose he was a member of mj-12 oh do you no no but he was in on doing the anti-grav stuff he was he was right he was right there with and he knew what was going on I remember seeing news articles old newspaper articles including this this one I'm holding here that mentions about his anti-gravity research and and he said there's a quote
(17:49) from him once we can explain gravity we can do something about it and then poof those articles it just it disappears it's there's no more discussion of it in the public press do you think that was a result of him speaking about fly exhausters or that they perhaps uh that they were able to study those saucers to get our our clues about uh how gravity Works they studied it and perfected in between 1950 they studied it uh and then perfected it had it perfected between 1958 and 1960 and that's why you don't
(18:20) see any articles of any kind in aviation week space technology Jane's defense weekly nothing no mention ever of any kind of research on anti-gravity and the reason is they already have it I know uh you've had some ups and downs in your life because of your interest in UFOs because of the things you've said publicly about them uh I I thought for a while that you'd given up on the topic because it was just too hard on you and your family but now I see you sort of bounced back you're involved in online
(18:52) discussions on an ongoing basis um what happened what's what's the deal with your your personal life and your interest in the topic well there were several times that uh I you know just kind of either took a break or said I don't want to do this anymore because it's so overwhelming when you realize what really is going on it's so overwhelming that you know it it's tough to take so it's depressing too isn't it it's depressing is not depressing well it's it's all I could say is it's overwhelming so I took
(19:26) uh you know a few months off I think in 88 or 89 I can't remember and then um um the airline that I worked for in July of 1989 called me in one day and they said you don't actually believe this stuff to you and I said yeah this is a matter of fact I do and they said well we can't have a captain flying passengers that that believes in UFOs so you know you need to take you need to find the employment elsewhere so they gave me uh three months pay and I went and started flying DCH flying cargo out of Detroit which was a lot of fun you
(20:02) know life has a way of working it out and I met a lot of good friends and uh and I kind of let the UFO thing drop for a few years then I took it up a little bit but then I really didn't get back until like 2003 or 2004 when when Art Bell called me companies that you know hey why don't we do another show and so about that time they were talking about disclosure and you know uh I think that's probably you know it's not that it's a ridiculous notion it's just that it's never going to happen uh so I had a
(20:35) few words to say about that and I wrote the famous lyric disclosure briefing and uh and just you know stayed in and out of it and I'm back in it and I uh I uh um I'm on this forum called abovetopsecret.com and we discuss all of this and what's fun about being on abovedobsecret.
(20:56) com is there's so many guys with so many different ideas and you better be able to support yours because they will crucify you because they're so knowledgeable I mean there's guys that you know that to get on there and they really know what they're talking about so if you can't back up what you're talking about uh you're toast you mentioned that you uh you don't believe disclosure is ever going to happen you know it seems like every other year or so somebody comes out with a statement oh yeah it's just around the
(21:25) corner uh the the good guys on mj-12 want to spill the beans and but they're fighting with the bad guys in MJ 12 and any day now it's going to come spilling out and of course it never does why do you why do you suppose that it needs to be kept a secret maybe that goes to the the center of your thesis That You released back there in 1987.
(21:46) yeah it goes to the core that it's really none of our business and uh people say well what do you mean I got a right to know if there's aliens on there as well you really don't because it's not about that uh you need to just uh continue on your

life be a good guy uh try and get rid of uh the bad things in your life which are Envy Hayden greed and uh and just try and improve yourself you don't need to know about what's going on in the background of course some of us want to know and uh you know and and if you want
(22:16) to know I'll tell you but it's not like there should be a mass briefing on CNN where they come on you know the president comes on with his uh chief of staff and his Joint Chiefs and staff and those aliens are here and you know here's what here's where they're from that's never going to happen it doesn't need to happen uh disclosure happens on a one-on-one basis uh and that means that when you're ready to know you will be told and you won't be told by the government you'll be told by someone
(22:47) else I know that a lot of people in our listening audience will find this frustrating but I'll have to make an admission here myself is that the longer I I stay in the field and and keep tabs on what's going on and do my own research the less inclined I am to uh to advocate for a complete disclosure I agree with you completely that it's not going to happen uh perhaps for other reasons perhaps because a lot of people would go to jail if they had to admit what they've been doing all this time but also
(23:16) uh you know I know that people think that they're ready I I know that they they may be in fact ready for an idea that they're extraterrestrials I'm not convinced that they're they're necessarily ready for uh what could be a very disturbing Truth uh about the reality of of uh life in our universe and and on our planet you've nailed it exactly as a matter of fact I'm going to play that back and type it over because uh you just said exactly what I feel why don't you give us a brief synopsis
(23:48) of of what you came out with in the John Lear document because uh you talk about startling there were a lot of startling things in there that really shook uh ufology down to its feet well uh you know it's kind of hard to remember I I haven't read that thing in a long time but basically I talked about what I found out uh in the in the year and a half before that and it was basically that yes there was a cover-up yes uh extraterrestrials are uh uh uh here that a group named mj-12 uh is dealing with them that we
(24:23) have a lot of technology that we're trying to find out about uh that there have been several agreements made uh the agreements uh were now this is what I wrote in in uh back then it doesn't mean I necessarily believe it now but the what I wrote was the agreements were that in return for our permission uh to abduct uh a certain amount of humans that the aliens would give a certain technology there was also a little bit of the reports of The Grudge Infamous Grudge 13 reports some of the uh some of the gruesome uh UFO incidents that they had
(25:02) and uh basically uh I ended up the uh it wasn't a Manifesto was is basically what I thought and I said if you ever see a appliance author was a saucer with beautiful green and yellow and blue lights run like hell because I didn't have anything else to say here's a hilarious thing Whitley Schreiber who used to call me practically every night uh telling me about his experiences uh when he read that he called me up and he said I read your thing and I said yeah and he says where you say run like hell
(25:40) and I said yeah he says where I mean that was just hilarious one of the things that you wrote in that uh that paper was that you said that on April 30th 1964 the first communication between aliens and the US government took place at Holloman Air Force Base in New Mexico three saucers landed at a pre-arranged area and a meeting was held between the aliens and Intelligence Officers of the U.
(26:05) S government how do you know that was uh Bob emanator told me that and he's the one that was gonna was approached in the 70s he was part of Sandler films which was a CIA cut out that did their work and they said look uh we're ready to release the story on UFOs we're going to give you and I think it was 10 000 feet of film of UFOs and and that meeting and everything and they said we want you to tell the story and that was um the the video that came out UFOs past present and future but what happened is they made the the movie and got
(26:41) everything ready and at the last minute uh they did have that footage at the last minute the Pentagon said no there's been a change in plans we don't want to do it and so the video that you see on uh uh that's today is released and there's several different names for it uh that's why there's no conclusion in the end and no footage I mean that the story just ends and but that was that That was supposed to be the release and I've spent many hours with Robert emanager he's retired now I think he

(27:14) lives in the South somewhere and he told me all about the briefing they got and uh about that home and meeting now that wasn't really the first one the first one was in 1954 at Edwards Air Force Base which was then called murrock Air Force Base and that's when uh Eisenhower had the famous meeting with the aliens there that uh he supposedly went to the dentist and that's where we've had so much of the documented uh material on on that particular meeting so there were several meetings we're going to take a
(27:47) short break John when we come back I want to ask you about the this the suggestion that there was some sort of a tree to allow aliens to abduct humans stick around folks I'm George Knapp a guest host here on Coast to Coast AM welcome back to Coast to Coast AM I'm George Knapp your guest host my guest this evening John Lear John in the paper that you wrote back in December of 1987 one of the central points you made was that you believed at least back then that there had been some kind of a deal worked out between
(28:17) our military and these alien visitors that would allow them to abduct humans here's my question about about that Prospect and I don't know if you still believe that to be the case or not but I always wondered well if that were true why did the aliens have to make a deal didn't they just do it on their own aren't they just still doing it on their own why would they need our permission if they're so technologically Superior to us you're absolutely correct there's no reason why would they have to make a
(28:44) deal uh with us uh if they did and I don't know that they did uh it was a scam on their part you know maybe we had found out about the abductions and uh and they in order to placate the military they said well look here's the deal we just want to um uh and abduct a few we'll give you the names and everything and in return we'll give you all this cool technology and do you believe that they lived up to that part of the bargain the the aliens yeah that they did give us the technology that perhaps was out
(29:15) at 51. lots of cool technology it's the other part they didn't live up to I mean you know uh everybody gets abducted I you know I would I thought you know in those days it was one in ten but it's certainly more than that one of the uh other parts that you mentioned you get into the stuff about Groom Lake in that paper back back when it was uh that was the initial my initial uh introduction to the possibility that alien technology had been uh had been tested and stored out there this is prior to your involvement
(29:44) with Bob Lazar right right you you wrote that you felt that the the base had been closed down for a period between 72 and 74 and a huge underground facility was constructed out there uh which is where this bargain for technology was set into place do you do you believe that to be the case still yeah there is certainly a huge underground facility there now whether there's uh uh any current uh saucer technology there uh or not I'm not sure there is certainly uh aliens there in that underground area there
(30:17) that's that's a tough one to swallow don't you think for for people in the audience I mean even people that are that are interested in the subject that there could be aliens out there working at a base alongside our Personnel yeah it sure is tough and uh you know if if they'd have been in my shoes for the last 20 years talk to the people I talked to you know talk to the people you know that have walked down the corridors and and told the stories of you know passing aliens uh they believe as I do but I don't blame them for not
(30:48) believing him because just it's a tough Story I mean you just cannot hardly you know grasp the fact that our military is working with aliens and they probably you know they work with at least five different uh five to seven different species up there it's not just one there's all kinds of them up there but that's how they keep the secret is people just don't believe it you and I know a lot of people who've worked out there over the years and legitimate uh classified programs SR-71 U2 stealth
(31:16) fighter and stealth bomber and things like that and people like that who have legitimate credentials who are up there they say Ah that's that's a bunch of baloney I never saw any flying saucers what do you say to those folks is compartmentalization and up there so severe so strict that even people who work there wouldn't necessarily know about this stuff absolutely I would doubt that 99 of the people that work at Groom Lake don't know what's going on there first of all a lot of it's underground second of all it's very
(31:46) compartmentalized uh yes I do new I know people who were heavily involved in in projects up there and say no there's nothing like that and I also know people who

say yeah I saw those saucers around there all the time you know you uh you had this interest in in the area in flying saucers and the possibility that saucers were up there you put out this paper at the end of December of 1987 and then lo and behold poof Along Comes A guy who seems to confirm your worst fears or your wildest suspicions that guy being Bob Lazar and
(32:21) a lot of folks think well that's just too darn convenient it was extremely weird what happened as you remember in the spring of uh 1988 I was on my soapbox because at that time I didn't believe the military knew about this and I was I wanted to tell well I guess I did I wanted to tell the the public about it so I gave that lecture at the Spring Valley Library I think two weeks in a row there and I got a call uh in any like June or July uh from Gene huff and Gene says Hey listen I uh I'm interested in your stuff and I'd like to
(32:59) get a copy of your tapes and stuff like that well but that was one of the times I had withdrawn and I was getting so many calls and it was just so overwhelming I said look I'm out of it um I'm not going to have anything to do with it and uh you know uh goodbye and he said well okay if you ever change your mind he says I'm a real estate appraiser uh and I'll trade you an appraisal for your tapes well that meant something to me because I need it alone and I needed a second mortgage on my house I said okay look you do that and
(33:31) I'll give you everything I have so I started copying all my stuff and got it all ready for him and we made a appointment he comes over with this guy and uh uh he says I have my help here we're going to measure your house when we start talking turns out this guy's name is Bob Lazar so as Gene and I are talking about saucers and Billy Myers and MJ 12 and all this stuff this guy is rolling his eyes and he can't make it plain enough that he thinks we're absolutely nuts and so uh Gene says look this guy worked at
(34:06) Los Alamos National Labs uh you know he's a scientist he was a scientist there he thinks we're nuts because he said if there was anything there that he would have known about it and then Bob says yeah look he said I had the highest clearance he said I was the nosiest I poked around everywhere he said if there was anything to this I would have known about it you know didn't we hear that from that day so anyway over that was like in the June or July of 88 over the next three or four months we started
(34:36) giving Bob Lazar information and he was receptive he said okay well I'll look at it and one or two I think there was three things that really tipped him over and one was the yy-2 secret address that we had at Los Alamos and the fact that we knew about it and he didn't uh and the other was uh I I forget what the three things oh The Grudge reports he did find those uh that were not supposed to exist and there was a third one I forget what it was but anywhere around October he had decided to re-enter the
(35:10) scientific Community to find out if this was true and that's when he called Dr Teller at Lawrence Livermore in California and uh said I want to re-enter in the scientific community and Teller says do you want to work there in Nevada or work uh here in California with me and Bob said I want to work at Area 51 and Teller says let me see what I can do that's when Bob got the three interviews at EG and G and uh I even have a typewritten piece of paper of the second interview because he came over here because the first question on the
(35:42) second interview was do you know John Lear and what do you think about John Lear and Bob says the way I answered that question was uh yes I know John Lear and I think he sticks his nose into places where it doesn't long and Bob said what I didn't tell them is I also like to stick my nose into places that doesn't belong you would think that that would be an automatic disqualifier for someone to work in a program out there no matter what the program and that's why I've always had this secret fear that Bob was
(36:14) brought into the program you know as the first part of a disclosure of what was going on and and we were supposed to tell what was going on there's so many little teeny teeny hints for instance the first night he went there December 6th and he came back to my house and told me what was going on I mean you know they followed him I mean uh and then when he when uh Bob was telling me about it he said I can't volunteer information but I can answer your questions and uh you know it was like it was a setup and it's never been uh
(36:47) resolved in my mind whether or not you know it was a setup uh now I know this or I feel all the stuff he told me was true so the question is were they purposely trying to get this information out what did you think about him when you first met him what was your impression of him as a person smart guy smart guy and uh

you know he handed me his resume his resume did have the it was uh eight and a half uh by 11 uh little folder and it did have the MIT and the uh Caltech uh degrees in there now I had that resume I kept it it
(37:29) disappeared I can't explain why there's no records of his um of his schooling I can't explain why uh MIT doesn't have any records I do know that he went to MIT uh when he was working on salamos there are those who wonder if these two men were working with the government in some sort of a trial balloon a psychological exercise to see whether or not a release of information about government knowledge of the ET reality might cause a panic all those theories have floated around over the years we're
(38:02) going to come back with John Lear in just a minute and ask him each one of those one by one as well as his relationship with Lazar how it developed how this story unfolded a story that is now known all over the world I'm George Knapp on Coast to Coast AM we'll be right back welcome back to Coast to Coast AM I'm George Knapp your guest host my guest this evening John Lear the one and only John we've been talking about Area 51 Bob Lazar uh how you two first met and and how you sort of uh debriefed uh uh
(38:35) Bob about UFOs in general of the cover-up you know you've heard the theories that I just discussed in that previous previous to that break about uh all the things that have been said about you and about Bob and and what you two were really up to over the years let's go through them I I'd like to give you the chance to answer some of these things the fact that you guys were working in cahoots together to cook this whole thing up what do you think sounds good but first I want you to say hello to my friends at Above Top Secret dot
(39:03) Hello friends at Above Top secret.com thanks George all right um tell me about uh you know you've heard all those statements about you and Bob and who was playing whom and whether you're working in cahoots for the government and things of that sort uh the idea that you created him that you putting him up up to this let's let's deal with that one first well I I don't know how to answer that I know nothing about physics I wasn't the one that and that you know that told us about gravity and gravity B those are
(39:33) two real things uh babazar gave us those um I don't think has been released yet but when uh sign is do release what gravity really is and it doesn't have nothing to do with gravitons and there is two gravity waves the gravity a and gravity B one works on an atomic scale and one works on a larger scale uh I didn't invent that uh also I didn't invent B Element 115 uh and the properties and how it works and how it's uh stable at 115 but unstable at 116 and the reaction uh giving off the antimatter uh and the access to the
(40:11) gravity a wave which uh allows travels you know uh at hundreds of times the speed of light so um I didn't you know Bob was the one that learned that up at S4 so the the idea that both of you did this is a disinformation plot to distract attention away from something else that was going on up there I've heard that one more often than ufological circles over the years and it seems to be the prevailing view among the UFO hierarchy that it was a disinformation plan to to attract a distract attention from
(40:47) something else up there which I've always thought that's if that were the plan that was a really stupid plan because by saying they're flying saucers up there they created an international sensation Drew tens of thousands of people they're still going out there to look at whatever it is that's flying around out in in the skies above Central Nevada and uh yeah I I agree 100 I mean uh if if it was a disinformation they they did the wrong thing you mentioned something a couple of minutes ago before the break that you
(41:18) you said that in the back of your head you've always had the thought that maybe you were played by Bob that he really was working with them I mean how much credibility do you give that possibility no what I meant to say was that I was being played by the people up at the test site um pru Bob uh that they wanted the information released and they used Bob to come to me because I was the UFO guy and uh and it was supposed to release it what could be the reason for something like that if that scenario were true how
(41:53) does it make sense there was a lot of guys that wanted the information out and when I first started this uh George I knew some guys not particularly a groom-like but I knew some Tesco side guys I flew for dynelectron and I flew that b26 and uh the ovtn and the UE and that turbine Beach that was out there on Patrick that old Hangar they had out there on Patrick Lane and I've you know I'd fly around there um uh around the uh underground nuke test and what I do is is my job is

depending on what airplane I was flying
(42:29) was if the uh if the new test vented we were supposed to pick up samples of it you know and bring it back and uh one of the other things I did is before the nuke test I'd fly around the outside perimeter of the test site and between um five thousand and fifteen thousand feet and take uh winds uh wind direction and speed and radio it down and I knew a lot of the guys there I also had a little gun shop called special weapons on there on Maryland Parkway and trop and a lot of the you know guys would drop in also I
(43:03) knew the chief test pilot of Special Projects he flew with me over in Laos I knew a lot of those guys so uh you know every once in a while I I'd get a little teeny tidbit of information and um uh that's why I thought uh that that it might be something like that there was another guy that that hung around a lot his name was Jerry Myers and I met him through the Confederate Air Force and he gave me a few tips that was a really interesting little uh scenario though or the scenario that went on but the most
(43:39) important thing George is during that time and I'm talking about 87 88 um and part of 89 because it pretty much all stopped after uh the Lazar thing came about people would come to my door now I was an airline pilot and I was away most of the time but you know that I live here up on Sunrise and people would come up and knock on the door and my wife would answer it and they'd say I can't give you my name I wanted to tell you that your husband is right that I work up in those black areas and I can't
(44:11) tell you how many times that happened and people were trying to get the information out so whether that was the story or not I don't know I know that there's been attempts to get the information out that that there are people that have that know that we were much further along in technology right now we're 50 years ahead and there's no reason why we can't have some of it but uh you know but it's not being done so that's why I give credibility to to some of those who say well maybe lyrin Lazar were used as uh
(44:44) yeah code conduit is trying to get the the information out the only difference would be they call it disinformation but it was real information you know I uh I think a lot of people as I mentioned in the UFO circles certainly the UFO hierarchy have dismissed the story they they no longer believe it they're open to the idea that maybe we had some technology out there they just don't want to believe Bob uh because of the problems in verifying his credentials and uh academic credentials in particular work history things like
(45:13) that I tell them you know when we have conversations look I know it's a hard thing to swallow it's a hard story to believe it's much easier to dismiss it because of all the things that have happened but you don't know because you didn't live through it that was a weird time there was some weird things that happened that shed light on the the veracity of the story wouldn't you agree absolutely you have nailed that that time between 1987 88 89 the stuff that was going on in Vegas that you and I knew about those
(45:44) the that girl that got murdered in her apartment over the area 51 deal remember that yes um you know just stuff like that was going on continually and you know for people who didn't live here they didn't live to that so they weren't involved in it on a day-to-day basis like you and I were uh for the the thing about the credentials you know that that's a problem that people have about Bob and and uh you know so many people have have done the same steps that we did in the beginning and found out well he doesn't
(46:14) have any record at MIT or Caltech they're they're not there uh you know they they reveal they find out the same thing later and think they've got a big expose or something where it when in fact that information was presented and the very first story We aired about Bob um but but explain to me how it would work that a guy like him could get hired up there you know it's it's question about what is his clearances were uh even if you buy the idea that he went to MIT or Caltech he's a he's an
(46:43) interesting character with a lot of different kinds of interests the interest in the in the legal brothel the jet cars the pirate uh flag that would fly on top of his house the desert blast events and and making his own fireworks I mean uh you can see a lot of reasons why people would would worry about having him work in a place like that wouldn't you think absolutely and I think that you know one of the things when you hire into a program like that and you don't have a long history of being with with the government and
(47:12) they're going to upgrade you in a couple of months to the highest clearance

level uh in the United States one thing they want to make damn sure is that they have a way to discredit you instantly if anything goes wrong uh they're going to make that brothel known they're going to you know make the fact that you don't have any uh uh uh education credentials they're going to have all that in place first so if anything goes wrong they can instantly uh dump you or discredit you well that's one of the things that
(47:43) people say well if this program were true they'd have uh scientist XYZ because those that guys like that are much more credible than somebody like Bob but in fact when you look at it through that prism Bob may have been the most qualified guy in the world for that program because he's technically uh technically brilliant you know knows a lot about science knows a lot lot about the mechanics and electronics and things of that sort but he certainly would be an easy target to discredit absolutely he had a broad education he knew a lot
(48:13) of things about a lot of different things and that's why when they went through the first World when they weren't for the first two interviews and then he got the third interview that's they probably said hey this is the kind of guy we need up there did he tell you right off the bat when he got hired or did he wait a while no the first thing I the last thing I knew before he went up there was the second interview and that the stuff I have typed up uh when he came in and he said uh they wanted to
(48:44) know about you and um there was three or four other things I wish I had that piece of paper but I don't have it right there he got a third interview that he didn't tell me about now the first time he went up there was December 6th now he has that on you know that log he gives you that calendar he always kept on as well right every year and he put you know flight to that was the flight to Nowhere well I looked up in my logbook and I was gone then so it must have been either the second uh it must have been the second time he
(49:15) went up there because I don't have a record of when he first came up here but it had to be like the eighth or ninth uh maybe the second week in December and that's when he came in in the evening like about seven or eight o'clock and I'm sitting there you know writing checks or something and I said what's going on and he said I saw a disc today and I I thought I didn't hear him I said what he said I saw a disc today and I said theirs are ours and he said theirs I said you went to Area 51 and he said
(49:46) yeah I said then what are you doing here I said why don't you get you know learn what's going on up there I said they might have followed you here and you know you won't get to go up there again and here's exactly what Lazar said he said John you have taken so much crap over the last year that I have seen that you deserve to know that it's true I saw it I touched it they're real well in that sense then he violated a security oath pretty early in the going exactly but the thing is and you know
(50:17) and in part of that conversation he said I'm allowed to tell you I'm not allowed to volunteer anything but I can answer questions no kidding so um and did he keep you appraised after subsequent events up there did he give you a little briefings yeah he'd come over and tell me um uh for instance uh you know it's been told a hundred million times and I'll just tell it again and um the night it was in January and Irene I know January it was really cold I had on short sleeve shirt he comes in we no
(50:48) longer talked openly in My Den because we knew it was been being recorded somehow and I forget that what the story is like that but he gave me the high sign and so we walked outside you know how the My Den has a back door and it goes by the pool and you walk out by that back gate you know where the where the stable is you know what I'm talking about right yeah so Bob and I walk out there and my wife is by the pool he says and she's always suspicious of what me and Bob are up to you know because we're
(51:18) always getting in trouble so she says where you guys going and I said oh we're just going to go out in the um in the backyard for a second so we went out that big wooden gate and Bob stood right there and he denies this you know to this day but this is exactly what happened is exactly the way I remember it he he was his eyes were shining brightly he was I mean he was alive he had something to tell me of great importance and I said what what what and he said John you will never know what it's like to see your first live alien I said you saw
(51:56) for sure he said yes I said it wasn't a doll or a puppet no I saw him and then he told me you know he's walking down the hallway guards on both sides he comes by this door there's a 12 inch by 12 inch uh window that has the uh that had the

wires through it he looked through the window and there's two scientists and lab coats facing him with one of the Grays facing away from him talking to the guys in lab coats now Bob denies his story this day he says you know something like well I told John
(52:31) I saw something and he said oh that's an alien that's an alien that's not the way it happened George the way it happened is the way I just told you so that's fine if Bob wants to deny it you know I can understand why he would having taken so much Flack but that's the truth as I remember it then in March of 1989 you take this first is when he was making the doggy Death Ray and the doggy death ray was uh uh my wife had some dogs and we had just planted a I had just made her a little uh Japanese garden and they were digging
(53:08) up the garden so Bob said well maybe let me make a a high-pitched home so that uh it'll keep the dogs away and we nicknamed it the doggy death ray so that whole day March 21st we worked on this or he worked on this little doggy death rate it was just a little amplifier and uh towards the end of the day he said they're gonna test fly tomorrow do you want to go see it and I said test fly what and he said one of the saucers and I said yeah how can we do it and he said there's a back road into Groom Lake which I knew
(53:42) about because I'd already driven it he said we can go down man I said we can see it from there and he said yeah and I said um how do you know it's going to be tomorrow night and he said it's always on Wednesday night just just at dusk and I said great so the next night um Gene uh huff and me and Bob they showed up at my house because we were going to take my motor home and uh Jackie was with us and we loaded up the motorhome and uh I think we laughed I think about maybe six o'clock we drove up Highway 15 got up at 93 went up 93
(54:18) went through Alamo turned left on 375 and we're just halfway up that Summit when the transmission gave out and Bob said hey uh you ever think about putting any transmission fluid in this and I said I don't think I have so Gina got out and hitchhiked back down to Alamo got some transmission fluid came back we poured it in and it worked and we came up top of the hill now it was about a quart it was about 8 30 and we drove down the Groom Lake Road parked and got all our off and at 8 45 is when the the light came out now it's just a light you
(55:00) can see it was a saucer it started jumping around the skies and I'm trying to set up that eight inch uh Celestron scope and when I finally get it lined up this the saucer is descending behind the mountains and I got a good like 15 second look at it as it's descending and I've described it it was the disc oriented about 30 degrees to the rise and it was like flowing something was flowing it off in a in a gold or orange uh substance and it was a flying saucer a dark side of some of the things that
(55:39) happened at uh at the world's best known secret base area 51. um you know John uh you were talking about uh we've been talking about the reputation of Bob Lazar and how it's kind of been shredded uh in the eyes of many people over the years and you know they the uh they will look at his lack of provable educational credentials things of that sort what they always seem to uh to bounce over or gloss over is the are the things that he knew that have been proven true and the most uh the most important of those probably
(56:11) is the fact that there were test flights of flying saucers on Wednesday nights at area 51. you know this because you went out there with them several times yourself or three times yourself and other with other people and saw them and videotape them you know I guess the question is how did he know this uh otherwise because when this was happening few people outside of Nevada it knew had ever heard of Area 51 let alone know that there were test flights of flying saucers on Wednesday evenings yeah well you know I hear that well
(56:42) maybe Bob was at Groom Lake but he he was he might have been a cook I said well if he was a cook then they were telling the cooks when the saucers flew you know it's uh it's hilarious what some of the things that people come up but I just got a call from gufan oh Gene Huff yeah now we got to explain to everybody that we all had nicknames and uh because all of the UFO things were uh like mufon and kufan and stuff like that uh we all became ufon so Bob became Buffon Gene Huffy became goofan and I didn't have a ufan I was the captain
(57:19) until uh Bill Cooper came out with his statement about being the Condor and then I became my nickname became Condor and I was Newfound I think back in those days yeah yeah we were we were talking before the break about uh going out there and you uh you saw this flight of a flying disc a glowing object you saw it through a telescope the first time second time you videotaped it right no the second this well

no the second night was the following that was uh the following Wednesday and that was March 29th and that was the night that uh or
(57:54) the day before I had to go to um Minneapolis on a flight with American Trans Air and and Tuesday night is when I call Bob from my hotel and I said what's going on he said uh we're going fishing tomorrow night and you know meaning they're going to go to groom lake so uh I missed that night but that's the one that's the night that Jim caliani went and Matt was the night that that somebody filmed it and got Jim taliani on the audio and that's why he got fired from donabateestrange the third night was April 6th the following
(58:30) you know the third Wednesday night and that's the night that me uh Gene um uh Bob and uh Jackie and Jackie's sister went and the motorhome had uh was was down for maintenance so we had to rent a car and we put all this stuff in the in the trunk the geiger counter in the video camera and everything we started driving down this road about 8 30 and we're going further in further I said look there's no point going any further we can't get more than a mile further why don't we just stop and set up the
(59:02) camera so before we got stopped uh we you know we saw the lights of a couple of jeeps in front of us or security vehicles and you know we we were apprehensive and so I said okay let's get out of here and I was riding right seat and I told uh Jackie's um uh sister who was driving I said now be careful around the turning around here because we don't want to get a caught on this road so we go whizzing down this road this Dirt Road in the middle of the night you know flying dust with a security vehicles chasing us we
(59:37) get about three quarters of the way to 375 the uh the paved Road and Bob says look stop they're going to catch us I can't afford to get caught let's uh stop I'll get out and uh you guys uh talk with them and when they leave I'll get back in so we stopped Bob jumped out ran into the desert and he took a nine millimeter with him I don't know what he was going to do with that you know Bobby was crazy anyway so uh I get the uh start getting the telescope out of the back of the trunk and setting it up when
(1:00:11) the security vehicle slid to a stop and so I went up and I threw my hands on the top of their you know I made a slamming motion on top of one of the vehicles and I said holy smokes you guys scared us uh and they said why is that we and I said we thought you might be dopers and I said no we um we aren't dopers we need to see some ID and and get some information and they they got out of their truck they had uh the guns and um they kind of circled around us and they took the information and they said you know we we can't kick
(1:00:50) you off here because this is BLM land and you have you know a right to be here but we don't want you here so we'd appreciate it uh you saved yourselves a lot of trouble if you'll just leave so they got in their car turned around and left and we're standing there in the desert with the trunk lid open with the light and Bob comes out of the desert about 10 minutes later and uh we all start laughing and joking and talking about flying saucers and and Bob says yeah I was over there I said I had the
(1:01:21) one of the security guards had lined up if he came towards me you know I was going to blow him away and and all this and and all the time we didn't realize that the security guys didn't go very far they just went out of our range of seeing and turned around and were filming us and recording what we were saying so after about 10 minutes of all that we put the telescope back in the trunk we all got in the car and we headed started to head home well we know sooner got on to the paid portion of the highway when we the lights and Sirens of
(1:01:55) uh the police of the sheriff vehicle came on and their bullhorn get out of the car and put your hands on top of the car so we all get out of the car and put our hands on top of the car and there's me and Jean and Jackie and her sister and Bob and the the guy's name was Doug lamoreau do you remember him I sure do so Doug says and at that time you know that was when we first met Doug and just he was a sweet guy he was a neat guy but of course that we didn't know that and he was playing Mr sheriff and he says okay
(1:02:33) he says I got two questions he said number one I want to know where the nine millimeter is and number two I want to know why there's five people in this vehicle now and when security checked you 15 minutes ago there was only four people so it was amazing George I mean for one solid hour we hemmed in hot and nobody said anything and this and Doug kept saying uh all I have to do is go into town get a search warrant come back here and pound your car and toss you guys in I need to answer those two questions well we never answered the

(1:03:09) question and one hour later Doug said came up to us and he said okay here's the deal what I've been told and I don't know why I've been told this I've been told to let you guys go now I don't want to see you back here again so he let us go we got in the car uh went on home and the next morning is the morning that uh Dennis Mariana called up Bob and said you know I don't want you to go to the airport today I'm going to pick you up and uh go from there and that's when he took Bob to Indian
(1:03:43) Springs excuse me which is the um the head of uh all security for the test site and the Nellis range and that's when they took Bob out according to Bob with a gun in his ear and took him into that little building and said now Bob when we gave you clearance to work on these flying saucers it didn't mean you were supposed to tell all your friends about them now do you want to work here or not and Bob says he was non-committal because he didn't know whether he wanted to work there or not and let's take I
(1:04:18) might have to stop you there for a second John we need to take a short break again but I want to continue this fascinating story it sure brings back some memories for us my name is George Knapp I'm with John Lear here on Coast to Coast AM stick around welcome back to Coast to Coast AM I'm George Knapp we're joined by our special guest uh John Lear we're talking about the early days of the area 51 Legend um specifically recapping a story about how John Lear accompanied Bob Lazar and a couple of other folks on trips out to
(1:04:46) groom Lake to personally witness flights of what sure looked a heck of a lot like a flying saucer on subsequent weeks in 1989 and on the last trip of course you got uh you got popped essentially and then Bob got called onto the carpet John and then uh and then his life sort of went into a tailspin after that he he agreed to do an interview with us in in Shadow shot out in front of your house a live interview with the we used the term Dennis which was the uh the name of his boss out at Area 51 or S4 and then after
(1:05:21) that boy it really hit the fan didn't it yeah and uh two things here number one is uh uh I already had you say hello to abovetopsecret.com right yes okay goofan just called again and I wanted to tell you what he said he said he you know that calendar I said the Bobcat yes he said that he has it and he's amazed at how accurate my dates are and he's going to try and call in later great good he says that is that's amazing he says I'm really enjoying this because you know I don't know how he can
(1:05:53) remember those dates and I said because I have to tell the story every day laughs well you yeah you you lived through some of these events you know a lot of folks think that Bob exaggerated to the things that happened to him that it never could have happened nobody shot out his tires people weren't breaking into his home but you lived through it I was around for a lot of that stuff and and and it sure as heck looked like a lot of that really did occur right now remember on Sunday we did the third uh on the record
(1:06:22) uh interview right that was the week after we Bob got caught at the test site okay so you called me the next morning and you said Johnny's I've um the phone is ringing off the hook what can we do for an encore and I said let me see if if Bob is ready to spill the beans and so I called Bob and I said Jordan wants to do an interview what do you think he said as long as I'm in Shadow so I called you back and you said yeah you could send the truck up to my house as a matter of fact I have the video of us
(1:06:53) doing that and uh and he wanted to be he wanted to be called Dennis which was a inside joke on Dennis Marianna who he worked for and you sent the truck up here and we did that interview that night and I mean all heck broke loose after that interview and we did that in my driveway and so I can't remember it was the next night or a few nights after that it was actually in the afternoon Bob came over to my house and he was just I mean he was beside himself I'd never seen him look so unhappy I said what happened he said
(1:07:28) I just had my tire shot out and I said uh oh what happened he said I was just uh turning on to the highway 15 office on from Charleston and he said the guys came up behind me and shot the tires out or one tire out and I said did you see him and he said no I couldn't see anything I pulled over change the tire and I drove over here and he said look I'm going to turn myself in I said to who and uh I said don't do that and so that was the night that Bob stayed over uh stayed on my couch because he didn't
(1:07:59) want to go home the break-ins at his house those were real weren't they they went he had break-ins at his home where people would go in and leave all the

doors and windows uh open yeah uh and I can't remember refresh my memory uh if if goofan would call and he could remember when we got the 115 I think it was a couple weeks uh after that do you remember I don't but we can recap for our listeners uh 115 is what Lazar claimed was the um was the fuel basically that powered the reactor that that launched these flying saucers that
(1:08:33) were out at uh S4 which is an area uh Papu's dry lake bed where he said he worked in a an underground hidden facility and uh and they had nine of these flying saucers stashed there uh 115 of course at the time that Bob first mentioned it didn't exist it has since been synthesized in a very small amount of and it it didn't have a very much of a half-life so it's not exactly as stable as he described it but in conversations I've had with him in the recent years um he says that uh he still believes
(1:09:04) that there could be a some sort of an isotope of 115 that could be made stable you know much about that John yeah it only occurs naturally uh and it can occur naturally uh in in our solar system anyway and uh and they can't synthesize and synthesize it at least to what he had now when he and I and uh Joe vaniti did the uh the experiment what we did was we took uh a piece of dry ice and we put a bell jar over the dry eyes we put the 115 on the uh the dry eyes and then we took a Coleman lantern mantle which would uh release uh
(1:09:44) Radioactive Alpha rays which were supposed to shoot off into uh space at the speed of light and we watched them and the reason we did the dry eyes it was it would form a fog inside this Bell jar and we could see the alpha particles being sucked back down into the 115 and basically what Bob was trying to show us was the attractive properties of the 150 150 you know the uh after that I mean all the stuff that happened to Bob and and he had personal problems and legal troubles and things of that sort and the views of many he's been discredited and
(1:10:20) they they've discredited the whole story out there but but despite in spite of that a lot of people still believe him and uh and the effect on uh that area Rachel and Area 51 has just been mind-boggling isn't it for you I mean could you ever ever imagined that area 51 would become a household name all over the world that would it would spawn so many cottage industries I mean not just t-shirts and trinkets and ashtrays and things like that and bumper stickers and posters but there are rock bands named Area 51
(1:10:52) there's a rock band named Element 115 some folks from uh Phoenix who are pretty talented there's there have been bars named Area 51 and and then there's the little alien and the E.T Highway and video games and and movies and books and screenplays and documentaries and and news coverage from all over the world did you ever imagine it would be this big no and it's crazy when you think about how back in those days you know it was Gene huff and Bob ozar and and you and me and and that was it and we were
(1:11:22) trying to get a story out and uh just just look at and just imagine how long that was a go that's been 20 years ago you know people you know uh you know were weren't even born that are now that are real interested in that stuff and that happened to us makes you wish you had a piece of the action though yeah it does you uh you had some uh adventures with Bob where you traveled to Los Alamos that's another knock on him he claimed to work at Los Alamos in sensitive positions and and folks you know it took
(1:11:57) me a couple of years to get them to finally admit that they had a record that he was in fact there after they denied it for so long what were the circumstances of you and Bob going to Los Alamos for Bob had a contract uh to repair Alpha probes for uh Los Alamos and there was about 300 of them and about every six weeks we drive there and uh took about 14 hours to get there and uh we'd set up a kitchen table had a kitchen table of a friend's house and we repair these Alpha probes and it took about oh anywhere from 16 uh to 20 hours
(1:12:33) and uh we'd strip them first and then I'd then he'd put the wire in them and I'd put the aluminum cover on them and uh it just took a long time to do and then when we were done he'd put them in a box put the bill there we'd jump in the car and drive back to Las Vegas when he started making a little money uh he started taking an airplane or an airline and since I had jump seat privileges I'd just get on the jump scene of the airplane We Go Together get to Albuquerque rent the car drive up to Los
(1:13:05) Alamos fix the probes and come back well this one time we did it we we jumped you got it the Hertz Rent a Car uh got into it drove to Los Alamos and everything went just perfect and we finished all 300 probes at eight hours and we had enough time to get back to uh Albuquerque get on the airplane and come back and

have dinner at parma's so we go racing down the hill from Los Alamos 100 miles an hour we get to the Hertz Rent a Car place turn in the car uh get the the bus to the airport we go running up the
(1:13:42) steps Bob runs into uh into the jet way on the airplane I get my pass at the counter jump seat Pass Run onto the airplane they shut the door and we're starting to push back and I heard the pilot say um uh welcome aboard Southwest Airlines 453 to Los Angeles and I'm thinking oh no I got on the wrong airplane and of course Bob is pushing back on the airplane to Las Vegas and he's wondering where's John this possibility of whether or not they messed with his mind you'll recall that he told a story about drinking some kind
(1:14:21) of a liquid that that tasted like Pine and he had intimidation tactics and threats that were used on them do you think it's possible that they planted any of this stuff in his head um seeing the alien that sort of thing it's possible I gotta admit that but I think he saw it by the way goofan called and he wanted me to remind you that we have a minor league baseball uh team named the area 51.
(1:14:49) that's right the Las Vegas uh the AAA affiliate of the Los Angeles Dodgers is the the 51s in fact I'll put in another plug this year uh the every year on the birthday of Nevada uh they have a big parade up in our capital of Carson City this year's theme is area 51. and uh guess who the Grand Marshal is that would be me anyway and I wanted to tell all my friends that uh the Nighthawk Zone and fantastic Forum I know you've heard these stories before but this is the first time I've had a chance to tell it with George who was
(1:15:22) there when it was all happening all right well um tell me this do you believe that Bob's life was in danger back during that period that it was legitimately in danger well that's the thing and that's the thing that Bob said on his uh on that one videotape that that you did that nobody has seen uh very few people have seen as a matter of fact I played it the other night for uh a friend of mine where he says look uh if you're gonna kill somebody you know you do it especially a big organization like that
(1:15:51) you don't threaten them you don't say we're going to kill you you just do it and they never did bottom line on the story John how much of it do you still believe how much of it still Rings true for you 110 percent tell me this do you still keep tabs on what goes on out at the Test Site Area 51 Tona power range how closely I'm right on top of it I don't know if you saw it it's on top on top as you could be because after 1990 whoever is in charge of secrecy at the government they found out how to
(1:16:28) keep a secret nobody ever came to my house again and it's been really hard finding out information but I still have sources and I'm pretty much on top of what's going on out there you think that the example the legal troubles that Bob got into whether or not the government was related to that that uh that the message was driven home that they used that uh situation to say see what can happen to you if you spill your spill your guts you mean recently or back then back then yeah I think that was uh I think that
(1:17:03) whole um brothel thing was was some kind of mind control because I remember asking Bob when when he was setting it up for the girl what was her name I you remember the girl's name uh it's escaping me right now anyway when he was saying I said Bob look this is insane I mean you know they're gonna find out about this why are you doing this and uh he said oh I just you know it's something I want to do it didn't make sense at the time it doesn't make sense now and of course you know everybody found out about it and uh you
(1:17:39) know for those who didn't know Bob you know totally discredit him but you know the fact is I was right there and I saw it happen so um it was a different story for me let's talk about Area 51 now in the test site uh of course we we broke a story uh earlier this this uh month uh about this gigantic new Hangar that's going in out there at Area 51 it was uh there's photos of this it can be seen online at a couple of places at uh dreamlandresort.
(1:18:12) com also at lazyranch.com uh photos taken from miles away but they're really great photos something really big I I we don't know what's going in there what would reduce pure speculation to guess about it but it looks like maybe it might be another secret plane of some sort you have any guesses yourself well Area 51 Groom Lake is a low level place now there are certainly secret projects that go on but uh in 1989 1990 most a lot of the secret stuff moved up to Idaho just out about 45 minutes out of Twin Falls and uh
(1:18:46) they're the main news secret base that they're using uh Groom Lake to cover they're letting everybody see it the real places Sandia and Sandy is located

halfway between donut pot test range and and group like there's uh you know there's three or four runways there huge hangers uh part of San Diego extends up on the Paiute Mesa there's uh massive massive underground facilities which includes places for uh people to live uh and and it's a huge place but it's kept real secret it was built between 1980 and
(1:19:25) 1987. it was open in 1980s and it's 20 years old now I have friends that not only work there but uh helped build it I had friends that helped build the runway uh it's a massive place but you don't hear about it uh very much Groom Lake is used as a place where now they take senators in congressmen and say we're going to let you in on all this really secret stuff and uh you know that's how they get their Appropriations is shown stuff so the people who look at Area 51 and think there's anything really really
(1:19:56) secret going on there they're wrong I mean there is a lot of secret stuff going on that's far far beyond area 51. well what's your guess about what's going on at Tonopah test range at the Sandia site you just mentioned there is a lot of new aircraft um you know people look at the F-22 and they think that's a state of the art and and all the rest of the stuff we have stuff that you know is just amazing they the cover-up is is is so well done and there's so many levels of it that uh people just I I just it would Boggle
(1:20:31) their mind I know of at least three major bases around the state of Nevada that are on dry lakes that are underground that you know I don't think they even have permission from BLM to put it there and uh you know Google is regularly photoshopped by the military there's no chance of finding anything on Google or any other satellite imagery place it's all photoshopped by the military um you've heard these stories and uh about an sr-72 about an aurora about Black Manta about any number of other programs do you think those things any
(1:21:09) of those or all of those are real and that they might be uh being test flown out at some of the facilities you've just mentioned absolutely they were real 30 years ago Bob saw the Aurora you know in 1988 so or 1989 you know there's tremendous strides being made in in secret aircraft but we don't get to hear about it anymore but um and uavs you are these yeah yes being flown out of a Creech Creech Air Force Base which is the new name for uh Indian Springs right uh I had heard that they might have uh insect-sized uavs that they're flying
(1:21:53) around out there somewhere George they have all kinds of stuff I mean it's just amazing what what uh they have that we don't know about and would you say that some of these new Advanced Technologies aircraft are based on things that they learn from the saucers that were there there at S4 certainly um certainly a lot of that is uh is stuff that they learn but you know our technology is so Advanced uh let me let me take you a step further uh in 1962 remember I told you the uh the saucerer or the anti-grav technology
(1:22:28) have been perfected in 1958. yes our first trip to the moon was in 1962. our first trip to Mars was in 1966. we've explored most of the solar system by now and we've probably gone to the Stars everything that you've seen or read about Mercury Gemini Apollo the space lab the space shuttle the International Space Station is all cover it's a hundred billion dollar cover-up for what's really going on as fantastic as that sounds when I first talked about you know flying saucers you had to have trouble believing it then
(1:23:13) the stuff that I'm telling you is real I mean we've been we have bases on the moon people live there we've been to Mars I've made some really good contacts and that's what's going on you're going to have to go back on the UFO circuit John to tell those stories we're going to take another short break when we come back we'll have another 15 minutes one-on-one with you uh to talk about disinformation and other topics and then and then at the top of the hour we're going to open it up to uh to our
(1:23:43) phone line so stick around I'm George Knapp on Coast to Coast AM welcome back to Coast to Coast AM I'm George Knapp guest host and my guest tonight is uh John Lear we're talking about Area 51 and a lot of other related topics John I want to touch on on something that's sort of a sore spot in in ufology in ufological circles and that's the idea of disinformation you know whenever some ufologist gets mad at some other ufologist he accuses him of being a disinformation agent and it's kind of like the equivalent of saying
(1:24:12) your mama something like that you've been accused yeah that sure happened a lot but with uh Bill Cooper and the rest of the guys uh you've been accused of it I've been accused of it Bob Lazar has been accused of it you made that accusation yourself a long time ago about a guy named Bill Moore and uh you know Bill Moore's

done a lot of good solid work in in in ufology particularly on the Roswell case but you wrote in that 1987 paper that you thought Bill Moore was a government agent and in fact
(1:24:41) it turned out two years later he admitted he was working with some disinformation people how did you know um I I forget how I knew that um but yeah he was working on um he was running the benawed steel with uh Dodie and I don't I don't remember how I knew he was a disinformation agent did you have any involvement with what happened to Paul benowitz or were you monitoring that you were aware of it as it was going on you know when I heard about the benefits deal I went to uh Albuquerque I stayed with him for two nights I got
(1:25:13) briefed by him he's the one that gave me uh the uh uh the X-ray of Judy Doherty that had the little thing in her neck uh that ended up with Ron regier and Ronald gear says he doesn't remember what happened to it but anyway uh you know I got the original story that uh uh Jim mccampbell wrote about the Judy Doherty abduction about Dulce that's when we uh uh got the um confirmation the adult he existed you know uh when I was at the crestone meeting uh Adams um I forget what his first name was we gave me the note of the contact at
(1:25:50) Henderson who had given me uh who had been given one of the boxes to be hidden uh by um uh the guy the security guard at Dulce Dulce is a real sore spot with a lot of people they can't believe that there's an underground base there that's a co-jointly occupied by the U.S military and Aliens but in fact it's true and uh this one security guard uh I think his name was um trying to I can't remember Costello or something like that uh and he knew the person in Henderson that I did and um subsequent to that when and I learned
(1:26:28) about that before I met Bob when Bob got the uh read the briefings at Air at S4 uh he read about the altercation uh in which the 44 Delta Force uh and the scientists were killed now it didn't specify specifically say Dolce he got the impression it was Area 51 but his clearance may have been not at the level to hear about Dulce yet but in fact the alternate altercation in which the 44 people were killed was at Dulce you know we're mentioning about Bill Moore in 1989 at a mufon symposium here and held here in Las Vegas the first one
(1:27:08) I ever attended he uh he startled Everyone by admitting that he had worked with afosi guys uh on regarding Paul benowitz basically drove the guy over the edge uh Bill Moore's explanation was that he he knew these guys were disinformation experts uh psych war operatives and that he was working with them because he wanted to know more about what these guys were up to and so that's why he cooperated tell me this how much legitimate real disinformation on the part of the government operations like that Black Operations to
(1:27:44) disrupt and muddy the waters uh is it do you think is going on a lot of it a lot of it I can't tell you exactly what um you know when I talk and and tell people about you know my experiences uh I tell them exactly what happened to me and you know I don't know for sure you know whether benefits uh knew exactly what was going on but he certainly knew about Dulce and he knew about Archuleta Mesa and he's the one that went up there with Gabe Valdez and they're the ones that found the um uh part of the
(1:28:18) wreckage of the black airplane that crashed up there there was too many things that happened to benowitz that he could prove uh uh to to uh for Bill Moore to say that it was a uh uh a disinformation campaign not to mention the fact that I spent uh at least several days with Colonel Ernie Edwards who backed up benoits you know ufology uh you you get paranoid you stick around it long enough and you start seeing disinformation agents under every Rock and uh uh it just it makes me wonder how much there really is because as you know
(1:28:54) John eupologists shoot themselves in the foot uh every chance they get they're their own worst enemies there's all the infighting that goes on everyone accuses everyone else's of being full of it you would think that the government wouldn't really have to work too hard to discredit the whole field because the ufologists do it for themselves [Laughter] that's a good analogy that's great so do you think that they're as actual infiltration of say UFO organizations anymore or they have agents out there uh
(1:29:23) posing as ufologists you know I just don't know it doesn't seem like they'd have to does it no not really let me get your take on this one of the other things you mentioned in that original paper long ago uh was about cattle mutilations you had mentioned about uh traveling down and conversing with Linda Moulton Howe of course he's done you know the seminal work on this subject and really brought it to uh to the four uh years ago and continues to do so what do you what do you make of

that you know because it's
(1:29:52) still going on it doesn't seem to get much much uh media coverage because they they seem to have done a good job of passing on this story that it's uh coyotes or Satan worshipers or something well what do you make of it um you know I don't know uh Linda and I drove from Albuquerque we were going down to Roswell to see Clifford Stone uh we went into Corona and as we're going down that Valley we had these a7s that were doing load passes on my truck and I stopped I said Linda this is weird uh anyway from Corona we took that dirt
(1:30:24) road that goes over that connects with the other road to Roswell and I think it's like about 25 miles you get halfway between it and there's supposed to be at least there's supposed to be a town on the map called Nan we got there and there's nothing there except 25 mulated cows and uh we started looking around I said this is crazy how could I be driving a truck with Linda Moulton Howe and just happened to drive into 25 mutilated cows so we drove South to where the original Ranch was where what's his name what was
(1:31:03) the guy that uh the Roswell guy that found the Razzle Brazzle yeah Ranch uh on this road and we got to this Rancher and we said you know what's the deal with all those cows and he said oh they uh they have this infection and the health department has told us to uh cordon off the area and they're going to take uh care of it and then Linda researched the story and I don't remember what happened to that but but that was just weird and yes those cattle mutilations go on so I don't know what it's all about well it's just so strange
(1:31:37) that whoever is doing it leaves the carcasses behind in such a you know oddly cut up way you know some that appear to have been used high heat instruments uh the cord anus the the tongues and strips of Flesh from the Jaw it it just seems like perhaps the reason that the carcasses are left behind is the is to have the psychological effect the unnerving effect of of having them discovered by people but I I just can't figure out what the purpose of that would be well then there's plenty of examples of them doing the same thing to
(1:32:07) humans the B-52 that crashed in Vietnam at Clifford Stone uh investigated that all those B-52 crew members exact mutilations like like you just uh described then the one in Alamogordo that was uh described in The Grudge 13 papers was exactly the same what's your take on the latest Roswell uh uh Revelations you know we see Walter hot came out posthumously with this statement of that about the cover-up uh it just seems like you know Roswell that's a that's a solid story but it just seems like it uh it's been so
(1:32:44) hopelessly polluted over the years by so many conflicting accounts I'll tell you what John before you answer that we're going to have to take another short break welcome back everyone we have one hour left with our guest tonight John Lear going to be taking your questions in just a moment but I wanted to give John a chance to answer the question that we we uh we had to cut off from because of the break John about Roswell uh you know it's been there's so many arguments about uh uh was it one crash or two
(1:33:12) where the location was were there bodies or weren't there any bodies and you got four different versions coming out by the government it seems like they keep lying about it but muddying the waters do you think the Roswell story The the core of the story still holds up and what do you make about the newest Revelations Walter Hots uh statements uh posthumous statements these two new books uh out one by Jesse Marcel Jr and the other by Don Schmidt are you up on it yeah I think that uh Roswell still holds up and I think uh Jesse Marcel Jr
(1:33:45) is telling the truth I think Walter Ott is telling the truth uh I don't know why the waters are muddied I don't know why anybody would expect anything different the airport is certainly going to not come and say yeah Walter hot yeah well that's that's what we really happened you know he caught us we're going to go to our lines now we're going to first go to east of the Rockies Melissa in Michigan has a question Melissa you there yes hi how are you guys this morning good we're okay what's
(1:34:14) on your mind John I had a question for you back in 18 [Music] with my mom at a little department store and there's a lady that used to come in there that we all thought was crazy and my mom had pulled me aside one day and told me that she wasn't crazy that she worked in the with the government on Black Ops projects and when she came home she was reprogrammed yeah and I was just wondering you know why you know do they feel they have to do that with people anymore and could they and could they have done things like that to
(1:34:56) uh Bob Lazar put things in his mind like he had said to make him think

that he was actually in them areas absolutely programming is so Advanced now in the days of um uh Bob Lazar they were still using drugs I I don't know how they do it these days but the uh from what I've been able to find out uh you can work on a project you can actually walk inside a door work on a in a building work on a project for like 30 or 40 minutes walk outside that door have no recollection of what you worked on uh and not have it
(1:35:29) bother you and so all this programming is uh is is really reached a very fine point well I also just wanted to make a comment that the auroras do exist I have uh I was in uh Northern California when I was in the military and around I'd say March or April of 95 before I had gotten out they had closed our SR-71 hangers and our Pilots were no longer to fly after dark and all of our crew and the towers and everything were all sent home when special people were brought in and we before I left I was informed that those were the Aurora's
(1:36:14) back in the hangars yeah I have no doubt uh that would be that time frame would be uh approximate I think there were seven auroras built uh they were Extremely Loud Bob saw them fly once uh we had lots of other airplanes but that that story Rings true we shut down the uh sr-70 program in 1990 uh and started giving them to different uh museums and I think there was only three left flying the one we gave to Russia and uh two that NASA had I'm not sure how many are flying today but the story you tell just really Rings true because I you know I
(1:36:51) did with the YouTube Project and you know just dealing with them and knowing some of the things that they had done was completely just amazing yeah and you know if the things that weren't going on today I would go back and heartbeat yeah did you uh Melissa you never actually saw the Aurora you just heard heard of it when you were in the military we weren't allowed around there in that area past start but I live just off the base where you could hear them Fly Above because I didn't live anywhere near an airport and you could hear them
(1:37:30) loud as you know any airplane just like launching off and it was just it it'd wake up in the middle of the night if they flew close enough overhead of you and what part of California was this in I was in Beale Air Force Base oh yeah okay yeah yeah that was out in the middle of nowhere so you could actually go somewhere and you know bring something there and nobody'd ever know about it yeah yeah that's right they had the black birds up there Melissa thank you for the call we're going to go to Bill west of the Rockies Bill's in
(1:38:04) California bill you there yeah I sure am good evening gentlemen howdy hi I'm a special effects artist I'm sort of a regular to the show on other subjects but uh I've had some time to discuss things with Robert Lazar a couple of times because of the projects that I've worked on in the past that involved the same kind of jet engine that he used in that jet-powered car of his and I wanted to know if Bob Lear or you George or anybody knows about his connection with Eugene blue hariff has anybody heard that name yes uh Eugene
(1:38:36) was the guy that made the little flying saucer the little flying oh the little hovercraft yeah yeah uh well Gene is actually uh he was a engineer from Rensselaer Polytechnic Institute and he's actually the guy who developed the jet engine that Bob used in that jet powered car what I'm trying to figure out and what I haven't been able to reconcile to this day is how somebody of the intelligence and the knowledge of Edward Teller would be attracted to that jet car to the point where it would qualify Bob to back engineer alien craft
(1:39:10) we're talking about a burner that runs on propane from the stuff you use in your barbecue if these are not high-tech devices as near as I can figure what Bob came up with was a way to add an afterburner to that jet engine and make it create a little bit more thrust to push the car yeah but that's not the that wasn't the car that was in the story that teller was reading teller was reading the the little uh car that Bob had and I forget whether it was a Toyota or I think it was a Honda a Honda yeah it was a
(1:39:40) hatchback right yeah I I have uh pictures of that that I got from Gene blue Harris before he passed away and it is that blue half engine in there with some sort of a afterburner uh unit in the back of the thing then he cut a hole out where the license plate would go and that's where the jet thrust comes out I don't think they I don't think it's the technology of that that is what impressed teller it just happened to be a coincidence that on the day that he was visiting Los Alamos that story about
(1:40:07) Bob was in the paper and that was just more of an icebreaker than anything I see I can kind of see that too yeah but uh you know uh Bob goes back with uh Gene gluhara for a long time you can still find pictures of Bob in the old jet catalogs

and this is stuff we used to get out of the back of Popular Science magazine and Bob is sitting on a Schwinn banana seat bike with a little one of the jet engines on the back with a propane tank up under the bar in the front and what I always saw Bob to be was somebody that maybe even aspired to
(1:40:37) show business or or barnstorming or crash and burners like we have in our business and for some reason he went in the other direction now I'm I'm of the same kind of bent but I'm in the entertainment business what I do is Showmanship if Bob seemed to be a showman and when you have intelligence and when you got too close to the actual subject he would get very tight-lipped for instance he wouldn't give me any details on what he was doing to increase the thrust on the uh on the car and then I look at the pictures and I'm going my
(1:41:05) God that's just an afterburner a few mathematical numbers anybody could build it there was nothing really really Earth shaking or anything that would qualify him to work on that kind of propulsion well I I would say that I don't really recall Bob ever claiming that he had uh re-engineered or made any kind of a propulsion breakthrough on the jet car it was just happened to be some kind of an interest of his but uh you know John maybe you can address that better than I could no I that's all I remember
(1:41:34) hey uh Bill thank you for the call I appreciate it we're gonna have to take another short break we'll be right back with more of your calls to John Lear welcome back to Coast to Coast AM I'm George Knapp your guest host my guest tonight John Lear and we're taking your calls we're going to go now to our first time caller line rich in Citrus Heights California Rich what's on your mind well um in 1986 it was September I think I was going over the interstate into Nevada I was about 20 miles
(1:42:03) from uh the battle line and I I pulled around this bin at a place called Blue Canyon there was no cars on the road pitch black no moon a few Stars and uh so right up as I turn them down there's this big like UFO flying shots or I don't uh it didn't look like soccer shape but I pulled over and I walked up started walking towards it and I could see the oscillating lights going around the exterior part of it um and it was like a yellowish orange light that four or five of them would just run around the perimeter of it and
(1:42:49) uh then I it didn't make any noise there was no no sound at all and it was uh really quiet up there and no lights and I was looking up and it started doing the different uh oscillation or something was different so I turned to go back towards the car and I kept my eye on what was behind me there and uh this thing just sped off just streaked off and uh it was gone and it didn't make the sound did you have a question for John Lear yeah I was wondering if if that gravitational uh um thing it could have been is quiet enough
(1:43:43) to where it doesn't have to be like it was yeah yeah the the uh the thing that described by Bob Lazar I think had no moving Parts did it John no no no it didn't make any noise no noise now okay okay well thank you thanks Rich we're now going to go to our wild card number one Kurt in Washington DC staying up pretty late tonight Kurt what's on your mind hey good morning gentlemen how are you all doing um my my it's a I have a question but let me preface it by saying I've I had this Vivid dream about two years ago and
(1:44:20) needless to say I'm interested in all this the coast to coast type of program I dreamed that I was on a secret mission working with the directly with the vice president current vice president putting bugs in hotel rooms and it was just a job nothing nothing no thought about it either way and I woke up with the the most odd feeling because I'm not a fan of the current Administration and I'm just wondering if you've heard any cases of people having those kinds of memories or thinking maybe that they have been
(1:44:56) pulled to do things and then they raced kind of so they don't remember them I hear that all the time but I don't know whether it's true or not okay I've had some dreams about Heather Graham that I'm pretty sure it didn't really happen I'm just joking that's good thanks hey George say the number again coupon's trying to reach us I'm going to give him a number there's a hotline number 818-501-4725 that's for Gene Huff 818-501-4725 we're gonna go down to our Wild Card two line Brennan in Phoenix
(1:45:31) what's on your mind um well I had a two-part question I'll ask you guys and then I'll listen offline um it seems to me like it's kind of ridiculous to think the government would hire someone like Bob lazier to be in a position like that knowing that he I mean they would know that he's going to spill that information what's he doing now where is he at now and also I had a uncle that actually was a

geological physicist at Area 51 for 21 years with all the nuclear testing going on there is it possible that the lights in the
(1:46:02) sky are from that thanks John uh Bob runs United nuclear.com uh out of Sandia Park in New Mexico sells scientific supplies and I didn't hear the second question he was asking about uh whether or not the physics uh the the uh nuclear testing might have something to do with why people are seeing uh seeing uh saucer type things lights in the sky at area 51.
(1:46:31) I doubt that they haven't done any of that testing in quite some time uh and the the descriptions that you see uh that you hear of these craft out there certainly don't sound like anything that's generated by those kind of tests certainly what we've seen on film on video uh certainly doesn't look like anything that was generated by a nuclear test even though they've been gone for a lot of years um I think we have time for one more call before we take another break how about uh wild card for Lee in New York
(1:47:01) uh yeah hi um I I'm not familiar at all with with Mr Lear uh and uh his group but I I've been listening to the show now and I I my complaint is that I don't really understand what is the point that he's trying to make I mean there's been a lot of you know folks yet you guys seem to know all the cast of characters that you're talking about but we the listeners don't really know who they are you haven't really filled Us in on them too well and and and and what what is the thrust of this discussion is it that
(1:47:32) aliens somehow have taught our scientists uh some secrets about anti-gravitational um material devices and that that's what what is has been being tested out at this place Gruen Lake is that just the idea yeah I'd say that that was pretty much the central theme and if you've missed that then we've really done a really crummy job here tonight a lot of folks the anecdoting and talking about you know was it April 29th or April 30th or you know all these little details the smoke screen and details and it's it's just been hard to
(1:48:09) kind of get down to the basics of of what's being talked about here and I I listen all the time and so I'm fascinated by the subject but I'm you've kind of lost me along well ma'am we apologize then if you if you missed that uh if you're not familiar with Groom Lake in Area 51 I I suppose maybe we have glossed over it a bit but uh the topic has been so well known for so many years and have been discussed on this program so many times I think maybe we made the false assumption I made the
(1:48:36) false assumption that that people had a basic understanding of the uh the parameters of the story and if you didn't get that then I certainly would apologize for it but I I would have to say we've gone into quite a bit of detail about about what's happened out there and why it's important I mean if you don't find it interesting that we have recovered alien technology and have been testing it in secrecy at a military base uh boy I I have really missed the mark but I I thank you for the call
(1:49:04) nonetheless uh let's try to slip in one more call here before our break wild card three Drew in Washington are you there yes I am hi guys hi um well I have a really simple question for you guys um I'm just curious to know is there any kind of statistics on how many sightings of UFOs there are not that I know of um I think that most sightings are of UFOs are sightings of our Technologies stuff that that belongs to the the government uh the ET stuff I think is pretty rare having said that I believe the Chicago sighting was uh E.T
(1:49:45) yeah go ahead number of ET sightings though excuse me are there a fair number of ET sightings or is it just I mean are there actually some ET sightings or do you think it's mostly made up no no there's a number of ET sightings I'm just saying that most of them are probably our own technology most ufologists will admit that probably nine out of ten uh UFO reports or UFO sightings are explainable prosaic items planets things that clouds or or terrestrial vehicles but it's also true that probably nine out of every 10
(1:50:20) UFOs that are seen are not reported at all gotcha okay quick comment sure you think for someone who has like a television and radio background it wouldn't be nervous or nerve-wracking going on your show you know I still get pretty nervous no need to be nervous here I appreciate you uh giving us a call and uh thanks for listening okay I think we're going to take uh have we got time for one more call before we go to the break okay we don't have time so John if you're gonna stick around we'll take a
(1:50:52) couple more calls a lot of folks are on the lines waiting to talk to you we're going to take a short break and we'll be right back I need five minutes for my

hijack uh Blackbird hijack oh okay all right well we'll do that when we come back uh stick around on George Knapp this is Coast to Coast AM thanks for hanging in there with us everyone we're back with John Lear uh speaking about Area 51 and Bob Lazar and all sorts of ufological topic topics John you had something else on your mind though we got a lot of people waiting to
(1:51:21) talk to you uh on our phone lines but you had something else on your mind you wanted to say I'll make this very quick at concur it concerns the uh hijack of a Blackbird by the uh um Secretary of the Air Force Michael Wynn General Michael Hayden who's the director of the CIA and General Charles Metcalf director of the national museum of Air Force what happened is in 1990 the Air Force started to let all the sr-71s and a12s go to museums the Minnesota Air Guard took one an a12 restored for 13 years put thousands of
(1:51:55) man-hours uh into it and hundreds of thousands of dollars got it all set was on display at their Museum and last year uh the director of the CIA Michael Hayden Hayden thinks he needs an SR-71 outside of his office there on a post so he gets the general uh win and general Metcalf to uh to go to the Minnesota Air Guard with public money take it down take it to Omaha get it ready for a pedestal and to send it to the CIA uh it's wrong uh they it's wrong that they did this they're they're effectively
(1:52:32) taking uh stuff that belongs to the public and a bill called uh named uh Senate Bill 437 has been introduced and I just like anybody who's interested in writing a wrong to either fax or email Carl Levin who is the head of the chairman Senator arms committee and is holding this up or your favorite congressman and center and say the simple message send the Blackbird back to Minnesota and that's all I had to say about that yeah Jim Goodall worked his butt off to collect the all the parts and put that thing back into mint
(1:53:09) condition good all of course is written about blackbirds extensively the a12 of course was the precursor to the SR-71 the the greatest airplane that was ever built that we know about anyway right right yeah okay and it is at CIA nobody will ever see it you know they put it on on a post and it's wrong it needs to go back to Minnesota all right so call your congressmen folks out there uh let's see we got a caller from from Nevada here on our Wild Card line Jerry in Nevada what's on your mind yeah so uh thank you
(1:53:40) very much for taking my call my question fits right in with your last statement uh I have always been fascinated by the SR-71 I went took my son to the uh Ogden Utah took a look at the Museum over there and looked at that one real well and uh the guy that was given the speech and the info on it uh at the end of it he had a question and answer and I asked him I said how fast does this thing actually fly and he throws his chest out there and he said well we're authorized to say Mach 3 plus and I looked at him I said well I
(1:54:17) had it figured for about Mach six and that guy turned white is a sheep and I would like to ask Mr Lear how fast does that thing go before it comes apart uh it's not coming apart it's limited by the inlet temperatures and three three uh two is the fastest I know that it's been flown three uh three uh 3.
(1:54:41) 32 oh three point three two okay Gerald greenemeyer was the guy that took it to Epstein like I say it's limited by Inlet temperatures this information is good for about 1974 1975. if they improved it after that I didn't know about it and Daryl didn't know about it okay well thank you so much for satisfying my curiosity okay thanks Jerry we're gonna go now to uh east of the Rockies line Bob in Ohio are you still there yes I am uh thanks guys for Having the courage to talk about these things so they tend to get a
(1:55:10) little bit spooky uh quick question for John and then I'll uh uh first of all don't wouldn't you think it's I mean it's obvious to me and don't you think it's obvious this first thing that our plan is simply just has been hijacked the things that are going on the reason I think the reason was are and you're able to still be drawing errors because a little bit of information they can't just whack everybody on the planet in the head all at once so feeding a little bit information here and there and
(1:55:40) letting some of it out and obviously whatever you know and a few people here and there know is such a small picture a small piece of the puzzle the big picture and here's what I think maybe you'd agree with part of it the plan has been hijacked there's so much going on the Chemtrails over where in my area are severe the things have been proven I have Morgellons this stuff is changing DNA I believe vaccinations are fake and they're changing DNA and I think the overall picture is really radical and all and most people are just

(1:56:16) first of all they didn't believe it is just wacky ordinance not informed and we're just all most people are just having they're getting by with their little world and having a board here and there and those things are just drawing attention elsewhere but the big picture doesn't look too good to me and I'm actually afraid to even talk about it but I did it for the first time and uh I will check out uh your website too John I'm I didn't even know about that but I certainly agree with everything you said I've been
(1:56:48) abducted I know I have for a fact and I always know everything when I turn to a radio station like this it's like I've experienced all this I already knew that I don't know why I know it all right thanks Bob for the thanks for the comments John any any comments about Chemtrails contrails he brought up some good points I could give you a whole show on every one each one of those subjects what about the chemtrail part uh the Chemtrails is where they're releasing um reflective material to help uh uh
(1:57:18) counter global warming no kidding so not poisons or or medicines or anything like that okay uh thanks for the call I think we've got time before we take our final break uh Ron in San Francisco on our west of the Rockies line are you there I am um what's on your mind my question's two-part unfortunately I hope you have time to answer it um one I was uh lucky or kind of strange to uh hear Bill uh William Cooper speak in 89 in a small UFO conference he certainly was passionate about the subject but how accurate do you think
(1:57:53) his uh info regarding UFOs and underground basis uh was specifically Dulce and also the second part kind of a funny thing I just randomly opened his book is it true that you told him that a certain retrovirus was created to kill blood sucking aliens I don't think so I I never heard that one but his information about Dulce was true and he seemed to think that Archuleta Mesa info was disinformation no that that was true um and I'll thank you guys for your work thank you thanks thanks for the call I we probably should have got into Bill
(1:58:34) Cooper a little bit because uh the I think the first TV appearance he ever made was on a show that uh that I produced back then with John Lear and I'll never live that down I suppose because Bill Lear went on I mean uh Bill Cooper went on to uh basically anybody that disagreed with him became a government disinformation agent he was he would put out this paper about the the alien cover-up and who it kept saying over and over this is the final Edition and then just keep adding stuff to it over the years right before he was
(1:59:03) gun cover Bill Cooper yeah we we will do that I think we can probably try to squeeze one more in Ron in Pioneer California on our first time caller are you there hey George and John how you doing howdy I gotta go actually here just uh talk about uh Cooper there that's a good segue here before you go um I was reading a little bit more about that I got his book Behold The Pale Horse one to find out a little bit more about that couple questions one wanted to see actually uh uh if you guys could talk explain a little bit more about two
(1:59:32) things project Excalibur if that rings a bell and also the Krill papers John I know that was a big thing between you and Mr Cooper yeah yeah what you're what happened was uh the quilt papers were written by John Grace uh in the summer of 88 and Bob Lazar wrote the Excalibur papers based on information that he got from Los Alamos when Cooper and I were interviewed in my living room by the one of the TV video programs that were going on in those days he starts talking about the Krill papers and um Excalibur that he'd seen in the Navy
(2:00:06) and uh when we were done I I grabbed him and I took him in another room I said what are you talking about and he said what and I said babazar with the Excalibur papers and and John Graves wrote The Grill papers he said no I saw those in the Navy and that's when I realized that Bill Cooper had UFO disease and UFO disease was when you run out of information you're so enthralled with the uh with uh the notoriety you're getting you start to make it up and uh that called into question pretty much everything that Bill Cooper wrote
(2:00:42) that book by the way Behold a Pale Horse I've heard it referred to as Behold a pail of horse yeah that was great anyway John stick around and do you listeners at home stick around we're going to take our final break we'll be back and try to squeeze as many calls as we can in for John Lear this is uh Coast to Coast AM and I'm George Knapp welcome back to Coast to Coast AM I'm George Knapp we have a few minutes left with uh Our Guest John Lear we're also joined I think on our Wild Card line by
(2:01:14) Gene Huff just in case you hadn't followed earlier conversation Gene was a friend of Bob lazar's before Bob went to work at Area 51 he's the guy who introduced

Lazar to John Lear and he lived through many of the events that we've been discussing tonight Gene you there I'm here you're you're here up kind of late tonight listen that trick was giving me the phone number to call in on uh live on the air worked really well [Laughter] yeah probably so any comments on what you've heard so far uh yeah the guy that
(2:01:47) called about the Bob and the jet engines and Eugene blue harassed down there and uh the Tri-City area in California I met Bob with Eugene gluehareth and the guys you know while he he he's you know sets up his story about Bob and the Jet Engine and then gives us all of his uh opinions on Bob Lazar and his personality none of nothing he said was true though Bob hit a jet engine and a Honda Civic and then later a Honda CRX and they were both real jet engines that the jet he's talking about was a propane
(2:02:18) jet which we put on a jet go-kart and and in fact for those of you that were at the last desert blast Jim taliani had it on his back if I remember correctly oh with a pair of roller skates on blowing around so the guy has that that story totally wrong okay well we're going to take a call stick around Gene maybe you can chime in on this how about our Wild Card line Jonathan in Bakersfield are you there good morning good morning what's on your mind hi Mike before I ask my question about error 51 uh John Larry are you
(2:02:48) listening yeah love your jet hey thanks I I can't wait to get one I write Motion Pictures as a Christian but before I got repented Jesus name baptized and Holy Ghost filled I knew of a pastor who worked out at 51. they we know this because while claiming through his car we found one of the badges and uh he was kind of tight-lipped but my question is though I am repented Jesus name baptized Holy Ghost about as a cordax 238 many Christians are or whether you're Jew Muslim or whatever how do you think the
(2:03:17) outcome of all this will be whatever be Vegas it is when it hits the fan so to speak for all Humanity concerned that is alive and among us before the good Lord returns what's your without being political what's your feeling on that everything will be just fine I mean so like God being in control of course means we have to just have faith that he knows what he's doing because you know he deals on a need to know basis too you know we don't know when he's going to return and I got to tell you uh George
(2:03:45) yeah you got a fantastic show I love you and Mr Nuri I told him a UFO star I had just after getting the Holy Ghost something really creepy happened but I know of like people like I said you still there yes that uh workout there's this other man I know whose name obviously I cannot give and we went out to supper once and this man in a coat this long long coat looked like you walked out a man in Black shoves that I have to talk to you right away privately and all I heard was three different things 51 alien protagonist
(2:04:19) and we got to move now so he had to take me home quick and they were gone I didn't see him for weeks so just so you know if people are listening there is more truth than even you're allowed respectfully to give that is truth and I want to let you know that our holy Jesus name prayers are with you and yours because you know it's a great thing it's to the glory of God to conceal Mary but to the Glory of Kings the search the matter out and I and I want and I hope everybody keeps you in their prayers
(2:04:44) because what you're doing is very bold we live in a nation of indifference in a world of of of nothing but lies and for you to do this is very brave and I want to let and and please remember Acts 2 through 8 we love you all very much and you're all in our prayers and I thank you okay okay Jonathan thank you very much we're gonna go to the west coast line Robert in the San Joaquin Valley which is my old stomping ground oh is it really oh yeah Stockton Modesto Sacramento sure well it's a pleasure to
(2:05:13) speak to you sir and John yeah this is Robert again I've talked to you on art show a few times yeah and your whole family uh going back with Bill building the lair I got all kinds of photographs and things and uh things that we've talked about uh Sam old John Heiser yep a lot of others you know people you and I know one of these days I got to get together with you okay you living out of Vegas yep yeah how's your gold mine going we're doing fine okay well I look forward to seeing you one question I'd
(2:05:49) like to bring up for the listeners with all that's uh happening nowadays uh with these new developments with uh planes have you been witness to see or I can't even talk about it the unmanned planes and I'll cut it off there and it's a pleasure to talk to you again thank you what do you think George he wants to know if

you've seen any of these unmanned planes which uh I can answer that for you a little bit we have a base called Creech which used to be known as Indian Springs just outside of
(2:06:19) Las Vegas and you can go sit on the freeway and watch them every day it's like the the number one place where they test them uh so yeah that I think probably all of us everyone who lives here has seen them uh once or twice uh better go to Hector in New York on our first time caller uh line Hector are you there uh yes um can you hear me good yeah go ahead all right I have a question about the uh validity to the claims about um the reptiloids and how like they have to do with the Dulce mountains areas and the conflict with the Grays and
(2:06:54) cooperation between like um you know the government and things like that so a quick second question would be about like the psychic defenses they have there like can you infiltrate them with uh remote viewing or uh like astral projection I don't know whether you can penetrate Dulce or not it seems to me you would be able to but I studied remote viewing and and it's uh it's real uh even a dummy like me can do it um the first question I didn't hear George something about reptoids uh Gene did you hear that
(2:07:28) sounds a question for John I'd like to know when the guy who thought the gold Holy Ghost prompted him to call this show wanted to know what would happen when they released the information John why did you say everything will be fine when you think that if men find out that they're not as high on the food chain as they thought they were that everyone will be pretty nervous about that fact why did you let that guy slide um I think everything's going to be fun okay good enough uh do we have uh Floyd in San Antonio on
(2:07:59) the Wild Card line Floyd you there yeah yes uh John Lear a show or two back mentioned that he got a a several hour tour of the Dulce New Mexico area by the local sheriff or uh policeman there he didn't tell a whole bunch of I could use it give some details of of what happened during that tour what what happened is uh Gabe Valdez who was the head of the highway patrol there in Dulce when I went there to check things out I called him up because I'd heard his name and he said uh I know you John and this is like in 1989 I said you
(2:08:37) know me and he said yeah remember back in 1972 you brought in you uh flew in a Lear jet here and you had some Stakes for Dean Martin uh who was filming a movie here and you brought in his girlfriend and I said I'll be darned I remember that he said yeah I was the one that met the airplane and so I had known him from 20 years before anyway I went on an eight-hour shift with him and talked about Dulce and uh and all that that happened around there there wasn't anything specific it was that yes Delsey existed yes the locals knew about it no
(2:09:09) they weren't going to tell anybody else about it and more or less that type of stuff does that answer your question well yes I just thought maybe John had actually seen something that night was what I was worrying about so no I didn't see anything that night by the way George I hate to interrupt but I wanted to tell you I am sitting here with Bob lazar's day-to-day wall calendar diary from late 1988 and early 1989 so I have all of the entries and I just want to John mentioned some of the dates before and the first time he went
(2:09:43) out to S4 his calendar entry says trip to nowhere and uh on April 6 1989 it says debrief

bob lazar, rare interview for the testors corporation UFO model kit + timestamps (pt 1) [remastered] - YouTube

Transcript:
(00:01) yeah it had a cap that fit over it this is where the 115 set that was a copper color s through no yeah or the uh the 115 inside this tube I guess went to the no this because the reactor was removed and this tube just goes to the base oh what goes on the two I think this is this gets into the the reactor portion of the um the 115 sits in here and it's in a triangular shape and the point of it sits level with this tube and I think this is where the reaction is taking place where they uh it's really looks like a little
(00:52) accelerator where they're accelerating a proton interacting it with here and then on the base here now all this happens within two inches which is fantastic on

the base here there's some thermionic generator and uh this is this is where they're converting the heat to electrical power and where it's producing as a byproduct the gravity wave which for some reason propagates to the skin of this device but the uh it was the 115 uh a square based triangular shape or is it a complete obviously just like that at least
(01:32) with ridges and just a slice so from what I understand the way these are cut is their the 115 comes in discs like silver dollar signs they're stacked up how they're attached together this is put on a lathe and and cut into a cone and then with the cone they slice through it then those slices form these so they have a little curve on them they'd almost be like that exactly as you go through exactly now why this is done I don't know if
(02:36) it's just a cut in a triangle why not take a piece and do this uh obviously there's some reason they have to go through all that trouble but that's what the originals are probably something about surface area I don't know is it heavy material yes yeah you can tell it's strange just holding it with tongue it's over heavy it was a radioactive uh supposedly it's an alpha emitter but it I mean the piece that I had and I tested it was just if it is it's the lowest level alpha particle emitter I've ever
(03:16) you could just let it run for hours and and try and gauge it over background it might be one or two counts uh every 15 or 20 minutes above background so it's I don't know why so what you're saying is it's extremely safe yes okay all heavy metals are toxic generally cutting anything like that which is heavier they get the more toxic they are so I imagine it's highly toxic no it may not be but I think following along standard lines about the normal elements I I would imagine that's very
(03:53) toxic I saw no oxide coating on it it looked uh a bright copper color stayed that way you're right it's relatively stable right plutonium for instance I mean it ignites on contact well they're a tarnishes instantaneously uranium too um you say it's copper colon yeah like a burnished like that over there beryllium color your pot under the phone there yeah it really is too gold uh in this area a bit brighter right in here she likes the luckier yeah yeah that's an interesting material so I would say yeah all the things
(04:48) you've talked about I would imagine they would you know after they lay these cones whatever they take this scrap and recycle it to make more some oh yeah yeah I'm sure they don't just throw it away you know which makes me think um that that they're making these discs that they're melting the material in and cutting them again did you ever see any physical properties listed for the material yeah melting point a couple other things too I wrote them down Gene hasn't I don't remember them off the top of my head
(05:29) so this little incense Burger can grow whatever you're sticking this in is it basically the same color as the element 115. no that's the same color as everything else in the 150. did you ever see the model that was made of the reactor yeah I I saw it once on the table in here oh because I came over it was just the there's some video on it yeah yeah I think I have the video yeah that was half scale I had a friend build that make it out of metal and it was very very close to what it looked like I used
(06:02) to have it at the moment uh no I know I have the video of it I believe that was very close so looking up you know on the ceiling or whatever is there a deck above the deck we're on you know with the chairs yes and it goes up through that deck yeah now that's why I believe this is just a guess out of the Clear Blue Sky should there be any navigating equipment or every any other heavy electronic or pseudoelectronic equipment that's where it is um from the next day right on that because on the uh on The Ridges here you see about three
(06:44) foot square black I don't know if they were Windows ports or if they were just black areas but certainly something is going on on that other level that you know of great interest that I didn't get to see and they are square yeah now they're Square this Square but they're black when you viewed it from the outside right but you know there again the only time I did see it is when it was outside and I was looking directly into the cell yeah you know when you when you look at cars with the blackened
(07:32) Windows they look pretty black and from the inside you can look out yeah let's use the shade and keep sunlight up if you're traveling somewhere got intense radiation it might be something that we shouldn't take yeah at that time the sun was directly behind it too so it really couldn't tell if there's any light inside how much Headroom would you have like to that next time no not much not much over in

there or yeah because you hit oh I think you have maybe 10 feet you have about six feet at
(08:05) the center uh but in a 10 foot down yeah every Circle here now you begin to hit yeah not yeah approximately I think we're dealing it was taller than it was just taller than me we're dealing with with four foot characters I mean is that is that conceivable I mean you you well certainly certainly five footage yeah no there's no well there's no way a five-foot person could operate in there yeah it was it was certainly uncomfortable for me and uh because I noticed as I walked even in the center I could feel my hair sticking up there was
(08:45) either some sort of static charge or something you know where you're constantly putting your hair down to stop I'm looking like an idiot or just a natural reaction but I I always as I put my hand up on top of my head I'd hit the wall or hit the ceiling rattle so it was very hair on your hand stand up and you did good and like when you run your hand across the front of a CRT uh I don't I don't I don't remember okay but I know I was constantly doing that okay very very close very close but this
(09:18) but the seat continues down a little bit it's not on a post right yeah okay almost like it was a sheet of rubber and someone pushed it up from underneath and you click it back and forth or yeah like a vacuum pump yeah which in fact may be that would explain a lot how everything was made like it really looked like that like if there was some sort of mold and they started out with a piece of metal and then a vacuum form and sucked in these consoles the seats and everything and then there's you know the level and
(09:51) then they is that wonderful from the tooling the same thing yeah there's nothing to do if anyone was to build it oh yeah that's that's perfect for cleaning keeping it clean and these the sides would kind of you know like your typical sort of 50s fiberglass chairs you can decide to actually come up around your thighs or whatever I mean was it bucket sort of yeah it was a bucket seat to sit on it you have to sit on the arm okay but it was not had it it was of course it wasn't metal either well it
(10:34) uh well maybe it was why would you wait 30 some pounds you probably wouldn't be great padding and if you were contained perhaps in a horse field within the ship what I'm trying to remember a zero Gene conditions minimum gravity yes that's right trying to remember if it flexed at all there were any belts or harnesses and or foreign was the floor texture was there any yeah the floor is kind of interesting how would I draw this what's it well to open let's get this way right I think and right here
(11:27) this is the access to the lower level yeah we just that's why I only fit the top torso on my body in there because I had to lay in bed and I could just see the amplifiers hanging upside down um this pushes together if you had lots of at the Pentagon lots of hexagons together and in a mesh there's an opening here in an area that you can stick your hand in and push and all the hexagons collapse you can push it and that's how you you can look down inside and as long as you hold it it'll stay when you let it go a little hex it
(12:12) how can I describe it for now so you imagine that kind of a honeycomb type thing uh kind of a think of a honeycomb made out of thin like springy metal strips a large honeycomb okay and uh if it was about that thick and just so it's a great yeah great like that and if you push it in the corner they would all kind of collapse into each other was kind of a neat a neat little door and holding that open you can look and when you step out back up while they return to their shape they go pop up on up so you can walk on it it would be strong in
(12:45) that respect Dimension across the flats in there two inches okay just to run okay see that you can walk on it yeah certainly walk on it because I stepped on it afterwards to see if it would but in in a lateral force it just pushed right open which was I thought was really kind of trick about about two inches yeah and there was a little hand hole that looked like where you could just that had nothing in there where you could just stick your finger and push it instead of the Moon uh not very big because I just fit
(13:25) about this square is it pushed in on my shoulders yeah it's just the maybe 17 inches maybe 16. yeah and it was regular it was square or was it was it rectangle no it was Square now the floor aside from that solid yeah when there's not a texture it's just the same gray stainless steel look you'd slip if you were if it was wet yes oh certainly yeah it was real shiny yeah I had I had it more or less you couldn't see yourself but it was certainly trying and it felt really substantial when you walked on me and felt I didn't feel any

(14:18) flex and I purposely stepped on this to flex it but it it didn't so it was pretty hefty oh strips of when you when you move that it compressed yeah the hexagons collapsed and like that when you pushed it did it collapse in a V from the sides or did the whole thing just move no a collapsed didn't be it did close right right from this point yeah okay okay yeah so folded it that's did you see that treatment anywhere else at all no but I thought about that for a long while after I left there in fact I
(15:01) think I came home and cut little strips of metal because I you know what a good idea for uh adoras yeah yeah you just but I couldn't get anything to do that but uh and at the same time he's not really a door I mean not a not a concealing door because you can see through it right but it just operated so easy but it had to be something very springy like phosphor bronze or something like that uh that would return to its shape but you know that takes too much force to it's almost like hot ago a feeler gauge for a car
(15:32) right close close to that packing that all over the spring back east or anything was there was there anything that gave any sign of conventional Earth logic relative to heating or or air flow or gas flow and environmental things just if there was it was concealed who knows where it could be because I keep blaming everything on the floor I didn't see but if I went out there and you know didn't see anything it would still make perfect sense because I don't know how you can conceal the reactor wasn't
(16:10) cooled in any way back there wasn't cool the reactor was an operation under heavy load there was no latent heat I mean that violates on a Newton's first law there has to be heat somewhere and it certainly wasn't there um you know I I don't know there's no no cooling no liquid no bathroom no unless a lot was removed that I didn't see but then because everything had that exactly in 100 perfect condition yeah but 100 perfect transcription anyway well I mean they're gonna be 98.
(16:52) 99 that little extra nine is heating it should it should show up but could have been dissipated in the skin somehow no because I saw the reactor operated out on a bench yeah I was they say this one was removed this panel yeah how could you tell it was it was a difference yeah it looked like well yeah marks on the bottom so it looked like it was okay you could tell where the human intervention was it looked like someone took a chainsaw to the bottom it was like the the chairs were just kind of grew out of the floor right that's yeah
(17:31) what's a proton source I don't know and what was you know you say like it was chainsawed from the floor what was what were you seeing like a like a thin section of a wall like it was Hollow you know where it wrote no it was solid solid metal that was all solid yeah which kind of makes you wonder what's in the box then yeah you'd think they would have cut it up higher or something no I didn't see because I knew the amplifiers are directly underneath here and uh I would have liked to have seen
(18:20) something interact in between yeah yeah a whole even for a cable anything but there's nothing at all or even this this flexible line that came off of the top you know it looked like it had been done recently and was it was there like little chunks of metal laying around no that was very and spam on me did you get the feeling that the craft was extremely reliable yes oh yeah I mean it from what you're describing thanks to me somebody just understood fully the the chemistry the unique radioactivity yeah that's a version the ballet is the
(19:04) perfect way to describe but there's nothing there's nothing that gets too hot that needs a fan to cool off you know if there's extra heat here it that they do something with it every single there is no waste anywhere at all works in Perfect Harmony that's the impression I got and I didn't see anything to deter me from thinking that way so you didn't see the ship go outdoors and towed I don't know if they started up and covered it out or someone would you say then that this this particular
(19:35) amplifier wasn't operational because of that panel being gone and we were only seeing like a two-thirds power somehow crippled vehicle yeah possibly no you know I'd say no I because of the way the ring formed around there it was it was equal around the perimeter all the uh amplifiers uh I think there'd be some disturbance here and the fact that on a bench test when I saw the amplifier operating it didn't have a box or console near it I don't really know if it has anything specifically to do with the operation of
(20:17) it so I don't think it was crippled how many chairs did you see two two on that level yeah yes is there anything in the front yeah it makes a it makes a face when I browse on and then the chairs obviously don't swivel or anything they're

they're stuck facing right facing this way or facing this way so the two operators would have a central focal point or something if they were sitting something straight ahead and there was nothing there on the wall that they would be no there was there was something removed here I don't know
(21:05) what it was but this was definitely cut closer to the ground but but again this sort of situation where it's solid it wasn't that obvious I'm not 100 sure but I I think there was something something there at one time and when I came in this is where everyone was hanging out right right here and along the wall of course you have this now between the time you were in there how many times did you get in there and how long was it between that time was that after you saw a flyer before and about how how much time between
(21:44) weekday hours I'd say a couple days so they evidently had time enough to retrofit this with everything they needed to do the flight test you don't think it could have flown because what you saw I don't know I think it could have I mean let's assume that if it's alien that they have a reason for everything that panel would have been needed if there was supposed to be power right there at the point there uh I don't know that it'll certainly operate with one amplifier working so I don't know
(22:29) they'd at least need something to sit on so yeah maybe they had a retro for something well I wish I could relay that feeling to how it is to look in there I mean it's well we're gonna we're gonna go on the basis of the gray guys and work that way certainly something smaller than five feet there's no doubt about that yeah four or three and a half or four feet would be perfect three feet would be small let's see something four feet running
(23:32) around still this space approaching the edge is useless but then there's not a whole lot you have to pack in there anyway wonder what happens there when we say useless I say to myself if everything is really so so conservative in design and so interrelated there must be something even the empty space I'm sure has a function in some ways plate condensers something like that [Music] incredibly small amounts naturally
(24:36) occurring plutonium I mean almost amounts you can't even measure but it does here and there occur naturally but that's about it I mean there is nothing higher than that yeah of course everything higher than that would became back down to to go through a normal stable radioactive decay and I just don't think there was enough bang candidate foreign anything to stick for very long you know above 106.
(25:13) I mean even 106 105 104 was all you know are we really sure those two items were you know it's all you know come on um it seems like you'd have to shoot for something all right I can't I can't see how you can do it unless there's a a completely different technique that I'm not familiar with yeah certainly not sitting a Target in an accelerator and you know bombarding with you know hydrogen nuclei for months and months and months yeah I know there were programs you're going to set up huge
(25:54) fields to gather monopoles and say kind of streaking through to us that was a successful little thing there yeah that you said wait a minute who came after that much space for this but who's going to run out there and find out yeah those projects and like the you know the giant pools of water waiting for him waiting for proton decay and things like those of us you know big projects that just require a lot of the time I can't see synthesizing an element like that in any kind of yeah it's a reasonable requirement
(26:31) how do you feel about Dr tiller at this point I'll kill him if I see him I'll kill him the next time I see him yeah he's totally resisted you know I've had correspondence before I knew you were you before you even went on television vip's correspondence going and I think I've sent you the letters and uh and I've I've written to him I said all we need is that one sentence that says Bob Lazar is a liar and signed by Dr Keller that would end all of this it's not coming oh he's afraid probably
(27:03) that I have something else on him I'm sure that's why he's taking that position you know he thinks and maybe you've got a tape for me he's doing something or recorded phone call so he's kind of wow but you know what's his motive what is his reason behind stonewalling everywhere no pressure I guess from the government perhaps but still he could I don't know I guess there's a lot that I don't know have you had any contact from anybody any slightest anybody from EG and G anybody
(27:40) that you touched and talked with at one time has anybody ever come forward that was a couple people that contacted George supposedly the guy that drove the bus uh from Rome to ask for one of the security guards out there who are we're out where

the plane lands and he was just you know after the special said I worked at 51 yeah I mean this is my badge number you can come and look at it and I saw this guy getting off the plane if that's worth anything and uh you know he didn't stay at 51 long he drove somewhere else
(28:17) but little support guys like that but no one like yeah I worked with Bob and we did this and you know nothing like that but this little acquaintances have you ever heard of gravity Shields being worked on at Los Alamos yeah well you have now gravity Shields something called gravity Shields this is a phone conversation that I got from this this new source yeah it was an interesting product gravity gravity Shields that's what it was called from Gravity that's a good question yeah I mean just number one what is gravity do we really
(29:04) know I mean did you ever find out what gravity really is particle wave what no we know a little bit about weight yeah it's certainly a wave it's not a farm no it kind of goes to the light thing photons or waves or what you know what the hell well it really it's certainly just the small amount I learned certainly in my mind tied the unified field Theory together a little more than than what's known it's certainly I mean gravity time and space are really one thing I don't think there is any
(29:36) difference between them you know it's not it's not time space it's time space gravity there they are all one it's a single sometimes me uh any illustrations on this warpages of time space oh definitely definitely a Scientific American has been running some articles recently with all of these conversations yeah grids with the big humps and the twists oh really yeah I haven't I haven't seen an issue with that and bring it around this way or how do you want to do if you want a three-dimensional would be would be
(30:17) better but how because what you want to do is show a disc on the side but then you kind of want to show the fabric of how would you show the fabric of space well you can kind of show it as a sheet but then pinching a part of that sheet and pulling it to the kind of a pseudo three-dimensional you don't you can't show space in three dimensions and show the craft having an active point on it you have to show that the space is flat and crafts I know that that's the toughest thing about it because you you
(30:49) have to put it into a two-dimensional thing yeah you need an analogy two Dimensions right there's no three-dimensional analogy of space time

Transcript:
(00:01) good evening america greetings from the boldest bodiest most outrageous city in the world the epicenter of excess the planetary capital of sun fun sin sex and secrets my not so hometown las vegas nevada you can believe the ads if you want to but what happens here does not stay here and i know because it's my job to dig up the dirt and spill the beans there's no such thing as a secret in las vegas not for long anyway whether it's a drunken celebrity running naked through a casino or a mobster paying bribes to a
(00:36) politician or a flying saucer or two stashed inside a non-existent military base it all bubbles to the surface eventually in this most transparent of cities my name is george knapp i'm your guest host this evening on coast to coast am filling in for the only irreplaceable man in america my friend art bell art and i go way back and i'm thrilled if somewhat intimidated to be behind the wheel of his smooth riding radio machine i'll try not to run it off a cliff tonight that's my promise like most of
(01:06) you my thoughts are with art these days we all know what's unfolded in his life recently the good news is he'll be back on the air on april 15th so mark that on your calendars and of course tomorrow night the gracious and rock steady george nori will be here at the helm as well many of you listeners outside of las vegas have no idea who i am let me just say that my obscurity is well deserved for the record i'm a television journalist the chief investigative reporter at klas tv i've

broken one or
(01:35) two big stories over the years including a somewhat notorious expose about a little military base that isn't found on maps you know it you love it it's area 51 aka groom lake dreamland the ranch the box the farm the watertown strip score event and probably a lot of other names that we either don't know or can't repeat in polite company i mentioned area 51 not only as a way to introduce myself but also to let you know what's on the menu tonight coming up coming up at the top of the hour i'll
(02:08) be joined by a couple of guests who just might knock your socks off along with your boxers your knickers your thong your mumu and any other unsecured garments i'll be spending three full hours with one of the most controversial figures in the history of ufology bob lazar and will be joined by his friend and confidant the always outspoken gene huff it's been a few years since these guys have appeared on any national media programs tonight we're going to hear about some new and disturbing developments in this long and twisted
(02:38) saga it's going to be fun coming up in this hour we'll talk about the news of the day and the week including a story about research into teleportation technology not all that different from the transponder room in star trek the man who studied this for the u.s air force dr eric davis will join us in just a few minutes to talk about it first though let's look at what's in the news in your town in my town the hot story is immigration you can call them undocumented workers you can call them illegal aliens call them economic
(03:08) refugees they and their supporters took to the streets all across the country this week in protest marches and school boycotts because they're angry about competing proposals in washington that might put millions of them on a path to legal status but with conditions such as learning english and registering as guest workers the ap reported today in a story by arthur rothstein minutemen volunteers concerned over the continued flow of illegal immigrants across the border from mexico gathered saturday with lawn
(03:38) chairs binoculars and cell phones for a new month-long campaign aimed at raising public awareness of the issue no one in the group had any illusions about their campaign's effect than this since it targets a relatively short section of the border for just a month however it comes at a time when congress is debating proposals seeking to reform immigration laws which have drawn supporters of legitimizing illegal immigrants to demonstrations in a series of cities across the country this is like stink sticking a finger in the dike
(04:08) said ken raymond a retired electrical engineer and airplane mechanic from tucson each month thousands cross into arizona so far this fiscal year which began october 1st agents have caught more than 48 000 illegal immigrants in the area staked out this weekend and that's up 53 percent from the same period a year ago you know like you i've read these estimates about how many illegal aliens are in the country somewhere between 11 and 12 million my own personal feeling is that that's guesswork at best that that the real
(04:39) number may be many times higher the the fact is i don't think anyone really knows this is a story reported earlier this week by knight ritter a comprehensive immigration bill that answers president bush's call for a guest worker program appears to have enough bipartisan support to pass the senate guaranteeing a legislative collision with an enforcement-oriented house bill several advocates on both sides of the issue predicted tuesday the senate may deadlock with the house of representatives because their
(05:07) positions differ so radically and the issue is too politically hot in this congressional election year for lawmakers on either side to compromise that could doom all legislation to overhaul immigration this year also reported by the associated press in the discussion about the proposals on on capitol hill even as hundreds of religious leaders and others rallied on the grounds of the capitol on monday chanting let our people stay the plan was fiercely attacked by conservative republicans who called it nothing more
(05:37) than an offer of amnesty for law breakers we do not want to create a fugitive class in america said the senator from senator specter from pennsylvania after the vote we don't want to create an underclass in america along the same lines this article from immigration daily written by thomas roach thank god for the mexicans roach rights while many in america continue to wring their hands and shout their concern about illegal aliens virtually every able-bodied illegal alien in america is employed the overall unemployment rate
(06:08) in the u.s presently stands at 4.8 percent it's been very low in this

country for the past 25 years here in las vegas for the past three days thousands of school kids high school junior high school have skipped class stage protest marches on the strip bless their hearts i i can remember back to the days when i was in junior high in high school and i can think of that hanging out with my friends on the las vegas strip would seem a lot more fun than maybe going to math class you know this is such a difficult issue to
(06:36) get your arms around on one hand america is a nation of immigrants we feel for the poor and the downtrodden of the world we empathize with someone willing to risk his or her life to slip across the border and try to make a better life for their families or escape abject poverty hard to turn a blind eye to that we know immigrants who come here work hard that's why they came they spend money they buy homes and cars and eat in restaurants many of them pay taxes but are afraid to use the services obviously many of them do use public
(07:05) services here in nevada our schools are are bulging with hispanic kids who not only can't speak or write english but are illiterate in spanish as well the public hospitals are stretched thin police and fire services are affected consequences of this immigration tsunami are good and bad but certainly profound other proposals to to round up 12 million people and deport them out of the country totally unrealistic totally too drastic even if it were possible large sectors of the national economy would collapse without immigrant labor
(07:38) uh you know americans are sympathetic to the play to poor people who want to make a better life vast numbers of people who slipped into the country illegally who do not believe that our government has a right to put conditions on their stay here are out in the streets in mass protests operating openly because they're under the free speech protections of our bill of rights even as they argue that the laws of our country should not apply to them and they're demanding that they be allowed to stay with no restrictions or
(08:04) conditions and all the time they're marching and chanting at least here in las vegas they're carrying and waving the mexican flag you know i'm not going to opine about who's right and what's just but just from a public relations standpoint seems to me if you're an illegal alien marching in the streets to demand rights and opportunities that were lacking back at home insisting that you'll be allowed to stay in the united states heck at least fly an american flag over your march i mean it's just tacky it's like having
(08:30) uninvited guests show up for thanksgiving dinner at your house and then they complain they don't like turkey and they tell the hostess to maybe whip up a couple of steaks you know here in nevada our social services have been overwhelmed by waves of immigrants you know and our department of motor vehicles for example is swamped with immigrants at least half of them probably illegals they're applying for driver's licenses i know there are many arguments about whether english proficiency should be required
(08:56) but you know when it comes to driving i don't think there's a defensible position i can sum it up in two words school zone you should be able to read that or one word yield or or chains required uh to get a driver's license here in nevada the uh a lot of the spanish-speaking immigrants are complaining because the the single uh driver's manual that's been prepared for spanish-speaking persons uh allowing them to not learn english to get a driver's license uh is not specific enough for several dialects
(09:26) so they're asking that eight more versions of spanish language drivers manuals be created for those immigrants from el salvador or honduras or panama or cuba or whatever i don't know about the traffic situation in your town but here in las vegas we already have more than our share of crazy distracted drivers i'm not sure we need a whole lot more who can't read the signs because they're written in english anyway that's a bit of a rant there i'm going to come back in a couple of minutes with more of coast to coast my
(09:54) name is george knapp and coming up in a minute or two dr eric davis will join us [Music] good evening everyone my name is george knapp this is coast to coast am i'm filling in for the legendary art bell i'm joined now by a special guest dr eric davis dr davis has had a very interesting career i've known him for a long time currently he works as a physicist at the institute for advanced studies in austin texas he previously has worked here in las vegas for the national institute for discovery science and is pretty familiar
(10:45) with some really strange research that's been underway here he's had security clearances for a number of uh government uh jobs uh including one for the air force that studied teleportation eric are you there yeah i'm here how are you

doing george hey eric good evening thanks for staying up so late with us uh can you first of all start this way i know there's been some some recent news about your teleportation study i want you to to capitalize it though for our our listeners tell us what the study was uh
(11:14) who sponsored it and and what you concluded okay the advanced concepts office at the air force research laboratory uh which is located at edwards air force base california that's one of the locations of of many of the air force research laboratories and this is just one office there uh this office sponsored the teleportation study uh for the reason that it needed to develop a database or knowledge base of the state of the art of teleportation physics the purpose of the study as uh detailed in the contract statement of work was to
(11:52) examine uh all knowledge of any developed physics or extrapolated physics that could be uh foreseen for the development of a teleportation project teleportation by i'm sorry interrupt you but teleportation are we talking star trek transponders what do we mean um how about how about like in the movie the fly that kind of teleportation and it's real you're saying it's real it yeah star trek star trek teleport a transporter is actually a teleportation device a teleportation device means to instantaneously
(12:32) uh transmit disembodied matter from one location to another so you would assume that the matter would be dematerialized turned into a beam of energy or a beam of matter and re-materialized elsewhere and that's one form of teleportation but it's basically uh generically defined in terms of disembodied transport of matter but anyway the purpose is is to uh is is to study the scientific literature and collate and collect all the information known about the state of the art and teleportation so i was to look at
(13:04) classical physics for forms of teleportation quantum physics to examine what teleportation was possible there and any other forms of teleportation that were known that may be known in nature and so the study ended up inviting the research that i had to do into that and collecting a database of references on the research literature published in referee journals and government documentation and so forth and then the end result was the final report which was the study which became infamous although all around the world
(13:36) as you already know how how well i know so so basically you you did a survey of the literature and the research and you said hey there really is something to this teleportation uh there really are are great possibilities here it deserves to be studied when the news teleportation has entered the mainstream of uh quantum physics it's known as quantum teleportation it's not new it didn't uh pop up overnight it's been in development since the sixties uh alain aspect was the first to do the very earliest experiments twenty years ago to
(14:07) demonstrate aspects the very first aspects that led to uh the nineteen nineties experiments and later experiments in this century which firm depth quantum teleportation quantum teleportation shortly is just a aspect of quantum entanglement the spooky action at a distance effect that einstein's so vehemently objected to but uh unfortunately wasn't allowed to live long enough to see the light of uh of that reality um quantum teleportation means a physical system a quantum system of matter or energy that's produced and if
(14:44) you divide it into pieces carefully then the divided pieces will remain in causal contact they'll stay in the same system forever until you do an experiment on one of them and the one you do the experiment on can be hundreds of millions of light years away from the other part you could remove and separate these things from each other uh across the universe in space and time and uh basically do an experiment on one and the other will react instantly instantaneously as if you were doing the experiment on both of them at the same
(15:19) time let me introduce what happens is that entanglement process which is a complicated overlapping of the quantum state that keeps these pieces connected together through space and time uh that entanglement allows to transfer what's called quantum information let me interrupt you for a second here eric eric can you hear me okay let me interrupt you for a second here after you after you did this study and showed that teleportation has great promise uh the the word about the study and the fact that the air force spent
(15:46) twenty some thousand dollars thirty thousand dollars whatever it was um that that that news went all around the world created a huge firestorm critics all complained that what a waste of time this is this is nonsense it's science fiction it'll never work right that's correct and of course they didn't read the study so they didn't know what the hell they were talking about if they had opened up that

report and read it they would have seen chapter three was quantum teleportation and i cited all of
(16:12) the refereed physical review and physics d journals physical review d journals all of the physics journals that have reported oh including science and nature which are the premier top european international science journals and uh i reported all of the teleportation and quantum entanglement experiments that have ever been done up to the point that i had written the final report and closed out that contract and uh teleportation had been proved uh over distances of as much as several kilometers uh even out in the
(16:45) open with uh very bad weather conditions lots of wind freezing temperatures uh freeway in between the uh communication link with trucks going back and forth this was an experiment done at the danube river in europe uh a few years ago and that was about a 600 meter experiment where they had a transmitter on one side of the danube receiver on the other and they teleported a signal from one to the other and the signal was teleported at high fidelity the adverse weathers did not affect it the motion of the tree branches and limbs and trucks on the
(17:20) freeway didn't affect it the distance didn't affect it nothing and it was a proof of principle that we could explode this concept this technology to then use teleportation as a means of space communications we can do ground to orbiting satellite communications using teleportation with a high quality reliability and uh signal transmission quick question here eric because we're going to have to go to a break but uh now there now comes word of this air article by uh gary s beckham in which he suggests that the defense intelligence
(17:52) agency that's a very spooky guys in the government have been taking a look at your teleportation study in addition they've been uh supposedly an elite dia tiger committee has been taking a look at some of the stuff that's near and dear to my heart work that's been done by nids about skinwalker ranch was as a matter of full disclosure folks uh i'm a co-author of a book about the hunt for the skinwalker and what do you know about dia interest in your research and in what was done on the ranch
(18:21) uh as far as the dia interest on the ranch i have no knowledge on that i know that during the tiger team committee meetings of which one of my colleagues is a member as a matter of fact the former founding chairman of the nibs sab uh was on that is on that committee and i know that he stated that uh as a matter of off topic conversations that were unofficial discussions about the ranch took place and there are people in government uh well in the defense business who are essentially uh remembering the old remote viewing
(18:57) program days and uh remember that this there's a reality to all this paranormal phenomena and it has a a benefit to scientific knowledge new scientific knowledge in the future if we could uh continue to explore and exploit it uh however that's not being done in government so people continue to follow it nevertheless uh as far as my their interest in my teleportation study that has always been the case since the study was released uh my study has been waived by the former commander of afr afrl that's uh general lamy uh he had a copy
(19:32) of that study at the war college waved it around and said this is an example of the kind of research i want done in my laboratories and of the kind of thinking i want done because we've got to look to the future the future is everything we have to uh leave no stone unturned because if we if we if we don't the enemy will turn those stones over and the enemy will find the phenomena that leads to new science and new knowledge that we're going to turn our uh turn away from or ignore all together and they'll be able to develop a weapon
(20:07) or some sort of a system and exploit it again eric i'm going to have to stop you here i need to interrupt you for just a moment we need to go to a break if you would stick around until after the break i have one more question i'd like to ask you about bob lazar and the physics of bob lazar because he's going to be our guest later on we're talking with dr eric davis physicist at the institute for advanced studies i'm george knapp sitting in for art bell on coast to coast we'll be right back
(20:31) welcome back everyone i'm george knapp coming to you live from las vegas sitting in for the legendary art bell we've been chatting with dr eric davis of the institute for advanced studies in austin texas a renowned physicist dr davis we've been talking to you about your teleportation study let's shift gears for just a moment as you know my uh principal guest tonight uh for the next couple of hours is going to be bob lazar very controversial figure in ufology i saw an email that you sent out last night to uh to a chat group it was

(21:00) uh pretty harsh in its uh evaluation of bob let's just let's keep it to the physics you're a physicist tell me what about the physics of bob lazar uh doesn't make sense in your view well essentially the propulsion system that he has described as nonsense there's uh it's it's so uh superficial it's also uh does not fit the pattern of what we would expect for any even future exotic gravity uh modification or amplification propulsion system uh even based on today's technology it doesn't
(21:40) even come close uh also his uh speculations on a stable element 115 there's no such thing nuclear physics has has identified in recent experiments going back in the last decade or so uh ever increasingly heavier atoms going up to element 116 117 118 and there's an island that it's what they euphemistically call the island of stable heavy elements above element 100 and uh unfortunately when we say stable we really mean metastable and such that any element over element 100 are basically going to be stable for only
(22:17) nanoseconds and then they completely uh come apart and decay down to the lower elements in the periodic table there has been no element 115 or any other uh similar elements close in number to it that are stable over minutes or hours or even a second or uh a small fraction of a second they're very unstable they last probably 10 to the negative 13 seconds or or so maybe 10 to the negative nine seconds max before they fall to pieces and dk away so you can't have element 115 now there is a possibility where that
(22:53) might be changed by some uh physics we're not aware of well that's what i was going to ask with the kind of physics we know uh it's not possible and that's what i was going to ask eric is that would make 115 stable have you ever 115 doesn't emit and you had indicated that the bob lazar has supposed so can you hear me yes okay you had said that the propulsion system is nonsense of course but i mean you work on some pretty uh exotic kinds of uh propulsion ideas there at in texas you work with the legendary doctor hal
(23:25) put off who also is pursuing some very exotic possibilities um isn't it it's it's not possible that some more advanced civilization has a propulsion system that we cannot fathom right now with our understanding of physics as we know it yeah oh yeah that's possible you can't dismiss that possibility i mean uh look at the neutron let me explain something to the public that may not that the public may not be aware of the fact that the neutron a free neutron uh has a lifetime of 12 to 15 minutes
(23:54) before it decays away but yet neutrons when they're bound with protons in the nucleus of an atom they can exist practically for the lifetime of the universe so you see it's just the circumstance of energy and forces and other and possibly other things involved that somehow keep that very unstable neutron uh lying like in other words it stabilizes it whatever circumstance in the case the neutron bound with protons in the nucleus somehow changes its lifetime its lifetime is is able to be stretched from 12 to 15 minutes on up to
(24:27) nearly the lifetime of the universe and that's remarkable so that means that there is some way that we could take unstable matter and stabilize it but we don't know what it is but given the descriptions that bob has given um it's just it's just too superficial to be able to pin it down and be confident of the information and plus he had no access to any classified information he worked in an uncleared area that was specifically designed for people with no clearances at area 51 uh it's euphemistically called the pen
(24:59) uh the pen i'm sorry the pen or the tank uh different people have different names for it and you do not need a security clearance to work there and generally it's a support uh type of it's a support job location where you're not given access to any sensitive materials or information and how do you know that early to provide support to the operation of the of the facilities out there he was a radiation uh he was a radiation physics technician and how do you know that eric how do you know i i i guess what's with the soup
(25:30) that's what his supervisor said the supervisor brought up his employment record on a computer and proved it his supervisor a woman can you give us her name no so you've spoken to persons in um with security clearances about bob lazar and they've told you that he did work at area 51 but not on any flying saucers yes he worked down there uh actually i believe he was not even on area 51 per se i think it was probably stuck to the area out at um uh mccarran air force on mccarran airport but i believe that that pen
(26:09) location is at area 51 as i said uh it's just that he's not in the he's not on the base per se in the secure areas where you have to do the the code words and you have to show the ids and go through couple layers of security and so forth um so

he was not anywhere outside of where the control is positively maintained for people that are not cleared and it's a very limited restricted movement area well eric thank you very much for staying up this late and offering your opinions on both of these topics i know
(26:41) that bob lazar is listening right now and if you can stay up if you can stay up a bit later and colin kelleher on a magnificent books uh hunt for the skinwalker ranch uh was the most is the most accurate book i've read that detailed and related the accounts of the utah ranch as i personally know it being the uh one of the staff scientists on board that program and i think you did a great job and i want to congratulate you it was a very difficult uh story to tell and i think you did a great job telling it you did some great research and
(27:13) column of course uh with his help you were able to transmit to the public the uh the difficulty we had being able to study that property uh as a living laboratory without any ability to control anything well i'll tell you what eric thank you for the plug i hope the audience knows that i did not set that up or solicit it but i thank you anyway and maybe if i ever if i ever get to do the show again we'll have you on to talk to you about talk to you about the ranch but thanks again for staying up so late okay thank
(27:41) you and um i'm george knapp this is coast to coast am we're going to take a short break and we'll be right back to take a couple of your calls [Music] welcome back to coast to coast am i'm george knapp broadcasting live from las vegas sitting in for the great art bell and we've been talking with dr eric davis about teleportation about bob lazar and about the skinwalker ranch and we're going to take a couple of your calls right now we're going to the first time caller line james in riverside
(28:27) james are you there yes what's on your mind um well i've met this man here in riverside that um claims he has this material that will withstand real high heat temperatures now we're talking in the in the degree of like 6 000 degrees i've seen him take this material in his hand and put an oxy acetylene cutting torch to it the material did not catch on fire and and it did not cut where does he say he where did he get this stuff um he's claiming that he created it um he claims to be um an analytical physicist and a chemist
(29:09) and he's apparently made this compound um to be biosafe um completely you know non-toxic and biodegradable apparently it won't freeze um and supposedly he has all of this scientifically authenticated by dr heinz pop and deak of geosciences down in san diego well that's pretty interesting my suggestion is you'd better go out and get a patent on it real quick if it can withstand 6000 degrees i'm not a metallurgist of any sort but that sounds like that could be a pretty valuable product yeah um well that's the whole
(29:45) thing i think he's just trying to get publication right now and um i'm pretty sure he's already gotten all the patents and everything in it like i said it's completely biosafe and biodegradable and and it'll it will withstand high degrees of temperature well uh tell him to give me a call when he gets it all together maybe we'll do a story thank thank you james and riverside thanks for calling uh we're going now to eric in atlanta eric are you there how you doing good evening good evening um
(30:14) i've been a big fan of yours and lazarus for a while now um and uh we at uh above topsecret.com loves you guys you guys on chat sometime but uh oh yeah the reason i'm calling is because um i've got an uncle that had just recently found out about my grandfather who works for eg g who is the company that uh lazar i supposedly claims um got him the job area 51 is that correct well i think what happened was that he uh he was actually interviewed at the headquarters of egng that company basically has had the contract to manage
(30:48) area 51 since the base was created he works in palmdale uh california he's got a top secret clearance which uh he's had for a long time he flew spy planes over russia and japan and uh recently i emailed him and asked we asked them about lazar and told them all about them and he was basically like well my opinion is that since he went on tv and lee classified information about whatever was there alien technology ufos that he would have been canned a long time ago but i tried to explain to him that that's the whole reason that he went on
(31:21) tv was to get his name out there you know what i mean but well that's that's the story that he's told and uh and he was uh he was terminated i mean he did leave actually he he left the the employment and but it would have happened anyway as soon as he spilled those secrets of course you'd think that if he spilled classified secrets there would uh be an option for the government to come after him in a legal

sense of course doing that prove that what he was saying was true that's what exactly a lot of people
(31:48) don't understand and uh anyways yeah i just wanted to call in because he's a real big guy with the eg g in fact i didn't really want to call i might get in trouble but uh um yeah yeah well uh tell him to call me sometime i'd love to have a cup of coffee with him thanks eric all right thank you bye all right we're going to go to uh dirk in arizona dirk are you there oh hello mr knapp hi good evening what's on your mind uh well i was hoping to get the good doctor's opinion on uh father
(32:16) neddy's chronovisor uh the battalion priest who developed uh what was basically a time viewing machine back in the 50s are you familiar with that i'm not i think art bell interviewed the translator of the book father ernetti's chronovisor about a year and a half ago and i was also wondering if you might have been able [Music] and familiar with a group over on this side of the big water who developed something similar about the same time and they took it basically one step beyond and developed their own teleportation device
(32:56) this is back in the 50s and tell me more i mean did it work uh sure did i know somebody has been through it well i mean it worked on what what was transported a person from where to uh where well the first device they set up was on one side of a facility all i will say is it was in maryland because i know there are people listening well that's uh i'll just tell you that i find that to be uh tough to believe i mean i'm not calling you a liar or anything but i know at this the state of teleportation research
(33:33) that dr davis and eric davis talked about we're talking about the ability to teleport molecules as opposed to entire persons there you know we've read some of this i'm certainly no expert but read some of this about how the difficulties of teleporting a person and putting all those things back together and the same person coming out on the other end that's quite a challenge now you're saying it doesn't work like that okay well tell me how it works basically went through what was a basically a field membrane
(34:03) you can actually look through it and you're looking from well as i said it was one one five one side of the facility and the other well the receiving end well the receiving and transporting in was about a block away on the other side of the same building do you can you know can you say what has become of this technology they have uh gone somewhere else uh they who's they there's a whole group of people that developed this military nope also private private contractors yep not contractors they this was their own it was a very private
(34:43) group uh so have they well having had access to a machine that could actually uh look both backward and forward in time they saw what was coming and decided to go somewhere else i take it you're not going to give us too much more in the way of details about this thing you're saying somebody's listening i can't there are people who would kill for this information well i'd be that be mighty handy technology to have i'll tell you but uh exactly if you're in a position to tell anymore you know where to find me yes i
(35:17) do thanks for calling got one more caller on the line uh alan in glen falls new york alan hi i've got a quick comment and then a question sure um about the time machine or the device listening to sound to try to get a viewpoint on the past of the future kind of find that hard to believe seems how the acoustic waves the energy would be dissipated pretty easily in our atmosphere but my question was uh could you talk a little bit about the skinwalker ranch i've never really heard of that i've been listening to this program for years
(35:48) now uh i'm happy to i just i didn't want to come on and exploit the fact that i had written this book but uh hey i guess public demand i i'm just kidding there's a the book is uh co-written with dr column kelleher it's called hunt for the skinwalker it's the story about a scientific investigation at a ranch in utah a ranch that has been the site of uh a bevy of paranormal activity for 50 years or more uh cattle mutilations ufo sightings bigfoot poltergeist kind of activity mysterious animals all sorts of
(36:24) strange things uh this one particular ra property uh the family had bought the property in 1994 and for 20 months they were tormented by this presence the the ranch eventually came to the attention of uh national institute for discovery science here in las vegas owned by uh founded by bob bigelow a very wealthy businessman with an interest in paranormal activities he bought the ranch installed his team uh of scientists including dr kelleher my co-author on this property and for seven years they basically stalked this thing that we have dubbed
(36:59) the skinwalker uh trying to figure out what it was some remarkable things

happened very uh strange and frightening things happened uh through the course of the seven-year study we've detailed most of it in our book um it appears at this point that the the activity has subsided at the ranch perhaps because this intelligence this entity or whatever doesn't like to be hunted and so it's it's a remarkable story it's scary story and um we've taken a lot of hits over it we've got a lot of interest in it as well so
(37:31) that that's basically the hunt for the skinwalker in a nutshell oh thank you sure thing i'm george knapp filling in for uh art bell we've got a couple of minutes here left to take your calls uh west of the rockies uh the number is 800-618-8255 east of the rockies the number is eight hundred eight two five five zero three three it's going to share with you another news story that i wanted to mention something happening here in las vegas or rather in nevada that's kicked up a political storm but i believe it should
(38:03) grab your attention as well the director of the defense threat reduction agency or dtra announced this week that a gigantic explosion is going to be uncorked in the desert here and it could produce a massive mushroom cloud that will cover las vegas it'll be the biggest blast since the nuclear testing program ended in the early 90s the government says it's not a bomb rather they call it a device a device that contains 700 tons of explosives the test is supposed to help the military figure out how to demolish
(38:33) underground bunkers in future conflicts and you can bet the next next one probably isn't all that far off uh nevada officials went into a tizzy when they heard that remark about a mushroom cloud the reality is the nevada test site's one of the few places in the country where someone can light the fuse on a 700 ton cherry bomb without any casualties our congresswoman shelley berkley when she heard this just pretty much went ballistic however the defense department told her that uh she had been informed about this
(39:02) back in december however when they when they told her i doubt that they used that mushroom cloud analogy a footnote to this as soon as this story broke about the planned explosion yours truly this reporter called the agency that runs the test site and arranged to get a front row seat for the big bang which is supposed to happen around june 2nd and heck i'd use vacation time to be there for that thank you for your calls uh coming up in just a couple of minutes i'll be joined by bob lazar and gene huff and it should
(39:30) be quite a ride i'm george knapp on coast to coast am filling in for art bell we'll be right back good evening everyone and welcome back i'm george knapp filling in for art bell broadcasting to you live from las vegas i'm sitting here in the studio all by myself and i sure hope nothing goes wrong because uh i'm really winging it here but i i think that you're going to enjoy the next couple of hours i've got a couple of special guests uh guys i've known for a long time in fact uh it's 17 years ago
(40:00) this month i met these two guys who told me quite a story a story that uh changed the course of my professional life had a lot of effects on my personal life a story that basically put area 51 on the map i mean 17 years ago the only people who knew about area 51 were the the folks who had worked there or the folks who lived outside near the base and now as we know it's known all over the world uh the cottage industry movies and books and tv shows and trinkets and christmas ornaments and ashtrays you name it uh it
(40:35) also created the story created quite a controversy in ufology one that continues to this day you should see the emails that i've been getting hundreds of them over the past two days when we announced uh that these two guests were going to be joining me tonight uh some of them supportive some of them very critical but we're going to uh tackle uh both viewpoints tonight the two guys are bob lazar and gene huff and uh welcome to coast coast guys thanks george hey george uh bob lazar of course is uh president
(41:04) of a united nuclear his own scientific research and development company looking into cutting edge technologies uh he sells a lot of retail scientific equipment and supplies through this company on the internet gene huff is his buddy his confidant he's known lazar since the mid 1980s uh knew him before during and after uh he was in this flying disc reverse engineering program at s4 near area 51.
(41:31) gene also wrote the videotape the lazar tape and excerpts from the government bible he's written a screenplay about the he and bob's uh adventures in dreamland uh chronicles and uh and these two guys have known this story from the beginning they've not only known it they've lived it bob i'm going to start with not the area 51 stuff but some other dramatic developments that have happened in your

life in just the last couple of weeks let's just jump into it without a lot of background explanation what's happened
(42:00) well boy that's a long story give me the headline i'll give it to you in kind of a nutshell and unfortunately there's some of it i can't talk up about and that's for legal reasons because now this is uh turning into a uh well anyway oh a few years ago we were raided here by a swat team along with a few other government agencies uh that still that we really haven't identified and um basically they handcuffed my wife and i went through everything in the house confiscated our computers and even took
(42:50) the trash cans that we typically shred catalogs and things of that sort and used for packing material when we ship our supplies out they confiscated all of that material that was in the trash cans packaged it and sent it to washington so what why were they doing this what were they looking for well that's the big question they never made it clear exactly what they were looking for they were concerned with um some of the materials we sold in our company nothing's illegal or has any problems associated with it
(43:32) as far as we knew they confiscated all of the hydrogen uh system information that we had been working on they confiscated things that were uh and photographed things that had nothing to do with the scientific supply business and they also never told us what they were looking for so we were kind of at a loss as to what was going on now it's it's sort of culminated hasn't it go ahead gene george there is a humorous part of this story and that is uh bob's wife joy met him they started dating and got together after bob's ufo
(44:12) days so and he doesn't really talk about things that happened at his past to a great degree so joy you know this was her first introduction to the life of bob lazar she has some ninja guys pointing automatic weapons at her nose when she's in bed on a random saturday morning now this might happen all the time in babazar's life but she had never been exposed this so it was quite a shock for her so there they are they're they're investigating the things that you're selling over the internet and and
(44:39) through the mails on your company united nuclear they're there and and uh and now more recently uh the investigation has culminated in in a very dramatic fashion has it not oh yeah they want to press criminal charges now i think they basically had nothing to really charge us with so they were they they came down to a criminal charge of shipping materials illegally um but i i sincerely well i don't know it's i really doubt uh some of the claims they've made as to why they decided to raise raid the place
(45:20) with such tremendous force i mean bringing the swat team out and guys in camo and spending seventy five thousand dollars on an operation where they overflew with airplanes photographing the house looking for best points of entry and as opposed to picking up the telephone and calling or sending somebody over saying well we'd like to check this and this if that's okay with you and you know it that what they did i mean it had nothing to do or i don't think it had anything you don't think it had anything to do with the
(45:57) business no it didn't and unfortunately because this is now just going to court i was kind of hoping i could talk more about it um but my attorney told me not to say anything uh too in depth pertaining to this have you actually been charged i really really suspect this has nothing whatsoever to do uh with the sale of you know general scientific supplies george i can talk bob can't and has he been charged it could be payback time for being bob lazar and spilling the secrets you never know as possible you know and or could have
(46:33) something to do with the hydrogen fuel systems i i i'm really surprised at their actions and what they're telling us the problem is it just doesn't match up i mean it's ridiculous even the search warrant that was presented now you know for somebody to get a search warrant they have to present an affidavit to a judge and all search warrants have the affidavit attached to him well we should be able to access anybody should a search warrant given the search warrant number and going to a courthouse
(47:05) and finding out what the problem is see the affidavit that's attached to it well when we try and do that they tell us our search warrant is sealed and the affidavit isn't accessible so this is just typical of what's been going on virtually my entire life well at least ever since you you went on the air on kles and spilled the beans about s4 we're gonna we're gonna take a short break when we come back we'll be talking with gene huff and bob lazar get into some specifics about exactly what

(47:39) materials you sold over uh through your business that they were most interested in this is uh coast to coast am i'm george knapp sitting in with for art bell we'll be right back [Music] welcome back to coast to coast i'm your guest host george knapp broadcasting live here in las vegas sitting in for art bell my guest this evening bob lazar and gene huff we'll be talking a little bit later about area 51 s4 flying saucers things of that sort but first we're looking at the latest development in the long and
(48:30) complicated lazar saga bob has just been telling us about uh government raids at his property in new mexico where he runs a home-based business uh bob am i to understand that you have actually been charged and if so what are the charges well they're attempting to bring charges against us as of this moment uh i don't know what the exact status is but what the criminal charges are i am actually i don't know myself do you know what the chemicals are that they've they seem to have focused on or the or the products that they are
(49:05) focusing on that you sold i i understood that maybe there had been some sort of a sting operation involved in this no i don't i don't believe there's anything along the lines of a sting operation the chemicals are just general laboratory chemicals uh you know oxidizers and uh anything else you'd find in a laboratory in addition we sell model rocket supplies and glassware and you know just just about anything you'd run into nothing that's extraordinarily dangerous so you're not selling bomb making
(49:39) material no i mean we do have chemicals and things like that where you can make fireworks but we're not talking about high explosives or terrorist material or poisons or anything like that that's not the case you know you know the rumors have been and you hear them and you hear them as well gene that bob lazar has sold out to the government he was a disinformation agent all these years spreading these lies about s4 and flying saucers and now he's living off his fat government contracts because he sold out
(50:09) this this development sort of suggests you're not in such good standing with your pals in the government right [Laughter] i don't i don't quite remember retiring off a big government salary no i wouldn't say their pals at all you know this is not the first time that these kinds of things happen and i know because i lived through a lot of it gene i wonder if you could help me fill in the in the gaps you know a lot of people have a lot of problems with bob's story we we all know why i've been reading these emails from
(50:39) physicists and others who say oh there's no 115 it doesn't exist bob's physics and propulsion system don't make sense but i think a lot of these folks even if that is true and we'll we'll grant that for the moment a lot of folks who are critics of the lazar story don't know the things that really went down in his life in your life uh back in the day things much very similar to what's happening to him now gene you live through it can you tell us a little bit about the kinds of things that happen
(51:08) you know whether people believe bob was ever out there or not or saw flying saucers the kinds of things that happened after he went on the air after he went on the air after he went on the air way back in 1989 people you know the the phones and people following him and and uh things of that nature right i i was back then i was working uh with national appraisal service on eastern avenue here in las vegas and uh you know people were following bob all the time government agents were following him and it would be funny i'd
(51:40) i'd have a gun there at my office and bob would come screeching up in a car run into my office say give me a gun i'd hand him a gun he'd run outside get back in his car and go screaming down the street and i wouldn't see him for a couple of days and these were just you know strange ongoing circumstances constant clicks and other voices on his phone and uh just things you see in the movies i you know when you're living through them i mean all of us hear strange clicks on our phones and uh then you know when uh he got deep
(52:11) briefed out that uh what was i think he was at indian springs air force base right before he got kicked out of the program uh they actually had transcripts of everything he had said on his phone and his wife had said on the on the telephone and he then knew that the clicks weren't just clicks but they actually had been uh listening and we weren't imagining things uh george you know your what was your previous guest name eric davis right did he say when he bob did you listen to the show before we came on here no as you can tell i just
(52:43) woke up there was a physicist on here named eric davis that said he asked your female supervisor not that you ever had a female supervisor at least that i was

aware of or you told me about uh if you had worked out there and she pulled up your record on a computer and you worked as some physics technician out at area 51 but you weren't able to go into the uh the areas that required security clearance uh you know george as you well know wait wait wait wait what is this now george you and the rest of some of the
(53:16) greatest researchers in the united states and other countries and everyone in the world tried to access bottle azar's background and now you've got a guy who says he just asked bob's supervisor and she pulled his record up on the computer you know so uh that's true yeah actually i've uh we're going to get into this a little bit later but maybe this is the time to it and i have a stack of emails here written by a variety of folks there's a former air force officer captain robert collins who's who's written extensively
(53:45) in this area who has who cites a number of sources who confirm that bob was in fact out at area 51 but that he only visited the place 22 times worked in a very low level technical uh position and never had access to the saucers they believed that that you were at the base bob they believed that the saucers were out there they just don't believe that you ever worked on them they also said he was a stealth fighter mechanic a stealth fighter mechanic there's something interesting yeah i think yeah this statement the sources
(54:16) have told these folks and it's been widely reported on the internet that bob that you were stationed at tonopah for a time being that you worked on the avionics of the stealth program i'm giving you a chance now to respond to it directly oh come on that's ridiculous that's absolutely ridiculous george two things from comments on when eric davis and the subsequent callers about the time machine first of all if the guy with the time machine they could see forward and backward in time could get us some info
(54:47) before we put our bets down on monday night's final basketball game for the ncaa that would be helpful and uh secondly you know i think bob not elaborating in the lazar tape and other interviews on element 115 has caused some problems when a a lab synthesizes some 115 and if bob would explain how they do that i mean these these particles are these atoms go flying through these uh sensors and they'll exist for a fraction of a second no one has a quantity of it that they can hold in their hand but the 115 that bob dealt
(55:24) with was kept under neutron bombardment at rest and bob i mean it could have been an isotope or what i don't know i'm not a physicist of 115 but there were a lot of extenuating circumstances about this 115 it was just wasn't just a clump of 115. it had to they had to take great great care to make it exist right yeah i mean no i don't know how we got to talking about ufos so quickly we were just discussing the raid and everything here and i can't believe you guys smacked that i was trying to help
(55:56) out the listeners they don't want to go we're gonna we're gonna get back on track here in a minute uh and there's a variety of ways and you know a popular new way is nuclei fusion where you just accelerate particles or or subatomic particles at each other and cyclotrons are linear accelerators and you basically smash these things together or by other means transmute elements and you can make or attempt to make elements not yet discovered uh that will appear on the periodic chart one of them uh is element 115 and when
(56:38) they did synthesize a couple atoms of this recently people think when they do these procedures they wind up with a measurable amount like a you know a gram or so of the material all they succeed in doing is really creating a few atoms of it that fly through detectors and through various techniques and timing they can tell what those particles are and that's about it they can never measure or analyze these elements in depth when they make it that way and those higher level elements simply because you only get such small amounts
(57:15) well we're going to go into 115 in depth a little bit later but before we leave this now this this raid that's happened on your home i mean gene was filling in some of the some of the gaps about other things that happened to you way back when i remember uh being over to your house and you were looking out the window and holding an uzi because you're worried about somebody coming in there were break-ins weren't there not only to your house was your car yeah there really were and um like i said it was a it was really a
(57:44) uh traumatic time and i had mentioned this back then when i did my original interviews that uh you know a lot of people look upon this as something that would be really cool to happen or you know aren't you excited to have been part of this and you know this is this is nothing that i profited over this is nothing that i

ever would do again really and yeah in some aspects and i've mentioned this before that i do feel privileged to have been part of the program but uh you know this it certainly wasn't worth it and for
(58:17) people making claims like i'm now friends with the government and they support me and i'm just some rich guy living out in the forest in new mexico now those those claims are ridiculous i never do interviews or lectures i mean i try and divorce myself from this stuff completely and a lot of people don't understand that but you know it's almost like if you were a victim of a crime of a rape or something like that it's not something that you go and talk about the rest of your life you know it
(58:48) this is something that i am not interested in i was only interested in the technology the program which is why i was attracted to the job and uh you know i'm not a ufo enthusiast i don't do lectures and it was only the technology that got me into this and you know that's that's about it this is nothing that's part of my life it's nothing that's paying me any money and it's something that i really hate even talking about we're going to uh we're going to take a short break and then
(59:21) force you to talk about it some more even though you hate it we're talking with bob lazar and gene huff i'm george knapp filling in for art bell we're taking a short break and be right back on coast to coast am welcome back to coast to coast i'm george knappian for art bell i believe that's a song by the highwaymen there a good choice somehow appropriate because uh my guests tonight are sort of outlaws from the world of ufology of bob lazar and gene huff you're still there right guys we're here yeah i have to apologize
(59:50) for being so sleepy i mean i've got coffee brewing now but i took a sleeping pill to get an early nap and i'm one of those guys if i take an aspirin it hits me like a sledgehammer so no it sounds great with me i will wake up and be lucid in a short time george i'd like to make a comment i mean no all kidding aside on bob's personal life i he went through rough times after he got kicked out of the program and asked for a personally financially he had a couple of bad relationships he was destroyed
(1:00:17) financially a lot of external circumstances economy changed things changed i think it's curious that now he and his wife have a nice little business going and for the first time in probably a decade he's back on his feet financially and now is when the federal government chooses to raid and prosecute him on bogus charges it's almost like while he was down they kept hands off but they you know maybe i'm being paranoid but i don't know why they waited the first time he's he's achieved a little success once
(1:00:48) again financially and they they choose now to uh to prosecute him well i was uh trying not trying to uh beat a dead horse and talking about some of the things that happened uh in his life long ago break-ins in the house and and his car and and death threats and the phones tapped and people following him only to emphasize that even though a lot of people don't buy the story and they have their own reasons for not buying it something really was going on back then and something is still going on now i there is another possibility
(1:01:18) that maybe it's not related to any of the revelations you made back in 1989 you mentioned that you're also working on a hydrogen system for automobiles tell me about the system tell me how far along it is and maybe gene you can speculate on whether that would be a reason for them to come after them okay well anything's really possible the hydrogen system i actually started working on as far back as the 70s uh something that i tinkered around with during the gas crisis and uh just with something i played
(1:01:49) around with on and off and there really is no big trick to running a car on hydrogen i mean you can basically run your own car on hydrogen with just a few minor changes the trick with hydrogen is storing it and you can either store it as a gas when in a big giant metal cylinder in your car somewhere under a lot of pressure so you can hold as much as you can and burn it that way you can super cool liquid hydrogen or hydrogen so it's liquid hydrogen and therefore you have an increased density and the tank that
(1:02:26) holds it needs to be smaller the problem is that both of these things among other problems is it's pretty explosive in that fashion if you get in a car accident you have a big tank of compressed hydrogen it releases ignites possibly explodes liquid hydrogen is even worse because on top of it it's absolutely freezing cold this stuff is 100 degrees below zero and in addition to immediately evaporating and possibly igniting and causing burns and all that kind of stuff there is a third way to store hydrogen

(1:02:55) and that's in a metal hydride and some materials have the ability to absorb hydrogen like a sponge absorbs water and once it's absorbed and stored in that material it's essentially non-flammable yeah it will smolder somewhat but it uh does not present the hazard of these either to either of these other methods of uh storage and that's something that i was interested in and we started working on and i've been to your i've been to your house there in new mexico i've seen this 30 foot long particle accelerator that i
(1:03:30) guess has a role in in the system that you developed i know that you have this hydrogen system in your own two vehicles and then it's been a heck of a long time since you've had to buy gasoline is that right yeah the uh the first car we converted was a chevrolet corvette and then a uh mitsubishi uh endeavor and uh now we're looking at uh converting a gmc but our vehicles have been running on for hydrogen for quite a while and we manufacture the fuel ourselves and it's uh something that we'd really like to do
(1:04:07) to as many vehicles as possible and the business we're talking about is united nuclear and what we want to do is manufacture kits so you can easily convert your existing car so how close are you to a system that could be mass produced and available for consumers because i think it's it's relevant to where we're heading with this conversation right well like i said the system i mean there are a couple little quirks here and there but not nothing serious i mean you can certainly put a conversion kit on your car like i said our cars
(1:04:38) have been running for years on hydrogen the problem is the material the hydride itself and although there are other hydrides available the particular hydride blend we came up with can be charged and discharged a lot more often and also holds a lot more hydrogen than the commonly available hydrides the particle accelerator i built is used in the manufacture of that the problem is that one of the materials in our hydride is uh classified as a weapon material well that might be some reason somebody might be interested in you then well
(1:05:21) yeah it it might be it's a thermonuclear weapon material it's nothing that you know a terrorist can get a hold of it in itself is not uh you know it cannot be used as an explosive or anything along those lines so yeah is that a possibility that they cause such a fuss about it um i guess it's possible but well i'm thinking more why didn't they say so i'm thinking more more along another line and that is this if your cars are already running on this hydrogen system and the potential exists for
(1:05:57) mass production and mass consumption of this that there might be other people who might be interested in causing you trouble i think gene you have an idea about where i'm heading with that one george you know you hear all these paranoid stories about well yeah we could get uh cheap easy even free fuel but the agencies in the federal government are preventing it because then they won't be able to sell oil but bob i think you should add to this story uh when about the little visit from the nuclear regulatory commission and how you had to
(1:06:26) have one of them on site and they even wanted to charge you how much was it to fire up your own particle accelerator to replenish this hydrogen the federal government intervened right there in his own on his own property in his own particle accelerator right well yeah technically i'm not allowed to operate my particle accelerator and technically uh believe it or not it's not the nrc do you know who regulates lasers and particle accelerators i don't the fda the food and drug administration believe it or not this is how our
(1:07:03) government is set up anyway i'm not allowed to operate my own accelerator that i built and nor can you you're not allowed to build any machine that can produce radiation you must have a license to manufacture operate or virtually conceive a radiation producing machine so i can't even run this thing legally and it doesn't replenish the hydrogen it's just used in the manufacture of the storage material so but don't you have to pay for them to come well then there's yeah then there's
(1:07:39) the possibility of a license that's five thousand dollars a month i mean this the regulations they impose on this are absolutely ridiculous and you would say imposed to prevent uh people from inventing their own hydrogen systems or no accelerators these these were in place but uh and who knows what reason they created these laws for i imagine to protect the public so i guess for some reason if you want to build an x-ray machine you're not allowed to and then you can't hurt yourself beaming yourself with x-rays
(1:08:11) it's the only radiation producing machine i think would be easy for somebody to make but in any case it was obvious what this machine is being used for

it's not being used in the production of weapon materials or anything like that and this is not the only uh faction of the government that's given us a hassle we had just about everybody from every department here on one particular day everything from the building and inspection to uh the fire department i mean it is as if somebody suddenly put us in the
(1:08:50) crosshairs and said just fire i'm gonna i'm gonna take a short break again when i come back i'll ask you to list all the different departments uh that were out there raiding your house those building guys they're pretty tough and uh we'll be right back with bob lazar and gene huff i'm george knapp filling in for art bell on coast to coast [Music] welcome back to coast to coast i'm george knapp in for art bell we're joined this evening by bob lazar and gene huff and we're talking about
(1:09:37) some very recent developments in bob's life that sort of fit the longer pattern bob back to your hydrogen fuel system for cars you were mentioning that your home in new mexico was raided by a whole laundry list of agencies um atf were they there uh if they were they didn't identify themselves now virtually nobody identified themselves except the local people and by the local people i mean the people from the fire department or the building and zoning and the local sheriff and um fbi yeah i believe the fbi was there there
(1:10:16) was a there was another government agency and they never identified themselves so i don't know who they were um but you know the swat team they didn't need to identify themselves that was pretty obvious um you said black ninja uh outfits i mean seriously no no no they uh what they did where that was really interesting and it was the first time i ever saw it was the camo and this isn't the camo you wear just as a normal soldier with this is kind of that uh drop cloth with real twigs and branches sticking out of it
(1:10:54) it's hilarious but it wasn't hilarious that day these guys came up from the bottom of the property and then another force came in from the top apparently in case we tried to get away from whatever it is was going on and uh yeah then they had just your range of typical swat guys that called us out on the megaphone and you know we came to the door and they handcuffed us but obviously this was a big old operation a interesting thing that happened is one of the agents left his legal pad which was wonderful and had a wealth of
(1:11:30) information on it and that that's where we learned where they had previously photographed our property from the air looking for possible ways to escape and any other buildings and things like that we had around so it was uh when i mentioned earlier that i was just kidding kidding about uh a sting operation but do you believe that they have that agents posing as customers have purchased things from you as a way to sort of build a case against you well i know that's happened to a fact without a doubt and look there there are prosaic
(1:12:09) explanations for all of this stuff you know it's possible that look being a scientific supply outlet um you know maybe they thought we were a drug manufacturer or something like that they're you know doing some other illegal activity because of all the weird equipment chemicals radioactive materials we order and resell you know maybe these guys just thought you know boy something else has got to be going on there and they just thought this was a gamble that might pay off and it just didn't it might have nothing
(1:12:44) to do with you know my past or the hydrogen system but it's just it's just incredibly suspicious to me i mean yeah go ahead and interject here as usual bob's being a little modest i mean this hydrogen fuel system isn't something he tinkered with a little bit since the late 70s i mean it's fully functional he drives his cars on it and and if bob if it was legal to provide this i mean bob could uh you know put literally a hydrogen fuel system on just about any car and they could get the hydrogen via
(1:13:15) electrolysis with the solar panel on their garage roof and but bob didn't need these hydrides that you store the hydrogen in that you say could be used to make a thermonuclear device i thought you told me those were kept in a complete vacuum and if just some normal guy like george or i opened it they would be destroyed once the vacuum was broken you'd have to be a highly trained uh you know a physicist something along that lines to actually make a bomb out of those hydrides wouldn't you i mean oh yeah walking down
(1:13:45) the street couldn't do that i mean all the hydrides do is store hydrogen i mean they're used that's the in a weapon that's the material that stores the hydrogen like the hydrogen and a hydrogen bomb right and to get it to go off you need an atomic bomb already unless you already have an atomic bomb this material is useless to you here's the theory that i that i was pursuing to see what you guys

think about it but i mean if this hydrogen system works and uh and revolutionizes the transportation industry it would
(1:14:15) obviously have bad effects on the oil industry given our political environment and the amount of influence that this oil industry has uh couldn't you be for couldn't you be viewed as a potential threat to very large industries i mean we've all heard the story certainly the uh listeners of art bell have heard the stories about promising energy technologies that are quashed because they represent a threat to the profits of major international corporations has that crossed your mind yeah i mean you
(1:14:44) always hear people talk about uh about stuff like that and i and i generally don't believe it i don't think that can be the case and you know using hydrogen is not new at all you know we've been able to store um more in a smaller space than previously and it's uh if the system is fairly easy to install on a car in fact what we want to do is sell kits so you can install it yourself or have a mechanic to install it and you can't tell me that major auto manufacturers and other people haven't
(1:15:21) stumbled on this i mean unless we just happen to hit on the perfect combination and we really can store more hydrogen than ever before and you know then it is something pretty significant but the bottom line is the system does work uh is it possible we're stepping on somebody's toes yeah i guess it's possible i'm not sure if that's the case but you know we do have something we'd like to market but instead of getting help through the government i mean in in every way shape and form everybody is stood in our way now i
(1:15:53) don't know if i'm just paranoid but it's just suspicious that all this stuff has suddenly happened right at the same time you know we basically announced that we have this and we want to bring it to market gene i know your politics a bit would you like to elaborate on the possibility the president is the son of a rich and famous loyal family george i think we're being paranoid after all i mean no one would use the federal government manipulate the federal government just for the sake of oil do you think
(1:16:22) well i mean do you think do you think that that's what's happening uh i i don't know i mean it would have to be a pretty comprehensive program i would hate to think that with all of the all of the situations prevailing in the world the war in iraq the fact that you know everyone hates them you know the plethora of global warming you name it the problems we got that they're worrying about bob lazar you know replenishing some hydrides with hydrogen down at his ranch down in new mexico would be you know
(1:16:55) high on the minds of the federal government uh you know i i it's difficult to be that paranoid but i think it's i think it's true i mean we know that that cars could be run on well some cars are running on hydrogen but but everyone could be driving in a car today that did not run on gasoline if if it weren't for the fact that the uh that the oil companies uh you know in uh and it has to be with the help of the car manufacturers uh are trying to use the oil as long as they've got it let's face it if you look
(1:17:29) at history in big chunks of time you know not in billions of years like the universe or the earth but in 5 000 years i mean oil was really only valuable for the past 100 years in the next hundred years i mean the the arabs weren't rich people historically it's just a hundred years ago when we found we needed all of this oil they happen to be over an ocean of it so i think they want to you know pump it out and sell it while they can that uh 100 years from now 200 years from now no one will be driving gas-powered cars unless they're
(1:18:02) classic cars and so yeah i do feel there is an agreement certainly between the saudi royal family the bush royal family everyone in the united states to get while we're getting good sell the oil while uh people are complacent enough and comfortable enough or at least trusting under that enough to think that we won't destroy the earth by burning fossil fuels and so they can sell it while they make their money while they can bringing it back to your your business bob united nuclear who are your customers i mean are you selling to uh
(1:18:34) terrorists you know i i've been on your website you've got this one animated figure of a guy uh and and the caption under it is got uranium you were you're selling uranium pellets that you found in the on public lands and uh i mean it's post 2001 don't you think you're going to attract government attention i'll tell you what i i think we're gonna have to take a break here so you'll have to answer that question when we come back we're talking with bob lazar and gene huff i'm george knapp in for art

(1:19:01) bell on coast to coast am good evening everyone welcome back to coast to coast as mentioned i'm george knapp live in uh las vegas most exciting city in the in the world in my opinion and we're talking with bob lazar and jean huff one one brief note art bell by the way who i'm filling in for tonight art bell will be back on april 15th and i'm sure all his loyal listeners can't wait for that back to bob lazar and jean huff bob uh before the break i had a question for you you know on your website for united nuclear you've got
(1:19:34) this little animated guy whose eyebrows move up and down and the caption underneath of it is got uranium and i know from speaking to you before that one of the products you first started selling online was uranium pellets that you'd go out and gather in the desert on public land and i wonder uh you know what are you thinking i mean don't you wouldn't you think that in post 2000 911 world that you're going to attract some attention selling that well hang on let me make a correction first what we sell is uranium ore
(1:20:03) not uranium pellets we're seeing uranium pellets you made the hair stand up on the back of all the people from the nrc thinking these are reactor fuel pellets they're not well we sell is uranium or uh among you know a wide variety of other scientific uh equipment chemicals and whatnot and no uranium ore is uh is not a dangerous thing you can't make a bomb out of it uh well if you have gigantic quantities of it and the power of an entire city to process it and several years yes you can purify uranium but selling little pieces of ore
(1:20:40) here and there for science experiments and experiments involving radiation or physics is you know is completely harmless who are your customers though i mean i'm assuming you're not selling to osama bin laden and that's not the reason that the the government is is looking at you who are your customers actually an increasing amount of our customers are federal agencies now which is really strange i was under the impression they wouldn't do any business with me but i have been proven wrong that in two
(1:21:12) accounts first of all we wound up getting a government contract and second of all just an increasing number of government agencies from the military specifically the navy and the army and um other government factions like the border patrol for instance buys infrared flashlights from us uh the department of uh naval sea warfare buys um ultraviolet equipment and you know things of that sort fire departments throughout the united states uh that's actually the i guess the most common customer of radioactive ore and what the fire
(1:21:56) departments use it for is everybody's training for homeland security exercises so they'll typically buy a piece of ore and maybe a piece of ore and a geiger counter from us and they'll hide it somewhere and this way they can train the people that operate the equipment to try and find the radioactive ore with the geiger counter and and they just use it in other drills and you know things of that sort so we still do a wide variety of schools and universities too and of course the general public was nasa one of your customers
(1:22:28) yeah yeah yeah they were i don't remember george this isn't all for necessarily for uranium war they have a wide range of products these cells um we you know for listeners just joining us we've been talking about the latest uh chapter in the bob lazar saga a raid on his property in new mexico by a host of agencies who seized records and equipment and things of that sort as part of a possible criminal investigation into his business united nuclear bob uh we're gonna just to wrap up this part of the conversation can you
(1:23:02) tell us where you think this case is headed is there a date is there a a point on the calendar at which you're going to know something well no there's no specific date yet it's basically finding out and we've hired attorneys to discuss this with them exactly what do you want what is the problem what are you going to charge us with what you know exactly specifically write down what the problem is this could have all been taken care of if there if it's just something that we're selling or just a customer that we
(1:23:36) we're dealing with or something this could have been handled by a telephone call but nothing in my wildest imagination um would be reason to take the past that they've chosen so i don't know and you it's kind of a wait and say any word from your lawyer on on his take on this thing or whether he thinks you'll be indicted um no nothing specific i mean it's anything's possible it depends how hard they want to push on this and exactly what's the problem is it in fact that uh it's just some chemicals is it and you
(1:24:12) know the real problem uh customers were dealing with you know that's it's something we need to find out just another day in the life i guess yeah it's not a

fun day in the life well listen i hate to take another break right now but we're going to we're about to jump into the inevitable topic ufos s4 all that stuff you knew it was coming uh but but i think before we start that we're going to get this break out of the way and we'll be right back with bob lazar and gene huff i'm george knappy
(1:24:43) knappian for art bell on coast to coast am [Music] good evening everyone welcome back to coast to coast am i'm george knapp in las vegas filling in for art bell our guests uh bob lazar and jean huff and this is probably the part of the conversation that the audience wants to to hear the most but uh that bob probably uh regrets speaking about the most and i mean all the stories that uh that emanated from you starting back in 1989 about area s4 and area 51 and flying saucers and things of that sort gene i wonder if
(1:25:33) i can impose upon you to sort of make a synopsis a thumbnail sketch of of this story as it unfolded uh for the benefit of those listeners who may not be familiar with it that is an imposition isn't it well let's see bob uh head bob would probably better just tell the story better than me but i'll just say it so you can answer ufo questions uh he moved to las vegas in the early 1980s and had some small businesses going and decided to get back into the uh you know scientific community so he sent resumes out to a few places and
(1:26:10) one of the guys he sent a resume out to was dr edward teller uh edward tellers the father of the hydrogen bomb uh bob had met him when he worked at los alamos in the early 80s bob had built a little honda with a jet engine in it and the local newspaper in los alamos did a front page story on him edward teller coincidentally came to speak at los alamos on that very day and when bob was going over to the auditorium to listen to tell her speech lo and behold teller was sitting on a wall reading the new front page story about bob's jet car and
(1:26:46) bob used that as an avenue to introduce himself to edward teller and anyway so back to the back to the 80s now bob sends out resumes and gets a response from edward teller uh gets an interview out at eg when it was located out on sunset road near mccarran airport here in las vegas um bob how did it go from there i forget how it went he gets he gets hired into a program yeah he gets hired in uh they just said it was then propulsion systems i don't know what he thought it would be if he thought it would be jet propulsion or
(1:27:18) whatever in in an outer area and so then they flew him out to area 51 and he went through well first he went through security checks the office of personnel management who does the background checks on all these people came to his friends and neighbors and you know mom and dad and everyone to check them out as would happen with anyone getting a security clearance then he was flown out to area 51 and i think bob should take it from there because that's the great story of when he was uh taken down to uh s4 in in the in the
(1:27:52) briefing room reading the reading the reports for the first time bob s4 is a facility uh south of groom lake uh a dry it has its own dry lake bed down there and you uh bob you say as i recall the story was that there was a facility built into the mountainside uh designed to sort of make it look like it was part of the mountain but inside was a fairly fairly amazing facility yeah it was a research facility that had hanger doors along the side of the mountain and after going through all kinds of security checks and
(1:28:26) like you said of my background and whatnot eventually they drove me down to uh s4 and um initially they just had me reading briefings that contained just uh amazing amount of information but some pretty bizarre information uh aliens flying saucers yeah you got it and um i really didn't know what to make of it and they were trying to get me caught up to speed as quickly as possible involving this project and unbeknownst to me the the project was to back engineer the propulsion and power system of an alien spacecraft and they
(1:29:08) eventually did show me the craft a short time oh i think i'd only been there two or three times and the instead of coming through the main entrance of the place they brought me into the hangar and i saw one of the craft and uh eventually you saw nine of them right nine of them when all the hanger doors were open the internal bay doors and um it was my job to do at least be part of the team each aspect of the craft had its own group of people working on it and they really compartmentalize everything that way so
(1:29:46) nobody has the entire breadth of knowledge about the entire product or project and like i said basically i just was involved in the propulsion and power system of the craft uh i worked with one other fellow and uh i was only there for a short time i didn't work there for years or anything along those lines but um let's

see well life story is so hard for me to do one one thing leads to another i wind up telling jean and a few other friends because i work at odd hours of the morning and evening and i wind up telling
(1:30:25) john lear gene huff finally told my wife and another friend jim taliani what was going on and you went out into the desert and showed them yeah since i had the uh flight or test flight times of the craft i knew what time and where to go in the desert to look so we finally did sneak out there one night and got to show these guys what i was working on and uh you know went home and as time went on we managed to get caught doing that by the way that's using sneak in the absolute sense of the term we went out there in an rv
(1:31:04) and sat out in the desert uh since i mean remember this was this was 1989 since then george after you did ufos the best evidence in 1990 of course the little alien out at rachel out there has become an international tourist stop and and they're you know there were tour buses going out there but but back then there was literally no one in the desert in the middle of the week they tested on wednesdays and we went out there and you could have heard a pin drop in in the desert i mean it was a starry sky nothing else going except of course
(1:31:37) until that little light popped up over the mountain and started jumping around in the sky and so now people go out there and look and see all kinds of things and you know they find the story hard to believe but uh the difference between them you know the the desert outside area 51 in uh late 88 and early 89 and and and in the early 1990s after you'd produced ufos the best evidence was night and day you know uh back in those days people forget that uh you know they're all kinds of people who have uh bad
(1:32:13) things to say about you bob and i i can tell you know that uh how like how much you like uh talking about this story well you know it's really i just cannot believe the amount of people that come up with the strangest stories that involve me i it just amazes me some of these stories are just so ridiculous even and i don't know why people pretend or feel obligated to tell their friends or other people that they know me when they don't i mean i i think i've told you the story before i was driving through flagstaff from
(1:32:49) las vegas on the way to new mexico and i was listening to an am talk show to keep me awake because it was late at night and i hear something that sounded similar to the art bell show but it wasn't it was some uh conversation going on about ufos and i was just kind of popping around on the channel when i heard my name mentioned and here's a guy that's giving an interview to the radio host telling him how he just had lunch or dinner with me something like that and how i confided him all these new facts and things like that but you
(1:33:19) know this kind of stuff goes on all the time about the most ridiculous stories and like you get most of the emails fortunately i don't and like this guy that just said i worked on the stealth fighter where do people pull this stuff out of it's just it's unreal george my favorite part of this story is that people either say bob lazar never did anything they didn't even graduate from high school till you know he did things far beyond what he said he did and they saw him out there and they can vouch for it because
(1:33:52) they went all the places but not even bob lazar was allowed to go and uh you know that that's the funniest thing like the gentleman you had on before we came on here tonight says that bob he said that you had a female supervisor and and i'd like to know when eric davis was that his name director eric davis yeah and he said i don't know when he did this but he says he asked bob's supervisor if bob worked there well how would he know if working where what supervisor out at area 51 he says you had a female
(1:34:23) supervisor well how did he know she was bob's supervisor before she checked to see if bob worked there you know she's got a check on a computer to see when and where he works then how did eric davis know that she was a supervisor not to mention that bob never ever had a female supervisor at all right was this was this a female supervisor when i was supposedly working on the f-117 i don't know but you know this is the i think it's at the brothel oh okay i'm just joking with you that's not the
(1:34:52) only version of this story it's uh you know a lot of people exactly what you're saying gene a lot of people don't buy it at all bob was never out there he doesn't have his degrees he's not a scientist his physics doesn't make sense we don't believe him and then on the other hand you got people yeah he was out there but he worked on this or he worked on that and we've confirmed it it it's hard to reconcile the two stories no well bob always you know he prefaces when he starts to

(1:35:17) describe the heavy element the propulsion system everything he goes now look at current physics on earth we have no idea what gravity is we don't have these heavy elements we don't have this and this and this and he prefaces it with this gives an explanation and then all of the other people go wait a minute we don't know what gravity is we don't have these heavy elements on earth they repeat the exact same thing he said and act like they're being critical in bringing up something that the rest of
(1:35:42) us don't know well let me run this one by bob because i just got a copy of this today a guy named tim ventura do you recognize that name oh yeah that's a guy i spoke to um three or four times he uh i don't know if it's him or if he's actually made a company uh and he um makes these little electrostatic uh propelled craft at a balsa wood in aluminum foil these little models that demonstrate iron or electrostatic propulsion and lift off the table well he's written this report and i'm sorry
(1:36:18) to spring this on you about he says in 2003 he spoke a lot of times to you he was building a relationship with you so he could eventually conduct an interview about area 51 and that you talked about a lot of different things he says to his credit he says you know if i had a ufo i wanted to understand after my team of physicists gave up in despair because they couldn't fit the technology to existing physicists i'd bring in people like lazar who would ask interesting questions and get unique answers he says that in 2003 he took you
(1:36:48) told him several times that your number one customer for geiger counter equipment where los alamos and sandia national labs that you had visited both of those labs uh your wife girlfriend corroborated the story and then the interesting part in in october 2003 you called him up and uh said you'd been doing contract work he this guy had been doing contract work at telecommunications systems in seattle and that uh a certain scientific team that you bob were involved in had been scouring the web for material on lifters stealing
(1:37:21) data from this guy he seems to imply that uh you got really mysterious on him uh on behalf of government agencies and uh and that maybe you are working as an agent does this ring a bell all right [Laughter] so you're admitting it no no no no okay this is another typical example of it of just an ordinary story that gets completely tweaked into another realm of existence eye contact well go ahead i'll tell you what i think we're not going to have time to finish the story so when we come back from this break we can talk about
(1:37:56) that we'll also address the question of whether you're a disinformation agent because that's a question a lot of people have and we may even get to talk about a a wild whacky ufo guy named dan burrish stay tuned i'm george knapp in for art bell on coast to coast am good evening everyone welcome back to coast to coast we're speaking with bob lazar and gene huff my name is george knapp in for art bell right before the break bob i was mentioning a guy named tim ventura who wrote a very detailed
(1:38:25) report that appeared on the internet today about his previous encounters with you that at the top of this report it says in late 2003 bob lazar recruited me to work on a top secret propulsion project at sandia national labs that probably never existed lazar speaks believably and if it wasn't for the story itself i never would have questioned his veracity two years later i still don't have the answers but i do have a lot of questions what he says was along the lines after talking to you many times on the phone that uh he was
(1:38:56) told that you were in washington dc you got back on the phone with him after returning from dc and said you'd been meeting with high-ranking officers about putting together a secret project to develop this prototype aircraft using technologies that have been found online in the open source community so he wonders was there a secret project at sandia to develop such a craft and what was your involvement with it what's your version of this story well like i said this is one of those typical stories that
(1:39:27) gets distorted into another realm of consciousness here um basically i've never met this guy tim ventura i spoke to him on the phone a few times and basically apparently how this got started was uh was me calling him i knew of someone and met them now who they were affiliated with was never all that clear he did work for sandia and whether his project was government funded or privately funded was never really clear anyway what this guy was producing was a an electrostatic lifting vehicle and it was just a larger model of timber
(1:40:07) and tour guy makes these little i guess you would use them for science fair projects or something little table top balsa wood and aluminum foil things you

apply high voltage to them and they they lift up it's a demonstration of electrostatic propulsion which is nothing new um this uh guy had a large-scale version of it and apparently was planning on making something much bigger in any way wanted to recruit me for consulting in the project um there's nothing secret or anything along those lines um however he always
(1:40:42) made a big a big deal about keeping things quiet uh about you know who i mentioned anything too but as far as i know there's nothing secret about this a short time later i had remembered seeing something just like that on the internet and kind of browsed around a while and found tim ventura's page and said you know boy that thing looks exactly like what this guy is doing now i called tim ventura who i don't think i had spoken to ever before and just mentioned to him that there were these other guys uh using his design and something along
(1:41:24) those lines and they were interested in me consulting for producing a larger version of this or uh commercial applications so on and so forth and you know would you potentially be interested in it considering that you know you've been tinkering with this stuff a hell of a lot longer than me in fact i wasn't even that knowledgeable about that particular field um what about this part of the meeting with high-ranking officers in washington dc well i met with the i met with this guy and a couple of his uh a couple of his buddies and then
(1:41:58) mentioned tim ventura's name and you know just waited for them to get back to me if this thing was ever going to materialize uh you know a lot of consulting jobs end up this way somebody calls and then you just never hear back from him but you know i mentioned tim ventura to them and a short time later they got back to me and i think i got some more information from tim and all he said at the time was that he was working in a bank and was really bored with his job if i recall correctly and uh i think possibly doing some
(1:42:34) computer work or something well at least it sounds like there is some basis for for for what uh tim is writing and then like i said but it's it's not a spectacular story or anything and uh they got back to me just saying that it was apparently just incredibly under qualified for the job i mean apparently he didn't have any uh you know similar work experience this was just a hobby for him and uh that was about it and i countered with well boy the guy has been tinkering with this stuff for years he's got a website
(1:43:05) about it and what you're making looks exactly like what this guy builds on a daily basis don't you guys think you should get together and uh we kind of went back and forth and i asked for more specifics on the project or potential project to give to tim who i was just you know trying to get an interesting job for and uh now never really got anything specific and phone calls weren't returned and it kind of fizzled out bob kind of faded away and that was that this type of propulsion system is also what a lot of
(1:43:39) people who know nothing about propulsion and especially know nothing about the cosmos think could be used to propel flying saucers right yeah but you know what i mean yeah it's not it's not any gravity or anything like that it's just electrostatic propulsion it's the same thing that keeps the uh little styrofoam peanuts stuck to your hand it's uh you can apply a high voltage to uh isn't that how you want to fly those plates over your uh tesla coil and the van de graaff general yeah and
(1:44:10) the van der grab it just you know repulsion of like charges and also an ion spray off a sharp point with high voltage on it i mean there's all kinds of ways you can use electricity to you know lift things up but for for deep spacecraft it is a form of propulsion in fact uh nasa's probes and uh the upcoming uh i think asteroid probe is going to use uh a type of ion propulsion so but as far as you know in the atmosphere flying around now this isn't something useful well i think the point that he was
(1:44:43) trying to make is that uh you know here you are uh traveling with shadowy guys and they had relationships with sandia and working on exotic propulsion you know we've heard those kinds of of conspiracy theories about you before that you're a disinformation agent that you helped the government to spread this whole story for what purpose why would it what what's a decision information agent supposed to be taking your attention away from well i think people have said that taking your attention away from something else that
(1:45:12) might have been out at 51 or s4 which uh my response to that has always been boy if this was the government's idea to take attention away from something else they had going out there it was a miserable failure because the result of your stories coming forward is that area 51 became a household name tens of thousands of

people are checked out there over the years and still do to see whatever is flying around uh the state of nevada dedicated the e.
(1:45:39) t highway that goes right past the base and i'm sure the folks who run area 51 are not very happy about this strategy so if someone came up with it it didn't work a lot of folks believe though in their hearts that you were working for the government part and parcel either as an active agent or as a patsy that's one of the the emails i saw yesterday somebody compared you to uh lee harvey oswald not that you are dangerous but that you are a patsy in the big picture any comment oh boy how could i comment george and i they just i mean these these scenarios
(1:46:13) just sound ridiculous to me george these these scenarios go full circle does anyone ever offer any suggestions to you i always ask them what in the world could they be hiding that they would go through all this expense and time and trouble to not to mention not just the bible's our story they must be faking ufo sightings all around the world for the past 50 years for the past millennia according to you know all the historical sightings and everything all this has been going on so they could hide what what is it that's going on out there
(1:46:48) that they're using this as a front for well no no the question i have is why something like that look i don't like giving interviews i don't create lectures and get money from this i i don't do anything with i'm trying to divorce it as much as possible it's something that i was involved in in one point in my life and spoke about it and and that was that i have better things to do this has been an incredible source of aggravation for me i don't seek public attention i try and avoid being on the radio and
(1:47:22) unless somebody just drags me on like like that uh you know other than that what in the world do you think i have nothing better to do and i really am extremely busy and stuff like this just doesn't make any sense to me why in the world would i do that well there are some things that uh i know a lot of people don't believe your story but there are some things that you knew and know that you could not have known otherwise that have been verified and i'm going to go over that list of things when we come
(1:47:51) back in just a moment we're going to take a short break uh speaking with bob lazar and gene huff i'm george knapp in for art bell on coast to coast am
[Music] good evening i'm george knapp in for art bell on coast to coast am we're speaking with bob lazar and gene huff about uh s4 flying saucers and things that mr lazar really doesn't want to talk about anymore but we're sort of forcing him to do it anyway bob when i uh when i am questioned by people who don't believe your story whatsoever uh who believe you
(1:48:39) were never out there that you made all this stuff up and they point to look he can't prove that he went to mit he can't prove he went to caltech he can't prove he really worked at los alamos on any kind of sensitive projects and he certainly can't prove he was out there at area 51 or s4 i remember a couple of things that come to mind that that suggests that you did in fact uh have these experiences because they were things that you couldn't have known otherwise the most obvious one is the
(1:49:06) the fact that disc shaped objects were flying around out there you took people out into the desert a couple of times in a row to show them this i've interviewed those witnesses i've seen the videotape something that looks very much like a flying saucer flying around in the exact area and at the exact time that you said it would fly around so how could you have known when and where you also knew about the ofi that's the office of federal investigation i thought you made a mistake or you're talking about the
(1:49:32) fbi was the one that was doing a background check on you but it turns out that you knew the name of the agent mike thigpen and you knew the existence of ofi which i had never heard of both the fig pen and the ofi check out you knew about the designation called s4 to my knowledge that had never been made public in the past i have i was able to confirm that with nellis air force base that it's a real place although they would not confirm where it was people forget that you also you you passed a polygraph test we administered this test
(1:50:02) a polygraph examiner named terry tavernetti who still works for a major corporate firm here in in las vegas a former police officer put you to the test and said you passed it with flying colors i know you also had information about the base itself the little tiny things like where the cafeteria was and how to get around in there and then of course people forget about the difficulty that i had in getting your records i mean the the song and dance i went through with los alamos to get very simple employment records uh with los alamos plus with the

(1:50:32) the uh company that had first recruited you to that to that job uh the difficulty that congressman bilbray's office had in getting uh very simple files uh from the fbi and others it suggested to me that something really was going on i i mean do you when this comes up do you give that kind of litany of responses you or gene no i don't and believe it or not i actually prefer that people don't believe it and uh please i will not be the one that tries to convince you because if if you think the story is ridiculous and don't
(1:51:05) believe it please continue to believe that in fact tell other people that because this way i get bothered less but yeah this this in fact did happen but like i said i hate the topic i don't want to be involved with it anymore and you know all these events did occur in my life and i did do the things i said i did and uh you know that's that and of course if the shoe was on the other foot i've said this before i don't know if i would believe the story because i can't prevent present enough uh evidence
(1:51:40) and you know being scientifically minded that's what i go on yeah there is some evidence here and there but i i can't physically bring people there i don't have you know really that much physical evidence to produce to put in fun in front of somebody so i'm not sure i would believe the story either and you know what what can i say that's the bottom line george is as you well know uh when people ask for some support and you give them support like you just said well here i everyone said he did work at
(1:52:14) los alamos here i proved that he did i i've met people that worked there with him you got his name there in the phone book eventually you found out his z number and that he actually did work at los alamos you bring them along you give them then they go okay well what about this and you prove the next step but what about this and it's never ending that you never reach a point where they go okay i believe it now they want you to be able to lay it out and prove it like you could in court well if you could do that you would be talking to
(1:52:42) them anyway you know each individual thinks it's our burden to prove it to them and so like bob i mean i i don't even try anymore i mean i know what i know and and you notice look as you pointed out before this is 17 years later look without bob since bob got out of the program i don't know any more about ufos than the next guy does i just know what happened with him that back then and i believe it because of the things he shared with me but you can't prove it and so why would we be trying two decades down the road well
(1:53:15) one of the things that uh recently uh caused this to all be stirred up again was the uh the synthesization the creation of uh a tiny portion of element 115 by scientists and of course this is uh what you said was the fuel for these uh alien craft uh they the scientific community around the world was able to create and other elements around 115 and finally got a little bit of 115 but you know your your supporters said well look it really does exist your critics say hey this 115 isn't like anything anything like what bob said it was like
(1:53:48) uh it only lasted for microseconds it's tiny little amounts lazar claims there was 500 pounds of this stuff up there what uh helped me understand um why this uh the creation of 115 by our scientists how it relates to your story does it add to it does it detract from it and it and if it's not stable as as what you described how do you explain that well both sides are actually correct to some degree uh yeah it is something i i said was possible and that the craft operated on and you know did in fact exist and you know at the time
(1:54:24) it didn't so yeah they did prove that it can be made and it does exist um however uh it doesn't what they created didn't have the all the properties of the material that i described and the reason for that is there are elements and different isotopes of those elements to use hydrogen for example hydrogen has three isotopes hydrogen uh that we're familiar with you can call protium it's a typical hydrogen gas another form of hydrogen is deuterium which is what heavy water is made from another form of hydrogen is tritium and
(1:55:14) this is a radioactive gas where the other two aren't so each one of these has slightly different properties because of what the more uh more more neutron yeah it's the uh number of protons in an atom define what that atom is for instance uh atom with one proton is hydrogen uh an atom with oh six well i won't put [Music] well you know 16 protons is oxygen and as long as you have the same number of uh protons in the nucleus of the atom if you add different numbers of neutrons to it it still is that element but it becomes a
(1:56:03) different isotope of that element and can have different properties for instance an ice cube made with deuterium oxide will sink in water so in other words

the version of 115 that's been synthesized that was created by these scientists uh is maybe not just a good good shot good try for a first time it's certainly 15 it's certainly 115 they made four atoms of it i believe and detected them as they went through the detectors uh but they they also detected a rapid decay but um just like hydrogen has an isotope
(1:56:39) that undergoes radioactive decay and also has stable isotopes so yeah they simply didn't make the isotope of element 115 that we were dealing with so i'm sure continued experimentation will will reveal it as long as they keep doing this eventually they'll come up with a proper isotope and it's going to have the properties that i claim am i correct in remembering it this way but weren't you guys the two of you were contacted by this heavy ion research lab and and i think it was in germany the
(1:57:11) same guys who were working on this thing darmstadt yeah yeah that was a long time ago i hardly remember what that was about but yeah at the time i think they were trying to synthesize it and i thought they did i thought they actually made an atom or two of it about 10 years ago which is why i was surprised no i don't i don't i think they made one seven now i i haven't i don't think but the lesson is that they actually took you seriously on it yeah apparently so okay we're going to take another short break
(1:57:38) we'll be back with bob lazar and jean huff and we'll be taking your questions and we'll open up the phone lines i'm george knapp in for art bell on coast to coast am good evening everyone thanks for sticking with us here having a fascinating conversation with bob lazar and gene huff our phone lines are open we'll be taking they'll be taking your questions in just a couple of minutes uh we've got an hour left with them or about 50 minutes and we'll try to get to as many as your calls as we can in the meantime bob i
(1:58:08) have one other question and i'm almost reluctant to ask this because the guy i'm i'm gonna mention here uh he and his group really thrive on any kind of attention they get even negative attention his name is dan burrish back when uh when i first encountered him his name is uh dan crane uh he claims to be dr dan burrish and got his ph.
(1:58:31) d while holding down a full-time job in las vegas apparently by traveling to new york state university of new york stony brook on weekends to get a phd in genetics and it's it's kind of a wild story now i don't want to i don't want to mischaracterize his story because when word came that you were going to be on the program and then i might ask uh questions about you someone sent out an email uh and modified it under my name and and said a lot of nasty things about dan so he and his group are pretty much
(1:59:05) going off uh anticipating that they're gonna get slimed i don't i don't want to do any slime wait wait who is this guy yeah well i i had told you about him before i interviewed you about him before he has a story about uh basically uh that he worked out at the program basically at the same time that you were there uh his job as a biologist was to interact with this alien named j-rod who's kept in a clean room uh facility that's below where the saucers are at s4 not i don't wanna yeah i think you i remember you
(1:59:37) mentioning something about that and he claimed he worked with me and well he didn't know you no he doesn't claim that he knew you he just was in the program at the same time but he was far more uh trusted of an employee since he got to interact with j-rod the alien on a regular basis and they became pretty good friends i just just in a general sense does any of this ring true grey alien's name was j-rod bob never said that yeah i know well the the burrish and his crowd have sort of borrowed a lot of little bits and pieces
(2:00:19) from all kinds of ufo stories i think they work for not only majestic 12 but there's a battle between the magi and the illuminati and uh you don't uh you find any of this credible and i don't mean to mischaracterize it okay no i don't know well you know sounds like the typical silly ufo lore you hear all the time okay well we've probably spent more than more time on that than it deserves and we're going to start taking some calls now we'll go to our uh east of the rockies line mike in binghamton new york
(2:00:50) mike what's on your mind hey gentlemen how are you good evening great privilege to speak with all of you uh this actually is a little story i have to tell bob my father was a lieutenant colonel in the air force and after he retired we'd been we were taking a trip to uh virginia to visit my brother who um works for a big computer company out in seattle we won't say who um anyway and we just idle conversation i we got talking about ufos and he uh i mentioned bob's name and he got

kind of like how do you know that name i'm like well
(2:01:32) it's on all history channel and it's on discovery channel and they have you know all kinds of uh you know television programs about ufos and bob's name comes up a lot and they show all his you know things you know that he's been talking about and boy he got so nervous and he was like looking at me like oh my gosh oh what you know uh you know and then i started bringing up stanton friedman and he got even more freaked out and you know it was just it was it was rather disturbing that you know here is
(2:02:03) this is my father and i mentioned bob's name and he was like it got all shaky and nervous and uh you know it it it just makes me stop to think you know bob your story i totally believe you i i 100 you know i have no doubts that you know the government is doing what they're doing and just not telling us well that's certainly a strange story but i've i've actually heard other people say uh similar things did you ever ask your father did you probe to find out why that was his reaction or well yeah and and once we got to
(2:02:38) virginia i i started asking him uh um preston nichols you know preston nicholls and the montauk experiments and all that stuff and once again he like got all freaked out and he's like how do you know about all this stuff and it's like look i study this stuff you know um i just got done reading brian greene's the elegant universe i kind of do you know read a lot of physics and stuff on my own and you know quantum mechanics and stuff trying to learn more about it and uh then i told him i said well i
(2:03:09) also read this book called the day after roswell by colonel philip corso and my god then second i mentioned his name my dad was like he was like all right let's just stop talking about this this is freaking me out hey thanks mike we appreciate the call we're gonna move along we appreciate the call and the story and maybe we can uh ask your dad to call us one of these days uh we're going to go to a wild card line number one kathy in western massachusetts she's up pretty late this morning kathy what's on your mind yes i
(2:03:37) am good morning my situation with the government was local on a local level was quite different than bob lazar and it was not as serious but believe me i do believe you mr lazar totally after what i went through on my level the government when you're trying to bring something public and you do that they do harass you they do follow you and they do try to discredit you and they will try to destroy you so i do understand what you've been through and it is quite a situation to go through in life but you know they they the more they
(2:04:15) intimidate you the stronger you get i think well that's what people say but i i don't know it gets pretty tiresome you know i i thought this stuff was pretty much over with we're talking about you know events that occurred you know we're coming up on 20 years this is ridiculous yeah well mine was a 20-year history also and it's it's quite ongoing and the more i put this push the subject the more i go public or the more i try to get it into court the more trouble i get into and the phone calls are very harassing
(2:04:45) uh very threatening um what was it that uh that happened to you what i'll tell you what kathy you're gonna have to hold the story because what i found out about a hospital i was i was quite naive when i went into this and and it turned out to be uh that they practically destroyed me kathy i'm gonna have to thank you for your story for your call but we need to take a short break right now we'll be right back with more calls more of your calls for bob lazar and gene huff i'm george knapp in for art bell on coast to
(2:05:15) coast am [Music] i'm george knapp in for art bill this is coast to coast am we're taking your calls for bob lazar and gene huff let's go to our first time caller line patrick in new mexico patrick fire away thank you george you're doing a wonderful job bob lazar i know bob lazar in uh san antonio but i i really appreciate listening to you you're very intelligent but a reason i'm calling is i want to discuss indian springs air force base i was uh my father was stationed there uh in 56 and 57
(2:06:10) and uh when they were doing the above below ground testing behind mercury mountain there and uh 40 well now i'm 56 and 50 when i was 54 i was the epitome of health now i've got three types of cancers i'm going into my second aneurysm surgery this week my teeth are falling out and i just wanted to ask you the question as to whether you knew anything about whether the government knew that that 40 years later the radiation see we used to be out in the in the desert uh my friends and i would have these car hoods you know
(2:06:49) where cars would run down the arroyos there and take the car hoods off and

we'd see the wave coming and we hold the car hood up to see if we could hold it up sometimes we could sometimes we couldn't you're kidding me no i swear to god oh and one one interesting thing about ufos when we would go out and we would use those car hoods as a tent at night would build a little fire in front of the car hood you know so snakes wouldn't come in but we would sit out and in front of the fire and i remember
(2:07:19) we knew nothing i was a kid you know we knew nothing about ufos and i remember several times at night this round object would come over us all the time and i mean we'd look up go look at that plane it doesn't even have wings on it you know are you saying you surf the shock wave from the explosion that's what i was harping on too several several times my sisters had 28 surgeries yeah they used to uh when the shock wave would come uh several times they would send it would blow the windows out on the base
(2:07:51) housing across from across the highway from the base and they would send these paddy wagons out and within an hour all the windows would be replaced you know i swear to you they would have all the women and children that of course we would always be out in the desert but they'd have all the women and children go into the bathroom so that uh if the weight if the blast came it would the glass wouldn't cut them you know apparently you've ignored the cardinal rule which is never stand near an exploding atomic bomb
(2:08:23) well i mean it was behind mercury mountain you couldn't see it go off you know i mean all you saw was just the wave coming oh you'd see the cloud maybe behind the mountain when it sometimes but not very often but uh you just see the waves coming towards you know if we didn't know anything that's what i had i was born in 51 and this was in 56 and 57 you know i i i really even doubt that the government was that familiar with the long-term effects of radiation at that point just judging on how they
(2:08:52) treated their own people and you know the limited amount of and look at the atomic canal when they get ready to charge after the wind blew past you know so there are a lot of interesting stories that i've heard about that indian springs base it was there before area 51 was created i've been told that some of the technology recovered technology had been stored there before it was transferred to groom lake uh some real interesting stories that you hear about the base patrick thank you very much for calling we're going to go now
(2:09:20) to our wild card line uh bob in north hollywood are you there yeah hi this is bob from my thought hi bob is laura lazar hi there it's funny i've been i used to work on this uh a stealth fighter project and uh i just asked you a few quick questions for my curiosity about your background um are you aware that the aurora project does exist is that correct you're kind of choppy there um are you on a cell phone or something sorry i'll clear it out fine i'm sure that's better now are you are you aware of the
(2:09:53) existence of the roar project yeah i've heard it mentioned several times and one time officially from what i understood is that it was a uh supposedly a replacement uh for the sr-71 high altitude high performance reconnaissance or high performance reconnaissance aircraft uh you didn't ever see it though did you bob i i saw one thing taxing out on area 51 at one point and i remember john andrews for the tesla testers model corporation he was always intimately familiar with uh military aircraft and i drew him a
(2:10:30) sketch of the plane because i thought the closest view i had from it as we were as we were driving by was a rear view of it and i drew it for him and i think a guy jim goodall who is intimately familiar with uh uh aircraft and the sr-71 and all sorts of spy planes in fact even wrote a couple of books and both those guys had mentioned well maybe that's aurora but maybe it wasn't but anyway uh that's all i know about it bob if i remember correctly didn't you say that the sound of the engines was so loud it sounded
(2:11:04) like a perpetual explosion yeah it sounded like in fact i think the word i said was it sounded like the air was ripping it was a really unusual sound and yeah incredibly sharp and uh yeah explosive sounding i guess you can you can say that may or may not have been the aurora bob what was your other question bob in hollywood what was your other question i'm impressed that's correct uh if you know the tester's model that was released of the f117a before the f117a was released was actually the aurora if
(2:11:34) you've seen the model that's what the roy looked like oh really yeah so it's pretty close we called it we nicknamed it the wedge and the dorito at first and you were you were involved with this project i left just as the beginning of the

project was starting and the engine works on a hydrogen system uh if you're you wear the hydrogen system the ancient season how's it going well hydrogen and methane yeah because that's that's kind of a a pseudo scramjet then right because you have supersonic flow in the
(2:11:59) engine that that's correct yeah it did what most people call is a pulsing pulses uh-huh did that too we figured out a way how to nullify the gravitational forces by pulsing the engine and um the one part that i did work on was to uh the cockpit area that keeps the pilot from being crushed from the g-forces so is this a reconnaissance aircraft is that really what it is or do you have it's a yeah yeah it was a replace base our sr-71 we started flying them first in 92 and they're getting they're gonna
(2:12:32) declassify it within eight years from now they're going to be classified to the public chase they're in no hurry uh no no no wait so we need to replace our new replacement we're coming up with is is a is a different type propulsion system that's uh that looks like a saucer the next one replacing are you familiar with the next generation called next gen which we're going to replace this uh the aurora with no i i've never even heard that term in relation to uh an aircraft before okay and that's similar to what you you
(2:13:02) you say you're working at it area 51 you know the correct term because we have a nickname for 51 you know the correct term that we use for today i've heard so many different ones from it you know i don't know if if they just make up different names or some of it is uh you know i've heard scorecard i've heard uh uh the box the ranch stream the land yeah that's what i was trying to pull up um yeah well i've heard so many i don't what did you have you heard a new one or yeah don't call it something different
(2:13:31) yeah there's a few yeah actually i was just i was just testing you a little bit yeah but most of people what we call the ranch basically and there's other little nicknames but just just see little groups of people call it different things i've just seen which which you're close to anyway one of the biggest things i want to bring up right now is that this is going to sound really strange it's bizarre if bob lazar's story is weird enough but are you aware that we do have in our custody uh what
(2:13:55) we term is space aliens we have them and we're actually using them we're actually large corporations like 3m we're actually charging 250 000 an hour to have them structure a business that actually really bizarre but we we are doing that we've been making money off these uh well what makes you believe that their provisions and you know that was so convincing i mean you you have to agree it sounds crazy right so why you know what did anybody present any evidence to you or you know what makes you think that's
(2:14:31) true there is evidence the reason why i'm bringing it up is because we had a meeting we're bringing what we call it's a space alien it's this individual who we have working on some of our projects because their their ability to uh think out of outside the boxes what's he look like i i i can't go there but the the thing is that now wait a second you already told us that we've got aliens and they're consulting major corporations you can't tell us what they look like um uh no it's just something that really no
(2:15:02) one once wants to really discuss they're not that um they're not that big well anyway there there is a there there i'll tell you right now the supreme court if you look in the supreme court there's a lawsuit filed a major corporation had paid 250 000 for an hour visit with one of space aliens a news reporter leaked out the story and a news reporter was waiting for a space alien to arrive at this corporation and it's in the supreme court files you can look at it supreme court there was a lawsuit filed against
(2:15:30) u.s government because they they charged 250 000 an hour for a meeting of space alien and the reporter blew in the security everything fell apart where do you uh how do you uh employ him how do you retain him obviously the yellow pages under space aliens or how do you get a hold of them military contracts if you know if you're military generals and stuff that have contacts with certain corporations that supply what do you call exotic materials for the projects to say some of the projects like bob was working on was an exotic
(2:16:02) project which needed certain materials from certain companies and uh they would actually have used one of these individuals they called i'm not saying it's a real space land but they call them a space alien and it could be a biological robot it could be a machine i'm not going to really get in the detail about it but this device for this individual has the ability of an iq it's over 200 of an iq of over

200 so you can imagine what kind of power that is for any corporation hey bob in north hollywood
(2:16:28) thanks for the call as a very interesting story we're going to take a short break right now yeah i guess you could say a guy if it's a space alien would think out of the box wouldn't he by definition maybe art bell when he gets back and could get the 250 thousand dollars together and have that alien sit in as a co co-host one night that'd be a pretty good show more questions yeah more questions for bob lazar and jean huff when we return to coast to coast am in just a moment good evening everyone thanks for
(2:16:54) sticking with us this late we're speaking with bob lazar and jean huff taking your calls and we're going to jump right back to the phones uh josh in las vegas on the wild card line josh you're a hometown guy we've got to give you a shot here what's on your mind and i'll tell you something this is a great pleasure uh having bobbler's rg huff and the great george knapp together uh for this great session i'm enjoying it thoroughly bob i feel like i know ya i moved to vegas in 91 sometime in 94 i
(2:17:24) traipse into like a mom-and-pop type video store and came across your video and was pretty much pretty taken aback by it i was uh i wound up you know looking to join mufon i talked to glenn campbell uh stuff like that but uh anyway bob i have the utmost respect for you i believe your story i truly do uh i guess my question is uh if if you know you you don't want to talk about it anymore you just kind of want it to go away but you actually made a video you you came out and made a video right the video wasn't who was ex
(2:18:05) exactly because the video was intended to stop me from talking about it at the time in the 80s all i was doing was getting tons and tons of phone calls for interviews and this is just something i wanted to get away from and it would be just so much easier to put one complete interview on tape and hand it out to the people that wanted to you know wanted an interview and be done with it and that was the original intention of the tape i'm just curious what uh substance is the story about dennis uh your boss uh your former boss
(2:18:40) if i'm not mistaken right uh chasing you around downtown like through the union plaza things like that hey i mean is this to this uh you what what to this you kind of cut out there for a second meaning is it a real story is there proof of it oh yeah well actually with that particular story um actually gene just happened to be there at that time the whole union plaza thing and um i mean gene can tell you what he saw we we went down there as per dennis uh dennis's instructions and uh well go ahead gene tell them what you saw well
(2:19:18) you know just as an observation for instance you know bob approached this guy to talk to him the guy walked right by him and and didn't stop and talk to bob with a strange look on his face as though we thought maybe dennis was being foul followed and i guess that's possible so dennis mariani went over to the blackjack table and uh now it's a saturday night in las vegas and and a telling thing is this guy sat in a chair with two beautiful women on each side of him low-cut tops you know saturday night
(2:19:53) they're drinking in las vegas this guy sits down to play blackjack and he doesn't look to his left he doesn't look to his right he's looking down to his cards and nowhere else just to go time and play built black jack bob walked right up to him to strike up a conversation he tried to get rid of bob bob came over to me and said i'm going to try one more time to go talk we turn around dennis has gotten up and is speeding out of the casino and so the meeting never took place but the whole atmosphere there it seemed like dennis
(2:20:23) mariani must have seen someone following him because i mean he looked exactly like bob described him i mean you know i could tell that was that was dennis mariani but uh even while calling for a meeting with bob and being told to meet down there uh he just wouldn't talk and he left in a hurry so someone else must have been there besides dennis mariani yeah we certainly suspected that that had happened and as it turned out this was apparently some ruse to get us out of the house because subsequent to that when we got back to my place something
(2:20:57) of importance pertaining to all this was missing so that uh yeah all that stuff is true and there were you know my friends of that time the people that were close to me that time were all involved with this and you know they you know they they went through this with me and some of them had rough times some were investigated by the irs i had one friend that uh was attempting to get clearance to you know work for the government and he lost he lost that and the reason given was his involvement with me and uh you know so the people around me were

(2:21:30) exposed to all this stuff so although i can't you know present physical evidence there are witnesses to some of these events here and there as they occurred at that time i can also tell you that i made a lot of effort to try to find dennis mariani if that was his real name i did find uh one uh gentleman an address in palmdale which is an interesting town if you think about it in relation to this kind of stuff but was never able to find dennis mariani himself josh is that it okay josh is gone so we've got uh roy on
(2:22:00) our west of the rockies line roy you still there you what's on your mind i happened to know the individual that took bob when he got fired and i know on a previous program bob said he mentioned 28 people that he knew at area 51 and danny took him down when he got fired do you remember danny bob well when i got fired you're talking about when i went to the morning indian springs to the morning the morning you were taken down when you got fired remember that individual took you down there they never really fired me i mean
(2:22:36) that you know was just uh just never a call to come back i mean there was no official firing uh the only time i was ever taken anywhere was during the uh you know debriefing after gene huff and friends were where are you his name was benny and he was a long-haired the paiute indian remember him i never thought where are you suggesting he was taken to well i don't remember where he went but he mentioned on a previous program a couple years ago about three years ago now that he knew 28 people at area 51 and he said benny took him down when he
(2:23:12) got relieved or debriefed and i called up danny and he said yeah i said i told him he was talking too much he should keep his mouth shut oh well i probably i recall that for you to remember but anyhow i i do know um it was mentioned earlier in the program one called j-rod i've been able to communicate with him and his brother trilly and i do have a video of him that was sold on art bell's program in 1997.
(2:23:39) there was a video show or sold of yep actually on coast to coast i have a copy of it and jay rodden creely his brother j rod was the one at christ at roswell in 1947 out on the desert and he had 12 aboard he was an alien and he was on the art bell show well the video was presented by a guy called victor put out by rocket pictures in california victor martinez i don't know what his last name was because he didn't identify himself he used a voice alteration device to cover his voice he didn't say who he was
(2:24:16) other than he just used this alias name but i've got the whole video i've got j rod's picture i've got krillie's picture and i've also got a picture of their sister what do they look like about favorite tall black big black eyes covers over their eyes all the technology we got was gotten from them area 51 and every place else are computers technology fax machines cell phones all since 1947 even the phone lines were talking over today i've been working with them for three years well roy that's an interesting uh that
(2:24:49) raises some interesting possibilities rob to open the door on all of the secrecy who hired you sam et's how much do you make i'm nine thousand dollars in debt right now i've got material to put together about 129 000 words to put into two books my father lives on another planet seven hundred light years from here i'm gonna get busy for that and there's roy thank you thank you for the call we need to take a short break here and we'll be right back with bob lazar and uh gene huff and your final uh couple of calls
(2:25:24) so stick around on coast coast am [Music] uh good evening everyone you're back with the george knapp filling in for art bell on coast to coast live we're have a few minutes left with bob lazar and jean huff we have eric in georgia on our east of the rockies line eric are you still there oh i'm here how's it going guys okay what's on your mind honor to be talking to you it's 5am here i'm gonna fall asleep like you almost did earlier bob um yeah i'll try to make this quick uh one of the previous calls you were
(2:26:11) talking about um names of area 51. well i came up with something here is a f a f f c detachment three but i think it's something to do with edwards air force base i think they have something to do with like uh running some of the things that go on groomed lake i don't know i know i never heard that designation for it it's like a air force flight test center detachment three um that's i think that's the first time i've heard that mentioned i don't i don't recall it ever being referred to by that
(2:26:46) it's popped up in some of the literature over the years i i think glenn campbell dug up some information on that they they believe that some of the programs that were conducted out of groom lake were under uh under the auspices of that

attachment that group and also on my email stan friedman and bill hamilton on a pretty regular basis and what i get from them is that they're pretty damn confused on you you know like a lot of people are but i mean i just want to mention that also if you heard about what's called a tr-3b
(2:27:17) like flying triangle that's supposedly nuclear powered and also uses like super heated mercury plasma no that's the black manta yeah they were like they're seen over belgium in the late 80s i believe you've heard of this george um yeah that's rumored to be one of the craft that's been tested out there over years i don't think anybody's anybody's uh confirmed the existence of it a lot of folks some of the aviation writers believe it's uh it doesn't really exist but um it's a story mercury
(2:27:48) is a fuel yeah there's some kind of the i saw i'm not too technical but it was kind of like a superheated mercury plasma ring underneath the craft and it was triangle shaped and also used as some kind of nuclear power and it's completely silent but it was tracked something similar to it in belgium uh 1989 on radar the contact and everything but i remember hearing about the belgian uh sightings yeah those were like triangle type craft um anyways the real beef of what i called was um and i might actually get in trouble for
(2:28:23) this but i've got a family member who works for eg and he's got a top secret clearance and um sorry i'm a bit nervous um he actually flew spy missions over japan and russia way back and he's worked on a lot of stuff and of course he can't tell me the details but uh i did manage to ask him uh about you and he just said that he doesn't think there was any way you could you know go on tv and say the things you said without going to jail um well if he went to jail wouldn't that prove what he said they had validity but
(2:28:59) that's exactly what i told him but it's a catch-22 type of deal there's right you know you mentioned stan friedman and of course uh stan has been very critical of bob all the way along which is it's fine you know that's that's fine and what i i do give credit to stan for actually uh doing some of the work i mean you know a lot of the material that's come out about bob people uh people follow it up and they say aha there's no evidence he was at mit aha caltech same kind of thing those uh
(2:29:28) those facts were all reported in the very first story we ever did about bob on the air i do give stanton friedman credit for following up himself i know that he uh one of the things that he says that he dug up was he went to your high school and talked to somebody and they said you were a terrible student and you could never get into mit of course the school denies ever giving out that information and no one will confirm it uh so i i would suspect that if the shoe were on the other foot stanton would uh would not accept that as
(2:29:57) evidence but but he has in your case however you know it's really strange i have a lot of respect for stanton friedman for some of the things he's done you know for ufology historically however with regard to bob's story as you well know when he heard bob had worked at los alamos he picked up a phone called los alamos said does bob lazar work there somebody said no and he said well that's it bob lazar never worked in los alamos and and and went on the record and then of course you provided the phone book
(2:30:24) and other evidence that bob you know worked at los alamos not for los alamos but he was totally willing to give up and and get negative before he had done anything more than make a phone call back then now maybe he proceeded to do other research but at first he you know he that was a very half-hearted investigation eric anything else from you there eric is gone you know speaking of los alamos it reminds me of uh i mean i spent two years going back and forth with those guys uh at first uh you know they told me that bob had never been
(2:30:58) there i kept pestering them tried to get it in writing uh they finally said okay yeah they came up with a z number after i i showed them him his name in the phone book and the newspaper article listing him as a physicist then concentrated sort on kirkmaier which is the company that recruited you to work there right bob that's correct yeah that's who first got me out of fairchild electronics in california when i first kirk contacted kirk meyer they said yeah we've got the records no problem we'll be glad to give
(2:31:28) it to you and then i didn't hear from them i started phoning them on a regular basis and they put me off i i have a stack of letters that we wrote back and forth to them and after a while after a couple of months doing this uh back and forth they said no the records no longer exist so you know that was sort of the the problems that i faced all the way through this investigation and you know i know

there are people in the audience listening who don't believe it they don't buy it uh but but there are
(2:31:54) strange parts of the story like that that are difficult to explain any other way wouldn't you say oh absolutely i mean and you're leaving out a a plethora of other things you know down to the social security number and the uh you know employer id number and i mean all kinds of things the physical things that i could put forward but uh you know everybody's entitled to their own opinion but uh please don't pretend to know more about my life than i do you know these these things really did occur if you know you don't believe that
